in which exasperation struggled with fatigue. "Good Lord, boy," he rasped, "don't you sup-pose I'd have a nurse if I could afford it?"

"Would you let me help? I'd like to do something. I'm a useless cub in a sickroom, but I could do that. Who's the woman he liked in the hospital?"

"Nurse Elisabet, I don't know, Mac. There's no reason why I shouldn't let you help, I suppose. It hurts, of course, but-if he would be happier-

"That's settled then," said McLean. "Nurse Elisabet, if she can come. And—look here, old man. I've been trying to say this for a week and haven't had the nerve. Let me help you out for a while. You can send it back when you get it, any time, a year or ten years. I'll not miss it."

But Peter refused. He tempered the refusal in his

kindly way.

"I can't take anything now," he said. "But I'll remember it, and if things get very bad I'll come to you. It isn't costing much to live. Marie is a good manager, almost as good as-Harmony was." This with difficulty. He found it always hard to speak of Harmony. His throat seemed to close on the

That was the best McLean could do, but he made a mental reservation to see Marie that night and slip her a little money. Peter need never know, would never notice.

At a cross street the car stopped, and the little Bulgarian, Georgiev, got on. He inspected the car carefully before he came in from the platform, and

sat down unobtrusively in a corner. Things were not going well with him either. His small black eyes darted from face to face suspiciously, until they came to a rest on Peter.

It was Georgiev's business to read men. Quickly he put together the bits he had gathered from Harmony on the staircase, added to them Peter's despondent attitude, his strained face, the abstraction which required a touch on the arm from his companion when they reached their destination, recalled Peter outside the door of Harmony's room in the Pension Schwarz—and built him a little story that was not far from the truth.

Peter left the car without seeing him. It was the hour of the promenade, when the Ring and the larger business streets were full of people, when Demel's was thronged with pretty women eating American ices, with military men drinking tea and nibbling Austrian pastry, the hour when the flower women along the Stephansplatz did a rousing business in roses, when sterile women burned candles before the Madonna in the Cathedral, when the lottery did the record business of the day.

It was Peter's forlorn hope that somewhere among the crowd he might happen on Harmony. For some reason he thought of her always as in a crowd, with people close, touching her, men staring at her, following her. He had spent a frightful night in the Opera, scanning seat after seat, not so much because he hoped to find her as because inaction was intolerable.

And so, on that afternoon, he made his slow progress along the Kärntnerstrasse, halting now and then to scrutinize the crowd. He even peered through the doors of shops here and there, hoping while he feared that the girl might be seeking employment within, as she had before in the early days of the winter.

Because of his stature and powerful physique, and perhaps, too, because of the wretchedness in his eyes, people noticed him. There was one place where Peter lingered, where a new building was being erected, and where because of the narrowness of the passage the dense crowd was thinned as it passed. He stood by choice outside a hairdresser's window, where a brilliant light shone on each face that passed.

Inside the clerks had noticed him. Two of them standing together by the desk spoke of him: "He is there again, the gray man!

'Ah, so! But, yes, there is his back!"

"Poor one, it is the Fraulein Engel he waits to see perhaps.

"More likely Le Grande, the American. He is American."

"He is Russian. Look at his size."

"But his shoes!" triumphantly. "They are American, little one."

The third girl had not spoken; she was wrapping in tissue a great golden rose made for the hair. She placed it in a box carefully.

"I think he is of the police," she said, "or a spy. There

is much talk of war."

"Foolishness! Does a police officer sigh always? Or a spy have such sadness in his face? And he grows thin and white."

"The rose, Fraulein."

The clerk who had wrapped up the flower held it out to the customer. The customer, however, was not looking. She was gazing with strange intentness at the back of a worn gray overcoat. Then with a curious clutch at her heart she went white. Harmony of course, Harmony come

to fetch the golden rose that was to complete the Le Grande's costume.

She recovered almost at once and made an excuse to leave by another exit.

She took a final look at the gray sleeve that was all she could see of Peter, who had shifted a bit, and stumbled out into the crowd, walking along with her lip trembling under her veil, and with the slow and steady ache at her heart that she had thought she had stilled for good.

It had never occurred to Harmony that Peter loved her. He had proposed to her twice, but that had been in each case to solve a difficulty for her. And once he had taken her in his arms, but that was different. Even then he had not said he loved her—had not even known it, to be exact. Nor had Harmony realized what

Peter meant to her until she had put him out of her life. The sight of the familiar gray coat, the scrap of conversation, so enlightening as to poor Peter's quest, that Peter was growing thin and white, made her almost reel. She had been too occupied with her own position to realize Peter's. With the glimpse of him came a great longing for the house on the Siebensternstrasse, for Jimmy's arms about her neck, for the salon with the lamp lighted and the sleet beating harmlessly against the casement windows, for the little kitchen with the brick stove, for-Peter.

Doubts of the wisdom of her course assailed her. But to go back meant, at the best, adding to Peter's burden of Jimmy and Marie, meant the old situation again, too, for Marie most certainly did not add to the respectability of the establishment. And other doubts assailed her. What if Jimmy were not so well, should die, as was possible, and she had not let his mother see him!

Monia Reiff was very busy that day. Harmony did not leave the workroom until eight o'clock. During all that time, while her slim fingers worked over fragile laces and soft chiffons, she was seeing Jimmy as she had seen him last, with the flower fairies on his pillow, and Peter, keeping watch over the crowd in the Kärntnerstrasse, looking with his steady eyes for her.

No part of the city was safe for a young girl after night, she knew; the sixteenth district was no better than the rest, rather worse in places. But the longing to see the house on the Siebensternstrasse grew on her, became from an ache a sharp and insistent pain. She must go, must see once again the comfortable glow of Peter's lamp, the flicker

that was the fire.

She ate no supper. She was too tired to eat, and there was the pain. She put on her wraps and crept down the whitewashed staircase. The paved courtyard below was to be crossed and it was poorly lighted. She achieved the street, however, without molestation. To the street-car was only a block, but during that block she was accosted twice. She was white and frightened when she reached the car.

The Siebensternstrasse at last. The street was always dark; the delicatessen shop was closed, but in the wild game

store next a light was burning low, and a flame flickered before the little shrine over the money drawer. The gameseller was a religious man.

The old stucco house dominated the neighborhood. From the time she left the car Harmony saw it, its long flat roof black against the dark sky, its rows of unlighted windows, its long wall broken in the center by the gate. Now from across the street its whole façade lay before her. Peter's lamp was not lighted, but there was a glow of soft firelight from the salon windows. The light was not regular—it disappeared at regular intervals, was blotted out. Harmony knew what that meant. Some one beyond range of where she stood was pacing the floor, back and forward, back and forward. When he was worried or anxious Peter always paced the floor.

She did not know how long she stood there. One of the soft rains was falling, or more accurately, condensing. The saturated air was hardly cold. She stood on the pavement unmolested, while the glow died lower and lower, until at last it was impossible to trace the pacing figure. No one came to any of the windows. The little lamp before the shrine in the wild game shop burned itself out; the portier across the way came to the door, glanced up at the sky and went in. Harmony heard the rattle of the chain

as it was stretched across the door inside. He Stood by Choice Outside a Hairdresser's Window

> Not all the windows of the suite opened on the street. Jimmy's windows-and Peter's-opened toward the back of the house, where in a brick-paved courtyard the wife of the portier hung her washing, and where the portier himself kept a hutch of rabbits. A wild and reckless desire to see at least the light from the child's room possessed Harmony. Even the light would be something; to go like this, to carry with her only the memory of a dark looming house without cheer was unthinkable. The gate was never locked. If she but went into the garden and round by the spruce tree to the back of the house, it would be something.

She knew the garden quite well. Even the darkness had no horror for her. Little Scatchy had had a habit of leaving various articles on her window-sill and of instigating searches for them at untimely hours of night. Once they had found her hairbrush in the rabbit hutch! So Harmony, ashamed but unalarmed, made her way by the big spruce to the corner of the old lodge and thus to the courtyard.

Ah, this was better! Lights all along the apartment floor and moving shadows; on Jimmy's window-sill a jar of milk. And voices—some one was singing.

Peter was singing, droning softly, as one who puts a drowsy child to sleep. Slower and slower, softer and softer, over and over, the little song Harmony had been wont to

"Ah, well! For us all some sweet hope lies Deeply buried from human eyes. And in the—hereafter—angels may Roll—the stone from—its—grave—away."

Slower and slower, softer and softer, until it died away altogether. Peter, in his old dressing gown, came to the window and turned down the gaslight beside it to a blue point. Harmony did not breathe. For a minute, two minutes, he stood there looking out. Far off the twin clocks of the Votivkirche struck the hour. All about lay the lights of the old city, so very old, so wise, so cunning, so cold.

Peter stood looking out, as he had each night since Harmony went away. Each night he sang the boy to

sleep, turned down the light and stood by the window. And each night he whispered to the city that sheltered Harmony somewhere, what he had whispered to the little sweater coat the night before he went away:

"Good night, dear. Good night, Harmony."

The rabbits stirred uneasily in the hutch; a passing gust shook the great tree overhead and sent down a sharp shower on to the bricks below. Peter struck a match and lit his pipe; the flickering light illuminated his face, his rough hair, his steady eyes.
"Good night, Peter," whispered Harmony. "Good

night, dear."

Walter Stewart had made an uncomplicated recovery, helped along by relief at the turn events had taken. In a few days he was going about again, weak naturally, rather handsomer than before because a little less florid. But the week's confinement had given him an opportunity to think over many things. Peter had set him thinking, on the day when he had packed up the last of Marie's small belongings and sent them down to

Stewart, lying in bed, had watched him. "Just how much talk do you suppose this has made, Byrne?" he asked.

"Haven't an idea. Some probably. The people in the Russian villa saw it, you know." Stewart's brows con-

tracted. "Damnation! Then the

hotel has it, of course!" "Probably."

Stewart groaned. Peter closed Marie's American trunk of which she had been so proud, and coming over looked down at the injured man.

"Don't you think you'd better tell the girl all about it?"

"No," doggedly.

"I know, of course, it wouldn't be easy, butyou can't get away with it, Stewart. That's one way of looking at it. There's another.

"What's that?"

"Starting with a clean slate. If she's the sort you want to marry, and not a prude, she'll understand, not at first, but after she gets used to it."

"She wouldn't understand in a thousand years."

"Then you'd better not marry her. You know, Stewart, I have an idea that women imagine a good many pretty rotten things about us anyhow. A sensible girl would rather know the truth and be done with it. What a man has done with his life before a girl—the right girl—comes into it isn't a personal injury to her, since she wasn't a part of his life then. You know what I mean. But she has a right to know it before she chooses."

"How many would choose under those circumstances?" he jibed.

Peter smiled. "Quite a few," he said cheerfully. "It's a wrong system, of course; but we can get a little truth

"You can't get away with it" stuck in Stewart's mind for several days. It was the one thing Peter said that did stick. And before Stewart had recovered enough to be up and about he had made up his mind to tell Anita. In his mind he made quite a case for himself; he argued the affair against his conscience and came out victorious.

Anita's party had broken up. The winter sports did not compare, they complained, with St. Moritz. They disliked German cooking. Into the bargain the weather was not good; the night's snows turned soft by midday; and the crowds that began to throng the hotels were solid citizens, not the fashionables of the Riviera. Anita's arm forbade her traveling. In the reassembling of the party she went to the Kurhaus in the valley below the pension with one of the women who wished to take the baths.

It was to the Kurhaus, then, that Stewart made his first excursion after the accident. He went to dinner. Part of the chaperon's treatment called for an early retiring hour, which was highly as he had wished it and rather unnerving after all. A man may decide that a dose of poison is the remedy for all his troubles, but he does not approach his hour with any hilarity. Stewart was a stupid dinner guest, ate very little, and looked haggard beyond belief when the hour came for the older woman to leave.

He did not lack courage however. It was his great asset, physical and mental rather than moral, but courage nevertheless. The evening was quiet, and they elected to sit on the balcony outside Anita's sitting room, the girl swathed in white furs and leaning back in her steamer chair.

Below lay the terrace of the Kurhaus, edged with evergreen trees. Beyond and far below that was the mountain village, a few scattered houses along a frozen stream. The townspeople retired early; light after light was extinguished, until only one in the priest's house remained. A train crept out of one tunnel and into another, like a glowing worm crawling from burrow to burrow.

The girl felt a change in Stewart. During the weeks he had known her there had been a curious restraint in his manner to her. There were times when an avowal seemed to tremble on his lips, when his eyes looked into hers with the look no woman ever mistakes; the next moment he would glance away, his face would harden. They were miles apart. And perhaps the situation had piqued the girl. Certainly it had lost nothing for her by its unusualness.

Tonight there was a difference in the man. His eyes met hers squarely, without evasion, but with a new quality, a searching, perhaps, for something in her to give him courage. The girl had character, more than ordinary decision. It was what Stewart admired in her most, and the thing, of course, that the little Marie had lacked. Moreover, Anita, barely twenty, was a woman, not a young girl. Her knowledge of the world, not so deep as Marie's, was more comprehensive. Where Marie would have been merciful Anita would be just, unless she cared for him. In that case she might be less than just, or more.

Anita in daylight was a pretty young woman, rather incisive of speech, very intelligent, having a wit without malice, charming to look at, keenly alive. Anita in the dusk of the balcony, waiting to hear she knew not what, was a judicial white goddess, formidably still, frightfully potential. Stewart, who had embraced many women, did not dare a finger on her arm.

He had decided on a way to tell the girl the story-a preamble about his upbringing, which had been indifferent, his struggle to get to Vienna, his loneliness there, all leading with inevitable steps to Marie. From that, if she did not utterly shrink from him, to his love for her.

It was his big hour, that hour on the balcony. He was reaching, through love, heights of honesty he had never scaled before. But as a matter of fact he reversed utterly his order of procedure. The situation got him, this first evening absolutely alone with her. That and her nearness, and the pathos of her bandaged, useless arm. Still he had not touched her.

The thing he was trying to do was more difficult for that. General credulity to the contrary, men do not often make spoken love first. How many men propose marriage to their women across the drawing room or from chair to chair? Absurd! The eyes speak first, then the arms, the lips last. The woman is in his arms before he tells his love. It is by her response that he gauges his chances and speaks of marriage. Actually the thing is already settled; tardy speech only follows on swift instinct. Stewart, wooing as men woo, would have taken the girl's

"Nineteen."

Harmony Collapsed in a Heap on the Floor of Her Room

hand, gained an encouragement from it, ventured to kiss it, perhaps, and finding no rebuff would then and there have crushed her to him. What need of words? They would follow in due time, not to make a situation but to

But he could not woo as men woo. The barrier of his own weakness stood between them and must be painfully taken down.

"I'm afraid this is stupid for you," said Anita out of the silence. "Would you like to go to the music room?"

"God forbid. I was thinking."
"Of what?" Encouragement this, surely.

"I was thinking how you had come into my life, and stirred it up."

"Really? I?" "You know that."

"How did I stir it up?"

"That's hardly the way I meant to put it. You've changed everything for me. I care for you-a very great deal.'

He was still carefully in hand, his voice steady. And still he did not touch her. Other men had made love to her, but never in this fashion, or was he making love?

I'm very glad you like me.

"Like you!" Almost out of hand that time. The thrill in his voice was unmistakable. "It's much more than that, Anita, so much more that I'm going to try to do a hideously hard thing. Will you help a little?"

"Yes, if I can." She was stirred, too, and rather frightened. Stewart drew his chair nearer to her and sat forward, his face set and dogged.

"Have you any idea how you were hurt? Or why?"

"No. There's a certain proportion of accidents that occur at all these places, isn't there?"

"This was not an accident."

"The branch of a tree was thrown out in front of the sled to send us over the bank. It was murder, if intention is crime." After a brief silence

"Somebody who wished to kill you, or me?"

"Both of us, I believe. It was done by a woman-a girl, Anita. A girl I had been living with."

A brutal way to tell her, no doubt, but admirably couraeous. For he was quivering with dread when he said itthe courage of the man who faces a cannon. And here, where a less-poised woman would have broken into speech, Anita took the refuge of her kind and was silent. Stewart watched her as best he could in the darkness, trying to gather further courage to go on. He could not see her face, but her fingers, touching the edge of the chair, quivered.

May I tell you the rest?"

"I don't think I want to hear it." "Are you going to condemn me unheard?"

"There isn't anything you can say against the fact?"

But there was much to say, and sitting there in the darkness he made his plea. He made no attempt to put his case. He told what had happened simply; he told of his loneliness and discomfort. And he emphasized the lack of sentiment that prompted the arrangement.

Anita spoke then for the first time: "And when you tried

to terminate it she attempted to kill you!"

"I was acting the beast. I brought her up here, and then neglected her for you." Then it was hardly only a business arrangement for

"It was at first. I never dreamed of anything else. I swear that, Anita. But lately, in the last month or two, she-I suppose I should have seen that she-

"That she had fallen in love with you. How old is she?"

A sudden memory came to Anita, of a slim young girl, who had watched her with wide, almost childish eyes.

"Then it was she who was in the compartment with you on the train coming up?"

"Where is she now?"

"In Vienna. I have not heard from her. Byrne, the chap who came up to see me after the-after the accident, sent her away. I think he's looking after her.

I haven't heard from him.'

"Why did you tell me all this?" "Because I love you, Anita. I want you to marry me."

"What! After that?"

"That, or something similar, is in many men's lives. They don't tell it, that's the difference. I'm not taking any credit for telling you this. I'm ashamed to the bottom of my soul, and when I look at your bandaged arm I'm suicidal. Peter Byrne urged me to tell you. He said I couldn't get away with it; some time or other it would come out. Then he said some-

"Peter, I Must Prepare My

"He said you'd probably understand, and that if you married me it was better to start with a clean slate."

No love, no passion in the interview now. A clear statement of fact, an offer-his past against hers, his future with hers. Her hand was steady now. The light in the priest's house had been extinguished. The chill of the mountain night penetrated Anita's white furs, and set heror was it the chill?-to shivering.

"If I had not told you, would you have married me?"

"I think so. I'll be honest too. Yes."

"I am the same man you would have married. Onlymore honest."

"I cannot argue about it. I am tired and cold."

Stewart glanced across the valley to where the cluster of villas hugged the mountainside. There was a light in his room; outside was the little balcony where Marie had leaned against the railing and looked down, down. Some of the arrogance of his new virtue left the man. He was suddenly humbled. For the first time he realized a part of what Marie had endured in that small room where the light

"Poor little Marie!" he said softly,

The involuntary exclamation did more for him than any plea he could have made. Anita rose and held out her

"Go and see her," she said quietly. "You owe her that. We'll be leaving here in a day or so and I'll not see you again. But you've been honest, and I will be honest too. I—I cared a great deal too."
"And this has killed it?"

"I hardly comprehend it yet, I shall have to have time to think.

"But if you are going away-I'm afraid to leave you. You'll think this thing over, alone, and all the rules of life you've been taught will come-

"Please, I must think. I will write you, I promise."

He caught her hand and crushed it between both of his. "I suppose you would rather I did not kiss you?" humbly.

"I do not want you to kiss me."

He released her hand and stood looking down at her in the darkness. If he could only have crushed her to him, made her feel the security of his love, of his sheltering arms! But the barrier of his own building was between them. His voice was husky.

"I want you to try to remember, past what I have told you, to the thing that concerns us both-I love you. I never loved the other woman. I never pretended I loved her. And there will be nothing more like that."

"I shall try to remember."

Anita left Semmering the next day, against the protests of the doctor and the pleadings of the chaperon. She did not see Stewart again. But before she left, with the luggage gone and the fiacre at the door, she went out on the terrace, and looked across to the Villa Waldheim, rising from among its clustering trees. Although it was too far to be certain, she thought she saw the figure of a man on the little balcony standing with folded arms, gazing across the valley to the

Having promised to see Marie, Stewart proceeded to carry out his promise in his direct fashion. He left Semmering

### A Freight-Rate Puzzle

PEOPLE especially interested in that subject are asking themselves what effect the Panama Canal will have on railroad freight rates; and the only answer so far is that it will probably bring up anew that troublesome question of the long and short haul. To meet water competition railroads are permitted to charge more for a short than for a long haul—that is, the rate from Chicago to a point two or three hundred miles east of the Pacific Coast may be the rate from Chicago to the Coast plus the local rate from the Coast back to the point of destination.

The argument is that the rate to the Coast must be low in order to meet water competition; and if the merchant three hundred miles east of the Coast pays the through rate plus the local rate from the Coast back, that is only what he would have to pay if his goods were shipped by water to the Coast and by rail from the Coast to his town.

That, however, does not altogether reconcile the merchant to paying, on a carload of goods from the East that stops in his town, exactly what he would have to pay if the car were hauled three or four hundred miles farther west and then back again.

More and more are rail rates in the mass held down to a point that will yield only a fair return on the capital invested. Now if rates, as a whole, yield only a fair return on the investment, and some of those rates—to meet water competition—are decidedly lower than others, it necessarily follows that the lower rates are producing considerably less than a fair return on the investment, while the higher rates are producing considerably more.

As water competition is increased by the Canal, inland people will probably be more dissatisfied with an arrangement under which they contribute disproportionately to the support of the roads.

### The Special Court

CHICAGO, which blazed the way with a juvenile court, has since added a court of domestic relations and a morals court, and now proposes another special court to deal with youths. The fundamental idea behind these special courts is tremendously important, and we hope to see it pervade our whole system of criminal jurisprudence before many years. That fundamental idea is to deal with a culprit as a human being instead of dealing merely with his crime or disorder as an impersonal thing.

Here, say, is a youth who has stolen an article of a certain value. That is all the old statute wanted to know about him—simply that he was of a certain age and stole an article of a certain value. It then classed him as a thief and sent him to jail; but if the case were brought before you, you would ask: "What sort of youth is he? What is his record? What was his motive for stealing?"

It would make a great deal of difference to you whether his record had been good and he had stolen a scuttle of coal to keep his mother warm, or whether his record had been bad and he had stolen a washerwoman's purse to get money with which to buy eigarettes.

So all through the old criminal code; its attempt to deal merely with acts by hard and fast rules, without regard to the character, situation and motive of the persons who perform the acts, gives bad results. These new special courts, each with a comparatively free hand within its field, can deal humanely with the people brought before them. They are our great invention in jurisprudence. We hope to see them multiply.

### The Party's Breadbasket

IN PROSECUTING its heroic warfare on behalf of the plain people every political party—broadly speaking—has been compelled to resort to ornamental people for its campaign funds. Before it could fire a shot at the citadels of special privilege it must go to some gentlemen inside those citadels for money with which to buy powder.

That this put the party in a rather anomalous and embarrassing position was long recognized. The history of the Republican party shows the logical result of this dependence on the privileged for munitions of war. In this country parties derived funds from the sale of offices or nominations for offices, and from contributions by benevolent gentlemen who had a direct stake in the tariff or some other governmental policy.

In England, ever since there were parties, the sale of titles of nobility has been a standard method of replenishing the party's coffer. A cynical peer recently observed in Parliament that the thing had always gone on and doubtless always would; while another peer confessed that not long ago he endeavored to secure a substantial sum for party purposes on the pledge of a baronetcy to the donor, but his tender was promptly rejected on the reasonable ground that his party was out of power and consequently unable to deliver the goods.

Naturally it is the Conservative party that is pressing the question over there, both because it is out of power and so has no titles to dispose of and because as soon as a Liberal contributor is made a peer he turns Conservative; so that, though the Liberals have him neatly off their hands, the Conservatives have him to live with for the remainder of his life. It is like rewarding a man who has assisted you to fight Smith by giving him a lifelease of a part of Smith's house. The noble Smiths do not like it. Publication of contributions on the American plan is suggested as a remedy.

Financial support of a party by its own rank and file ought to be the remedy. The time has come in political development when the continued usefulness of any party for which the rank and file will shout and vote, but which it will not support with money, is very questionable.

### The Professional Consul

WE ARE not much interested in the diplomatic service, for its importance to the country is small. The occasions when a minister or ambassador acts on his own initiative, except at a tea party, are so few as to be fairly negligible. Mr. Choate described the situation when he said that an ambassador was only a glorified messenger-boy.

The consular service, however, is capable of real and broad usefulness. It ought to be a big trade-promoting agency, equipped to give the smaller manufacturers such comprehensive reports about foreign markets as the great exporters, like the oil and steel trusts, gain by maintaining expensive organizations of their own. It ought to be a national bureau of information on foreign social and commercial affairs. All this requires training and experience. It requires that spirit in the personnel which can be had only by making the consular service a profession, with security of tenure and certainty of promotion.

A good many young men in the consular service are now watching events at Washington with interest and a little apprehension. They went into the service only after our Government promised to make it a profession. Mainly they are the sort of young men who would not have gone into it unless it were made a profession.

From time to time rumors have arisen in Washington—happily unsupported by facts as yet—that there was to be a return to the old system of using the better consular positions as rewards for political activities. The better consular positions are few. Only two or three political appointments to the more attractive posts would be necessary to demoralize the whole consular service. The young men on whom its future depends would feel that the Government had broken faith with them; that energy and devotion on their part were thrown away. A single dubious appointment not long ago, and that by no means to a first-class post, sent a chill through the whole service.

With any considerable return to the spoils system, we might as well throw the consular service on the scrapheap.

### The Speculator's Toll

ESSENTIALLY Berlin is as new as Chicago, and of about the same size. Both have sprung up overnight, so to speak, in the forcing-house of an industrial system which causes cities to sprout everywhere from the Danube to the Sacramento. The Chicagoan makes his own government; that of the Berliner is made for him. It is, therefore,

rather odd to find that in the first and most important item of civilized living the self-governing Chicagoan is mulcted to an extent which the governed Berliner would deem incredible and intolerable.

For equal living quarters a man of moderate means would pay in Chicago at least double the rent he pays in Berlin. The rent a New Yorker who is just comfortably off pays for his flat would procure him quarters in Berlin or Paris that an enthusiastic reporter might describe as palatial.

It is really extraordinary that in the matter of paying a monstrous toll to urban land speculators America far outstrips all European countries. The rent that almost any American city pays over and above what would be paid in almost any European city of corresponding size would support a dozen royal households and maintain a hundred dreadnoughts.

### They Do Not Quite Like Us

THE United States is not very popular in France at present. That nation of small investors is peculiarly cautious and sensitive on the subject of bonds. It has by no means forgotten how we unloaded some rank Frisco securities in Paris just before the road confessed bankruptcy.

The general principle of our new tariff law, with low rates on necessities and high ones on luxuries, is admitted to be sound; but unfortunately France is almost exclusively an exporter of luxuries. Her wine and silk merchants complain: "Instead of saying 'We will impose high rates on luxuries,' you might as well have said, 'We will impose high rates on French goods.""

France has some interest in Panama Canal tolls and some stake in Mexico. In neither respect does she find satisfaction in our actions. The course pursued by our Treasury Department in regard to imports of French pottery was especially resented. There is undoubtedly a feeling that the United States holds France in rather light regard; and being held in light regard is probably less tolerable to the French than to any other people in the world.

On the other hand, prodigal circulation of American coin along the boulevards is duly appreciated; and the knowledge, based on long experience, that American visitors spend more money and spend it more foolishly than any other nationality about squares the account.

### **Irritating Customs Practices**

WE HAVE, after mighty effort, reformed our tariff law: but we do not seem to have reformed very greatly the method of enforcing it. Time out of mind our custom duties have been collected with a sort of inveterate suspicion and nagging jealousy that have provoked much righteous resentment. The guiding principle seems to have been to construe the law in whatever way would be least agreeable to the person paying the duty.

The matter of traveler's baggage is a relatively unimportant instance, yet that has created an amount of irritation which makes the money gained by it a very doubtful asset. Every successful department store, for example, suffers a certain constant amount of imposition and is perfectly aware of the fact, but would rather be imposed on than make a fuss. The same thing is true of all good businesses. No good business insists on the last cent in every case. It is much better to suffer some petty impositions with a smile than to set the machinery so tight that its screech is heard all over the place.

For half a century, of course, the basic idea of our tariff was that bringing foreign goods into the United States was an evil. Under that idea, to make importation as vexatious as possible was perhaps the reasonable policy. The new law expresses a more liberal idea and ought to be enforced in a correspondingly liberal spirit.

### Listing Real Estate

A COMMITTEE of the New York Real-Estate Board has reported favorably on a proposal to list there securities based on real estate, substantially as stocks and bonds are listed on the Stock Exchange, and to make an open, official market for them comparable to the Stock Exchange market for other securities.

Here would be a responsible and reputable body which would appoint a committee to examine securities that were offered for the list, to require exact statements concerning them, and to see that they had some substantial, bonafide basis. The investor in such a security would know at least that he was not buying mere blue sky.

Taking it by and large, there is as much sheer take and fraud in the selling of real estate as in any other part of the investment field. This proposal looks only to the listing of securities based on real estate. In every large city we should like to see the real-estate board offer to list all extensive real-estate selling enterprises—all those that advertise, circularize or otherwise go out for a public hearing.

Under proper regulations any lot or acreage selling proposition that was not listed would be one for investors to let severely alone.

# Who's who-and why

### Serious and Frivolous Facts About the Great and the Near Great

A Gentleman With a Broad A and an Appetite for Scrod

TIBRARIES have been written about country boys who went to cities and there became masters of business, of finance, of politics, and of everything else in the line of endeavor that re-quired stout hearts and willing hands-or willing hearts and stout hands, as the various cases may have been.

Likewise libraries are being written about city boys who are going to the country-back to the soiland attaining that well-known and justly celebrated panacea for human woes, independence, through the medium of close communion with Nature, the tilling of the soil as opposed to the soiling of the till with the tainted money to be obtained in the busy marts of trade, and the manifold benefits of the

parcel post, which enables them to ship their produce direct to the consumer-from grower to growler, so to say.

Personally I applaud both propositions, for I have tried them both; but it occurs to me that here, at this moment, It is time to say a few ringing words in behalf of the city boys who stayed in the cities; who fought their fights in or near the wards where they went to public school; and who,

struggling with the horrendous handicap of a metropolitan upbringing-for it is an awful thing to be a native of a city, as we have been told voluminouslysashayed in and proved that now and then a boy who is born urbanly and remains urban is not, either congenitally or contemporaneously, always of no account.

Wherefore, casting about for a living example to cite as proof of my contention, my eye lights on the Honorable Billy Murray, of Boston-lights on Bill Murray and lingers there; and I cite him. I cite William Francis Murray, of Boston, who was born in Boston, has always lived in Boston, always intends to live in Boston, hopes to be buried in Boston, and has all the Boston attributes, including the broad A, the appetite for scrod, the firm belief that if Boston were expunged the universe would be eliminated and that Buffalo is out West.

I call your attention to the picture of the said Murray that is snugly ensconced in the upper left-hand corner of this page. Observe that! If it is not a picture of a city boy; a boy who was reared on the pavements instead of in the fields; a boy who has been over seven since he was three; a boy who, from the top of his derby hat to the tips of his shoes, radiates the wisdom of city ways; a boy who has always been familiar with street cars and big stores and theaters and ambulances and crowds, and keenly sophisticated as to all other city matters that are strange to the youth who wanders in from the farm-if that is not the picture of such a boy, then I have never seen such a picture or such a boy. And I've seen a million such boys and several such pictures.

At the present time William Francis Murray is thirtythree years old, and is serving his second term in Congress, from Boston, the place where he was born. That means he was elected to Congress when he was thirty, and it also means that occasionally a boy comes across in a city who was not brought into this vale of sorrows and deceit in an outlying district. There are others, of course, in our Congress; but not so many as you would think when the opportunities are considered—the opportunities in a numerical sense, I mean-and very few who came under the wire at such an early age.

It can be said, with due regard for conservative utterance, that Mr. Murray has been and is a busy little pot of baked beans. "Of course," he said to himself as he emerged from the first grades and sought sanctuary and a sheepskin at the Boston Latin School, "of course, I am penalized by a stroke a hole because I did not come down from Maine, and that may make it more difficult; but, that being as it may, I shall now begin an endeavor to put something over in my capacity as a Bostonian."

#### On the Air Line to Washington

AFTER he had finished with such Latin as was provided by the Boston Latin School he turned his face toward Cambridge, as all loyal Boston boys must, and matriculated at Harvard. He spent four years at that institution for the manicuring of young men, and two more years at the Harvard Law School. The net result of these six years in a scholastic sense was the beneficent bestowal on him by Doctor Eliot of the degree of bachelor of arts in 1904, and the further plastering of him with the degree of bachelor of laws, or something like that, in 1906. Thus equipped, he began the practice of art and the study of law. Neither degree, so far as can be learned, has had a deterrent effect on him, and he feels that he has lived them both down.

However, art and the law were not his sole concerns. While he was at Harvard he was a sort of a Siamese-twin

student or a Siamese-triplet student. He studied-of course he studied. He received his degrees, didn't he? But other things concerned him to some extent. There was journalism, for example, and politics, and one or two little matters of similar import. They say his record for a sprint from a classroom to a newspaper office, thence to the meeting of a political club and back again, stands for all time as the low mark for such performances.

Gradually he concentrated on the law and on politicsthat is, gradually he concentrated on politics and the law. The law is the handmaiden, valet, major-domo and the general manager of politics. So are the lawyers. It must be so. If we had no law we could have no lawyers—what a calamity !-- and if we had no politicians we could have no law. Hence the lawyers go into politics in order that they may make the laws, so there may be laws for the lawyers to unmake.

Anyhow, young Mr. Murray not only felt it to be his duty to provide a few laws for his own use but, being of a genial and charitable and kind disposition, concluded that his sphere of influence was along those lines—politics and law. As is well known, law is not insistent. You can practice law or let it alone, as it pleases you. Politics, on the other hand, is not only insistent but persistent. Unless you practice politics constantly it will not be a case of your letting politics alone-politics will let you alone. The youthful Murray was soon in touch with the situation.

That denoted adaptability. Any person who is in touch with the Boston political situation may be said to be a good, capable, experienced situation-toucher. Boston politics eludes most persons who do not begin the persistent practice of it at the age of four years. Also, it eludes most persons who do so engage in it. Boston politics is a combination of race, religion, tradition, prejudice, inheritance, entails, ancestors, posterity, dogmatism, hatreds, friendships, history, prophecy, precedent, novelty, delusion, deception and desire. It has as many slants as a cubist picture of a man falling down stairs with a cookstove; as many angles as a rail fence; as many intricacies as a crystal maze. Some understand it; some comprehend it; some apprehend it; and many try to beat it.

Murray seems to have grasped the rudiments of it anyhow, for he had been but a short time out of the law

school-maybe it was while he was there-when he offered himself for the suffrages of his fellow citizens and was elected to the Boston City Council. That started him. He next seized on the Massachusetts House of Representatives and was triumphantly deposited therein. Then came the upward step that led to the Governor's Council, and after that it was but a short distance to Washington.

An alert and capable young fellow, he has good ideas and good sense. He talks well, makes friends, is open and aboveboard, and is popular with his colleagues. He has courage, says what he thinks, is not averse to a fight, and plays the game as it lies, with a strong predilection for having all the cards laid on the table. He is lively, energetic and busy every minute. Moreover, he has excellent material in him and will develop into a very useful legislator. He harbors the remarkable theory that a workable but not overworked phase of politics is to be frank and fair in his dealings with everybody

Bearing all this in mind I cite Murray as Exhibit A in the class of city boys who stuck to the city and won out, as a proof of the contention that it is not absolutely necessary for a person to come from a farm to get anywhere in town. Sometimes the city boy lands, and William Francis Murray appears to be a rising young member of that aggregation.

### Bank Stock as an Investment-by Roger W. Babson

MY FRIENDS have asked me to recon-cile the facts that, though I am an officer and a large stockholder in banking institutions, I at the same time advise others not to invest in bank stock. My reply is that in these SATURDAY EVENING POST articles I have been endeavoring to guide the small investor to sound financial practices, irrespective of personal interests. You may own a grocery store, yet you would feel free to advise small investors to invest in other securities rather than in stock in grocery stores. Well, banks are a good deal like grocery stores.

Experience shows that the success or failure of banks depends on the human element. A bank cannot be run by rule; neither has it any monopoly. Bank management requires a wonderful combination

of honesty, tact and good judgment.

Among people of New England antecedents there exists an inherited predilection for bank stock. This is a natural reflection of the veneration in which their forbears held that class of investments. The spirit of the age, which is more active in showing up defects than in extolling virtues, shows that the idol of gold has, at times, feet of clay. Bank stock that has been inherited along with family portraits and old china sometimes ceases to pay dividends—or, what is worse, declares Irish dividends. For the benefit of readers not posted on the technicalities of finance, I will say that an Irish dividend is an assessment.

First let us consider the elements that affect the value of bank stock and note the use of the published reports of condition in arriving at the stock's investment merits. Fifty years or so ago the natural and most common use for excess funds was to organ-ize a local bank. Local money was loaned to finance local needs under the personal supervision of those most interested. The possibilities of the bankruptcy law were undeveloped and personal integrity was a dependable asset. With the high rates of interest then prevailing, the local bank was a good proposition from all standpoints.

As the commodity dealt in by the banksthat is, money—is the concentrated es-sence of all human endeavor, success or failure depends on the human elements governing the transaction of the business. The latitude permitted by the elasticity of modern business usage renders it impera-tive that credit should be based on facts rather than on sentiment.

### How to Judge Bank Management

In other words, though most business is conducted with honest intentions, there is not the moral or social opprobrium attached to the financial delinquent that existed in those early days. In a business where the losses, expenses and profits are recovered from a gross return of two or three per cent on the total overturn, the errors resulting from an excess of either conservatism or liberality are very potential in results. A bank reflects both local and world con-

ditions; and on the ability of the management properly to decide today's small and great questions depends the prosperity of the institution. Is the bank you have under consideration a nursing bottle for infant industries—or is it an invigorator for senile decay? Is it dominated by a progressive spirit, full of hope, optimism and thrift, tempered by good judgment as to probabilities? Is it a bank where the majority of the stock is held by live directors, or by women and estates—so that the local cemetery is the only place where a stockholders' meeting can be held with a certainty of having a quorum present? Are the directors coming or going? Are they full of industry and courage? Or are they like the last leaves—unwilling to let go? These are the human assets or liabilities, as the case may be, which cannot be found in a report of condition; but they are the factors that decide whether your prospective bank stock is a good or a bad investment.

National and state laws require that all banks under their authority shall furnish, when requested, sworn statements of condition at the close of business on certain dates—generally a few days past. In the case of national banks these calls are made at least five times a year and to a certain

extent periodically. Two copies are made in detail, each showing the salient facts affecting the bank's stability as shown by the books on that date. One copy is sent to the Government authorities at Washington and the other copy is kept on file for verification by the examiner on his next visit. These reports show the amount of stock held by the several directors, as well as the amount of loans made to them and to

These reports also show all loans in ex-cess of the prescribed limit; maturity and character of all loans; nature of the items comprising the bonds and securities ac-count; amount of cash on hand and in banks; average of cash reserve held for thirty days previous; the amount of money borrowed from other banks; interest paid and charged, and so on. A concise state-ment of the bank's condition is demanded, in fact, and may be considered as mathe-

matically correct.

For the purpose of comparison, it will be better for the investor or young business man to use the report made in response to a call rather than one voluntarily published, as bank officials are sometimes not above selecting opportune times for issuing re-ports. I have even known instances where they have loaned themselves money to fatten up deposits. Did it ever occur to the reader that a bank can at any time easily increase its deposits one hundred thousand dollars by loaning five of its friends twenty-five thousand dollars each, with the understanding that they should each have twenty thousand dollars of their loan on deposit? It is a sort of perpetual-motion affair; nevertheless it does the trick.

### Conditions Revealed by Figures

National banks are also required to furnish a condensed statement to a local newspaper for publication, and this is the report that will be available for the people interested. A copy of the published report is attached to the sworn statement of the publisher attesting publication and forwarded to the Government authorities for comparison with the other detailed report, mentioned before.

Any discrepancies between the published and the detailed reports must be accounted for and corrected. This is done in order to be sure that you and other people interested may have an opportunity to know, if you wish, just how your bank's affairs are being conducted.

conducted.

An omission of the item of bills payable, including certificates for money borrowed, from the published report of the condition of a large city bank once started an investigation that resulted in the bank's going into the hands of a receiver. The going into the hands of a receiver. The discrepancy caused the investigation, and not the fact itself. These reports show the condition as of record, but are no criterion of the financial possibilities—except when used for comparison with some previous reports of the same institution. All assets, as shown by the report, are considered good whether they are no corner. Their good, whether they are so or not. Their real worth is problematical. To illustrate this point, a report will be analyzed that was approved and published about two years ago:

	\$1,685,654,60

superficially this would seem to be a god report, with the stock showing a book raise of one hundred and thirty dollars. The principal causes for criticism may be food in the apparently small undivided prits and the fact that the bank is borrower interprive thousand dollars—in round numbers—presumably paying five or six or cent interest thereon, and carrying with nerve agents the sum of three hundred and seventy thousand dollars, drawing only not per cent.

The item of undivided profits might be easy justified from many causes. Assuming that the bank paid dividends quarterly and made a distribution on January first, the books would have been closed at that ine. If the bank had an interest department, paying two per cent interest semi-amaily, and due January fifteenth, on a specific of five hundred thousand dollars, that would also have cut down the profits at the time. If other current expenses were see thousand dollars all these items—mounting to eleven thousand dollars—ming out of the earnings between January list and the date of the report, say, February twenty-second, would have caused the result. These earnings could be easily stained as follows:

next on Government I next on other bonds, went on loans, 3%				00,0		\$1,000.00 5,000.00 3,420.00
in sterest, and so on	4		4		1	2,460.15
Total		3			q.	\$11,880.15
les smount paid out .				a.	15	11,000.00
Individed profits, less in te	res	t	100		,	\$880.15

The same proportionate income will continue and should be sufficient to pay the suring dividends, amounting to six per serial year, and carry three per cent analyto the surplus fund. This is based on the supposition that the assets were invested on an average return basis of four this quarter per cent. Hence the above spot shows a book value of about one maded and thirty dollars, constantly invested, and should have had a market tipe of about one hundred and twenty plans. I say should have; but, in fact, he bank is now in process of liquidation of another bank. The report showed the mat to be sound; but an analysis of the seat now shows an entirely different state of afairs.

## Analyzing the Report

1-Lorns and Discounts. This item brid be worth its book value; but, in at a rarely is for liquidation. So long as innested, this bank would probably have utinterest in full and be considered good. The start than sound business reasons—an that should have been cleaned up at up, before the security was impaired. It is speculative account was accepted of the whose personal influence was substituted for the usual margin of safety that had exist on loans secured by collateral the remedied this fault or enlarged it, specifing on the market. For liquidating the time may be reduced about five per cent. The case of the bank in question this tree a value of, say, four hundred and wenty-five thousand dollars.

1- Inited States Bonds. For reasons the impossible to have been foreseen

I wited States Bonds. For reasons by impossible to have been foreseen a avoided by national banks, the bonds of by them for securing circulation have breated greatly—not on account of security behind them, but because low income derived from them—not low income derived from them—not low income derived from them—not about two per cent. Bonds bought premium not only have lost that the but have also depreciated in some as much as from five to ten per these assets in the above case show a liquidating purposes—of, say, five

thousand dollars, including the asset, Premium on United States Bonds.

3—Bonds and Securities. This account shows the value at which the different items comprising it are carried on the books—generally the price at which they were purchased. Owing to market conditions such securities have recently fallen off greatly in value in the case of almost all banks, not only on average but because purchased for speculative possibilities rather than investment. Time might have shown gains far in excess of present recessions; but for our purpose we shall consider a loss of only five per cent on this item, say, twenty-five thousand dollars—not excessive, but quite a sum if charged against earnings.

4—Banking House, Furniture and Fixtures. This item comprises the office building, vault, furniture, and so on. Good, sound, conservative banking policy charges off a certain percentage of the cost of these items every year. Facts show that, except in extreme cases, such property depreciates very rapidly, and for realization purposes a bank vault is practically worthless. Who fancies second-hand bank furniture? As a selling proposition this item would show a

value of only twenty-five thousand dollars. 5—Other Real Estate. National banks are forbidden by law to loan money for mortgages on real estate, or hold—except for office purposes—any real estate; though they can take the same to secure debts previously contracted. This was the case in this instance; and the property, instead of being worth the amount stated, was worth only, say, about six thousand dollars, being a sawmill site after the lumber had been sold from the neighborhood. The assets as above analyzed show a loss as follows:

Depreciation of United Sta	tes	bon	ıds	gg.	2	\$ 3,000
Premium on United States			1		- 93	2,000
Banking house and fixtures		-	-	89	0	15,000
Other real estate	-		9	33	3	30,000
Bonds and securities .			8	82		25,000
Loans and discounts	-				- 83	25,000
Total depreciation						\$100,000

Cash items are worth one hundred per cent cash and need not be considered, as the only fact affecting them would be the downright dishonesty of the officers. The above losses, if not adjusted by time and exertion, would eliminate the stockholders' equity. Those in touch with the above affair consider that, as a going proposition, under proper executives, the losses may be recovered; but stress is laid on the personal equation.

# Reports of Trust Companies

To emphasize that feature is the purpose of this article. The above conditions were developed under a régime where the directors were dominated by a strong personality and, for various reasons, temporized, condoned or abetted tendencies that cumulatively were disastrous.

For comparison I will illustrate how the same report would appear if published for a trust company, where the personality of the directors was different. In this case we will assume that the executive committee controls the majority of stock, both in fact and in name, and that any loss will be felt by them more than all others. Hence selfish reasons insure a continuation of a policy that is profitable, both to the community and the institution. The same report, if issued by them, would cut up about as follows—except the two items of Bonds to Secure Circulation and Banknotes Outstanding:

1—Loans and Discounts. Every borrower is given to understand that his loan has a definite maturity and that the promises made at the time of borrowing will be fulfilled. The loan must be paid or reduced as agreed on. This condition is satisfactory to coming men, but not to going ones. The result of this policy is that the loan account is very much alive, or amply secured by collateral capable of liquidating above the loaning value, the whole account being worth ninety-nine per cent on six months' time. The policy was outlined by the directors as follows: "Mr. B., when we have the money we have the say about it; but when you have borrowed it you have the say."

the say."

2—United States Bonds. As a trust company has no use for holding United States bonds, this feature may be eliminated. Though the trust company in question holds some state bonds that have depreciated, these, unlike some United States bonds, have a definite maturity; and the

# Gay Vienna Went Dance-Mad Over It

ALL America and Europe today are fast in the spell of the Dance. The fascinating, irresistible rhythms of today's music enchant young and old alike—stir them to a new and subtle exhilaration, which seeks expression in the Hesitation, Tango, One Step, etc.

Fifty years ago, just another such wave of rhythm swept the two continents. Johann Strauss's famous orchestra was the sensation not only of Vienna but all Europe. And his "Beautiful Blue Danube" waltz lives today an enduring favorite. Great concert pianists like Josef Hofmann include it in their programs. Dancers the world over demand it for their ballroom music,

Play "The Beautiful Blue Danube" on your Virtuolo Player Piano by Instinct, and its bewitching spell lives anew. You know then what it is to have the waltz rhythm seize your very pulses and stir you to keen exultation.

Because the Virtuolo makes you unconscious of your playing. Its simple Acsolo buttons translate your very feelings into the music, and you find your-self playing on and on, just listening, and almost forgetting that you are doing the playing. No player made puts more dash and go into dance music.

# HALLET & DAVIS

# VIRTUOLO

# THE INSTINCTIVE PLAYER PIANO

You can see, hear, play the Virtuilo in leading cities and towns the country over. And we would far rather have you play it yourself and discover the thrill of Instinctive

Playing, than to read every argument we might write about it.

### Every Home Can Own a Virtuolo

The Virtuolo in the famous sunlight-toned Hallet & Davis Plano — endorsed by Johann Straus himself when he burred America — comes at \$650 to \$10.50.

In the well-known, artistic Conway Piano, \$495 and \$575. The Princesa Virtuolo, a small player for modest homes, \$450. Our Charge Account Plan permits you to select any style Virtuolo you perfer, on convenient payments.

You actually carnot afford to purchase any player until you have investigated this great invention.

### Send for the Free Virtuolo Book

This book explains why the Virtuolo is different from any other player piano, and tells the thingsynousant to know about it and its Instinctive Playing

Mail as the attached coupon for full information today – before you give yourself a chance to forger.

book loss will be recovered, as there is no question in regard to the security.

3-Bonds and Securities. In this item appears the value of personality. These directors, qualified by personal experience and observant students of the trend of things, buy bonds at intervals. If the report of condition of a year previous were available it would be seen that the item "with reserve agents" was far above legal requirements, and the stock and bond accounts would be correspondingly small, instead of being, as at present, far above apparent needs. The bond account, as it stands, represents values arrived at as follows:

There is a tide in the affairs of finance as well as of men, which, taken at the flood, leads on to fortune. The investment board of this company maintains a Burke's Peerage of investments and buys only securities of good character and antecedent-and then only at certain times when prices are low, considering the law of action and reaction in accordance with deductions justified by broad experience. Purchases are made in blocks of five thousand to ten thousand dollars, at prices that are attrac-tive by comparison with prices over a term of years as an investment proposition.

# The Stock and Bond Accounts

Should these investments show an appre ciation, a portion of them will be sold; though, instead of carrying the profit to the profit account and paying out the same as dividends, the balance of the item is carried at the book value. In the reports of condition made by trust companies the market value is published as well as the book value. Consider this when you review the next published report. Should you, however, find that the stock and bond accounts show a shrinkage there is no cause for alarm, as probably every other banking institution is in the same class. Remember that fresh eggs are sixty cents a dozen in December and thirty-five cents in May, and the intrinsic value is no less at one time than at the other. When the bond account of a con-servative institution is low probably every other unit of value is correspondingly low. At that time show your confidence in your directors and sit tight.

To return and illustrate: The Company purchased on a sound investment basis in

1907:

\$15,000 American Telephone and Tele-graph Convertible 4% bonds, at 83 It had sold previous to January, 1912: \$12,450.00 \$12,000 of the bonds at the average price

of \$100 \$12,000.00 The remaining \$3,000 of bonds are now carried at .

The objection may be raised that this is a misleading entry; but as the entry is ap-parent to every auditor and examiner, and is a counterbalance offsetting future losses that are bound to occur, I claim that the entry is correct. Numerous instances like the above will explain why the bond account will read: Market Value, \$500,000; and Book Value, \$475,421.

4—Banking House Furniture and Fixtures. In this case the fixtures include a sefe density walls that is a profitable recon-

safe-deposit vault that is a profitable prop-osition and which has already been charged off fifty per cent; and, as a going proposi-tion, the item is well worth the book value.

5-Other Real Estate. As trust companies are allowed to loan on mortgages as well as hold real estate it is safe to assume that the properties are worth the prices as carried; for if the property was taken to satisfy a mortgage it may be presumed that the margin allowed for safety when the mort-gage was placed has been protected. When a national bank holds real estate it may be safe to assume that the property was taken as a last resort at a price above the owner's equity: for, if below, the owner would have taken it and paid the loan. So probably the national bank gets in on top, while the

trust company gets in at the bottom.

These citations show why the bank might be forced to liquidate and the trust company become a going proposition, with the stock having a market value of one hun-dred and fifty dollars bid and one hundred and fifty-five dollars asked; and both reports of conditions might be mathematically correct!

Hence whether the stock you are con-sidering is or is not a good investment prop-osition depends entirely on the personality of the management. Before buying, compare the available reports to ascertain the trend of progress, and whether assets that

are bound to depreciate are charged off or not. The bank going ahead is anxious to do so; the others cannot. Is the stock seeking a buyer or a seller? And in the last analysis consider the question: How do the directors size up as men?

My attention was recently called to the personal element very emphatically. An institution that had, under the impetus gained by the advent of new management, made a very substantial gain was commenc-ing to retrograde. The novelty wearing off, vigilance was relaxed and conditions de-veloped that had no business justification. A strong personality present took exception to the trend and prescribed drastic remedies. This being unpopular, the doctor was fired; but his prescription was taken and the

his prescription was taken and the institution prospered.

Already the corner is turned and a continuance of the present policy will result in the institution's becoming creditable and profitable; and those who shouldered the load will be rewarded. The stock, with a book value of one hundred and thirty dollars and a very limited market round one hunand a very limited market round one hundred dollars, will probably become scarce-except at higher prices.

As an investment proposition pure and simple I should advise letting banking institutions alone. If you are interested for sentimental reasons there is an opportunity to give good service to your community by supporting a local institution that, if rightly conducted, may be as beneficial as the church—or, on the other hand, if misconducted, an unmitigated evil.

If all these conditions are satisfactory, and the return is attractive, there exists no financial reason why the purchase should not average as well as any, always remem-bering that you will be financially as well as morally responsible for the delinquencies of the institution to the extent of one hundred per cent assessment. If not prepared to let your head and hand accompany your pocketbook, let the stock alone.

# A Bank's Main Asset

The men are the main asset. Because a bank has degenerated and the stock is low may mean an opportunity for profit when newblood takes hold. On the other hand, the stock may be high and the causes that made

for success may have been removed.

Note who the president of the bank is and whether he is a sound, substantial business man, standing for what is best in the community, or a politician living on his wits and the troubles of others. Note whether the officers of the bank have themselves made successes in life, transacting their own business as they should, living well within their means; or whether they are heavy borrowers of money—just scrub-bing along to make ends meet. The personnel of the management is the real asset of a bank, and on that the real value of your bank stock depends.

Now in this vale of tears-when man is here today and gone tomorrow—is not the personality of a board of directors rather a slim asset? Personally I think it is; and, though I hold stocks in banks of which I am a factor, yet I do not want any stock in banks with which I am not thoroughly acquainted.

This means that the young business man should purchase bank stock only of institutions with which he deposits and is thor-oughly acquainted, treating such stock not as an investment but as a side business interest. When the young business man dies, however, his wife and children should make haste to dispose of his bank stock.

Women should do this not only out of duty to themselves but for the sake of the community. The great trouble with many banks today is—as I have already sug-gested!—that their stockholders' meetings must be held at the local cemetery in order to get a real quorum! This is wrong. The majority of the stock of a bank should be owned by the directors. That is the only thing which makes directors careful and thoroughly interested in their work. Hence avoid stocks of banks where the owners are quietly resting in the local cemetery!

The greater the percentage of stock represented on the board of directors, the better the bank; but the greater the percentage represented in the cemetery, the worse off is the bank.

Hence, when widows and children come to me asking about the bank stock they have inherited, I say: "Sell it to some one on the board of directors, in order that the owner thereof may attend meetings in person and not in spirit only."

# THE WAGE-EARNER AS AN INVESTOR

(Continued from Page 12)

When you come to the ordinary savings and loan associations among employees in large concerns you find such a bewildering array that, with the limited space remaining, I can only point out those which are either striking in formation or unique in method of teaching the thrift habit.

In most of these organizations the method is the same. It involves systematic

In most of these organizations the method is the same. It involves systematic savings of sums from five cents a week up, fines for non-payment of dues, and the lending of money to members at minimum rates of interest and on character. In the main there are two procedures. One provides for a definite period of saving, with a distribution of deposits and profits once or twice a year; the other is like a savings bank, in which the accumulations continue from year to year. With few exceptions, the associations are conducted by and for the workers.

The Savings and Loan Department of the Celluloid Company of Newark will illustrate the series of deposits system. Members pay weekly installments in sums of twenty-five cents or multiples. A fine of five cents is imposed for failure to deposit. On June fifteenth and December fifteenth the deposits and profits are distributed. A small surplus is kept for a sinking fund. To encourage the men and women to keep deposits intact, a small penalty is attached for

all withdrawals.

One aid to saving by this system is well worth duplicating everywhere. Scattered throughout the factory are receptacles for the deposit of money. On payday, or any other day, an employee with a loose quarter jingling in his pocket can put it in an envelope provided for the purpose, and drop it into the nearest box, from which it will be taken out at night and deposited to his credit. If he had kept that quarter an hour longer it might have been wasted on some useless expense. The officers of the fund find that these boxes are a great incentive to small saving.

# Department-Store Savings Systems

The same plan is in operation at the Sears-Roebuck Company, in Chicago, where deposits may begin with five cents. On some days hundreds of nickels in as many enveloses are found in the deposit boxes.

lopes are found in the deposit boxes.

The H. B. Claffin Mutual Benefit Association, in New York, has a Poor Box, into which applications for loans are dropped. This enables the borrower to make his request without publicity. A loan committee, composed of employees, meets every day to consider the applications.

The yearly clean-up of thrift results—

The yearly clean-up of thrift results—
made in December—is shown in the work
of the Employees' Bank of the Rogers-Peet
Company, in New York. Here you have
five different banks—three in retail stores,
one in the factory and one in the wholesale
department—all under one central control.
Savings from fifty cents up to ten dollars a
week are received. In order to secure the
largest possible number of depositors the
earnings, which largely come from loans,
are divided share and share alike. Thus the
employee who has saved only fifty dollars
gets as much dividend as his colleague who
has piled up two hundred dollars. This
prevents a few from monopolizing all the
profits.

Still another type of annual distribution of savings is exemplified by the Strawbridge & Clothier Savings Fund, of Philadelphia, which has distributed \$1,757,228.23 since its organization thirty years ago. The special feature is that any depositor may reinvest a part of his savings in a special and permanent fund, which is put out to work. Thus he can have one savings deposit for emergencies and another for money that he does not want to touch.

The beginnings of some of these associations are picturesque. The Deposit and Loan Bureau of the Filene Coöperative Association, composed of employees in a large Boston department store, is a case in point, For years there was no organized agency for saving in the establishment.

saving in the establishment.

Then a man entered the employ who had notions about thrift. He started a little bank in his right rear trousers pocket; accepted small deposits; banked them, and turned them back when the saver needed funds. The deposits grew so heavy that the

pocket could not accommodate them; so the bureau was started, which now contains a membership of 1661 depositors out of a possible 2089.

The bank has an office in the store, receives deposits from five cents up, and pays interest at the rate of five per cent. Loans are made on character at the rate of one cent on a dollar a month.

cent on a dollar a month.

Last November it was decided to wage a campaign for five hundred members in five days. The store was canvassed and ten more than the required number were secured in the stipulated time. Nor does the bureau rest on its laurels—it wages a constant crusade to bring everybody within the conservation fold. On January third every clerk who was not a depositor received this notice:

"This is the first Saturday of the New Year and it is the time to begin a regular system of saving money. Resolve to deposit a certain fixed sum in the bank regularly every week and not to withdraw any part of it until your savings have reached a certain sum."

Another notice that went to every employee was:

"If you are in need of money don't go to outside moneylenders or loan sharks. The Deposit and Loan Bureau is ready to help you in all such cases. No reasonable request for a loan is ever refused. All loans are strictly confidential."

No less picturesque was the inaugural of the Penny Bank in the factory of the Joseph & Feiss Company, in Cleveland. Here the sex line is strongly drawn among the workers. One day during the recreation period a group of girls who sewed at the same table began to count their pennies.

"Let's save them for a certain purpose,"
spoke up a thrifty Hungarian maiden.
They took the forewoman into their con-

They took the forewoman into their confidence; and out of it grew a bank that now includes the majority of employees and pays six per cent interest. The firm lends worthy borrowers reasonable sums and charges no interest.

One particularly helpful feature of this thrift system is the definite effort made to teach employees—especially women—the value of money. If a girl comes to work wearing a flashy pair of white shoes her forewoman asks her what she paid for them. As usually happens, the girl has been overcharged for an inferior quality of footwear. Her chief then gives her a little lesson in economic and practical purchasing. Again, if a girl wears a lot of false hair and is generally overdressed she is cautioned about simplicity of attire and the wisdom of concentrating on work and not on apparel.

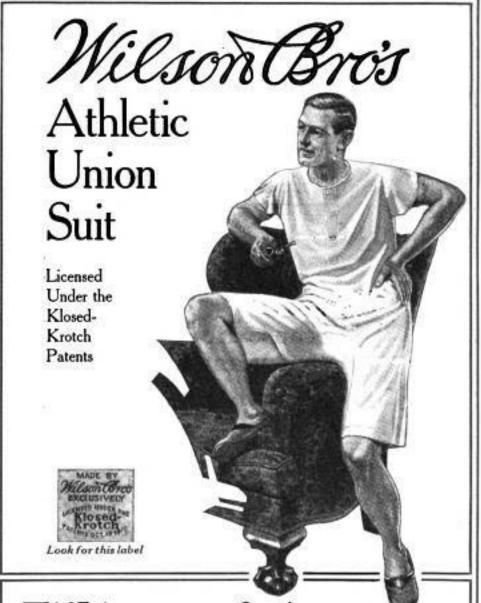

### The Diminishing Deposits Plan

Many savings and loan associations issue stock. The employees of the John Wanamaker Philadelphia Coöperative Association can buy both common and preferred. The preferred, for instance, has a par value of ten dollars, pays six per cent, and may be bought on weekly installments of twenty cents. Money is loaned to shareholders at six per cent a year.

Every possible aid to thrift is given in this store. There is even a John Wanamaker Junior Savings Fund, which receives deposits from five cents up. As in the Filene store, the employees are canvassed in order to make them save. A retired member of the staff makes it his business to advise his old co-workers about safe investments.

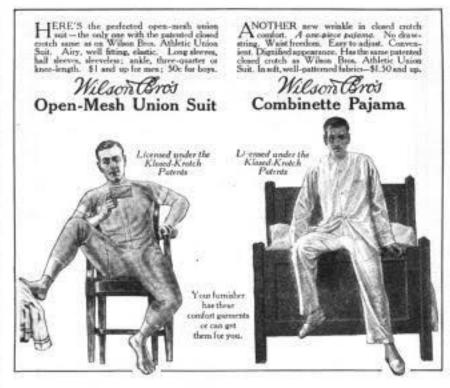

A unique plan of saving is in operation among the employees of the New York Life Insurance Company. Each person desiring to become a subscriber signifies this at the beginning of the year. He is then required to deposit one dollar on the first Monday in January; ninety-eight cents on the second Monday; ninety-six cents on the third Monday—and so on—the deposits decreasing by two cents a week until fifty deposits are made. By the middle of December the depositor has saved about twenty-five dollars. Any member who is more than three days late with his deposit is fined ten per cent of the amount due.

Any one withdrawing before the end of the series is taxed ten per cent of the sum he or she has on deposit. Loans are made

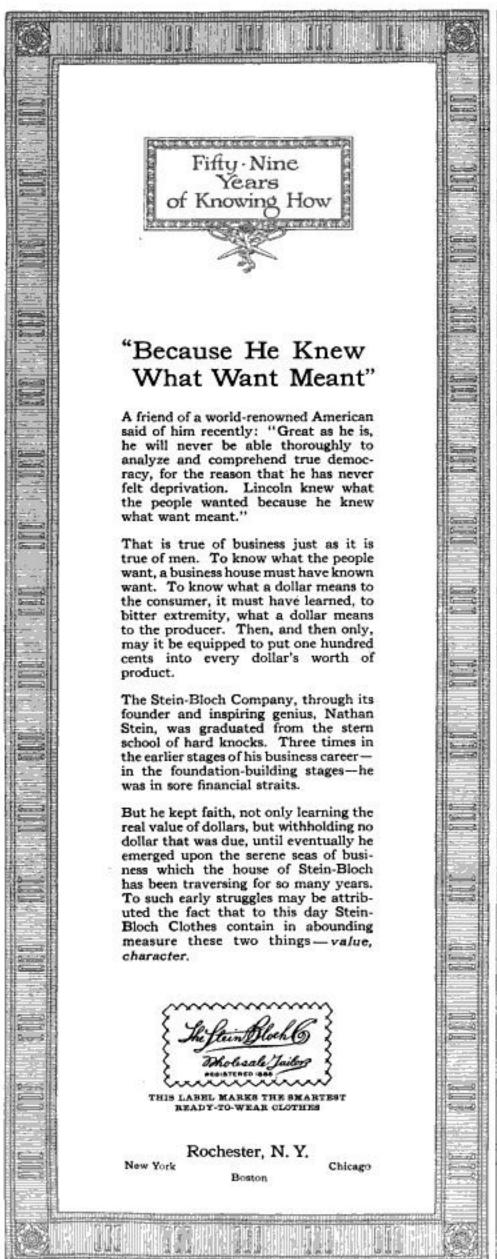

EASE in every pose. Smooth—convenient—comfortable. Permanently closed crotch gapless. No edges or buttons between the legs. Separate openings front and rear. Wilson Bros. have the exclusive right to use this patented closed crotch on this style of union suit—\$1.00 and up for men; 50 cents and up for boys.

> Other furnishings bearing the Wilson Great mark of quality include Shirts, Gloves, Hesiery, Suspenders, Neckwear, Handkerchiefs, etc.

Wilson Bros - Chicago

on the unindorsed note of the employee if he is known to the treasurer of the fund. The most desirable feature of this fund is the excellent way it encourages continuous saving.
Sometimes the savings and loan associa-

tion is operated in conjunction with a regu-lar sayings bank. Chicago furnishes an illustration with the Hibbard, Spencer & Bartlett Company Employees' Savings and Loan Association. The Northern Trust Company supplies the passbooks, deposit slips and loose-leaf ledger pages. Every Friday a bank representative comes to the store and receives the deposits. The ministore and receives the deposits. The mini-mum is twenty-five cents a week. Earnings are from three sources-from the bank, which pays three per cent; from loans made to members at six per cent; and from investments of the surplus in bonds. Last year the depositors got a total of 7.08 per

cent on their money.

The firm has encouraged the movement to the extent that on the first of this year it issued a letter to all employees cautioning them to be prudent, and stating, among

other things:

"A man or woman who is saving money is more valuable to an employer than one who is spending the last dollar.

More intimate is the system used by the National Cloak & Suit Company, in New York, which employs three thousand girls, most of whom are of foreign birth or extraction. Many have family burdens; so the plan has been to encourage them to start saving with a penny. As soon as the girl indicates her intention to become a regular saver she is given an envelope, which is

placed in the custody of the paymaster. When she has saved a dollar the company starts an account in her name at the Excel-sior Savings Bank. This enables the girls, who would shy at going to the bank them-selves, to become regular depositors. The envelope is used for the accumulation of the second dollar; and it goes, in turn, to the second dollar; and it goes, in turn, to the bank. The paymaster keeps the bank books. Thus the girls cannot withdraw money without giving an excellent reason. This firm lends money to its employees at a nominal rate of interest. Out of eleven thousand dollars loaned last year the loss was under one hundred dollars.

This leads us naturally to thrift among people who work in banks. You would naturally suppose that men and women who toil in the very atmosphere of money would be savers; but experience shows that they need incentive and encouragement.

### Thrift Among Young Bankers

One of the most striking of all these systems is employed by a great international banking house that has branches all over the world and a very large one in New York. It combines automatic saving and an old-age pension. In order to make the saving systematic the bank deducts five per cent of every employee's salary each month, and with it deposits to his credit a sum equal to twice the amount of his savings. This so-called Provident Fund receives interest

from the firm at five per cent a year.
Unlike the Metropolitan Fund it has no twenty-year clause. Any employee who re-tires after a reasonable service can take out all he has put in, together with the bank's generous contribution. One reason for this generosity is that these employees serve in every section of the globe. They are sub-ject to tropical fevers and the hazard of life

in strange regions.

Most of the big banks in New York have savings organizations among their employ-ees. In the Guaranty Trust Company, for instance, the Guaranty Club has a straight savings club that receives deposits from one dollar a week up. Under the auspices of a savings committee, and with the advice of the bank officials, it invests the proceeds in high class required. high-class securities. Last year the fund earned nearly eight per cent. An employee may buy stock in the company through this agency. The same system obtains in the Bankers' Trust Company.

The National City Bank accepts deposits of employees—who have a club—and pays them six per cent on sums up to five hun-dred dollars. The house of J. & W. Seligman & Company, in giving its employees their Christmas bonus—usually twentyfive per cent of their salaries—hands over only half in cash and deposits the remainder

in a savings fund.

And so it goes all over the country. Even the smaller towns have joined this thrift procession. The First National Bank, of

Joliet, Illinois, which wages a very intelligent campaign for savings deposits, including the collection of school children's deposits by automobile, has an Employees' Savings and Profit-sharing Fund that netted forty-five per cent on the investment last year. These employees save one-tenth of their salaries each month, which is used by the bank. At the end of the year the bank adds to the fund an amount equal to two and a half per cent of all dividends paid

during the year.

An imposing tribute to the scope of these organizations is found in the assets of the Pennsylvania Railroad Savings Fund, which has \$5,384,575 to its credit in such which has \$5,354,575 to his create in such ultra gilt-edged securities that the annual return is only three and a half per cent. The employees of the Cumberland Telephone & Telegraph Company—part of the Bell system in the South—have rolled up Bell system in the South—have rolled up nearly a million and a half dollars, on which

hearly a million and a half dollars, on which they receive five per cent.

Of course the regular purchase of stock in corporations is really a form of saving, espe-cially when it follows the plan put in opera-tion by the United States Steel Corporation. Any employee, from laborer up, can indi-cate the installment he wants to pay each month for stock and this sum is deduced from his new. The stock is offered at a rejecfrom his pay. The stock is offered at a price that is usually one point below the market at the time of the offer. That the employees sppreciate the opportunity is shown by the startling fact that last year 35,460 pur-chased 59,502 shares.

### Christmas Clubs

All systematic saving by workers is not done through their own organizations, bowever. Vastly differing agencies, with a multitude of purposes, carry the gospel of thrift to factory and fireside. Take the Vacation Savings Fund, which is under the wing of the National Civic Federation. Beginning as a modest medium to provide summer holidays for tired shopgirls in New York, it has grown into a nation-wide protest against

useless Christmas giving.
Then, too, there is the Christmas Club, which began, like so many of these movements, in a very unusual way. Some years ago a shrewd and live-minded young man worked as an accountant in a bank at Har-risburg, Pennsylvania. He noticed that a clerk employed in a local factory deposited about three hundred dollars every month on his own account. The observer was es-pecially interested when the clerk drew out the whole sum about the middle of December. The live-minded young man, whose name was Herbert F. Rawll, investigated and found that the large and persistent de-positor was the Santa Claus of the establishment where he worked. He collected the savings each month, deposited them to his own credit, and got the interest for his part in the transaction. He had persuaded his co-workers that the only way they could have a Christmas surplus was through him.

"If this scheme is so good for one man in one town it ought to be good enough for some other men in a great many towns,

said Mr. Rawll.

So he devised the Christmas Club scheme, by which regular weekly deposits, which may begin with two cents, create the holiday fund. It is now employed by more than a thousand banks throughout the United States. Last year these clubs had two million members, who saved forty

million dollars. What then is the lesson of this organized movement for thrift that extends from coast

to const?

It has a multitude of benefits. For one thing, it shows that the man who will save his money will also save time and material; and thus it is a good investment for the employer who encourages it.

It is making the employee more contented and therefore more efficient. More than this, it is proving to him that by his own efforts-and without altruistic aid or benevolent bonus—he can work out his economic salvation. Hence he becomes a selfmade, independent unit. As he develops materially he likewise strengthens the stability of the whole country; for a nation can prosper only to the degree that its people advance.

This campaign fits admirably into the machinery of a time when "Safety First!" is a much-heard slogan. Along with protection of life and limb must come that other and equally important safeguarding which concerns the pay envelope. Together these constructive agencies rear an impregnable bulwark for the worker and his wage.

# A Mere Veneer for a Union Suit

# Simplicity—The Secret of OLUS Superiority

The first layer of comfort is your UNDERWEAR. It's an unbroken, smooth-setting layer if it's an

OLUS is coat cut—opens all the way down. OLUS has closed erotch - no flaps, no bunching, only one thickness of material anywhere. OLUS has closed back - perfect fit from shoulder to crotch, no binding.

OLUS union suits are made in sixteen plain and fancy woven fabrics, including nainworks, madras, pongees, silks and silk mixtures, also plain and mesh knitted. Prices \$1.00, \$1.50, \$2.00, \$2.50 and \$3.00.

COAT-CUT UNION SUIT (Loose Fitting)

The Coat-cut feature, found only in OLUS, makes possible a closed back and permanently closed crotch, protecting the body at every point, with only one thickness of cloth anywhere.

OLUS One Piece Pajamas for Lounging, Resting and Comfortable Sleep

are made on the same principle as the OLUS union suit, coat cut-closed crotch-closed back and only one layer of material anywhere. OLUS Pajama has no string around the waist, thus doing away with the most uncomfortable and unhealthful feature of the ordinary ajama which is always too tight or too loose.

OLUS Pajama has closed back and because it is any fiece cannot work up. The weater, protected all over all the time, presents an

appearance not afforded by and surpassing the old style pajama or night shirt.

OLUS Pajama cannot drag around the beels like an ordinary pajama or flap around the legs like a night shirt.

Price \$1.50 to \$8.50. Materials include madras, crepes, purgee, silk and silk mixtures. Plain or trimmed in handsome self-or contrasting colors.

When you buy UNDERWEAR or PAJAMAS think of OLUS. Insist on OLUS. Ask your dealer for OLUS. If he has not yet stocked OLUS, send us your size with price and we will see that you are supplied Write for important booklet, Free. To Dealers:-Your wholesaler carries OLUS.

THE GIRARD COMPANY, Makers, Dept. O, 346 Broadway, New York City

# The car twelve months ahead

From the Manchester, England, Dispatch:-

T is only after mature reflection that one is able to grasp the importance of the enormous improvements embodied in the Cadillac A chassis. We have been so long accustomed to believing and being told that the English car is indisputably ahead of any other construction in the world that it comes as something of a shock when we are faced with a car successfully embodying features which are as yet in the merely experimental stage in British car builders' workshops.

On the Cadillac car will be found an interesting example of a two-speed back axle, and we may here remark that the construction has been thor-oughly tested and found serviceable and reliable, both in the United States and in Europe. There is no element of experiment about the work; it has proved itself. The pressing of a button throws the low or the high-gear on the axle into operation as required, and that is all about it. They tell me that, as a test, the car was driven from London to Edinburgh with a full load without handling the gear-change lever at all. Pressing the button was all that was required.

Having admired the axles to our hearts' content, we are at liberty to examine the many other features of the Cadillac chassis, which calls for close examination. There is the self-starter, which will start the engine a thousand times without a miss. There is the neat little mechan-ical tyre pump. This is one of the finest chassis, taking all things into consideration, that ever left the United States just as an ordinary proposition. All her improvements are practically thrown in. I should term her the push-the-button car. So far as ordinary practice is concerned, she is equal to any. Her unique improvements have placed her twelve months ahead."

Cadillac Motor Car Co. Detroit, Mich.

# THE LETTERS OF WILLIAM GREEN

# The Forthcoming Fourth of July

EAR AUNT: Hennry Begg and me D were haven sevrel orguments lately about hollydays and wether Christmas or the Forth of July was the gratest and we do not seme to be abul to get it settuld and so we thought of riten to you becaws the Forth of July is commen round agen in a littul wile and it will be Christmas soon after that and we would like to know about it.

We have ast a grate menny peepul round here about it but they do not seme to know how important it is and they are appto laff and say it all depenns on how you look at it witch is a poor ansur don't you think like a teecher sumtimes makes wenn she does not know and tells you to wurk it out for your-

self and not always be asten her.

Hennry said a teecher otto be like an ensicklepedia so you could open her ennywares and find out what you wanto know without enny bother but she is not and so I

supoas nobuddy is to blaim.

A teecher is a wunderful thing when you are yung and do not have so mutch expearence but when you get oalder you begin to see that she is mutch the saim as all of us an sumtimes a littul moar so. It is a deliteful thing to be a teecher though and maybee haffto spank sum boy who will be president of the Yoonited States sumday and be abul to look back with a grate deel of pride.

Hennry Begg says when a teecher asts you how long it takes a lion to eat a sheap

aftur a bare can est it in two hours and a wulf in three hours and a wild cat in fore hours and the bare has been eaten half an hours and the bare has been eaten half an hour and the wulf ten minnets and the wild cat forty minnets and the lion can eat it in half an hour in the furst place. And she expecks you to tell it out of your head in a minnet when you have just been thinken about a serkus or a bawl gaim.

And besides Hennry says a bare could not eat a sheap enny way becaws it mite be color a black have and out hunsey because

onley a black bare and eat hunney becaws

you cannot always tell.

I gess you otto eckscuse me for getten so far away frum the Forth of July and Christmas but sumtimes a boy's hart gets full of sumthing about school witch he hassto get out before he can talk about ennything

And Hennry and me know you are always full of simpathy for us becaws you are so luvly and know how to cumfurt a boy when he is full of pane like Hennry was the time he is full of pane like Hennry was the time he bloo off part of his thumm wile he was taken a catridge out of the shell by melten it in the fire with the best intenshuns.

And sumday when he is famus he will re-word you for it dedd or alive witch is the kind of a boy Hennry is.

The way we got started about the Forth of July and Christmas was Hennry said Collumbuss was a grater man than Wash-ington because he discussed it wile Wash-

ington becaws he discuvvered it wile Washington found it alreddy hear when he was born and if it was not for Collumbuss it would have been no chanst for Washington to be the father of it becaws it would not be

there to be the father of.

Hennry said Collumbuss was a verry poor boy who ponned his juels to the queen for three small shipps and was almost discurridged in the middul of the ocean when he hurd sumbuddy say Sail On! witch was a pome menny cenchuries afturwurds.

And so he went onto the Yoonited States and was met with grate pleshure by the Indyuns frum witch we afturwurds took it. After Collumbuss discuvvered it he dide

in sorro and dissgrace and is now berried in sevrel difrunt places menny of witch are not him but it may be there is a littul of him in each place but Hennry said he was not sure but it did not matter ennyway.

Hennry said after Collumbuss was berried he became a verry grate man witch is

offen the case.

Hennry said after Collumbuss discuv-vered it it was a simpul thing for Washington, who lived a grate menny yeers and dide full of honner and glorey beein bledd to deth by dockters witch they thought was the best thing to do but it turned out rong for Washington.

Washington called the thurtene collynies together after the tee was throne into Bostun harbor and they all charged up Bunker Hill as soon as they saw the wites of thar eyes.

As soon as it was over Patrick Henn made a speach and said give me libburt or give me deth witch was published in t Fiffth Reeder and was a grate shock to Ki

Gorge when he redd it.

Then they all sined the Decklarashun Independence followed by Jon Hance and menny uthers. Hennry said this was the Forth of Jo

witch happened to be a good time becau would be verry could for bands to play o dores if it was in the wintertime but Chri mas does not make so mutch difrunce caws you haffto stay inside all day and

Hennry said a boy is appto make a gr menny mistakes on the Forth of July 1 loden a big cann with mudd and sum per of brick and nales and other things and the putten a big charge of powder under it a liten the fews and after wile looken inside it close to see if it is goen off witch it of close.

Then your muther cums rushen out v a grate shreak and gethers you up in arms as mutch as she can get and takes in the house and the uther boys go s

home glad it is not them. But a boy is tuff and unless you get the lockjaw you out agen in a few days looken at the pware it happend.

# In Goodyear Tires, with the Double-Thick All-Weather Tread, We Offer You

# The Utmost in a Tire

# How We Proved This

We have for years kept scores of experts at research and experiment—all to lower your cost per mile. Most of these men were technical graduates. Their efforts have cost us \$100,000 per year.

They have built in our laboratory 8 or 10 tires per day. They have tried out some 2,000 formulas, some 200 fabrics, countless methods and devices.

They have put these tires on testing machines to run under road conditions. They have worn them out in road use while meters recorded the mileage. This, remember, for years and years, with 8 or 10 new tires daily. Always seeking a lower cost per mile.

They have compared, in the same way, rival tires with our own. This to make sure that no other maker had found any way to excel us.

They have watched Goodyear tires which came back for adjustment—analyzed the faults. And they have found some way to correct each fault, regardless of cost.

They have strengthened the fabric, toughened the rubber, found out the best way to combat every tire trouble.

Now these men say that No-Rim-Cut tires mark the best they know. A thousand efforts have shown no way to improve them. And no rival tire reveals a single advantage. So far as men know at the present time, we offer you here the utmost in a tire. And we offer you so much more than others that these tires have become the largest-selling tires in the world.

# Four Exclusive Features in No-Rim-Cut Tires

Here are four ways in which No-Rim-Cut tires excel all other tires.

They prevent rim-cutting in a way which for many years has proved faultless.

Many other attempts to accomplish this have resulted in faulty tires. The Goodyear method has no shortcomings. And hundreds of thousands have proved it in [1] libbs.

This method—which we control has ended a trouble which ruins nearly one-third of all old-type tires, as per our last statistics.

# Blow-Outs

No-Rim-Cut tires are the only tires which are final-cured on air-filled fabric tubes—under actual road conditions, This "On-Air" cure means an extra cost of \$1,500 daily—all to save the countless blow-outs which are due to wrinkled fabric.

# Loose Treads

We alone use a patent method which lessens by 60 per cent the risk of tread separation. Hundreds of large rubber rivets are formed at the point where this trouble occurs.

And Goodyears are the only tires with double-thick All-Weather treads. As smooth as a plain tread, flat and regular, but offering wet roads countless sharp-edged grips. This tread alone has completely solved all the problems of anti-skids.

# Yet 16 Makes Cost More

Despite all these costly exclusive features, Goodyear prices are below 16 other makes of tires. Some cost up to one-half more. Goodyear prices are due to enormous output. We are now making as high as 10,000 pneumatic motor tires daily. Our overhead cost has been reduced by efficiency 24 per cent. And our margin of profit last year was brought down to 6½ per cent.

No-Rim-Cut tires used to cost onefifth more than other standard tires. And they give you today all that any price can buy. On mileage records they have won the topmost place in Tiredom.

Any dealer, if you ask him, will supply these matchless tires.

# OUT-OF-DOORS

# Hints on Vacation Houses

HOW and where shall one spend the summer vacation? The answer is not so easy to be read in the stars as it is in the pocketbook. Having arranged the elemental, general or fundamental principles of the proposition with the boss, the next thing to do is to consult the ultimate oracle that except the consult the started or the terriles the coin. that carries the coin. Sometimes that oracle says you must be content with a week or so at some farm not far from the city, where

the farmer has grown too tired to work and so runs a resort—mostly by his wife's labor, he himself doing little but tell how good the fishing used to be.

There are grades in the country farm and the country resort, all nicely adjusted to catch the vacation dollar; but, after all, a hammock is a hammock, and almost any place where you have leighted to catch the vacation dollar. place where you have leisure is good enough for larking and spooning if you are young, or for loafing and smoking if you are old. or for loafing and smoking if you are old. You can board in a resort for a dollar a day, or ascend the price scale until you pay four hundred a month for a cottage in the North Woods, where papa gets out almost every other Saturday night if he has luck and does not like it better in the city.

As to localities, there never was any country laid out better for vacation purposes than these same United States. All the way from Maine to Oregon there is a grand summer country ready and waiting

grand summer country ready and waiting

grand summer country ready and waiting for you; and in that country you can get almost any sort of game you want, from log cabin or tent to cottage or swell hotel. Summer-resorting has been brought to a science in every one of these Northern pine countries where lakes and streams are numerous. From Allegash to Glacier Park; from Manitowish to the Rogue River Valley; in upper Dakota or even in lower Saskatchewan and Alberta—you will find a summer country waiting for you, and in it some person or persons who have made ready for your coming, generally minded to transfer your coin from your pockets to their own. their own.

their own.

The ability to scent a round iron dollar in any weather is not confined to the East or the Middle West. Even in the remotest fastnesses of the Rockies you will find that your vacation has been all thought out and planned for you by some one on the ground. There has always been a fascination for Eastern folks in the ranch life of the West. This year there are many Western resorts advertised as ranches, which offer the attractions of horseback riding, fishing, and so on. One such circular comes from the so on. One such circular comes from the Big Horn Mountains, as an instance, and there are others from different parts of

There is no better exercise than horse-back riding; and there is no bluer sky or better air than that of the high plains, or the foothills, or the mountains. The guides out there will tell you how abundant the big game used to be and how large the trout once were. At least the mountains are as abundant and as large as they ever were—as restful and logical, consoling and rejuve-nating. It is hard to beat the mountains for a vacation if the oracle of your pocketbook allows the thought.

### Summer Holidays in the Woods

Most of us go North in the summertime rather than West, in part because of the change of climate, but more because of the proximity to the larger Eastern cities and of the attractive vacation countries of the North Woods. Perhaps you may pass your week or two weeks, your month or two months, in some Northern country where once there were pine forests, and where yet the remaining trees stand tall and the water runs clear and cold and you need a blanket at night. This is not to say that only Northern folks have summer vacations and that all Northern folks go North. There are many mountain districts in the Southern states that are delightful in the summer-time; and all through California the sum-mer seashore life equals that of the winter season, which is better known to the Northern tourists who go thither. Whatever be your choice of a vacation ground, you go there as a transient. Per-

haps you go to a large hotel more or less badly run, or to a small one that is worse. There is benefit even in that, though you will put up with inconveniences there you would not tolerate at home—bad beds, had food, bad water, bad service, and a certain

amount of danger from disease.

It is only the loyalty of vacation folks to
the vacation idea which sometimes makes them stoutly asseverate that they have had a perfectly "bully" time, when their time would have been just as bully had they stayed at home in a cool cellar or camped out near the bathtub.

Every one to his own taste and in accordance with his own means in these matters. To me, it seems an easy guess that a vacation will be better if it affords an absolute change of scene and manner of life. Moreover one will get more good out of a vacation not passed in a crowd. Your family, for instance, will rest better if you have a little cottage or a big tent all your own than if you divide two or three small rooms in a

Perhaps they will enjoy it yet more if you go farther into the woods and turn your hotel cottage into a log camp on some less frequented water. Or as you advance in vacation skill and as your wife becomes used to life in the woods—which the kids always like—you may shake off civilization altogether and take to the tent, where you do your own cooking and your own work. This latter proposition is more apt to appeal to bachelors or to young men who go in small parties, though it is entirely practi-cable for a family.

Again every one to his taste; but to me it seems that the tired business man can get

about as good a run for his vacation money in this way as in any other.

# In Case of Mosquitoes

If you go to a summer resort you do not need any hints, points or suggestions. Just take all the money you have, borrow some more, give it all to the hotel people—and then walk home and try to forget it. The main memory you will have of your vacation is the general feeling that other people have more diamonds than your family, and your wife's assurance that she cannot see why that Smith girl should be asked oftener to dance than your own daughter Elleen.

to dance than your own daughter Eileen.

If, however, you wish to take the plunge into camp life in your vacation season there are some things that perhaps you might well consider in advance. For instance, what is the best all-round tent? The answer is that there is no best all-round tent any more than there is a best all-round rifle or shot-gun. It all depends on where you go and hat you do.

The vacation en famille, more or less per-The vacation en famille, more or less permanent in location, is apt to indicate a wall tent as the vacation home. Indeed the wall tent is the typical tent of the white man. He built it as near like a house as he could, with upright sides and ends, and a sloping roof running down from a ridge-pole. You can get wall tents from six feet square up to forty feet long. Some of them have board floors and boarded sides, and sidewalks in front of them. In some of them sidewalks in front of them. In some of them you can stand up and in others you cannot. Some of them are heavy and some are light. In short, in this one model of tent you have a great range of choice.

The main virtue of the wall tent is its roominess. It will do as a sort of house when it rains. You can keep it warm if it grows cold; and by putting a fly over it you.

grows cold; and by putting a fly over it you can keep it fairly cool when the weather is warm outside. But, at the same time, most wall tents are close and stuffy. The air does not seep through canvas, especially when it is damp. You will have to use the wall tent as you do the hall bedroom at home open the windows and leave the door ajar. That means perhaps mosquitoes—a situation which, in turn, opens up a series of

Tentmakers have improved in their work steadily; but in one essential they seem not to have improved at all-that of ventilato have improved at all—that or ventua-tion. Some maker of every-day wall tents is going to make a big business success one of these days by building wall tents with good ventilating windows in them—win-dows covered with mosquito bars. At pres-ent it is only in the specially made tents that you can get good ventilation or good protestion against insect nexts. protection against insect pests.

The mosquito pest has spoiled many a vacation for a woman, or even a man. If you do not sleep perfectly at night your vacation is a failure. As a general rule, it is not enough to have head nets to wear at night. That is an uncomfortable way of putting in the night. Your whole tent should be mosquito-proof if you are in the mosquito country.

Most city folks think it is enough to

drape a mosquito bar carelessly across the front of the tent. Perhaps they close half of the open end of the tent. That means they swelter and suffocate if the weather is warm, because very likely the tent is not provided with mosquito-proof ventilating

windows.

You can buy a tent that has a bobbinet front. Again, you can buy an inside tent of mosquito netting or cheesecloth, which can be tied to the ridgepole inside and dropped down over the beds at night. All this shuts off a certain amount of air. In general, therefore, it is a good hint to study your therefore, it is a good hint to study your wall tent and its possibilities before you adopt it as your vacation home.

of the methods above suggested, that of the inside net is the best. The edges of this inner tent should be heavily shotted so that it will lie close to the floor. You can help this out by putting the rod cases or articles of camp furniture on the edges of the tent netting. Of course you have to lift the edge of this net when you come in at the tent door; and, of course, then some mosquitoes

of come in with you.

Of one general proposition you may rest pretty well assured—no tent is mosquito-proof that does not have a floor sewed into t. The best sod cloth and inside net ar-

it. The best sod cloth and inside net arrangement you can devise will let some mosquitoes in round the edges in spite of anything you can do unless the floor is sewed to the walls of the tent.

It is just as well to harken a bit about this mosquito business, for your comfort in camp in the average wilderness vacation is lessened much more by mosquitoes than it is by cold or rain. Now there are men who live in fly countries all the time and carry on work.

In far-off Alaska, all over the Rocky Mountains, in the timber or tundra country of the wet Pacific slope far to the north, where mosquitoes swarm in millions and constitute a pest such as is not comprehended by average Easterners, men live and work—do prospecting, mining, engineering, railroad building, packing, traveling—not as sport, but as a business. They are children to alone at night—and sleen are obliged to sleep at night—and sleep comfortably—or they could not carry on their work. Naturally it is to some of these professions that we might well turn to get

knowledge on the mosquito question.

The general principles of the ideal mosquito tent have long been accepted by Eastern manufacturers, but the most perfect mosquito tent I ever saw I ran across last summer for the first time. It was made in a Western city, after a design said to have been invented by a member of the Geodetic Survey in Alaska. If it will work in Alaska it will work anywhere.

## A Door With a Puckering-String

The material is not of heavy duck, but a light Egyptian cotton, sometimes called balloon silk. In size it is seven by seven, very high in the ridgepole and on the walls, the tent in its bag weighing only about

twelve pounds.

A light waterproof floor is sewed into it.
Both ends are sewed into it. On each side there are two large netted windows, affording abundant ventilation. There are flaps arranged for these windows that can be

buttoned down in case of rain.
In each end of this tent there is yet another large window for ventilation. The roof projects three or four inches all round over the walls, making eaves that keep the water out of the open windows in case of rain. The front door is not a door at all, but a hole, and it is round—not triangular. This hole is fitted with a sleeve, like the trap of a fyke-net-the sleeve or funnel being made of light drilling. You crawl through this hole and, so to speak, pull it in after you, and tie a knot in it; at least, there is a

puckering string by which you can close the bag that makes the entrance of the tent. Once inside you have a large, roomy house in which you can stand up with comfort, lie down on your beds in comfort, and let the weather rage. No mosquito can get at you unless you take it in on your clothes. In case you have done that you can put a wet sock into operation. At first you may think the tent a little close, but soon you will see that the ventilation is

There are variants of this mosquito tent used in Alaska, some of them A tents of heavy duck, provided with one little window heavy duck, provided with one little window high up—mankillers of the worst type; but the tent made as above is practical. It can be pitched rather quickly. Make your bed of boughs or leaves, or whatever you can get on the ground. Throw your tent on top of it. Peg the bottom out loosely at each corner. You do not put the ridgepole inside the tent at all.

The roof runs up into a four-inch comb, in which is a line of grommets, or big eyelets, let in the canvas. You can run a rope through these and lash the top to a ridge-pole above the tent. Use two crotches—at each end of your ridgepole—and roughly hoist your tent to its full height. Crawl inside throw your warher into one corner. hoist your tent to its full height. Crawl inside, throw your warbag into one corner, your bedroll into the other; and have your chum do the same on his side. This will hold the floor in shape well enough for the night, and it is all the work of only a few moments. If your camp is permanent you can take more pains with the pitching. You can buy a tent like this in one-man, twomen or four-men size; and the largest will not weigh more than the little A tent of heavy duck you once used for smothering

I am strong for this wall tent, much as I dislike wall tents in general, because it has abundant windowspace in it, and because it will afford a good night's sleep in any weather or any amount of mosquitoes. So if you plan tent life in the North Woods you might do very well to keep your eye on this sort of wall tent. It is professional, not amateur.

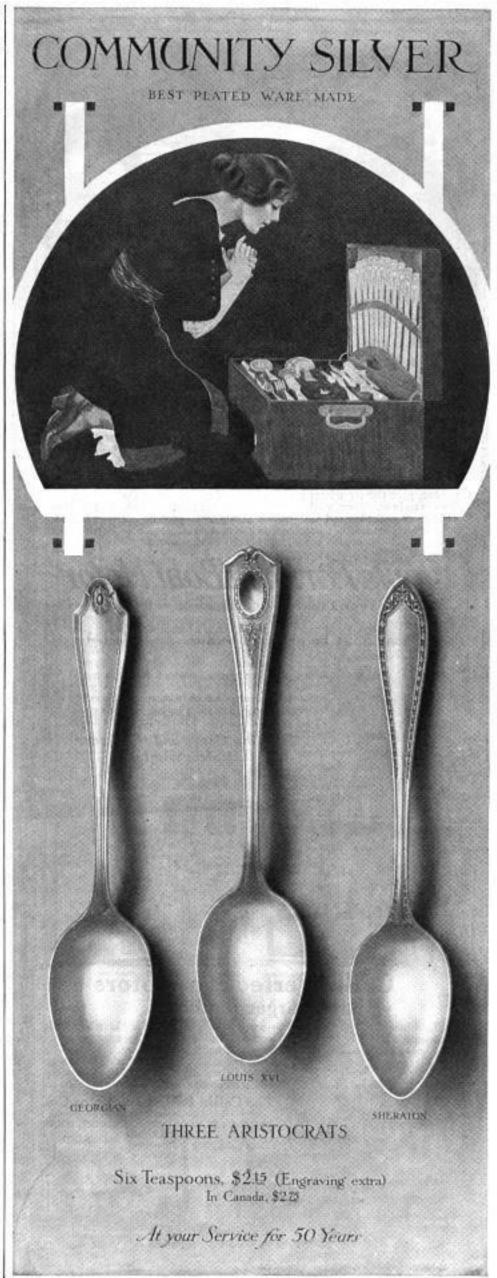

### Openfront Models

You should not forget your fly dope, of course, whether you be angler or camper; but in very bad fly country dope is no defense—you will have to use netting or a mosquito tent. In Africa the safari outmosquito tent. In Africa the safari outfitters give you bed nets, which are slung
from the roof of the tent, the sides dropping
down round your bed. Your tent boy tucks
in the edges when you go to sleep. That is
all right unless you get the netting loose
during the night. The beauty of the mosquito tent above outlined is that you cannot get the netting loose. Another great
advantage is that you do not hear the buzz
of the mosquitoes close about your ears,
as you are bound to do if you use a bed net.
You can get tents in all sorts and shapes,
embodying the best of the foregoing prin-

embodying the best of the foregoing principles, sometimes with the floor sewed in and sometimes with inside nets rigged to drop down all round. I tried one of the small shelter tents, triangular in shape, running down to a point behind, last fall on a hunt where mosquitoes were bad. I fitted the tent with an inner net of bobbinet. fitted the tent with an inner net of bobbinet. There was no floor sewed to the tent. Two of us occupied this tent and we did our best to keep out the mosquitoes. They got at us in spite of everything. Such a tent will do in good country and good weather where there are few mosquitoes, and where the transportation is so bad that you cannot get a better tent. The argument for it ends about there. It is better on paper than on the ground, and is amateur—not professional.

As much is true of many other patent inventions, ingenious as makeshifts but not accepted by the seasoned outdoor men as useful in every-day work. If you are walking and carrying your own outfit, and like to think you are pretty hardy, and are not apt to be much bothered by insects, you may take one of these little tents, which only weigh four or five pounds. In good weather conditions such a tent is comfort-able with a campfire in front of it. In bad weather conditions it is not comfortable at all: and as a summer home or a vacation rendezvous it, therefore, is not to be commended, and should not even be considered

Of course all these matters bring us to the two basic factors in any vacation—the pocketbook and the transportation. The sort of transport you have must determine to some extent the sort of vacation you are going to have if you are to live in camp. In a dry country almost any sort of tent will answer, and the one most open to the air is the best one for you. There are many forms of shelter tents in openfront models. One is called the baker tent, because its roof and walls are set at the angles of a reflector oven. It is a healthful and pleasant

tent even in cold weather, for you can have a good fire in front of it and so keep warm.

Your catalogue will also show you such tents made with porches and with floors sewed in. Perhaps you can leave the porch flap up and put in a door of your own, made of bobbinet or cheesecloth. The main thing is to get all the air at night you possibly can. The better your transportation facilican. The better your transportation achities, the better your tent may be. Men live
in tents all through the summer in New
Brunswick, Nova Scotia, Labrador, Alaska,
the subarctic country of the Yukon—
because they know how to live there. By
using a little judgment, therefore, you also will be able to live out-of-doors in comfort in your selected country, in almost any sort

of conditions that are apt to occur.

In some of the Far Northern countries mosquitoes come in assorted sizes—some so large that they will bite through a leather glove, and others so small that they will go directly through an ordinary mosquito bar. I think that even in our lower latitudes a good many mosquitoes will crawl through the ordinary mosquito bar. Bobbinet is better, and English cheesecloth is still better. A good bed net is made with a canvas top—say, three feet by six—with shotted sides six or eight feet deep, made of cheesecloth. It sounds a little stuffy, but

it keeps them out.

In Northwestern Canada travelers use what they call a mosquito tent. It is not very different from a very large bed net. It is pitched with a ridgepole and stands about three feet high. You erect this over your bed and crawl in under it. The walls are of cheesecloth or bobbinet. This gives you good air and protects you from dew as

well as from mosquitoes.

In the West I have always liked the
Indian lodge as the best of outdoor houses. That is the Indian's basic idea of a tent as against the wall tent the white man makes. One is conical and the other rectangular; but the teepee is by no means mosquitoproof, even though sometimes filled with smoke at night. Of course you could rig bed nets in a teepee as well as in any other kind of tent. Ventilation in a teepee is better than in the white man's tent, and it is roomy and comfortable. No teepee Indian ever had tuberculosis, but his people are dying like flies of it in cabins and wall tents. At the same time the teepee is bulky and heavy, and, in fact, is impossible for

the average vacation.

If I were going into the Rockies for a permanent camp I would use a teepee, because I think it is the most practical of the aboriginal homes; but some men do not like teepees. They are, of course, out of the question for the average camper in the East or North, and, indeed, are not much used

by vacation people anywhere.

### A Capital Offense

Your vacation home ought to allow com-fort in any sort of weather; and sometimes the weather gets wet and cold in summer. The worst thing about a wall tent then, next to its lack of ventilation, is the diffi-culty of keeping it dry and warm. For this reason an ingenious man has invented a wall tent in which one whole side lifts up into a porch, so that you can have a fire in front. Of course you can have a fire in a teepee right on the floor. You can have a stove in your wall tent; but to my mind a stove in any tent, except in extremely cold weather, ought to be considered a capital offense. It makes the tent still more stuffy and hot.

In the average campstove the fire goes out about as quickly as you build it, and it is practically impossible to keep a fire in one of them overnight. The average summer camp will not need a stove—unless it is used out in the open, clear away from the tent, which of itself is also more or less reiminal in view of the pleasure of eaching. criminal in view of the pleasure of cooking at the open fire. This criticism of the stove, however, must be given with qualification; for in some countries you cannot get wood for a campfire, and so perforce must have a stove, even though you carry it on your own back.

So, always considering transportation and the personnel of your party, and the experience of the weakest member in outdoor life, you will have to select your tent—closed or openface—with or without a permanent floor, in accordance with your guess as to what the weather and mosquitoes are going

to do to you.

The openface tent is, in fact, a sort of amateur fad. It is considered the correct thing by some men who have not thought much about it, and by others who have thought a great deal about it. A quarter of a century or more ago there was an old woodsman by the name of Sears, who wrote over the name Nessmuk-an ingenious old solitary woodsman who had ideas of his own, and who was the founder and forerunner of the modern school of camping light.

Mr. Nessmuk invented a hunting knife, Mr. Nessmuk invented a nunting knile, a hunting ax, a packsack, a manner of building a campfire and a way of pitching a tent. He made his tent open in front, with sides and roof converging to a low wall at the rear. He built a little frame of poles and tacked his light drilling on to this, the front opening being about four feet in heighthe tent itself being intended as a sleeping shelter. shelter.

Such a tent is not much good in case of rain, but the old woodsman managed to make it do by means of shelters of boughs at the sides. It took a little while to fix this tent, but the whole affair could be taken down and packed with little trouble. Such a tent can be made quite warm in cold weather if you know how to build a lasting campfire in front of it.

The baker tent, and indeed all the oper face tents, are only modified forms of the old Nessmuk bivouac shelter. You cer-tainly sleep well in such a shelter, for you are warm and you breathe good air.

### The Three-in-One Tent

Besides these square-front, openface models, there are many sorts of single-pole, conical or pyramid tents, which can be put up quickly. The miner's tent is the simplest of these—a broad-based pyramid, with a single upright centerpole inside. It is very quickly pitched, and is very com-pact when made of the light modern ma-terials and not of heavy duck. This is a modification of the round tent which was terials and not of heavy duck. This is a modification of the round tent, which was a modification of the teepee. The door is forned by a flap inside, the opening running not quite to the top of the tent. Such a tent will keep off rain, and it is all right for men who are accustomed to living simply in the open or who are traveling about from day to day.

An Eastern outfitter makes a big round tent, with a single centerpole and a bood

tent, with a single centerpole and a hood built round an iron ring-a modification of the old Indian teepee idea. A very decent permanent camp can be built with one of these tents, but they are hard to put up and require a large number of pins and ropes. No white man can build a teepee.

An ingenious mind undertook to make a tent that would be a cross between the wall

tent, the A tent and the single-pole or miner's tent. Moreover, he did it, and made a very effective tent, which has about as much room in the right place, weight for weight, as any pattern yet cut. This tent has a single upright pole, which is used in the front end. The roof runs down to a low wall at the rear. The sides slope from the peak like those of an A tent, merging into the wall behind

The floor of this tent is square; the front has two flaps that meet in the middle, and over it there may be used a triangular fly, which can be shifted in front and used as a

Such a tent can be easily made as mosquito-proof as any. It can be used as an openfront camp or as a closed tent. It ought to be called the three-in-one tent, for it has some of the advantages of each of the three types it embodies.

For eight years an old comrade and myself used this tent in our summer vacations, sen used this tent in our summer vacations, some weeks in extent, and we found it very practical. Of course there is not much room in such a tent for ladies who are particular regarding their costumes. Indeed nearly all tents except the wall tent are made for men and not for women.

You can make a good-enough bivouactent out of a tarpaulin or tent fly stretched leanto fashion, or in the fashion of a lean-to, with the roof or porch in front—all depending on the frame you use in stretching. Or you can buy such a tent already cut, with side walls let on to it, if you prefer. And, of course, if your transportation is bad, you can use, instead of heavy canvas, a sheet of the light balloon silk or Egyptian cotton of which more and more tents are made today

The A tent is very simple—indeed about as practical as anything for general travel under a compromise of average wilderness conditions. An A tent can be just as stuffy as a wall tent, though it does not weigh quite so much. Therefore look to the windows and the mosquito defenses if you are going into fly country.

The A tent, however, used to require a ridgepole and two end poles, and the excellence of the pitching depended on the fit of these poles. Of course you cannot always carry tentpoles along with you, and sometimes cannot cut them. Therefore the A tent is now largely made with the rope ridgepole. The rope ridgepole is not quite so good for shedding rain, but it is simple and handy. By its use you can quickly pitch the tent between a couple of trees. Or you can peg out the end ropes and lift the tent by using a couple of poles as sheers at each end, tightening it all you like—a simple and speedy process.

However, not even the simple A tent, or wedge tent, was left unmolested in its model. Along came a man who shortened the ridgepole of the seven-foot A tent to a The A tent, however, used to require a

the ridgepole of the seven-foot A tent to a couple of feet, sewed a short permanent ridgepole into the top, cut the sides sloping in every direction from this short ridgepole, and hung the whole thing up by a rope from the top—like a birdcage. This also was a simple canvas house, light, portable, and dispensing with considerable useless canvas. Some canoeists took to using this tent. I presume you could call it a trapeze tent, though I have never known it to have that

Now your canoeist, though the most sybaritic outer on earth, likes to consider sybardict outer on earth, likes to consider himself very hardy; so he makes his tent as small and low and inconvenient as he can. This trapeze-bar, short ridgepole did not leave much room inside the abbreviated tent, the door of which sometimes was so low that a fellow had to crawl in. So the ingenious outfitters who cater to the canoe trade built a big circular end or swell in the back of this sort of tent. It added immensely to the floor space. Such a tent in balloon silk may be seen in a good many canoe camps. I have never seen one arranged with windows for ventilation. And once more I speak loudly for windows in the tent—and plenty of them.

You will notice that the general tendency.

You will notice that the general tendency in modern tents seems to be toward light material and toward the abolishment of poles. Tentpoles are a nuisance. I knew a Chicago man not long ago who had been in the Rockies and who wanted a teepee in his city back yard for his children. He sent all the way to Japan to get a set of bamboo poles for his teepee, and when they came they were broken to pieces. Then he sent to Montana and imported a carload of teepee poles from an Indian village.

teepee poles from an Indian village.
We all remember the ridgepole of the old wall tent, which used to stick out behind the wagon when we went on a family picnic. That left the tail-gate of the wagon down and everything spilled out. We do things better now. We shorten our ridgepoles, lighten our tents, and run to ropes rather than to poles. And all the time, though we have not yet learned the virtue of windows, we trend toward openface tents, with plenty of air. For once the trend of fad or fashion is a good one.

### The Shelters of the Chippewas

In dry country like that of the eastern slope of the Rockies—the best man's country and the best out-of-door country to be found anywhere on the globe-outdoor workers do not always use a tent, but spread down their blankets with tarpaulins under and over. Your outfitter will sell you a tarpaulin arranged with rings and snaps, so you can make a very good bed right on the ground. This is hardly a good suggestion, however, for the tired business man who has his whole family along. It may do for you if you are alone on some tramping, riding or boating trip.

Get as far from home as your pocket.

Get as far from home as your pocketbook will let you, and then build as good a camp as you can in as good a place as you can find. Even two men in a canoe can outfit for camping in absolute comfort. If you can have a wagon to carry your duffel you can carry a whole village of modern tents today. If you have a packtrain you can take an Indian lodge, a wall tent, an A tent, a baker tent, a miner's tent, or any one of a dozen other combination models,

which will probably do you very well. Perhaps you may find some old shack or log cabin that you can use—for bad weather at least. It depends on your transportation usually, however, what your house is to be. Two persons in any tent are enough—more than enough if one of them snores. If there are several in the party two or three tents are far better than one. Your vacation will do you most good when you have a little time and space and solitude all to yourself.

Lastly if you have not yet got just the hints you want as to your summer home you can have a great deal of pleasure in designing a special tent model all your own; and you certainly will find some manufac-turer ready to make it and list it in his catalogue. One ardent canoeist, for instance, devised himself a little octagonal tent like a teepee, with a hole cut in the side, not run-This was a single-pole tent. The flap could be raised and used as a sort of porch. One could make a fire in front of this tent and get some good of it, or could easily defend it against mosquitoes provided it had a second in floor. sewed-in floor.

Another man devised a tent with steep roof and sides to shed snow. He pitched it root and sides to shed show. He pitched it usually in the trapeze or birdcage fashion, the ridgepole being short and permanent. Then there are little gipsy tents, pitched over bows like wagon-covers—a sort of thing not seen in this country, though sometimes used by the Romany folks in Europe. This is something like the dome-topped bark lodge of the Chippewas, but much smaller.

Speaking of the Chippewas, did you ever see a party of them go into camp on the trail? They have no skin covers for their lodge-not even canvas, let alone balloon silk—nothing but mats woven out of reeds; but in a few minutes the women will have some springy poles cut and the ends thrust into the ground. Then they bend the tops over and fasten them together with bark—three or four sets of these rafters—connected by a pole on top to stiffen them. Perhaps they lash a pole or so alongside. As this progresses another woman will throw mats across the top. In a few moments they will across the top. In a few moments they will have a house that looks as though it had always been there. There is a smokehole in the roof at the middle.

### Three Great Remedies

In fifteen minutes after they have thrown down their packs you can be sitting in a very smoky interior, with eight dirty children and nineteen dogs running over you, feeling quite hardy and sporty. You can add to the excitement if you happen to have a banana or some taffy along.

There are volumes—and very good ones, too, interesting and useful—written in the way of advice, hints and suggestions to the outdoor man going into camp. No doubt

outdoor man going into camp. No doubt you will get additional ideas from these. At first you will believe everything you read; but after a while you will get over that. I remember once hearing a girl in a musical comedy sing a little song. She must have been a peach, for I remember her yet—also the words of her song, which ran in the chorus about like this: "I read it in the book, in my little lesson book—I read it in the book, and it must be so!" it in the book, and it must be so!

You can read a great many things in your lesson book before you leave home for your vacation, and about the best part of the vacation out-of-doors is in preparing for it; but the great lesson book for you will be the out-of-doors itself. You will get your best fun out of meeting actual condi-tions of Nature with your own with such your best run out of meeting actual condi-tions of Nature with your own wits and your own energy. The best way is not to take any man's dictum as to what you want to do or how you want to do it. Figure it out for yourself.

The more primitive your summer resort, the better it is apt to be for you. What you need is a change. No man can live in the city—indeed, no man can undergo the high pressure of modern business in any community—and not get a case of nerves at east once a year.

Neurasthenia, nerve exhaustion and mental collapse are becoming more and more common in American business and social life. We work entirely too hard—speed up entirely too much. No amount of drugs and no amount of stimulants will ever cure

that sort of thing. For the nerve-broken man or woman se doctor now pre treatment-no drugs, no stimulants; just sunshine and sleep and oxygen and good food, and freedom from all care. If some of these generally tired chaps, some of these generally harassed women, would get out into a camp in the wilderness some-where for a few weeks, they would get a better run for their money than perhaps

they could in any other way.

At least this is the hint that of all these seems most worth while: As an antidote for the three R's of the city, take the three S's of the wilderness—Sleep, Sunshine and

For MEN

"First Choice" for Summer Underwear-Chalmers "Porosknit" Guaranteed. coolness, "first choice." For lightness, comfort, durability, value-"first choice." But—buy by the label.

That you may know genuine Chalmers "Porosknit," we show

way. But observe our triangular piece in the back. See how this section of fabric is reversed. Thus its "stretch" runs opposite to the rest.

This means full elasticity to the seatup and down, as well as across. It givesat every turn or bend, with no pull, no bulge, no draw.

There can be no "short-waisted" feel-ing — no "cutting in the crotch." The Closed Crotch is comfortable. It fits. It stays put.

For these reasons you get real unionsuit comfort in this underwear.

# The EXTRA Stitches

Now we'll turn the union suit inside out. Notice how every seam is reinforced throughout. All are double seamed by cover seaming. Extra stitches-for strength's sake.

Note that there are no cumbersome flaps to gape open. Stretch the fabric. See the extra stitches (again) surrounding each ventilating hole. These, with the lock-stitch, prevent unraveling.

# The EXTRA Quality

We have been told that the yarn in halmers "Porosknit" is better than it Chalmers "Porosknit" is better than it need be. That we could use less costly

Buy

combed yarn. That we cou thousands of extra dollars o That the yarn would still be goo That we could "get away with

True, We might. None mi the difference but ourselves.

The same careful workman be employed in finishing such yarn—and Chalmers "Poroski still look about the same.

But in them rests the inability are Chalmers "Porosknit." They be unfailing satisfaction. They be the delight that millions—men have found in wearing the year after year.

by you understand now why this arean be backed by a No-Limit te. [An actual reproduction of the Bond—which accompany parament of genuine Chalmers in "—is shown to the left.]

Doubtless you see why one should judge by more than mere appearance.

# Soft, Cool, Dry

Chalmers "Porosknit" is made in all styles—for man, for boy.

Open in texture, and of soft, absorbent yarn, it keeps you cool by absorption and evaporation of perspiration. You are kept dry—even when the mercury soars skyward. Your pores breathe the needed air. The yarn's softness eliminates irritation of the skin.

These features you can see and feel.

# The Cleanly Making

The extreme care in making, you cannot see—unless you come to Amsterdam. There, in a modern mill, clean as a new pin, Chalmers "Porosknit" is fashioned and sewn. The atmosphere is bright, clear, healthful. Hygiene at the maximum. Even the dust eliminated.

Many costly, patented machines knit the high-priced yarn into the celebrated fabric. Then each yard of fabric is acrated with hot, dry, pure air.

Other machines complete the finishing touches. Each garment is ironed individually before packing. See for yourself how pleasing the appearance of the garment in the box—at the dealer's.

# Fuel and Repairs You can lower these expenses

IN three years' time supplies and I repairs occasionally cost as much as the original price of a car.

Careless Inbrication is responsible for most of this expense.

A canvass among New York repair shops showed that about one-half of the automobile engine troubles are caused by incorrect lubrication.

There are two things that must always be considered in an oil. One is its quality. The other is its fitness for your motor.

Low-quality oil in time may bring practically every trouble a motor can face.

Oil of a body which is incorrect for your motor brings many penaltiesheating and seizing of bearings, worn wrist pins, poor compression, breaking of parts, excess carbon deposit, smoking or overheating of engine and many other troubles.

Aside from repair troubles you must face a plain fact:

The more power you waste the more fuel you must consume.

You cannot get perfect lubrication unless the quality is right, and the body of your oil suits-

- Your type of lubrication system.
- Your piston clearance. Your bearing design and adjustment. Your bore and stroke.
- Your engine speed. The size and location of valves.
- Your cooling system.

Gargoyle Mobiloils are sold by a Chart which specifies the correct grade for each car.

They are backed by almost 50 years' experience which has won for us the worldleadership in scientific lubrication.

If you do not at present use the grade of Gargoyle Mobiloils specified for your car, you may feel almost certain that your bills for fuel and repairs are higher than they should be.

Consult the partial Chart printed at the right. Make a note of the grade specified for your car. Then make certain that you get it. If your car is not mentioned send for our complete Chart of Recommendations.

It is safest to buy in original barrels, half-barrels and scaled five and one-gallon cans. See that the red Gargoyle, our mark of manufacture, is on the container.

On request we will mail a pamphlet on the Lubri-cation of Automobile Engines. It describes in detail the common engine troubles and gives their causes and

The various grades of Gargoyle Mobilolls, purified to remove free carbon, are: Gargoyle Mobiloil "A", Gargoyle Mobiloil "B", Gargoyle Mobiloil "E", Gargoyle Mobiloil "Aretie".

They can be secured from reliable garages, auto-mobile supply houses, hardware stores, and others who supply labricants.

For information, kindly address any inquiry to our nearest office.

# Correct Lubrication

Exploration: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Are," means "Gargoyle Mobiloil A." "Are," means "Gargoyle Mobiloil "A." The recommendations cover both pleasure and commercial vehicles unless otherwise noted.

(Continued from Page 20)

in American as well as English newspapers.
"The Suffragette movement," declared
Scotland Yard, "is dead—slain by the Cat
and Mouse Act." For proof Scotland Yard pointed to Holloway Gaol with only two Suffragettes incarcerated; whereas at Christmas time, 1912, the prison sheltered something like fifty Militanta.

The day the statement was given out a bomb was exploded under one of the outer walls of Holloway. The young person who did the job was a Mouse. Less than three weeks before she had stood in a dock and received a sentence of eighteen months in Holloway. She served a week and was now diligently at work again. Motives of deli-cacy forbid the publishing of her name. It goes as deliciously with bombplanting as Miss Jolly does with a hunger strike— but then Miss Lamb has charge of an important department at headquarters; Miss Pleasance Penread wrote a pamphlet defend-ing window-smashing; Mrs. Dove Wilcox got eight days' solitary confinement for kicking a wardress; Miss Rachel Peace has recently finished a stormy term at Hollo-way. What's in a name anyhow?

Scotland Vard does not understand the

Scotland Yard does not understand the Suffragettes; but then, who does? The bobby perhaps—but no one else. One occa-sionally hears the Suffragettes defended, but never explained. On a day when huge crowds were pouring out of London for some racing event the usual crowd of program sellers and hucksters were doing a more or less thriving business at the doors of the railroad station. Suddenly a bevy of Suffragette newsgirls appeared on the scene, much to the disgust of a vender of team

rosettes.

"Ah nah!" he grumbled: "blow the women anyhah! Nah they'll get all the show! W'y don't they stop at 'ome? Wot are their plyces like, I wonder?"

A woman huckster stopped work long enough to reduce the grumbler to moral roll.

pulp.
"Shut up and mahnd your business!" she shouted. "These women is the friends of us pore women. You don't know wot you're tarkin' abaht! 'Ave you got four children and a plyce to look awfter when you gets 'ome? Wull, I 'ave when I gets 'ome! Good luck to 'em, I s'y! Next time you open your marth, know wot you're s'yin' of!"

# Out With Their Hammers

"Ine't that just like a woman!" the discomfited one exclaimed. "Tark politics to 'em and all they s'y is: 'Dry hup!" Apparently many of the sweated women of England have it firmly fixed in their minds that the Suffragettes are going to make things better for them. I saw a ratio alether was drag a woman cut of a plain-clothes man drag a woman out of a Suffrage procession in the East End and take her to the station house. They were followed by a crowd of typical East End women who hurled abuse on the officer as

far as I could hear them.
"McKennar's pup!—that's wot I call
yuh!" was about the least offensive of the expressions used. However, that did not

explain the Suffragettes.
I asked an Englishman who sat at table with me on a steamer what he made out of He was one of those calm, slow Englishmen; but at the word Suffragette he became violently agitated, red in the face, almost hysterical. He poured out a rapid recital of experiences so incoherently that I could hardly follow him. I managed to gather, however, that he and his wife had just got back from the Continent; and after they were settled in their hotel rooms she him that he had no fresh evening shirt and that he had better go out and buy some before the shops closed. So he went forth into Bond Street and was standing before his favorite haberdasher's, admiring the window display.

It was a beautiful evening-everything quiet and benign. His soul was peaceful within him as he regarded the haberdashery. All of a sudden a woman stepped up to him and said: "Beg pardon!" and pushed him aside. Then before his very eyes she raised her hand, which held a bunch of nink roses and helping the right roses. of pink roses, and behind the pink roses a hammer, and smashed the window of his favorite haberdasher.

As though that was not enough and plenty, the sound of smash, smash, smashing

One teaspoonful per cup, there are 60 to a pound. The cost per cup, you see, is really less than ordinary coffee-And it's delicious.

ET us send you a trial pack-⊿age. Then you can see for yourself that it is not only better and purer, but that it costs less per cup than ordinary coffee, as it makes more cups to the pound.

# A Trial Can Free

SEND us your grocer's name and we will send you a trial can of Barrington Hall, enough to make six cups of delicious coffee, and booklet, "The Evolution of Barrington Hall." This explains the three stages of progress through which this famous coffee has passed.

# BarringtonHall The Baker-ized Coffee

At first Barrington Hall was sold whole or ground as ordinary coffee is today, then steel-cut with the bitter chaff removed, and finally Baker-ized. In it we have retained the good points of our older methods and adopted new features (explained in booklet) that make it economy without economizing. A luxury not at the expense of health, but one that is an aid to correct living.

# Baker's Steel-Cut Coffee

Steel-Cut Coffee lacks a little in quality and in evenness of granulation when compared with Baker-ized Barrington Hall, but the chaff with its objectionable taste is removed from it also. It is far superior to the so-called cut coffees that are offered in imitation of Baker-ized Coffee.

Our Coffee is for sale by grocers in all cities and most towns. Where not for sale, we will send it by Parcel Post prepaid until arrangements can be made with your grocer to supply you.

BAKER IMPORTING COMPANY 116 Hudson Street, New York, N. Y.

Do you know that you can buy your olive oil just as you buy your flour, in large enough quantity to make a saving in the price?

Our business is exclusively olive oil. We have selected a brand of unquestioned quality

# "B&G"

Shipped by Messrs. Barton & Guestier, Bordeaux, France, to the United States, formore than 50 years in glass. They are now shipping it to us in half gallon and one gallon tins.

This makes it possible for you to buy a product of exclusive quality and to obtain the economy of large quantity.

# It carried the \* marking in "Good Housekeeping."

Perfect olive oil is particularly necessary when prescribed by a physician. It may be obtained from us, delivered, charges paid anywhere in the United States, upon receipt of theck or money order for amount of order.

for

gallon time of "B & G"

began to be heard on every hand. Ladies with hammers were coolly walking the length of Bond Street and smashing window after window. The noise was simply frightful. The excitement was enough to give one heart failure. The destruction was horrible. The scene, on the whole, was like nothing but the beginning of the French Revolution. "And she said 'Beg pahdon!' and pushed me on one side; and raised her hand. It

was unspeakable, unspeakable! And I never got me shirts!"

Get the point—the only real point? "I never got me shirts!"
You would think an army man, a professional fighter, might understand. But no! A member of a fashionable Guards. Club was relating his experience: A Suffragette threw a stone through his club win-dow and then surrendered to the policeman

who came running at the familiar sound.
"I went out and asked the woman: 'Why
did you break our windows? We haven't
done anything!' And what do you suppose she said? 'It's because you haven't
done anything!' No sense to that, so far as
I can see. What could the woman mean?"

## Suffragette Logic

I think I know why the Suffragettes are not understood. There is nobody in England to understand them, nobody who can understand them. There never were; per-haps there never will be. The English mind is not constructed to understand. It is the east understanding mind in the world, as history proves.

Under one of the Georges-the previous one, if memory serves—a man by the name of Thomas Muir, of Hunter's Hill, came into brief fame by going up and down the country agitating for votes for men-not lords and owners of great estates, but common, ordinary lawyers, doctors, shopkeepers, workingmen. Well, of course they could not have that; so they arrested Thomas Muir, tried him for sedition and transported him for fourteen years.

Lord Braxfield, who sentenced the man,

"The British Constitution is the best that ever was since the creation of the world,

and it is not possible to make it better."

The man Muir, the judge said, had gone about "telling folks that a reform was absolutely necessary for preserving their liberty, which, if it had not been for him, they would never have known was in danger! Mr. Muir might have known that no at-tention could be paid to such a rabble as he harangued. What right had they to representation?"

So it was Botany Bay for Mr. Muir, just as it is Holloway for the Suffragettes— when they can catch them.

One begins to feel sorry for the Militants. They have a hard job ahead of them, though it is beginning to be whispered that, be-tween the Irish and the women, the present government's sand is pretty well run out. But would any other government prove less obtuse? It is doubtful.

One Englishman is very like unto another, regardless of politics and regardless of class. They all argue somewhat after the fashion of a coalheaver whose wife had been listening to the talk in Hyde Park and had come

home a convert. As he tells it, the conver-sation ran something like this: "'There's abaht four million women in the country,' she says, 'as 'aven't got the

"'Go hon!' I says.
"'And abaht a million of 'em,' she says,

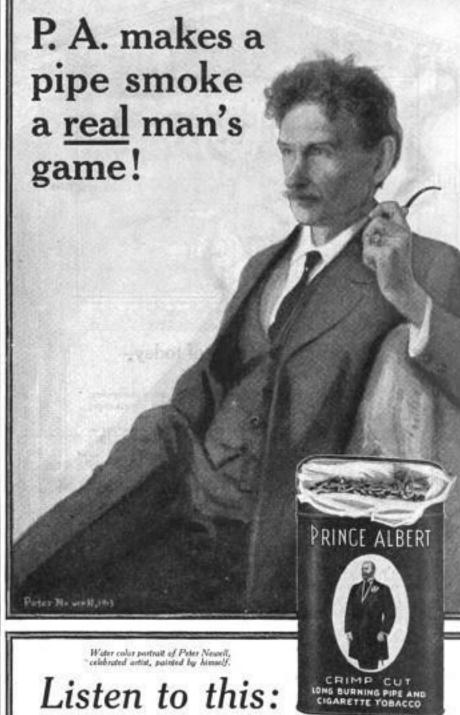

'p'ys separate taxes.'
"'Go hon!' I says.
"'And taxation without representation,'
she says, 'is tyranny!'
"'Go hon!' I says.
"And that done 'er! She could see that

she 'adn't got such a fool to talk to as wot she thought for!"

However, to revert once more to the case of Thomas Muir, of Hunter's Hill, it did not do much good to transport him. Votes for men happened just the same.

# Unahiming Your Suit

MACHINE has been constructed to A take the shine from well-worn suits of clothes. Its action is practically that of sandpapering the glossy elbows of the coat or the polished knees of the trousers. The cloth is passed between sets of rollers which are covered with sandpaper, or some other friction material, and the surface of the cloth is picked up, destroying the gloss.

P. A. spells "pa"—and that means Prince Albert is the daddy of 'em all!

Never hit you before? Sure will just about as quickoff-the-bat as you fire-up some national joy smokings, via a jimmy pipe or rolled into a makins cigarette.

Because Prince Albert has everything—flavor, aroma, quality. It's so ripping good for what ails your smokappetite that the sight of a tidy red tin just jams joy into your system.

You pin a quick-action tag on your sleeve, beat it biffbang around the corner, and lay in some

# NGE ALBER

the national joy smoke

Sooner you know for yourself that P. A. can't bite, the wiser and more cheerful-like you'll be early in the a.m. It's this way: Prince Albert is made by a patented process that removes the bite! Just leaves the tobacco-goodness all there, and brings out the rich flavor that makes men yearn for P. A., sunrise to sunset. You give Prince Albert the punch-test. That's trying it out any old way - just as mean as you can be to it. You'll find P. A. true-blue because you can smoke it red hot - and it just can't make your tongue tingle!

Say, you begame. Mate up P. A. with a jimmy pipe and get going-

You hay Prince Albert just like you know what you're on your way for. It's sold all over the nation, on the byways as well as the highways. Toppy red bags, Se; tidy red tins, 10c; also handsome pound and half-pound humidars.

R. J. REYNOLDS TOBACCO CO., Winston-Salem, N. C.

# What Next?

WIRELESS-TELEGRAPH shows are the latest form of amusement, just as interesting to persons who know nothing about electricity and wireless as to operators themselves.

The principal feature is the use of a stereopticon screen on which are thrown actual messages from some distant wireless station, translated to the audience as the

messages proceed.

At such a show recently in London the audience actually saw a message on the screen sent especially to that room from the Eiffel Tower, in Paris; and then by the

the Effel Tower, in Paris; and then by the same method enjoyed eavesdropping on messages that were being exchanged between official stations.

Demonstrations of ordinary wireless instruments made up the remainder of the entertainment. To receive messages on the screen a siphon recorder was used, so that a shadow mark the average was used. that a shadow mark on the screen rose and fell as the signals came in; and a lecturer called out each letter as it was formed.

### Climbing Buckets

PASSING on the same track has long been a subject for humor, but it is being successfully accomplished on some over-head transportation lines. A cableway of one rope, carrying buckets of earth and ore, has been built to permit the buckets to pass each other safely.

The carrier, which runs along the cable and supports the bucket, has in each in-stance a short rail built over its top. This rail is bent so that it rests on the cable in

rail is bent so that it rests on the cable in front of the carrier. When two buckets meet the carrier of one promptly climbs the rail over the other one, passes over it com-pletely and slips down to the cable on the

A simple arrangement prevents any con-fusion as to which bucket should climb over the other one and prevents interference as they swing past each other.

### Suction Shampoos

VACUUM-CLEANER shampoos are now being given the horses of the New York park department. The suction cleaner takes the place of a curry comb occasionally, and the shampoo is as pleasing to the animals as it is successful. Its best the place of the shampoo is a special to the animals as it is successful. use is after a horse has been clipped, for in this way all the fine loose hairs left on the animal's coat are removed.

## Fungi in Cold Storage

AN ODD use of cold storage is now being practiced in Florida. A fungus that is plentiful in the orange groves in the fall is very fatal to the larvæ of the white fly, which, in its turn, is destructive to the

orange groves.

The fungi, however, are plentiful only in the fall and the larvæ of the white fly

appear in the spring.

Cold storage gives the opportunity to have the fungi at the most useful time. The fungi are collected in the fall and placed in cold storage, which keeps them safe and vigorous until spring, when the organisms are placed on the trees. There they attack the larvæ of the white fly.

### The Latest in Oils

NOT many new foods are invented. A new one which is now being perfected so that it will work is tomato-seed oil. Some Italian factories in recent years have been using the seeds to make oil for soap and oil cake for stock feeding, obtaining them from preserving factories which formerly wasted

These oil manufacturers are now developing a process of refining the oil so that it will be palatable and nutritious, to be used like olive oil.

### Glue Embroidery

GLUE embroidery aptly describes a new didea for giving at slight cost an em-broidered appearance to cloth. A solution of the chemicals from which artificial silk is made is prepared in a tank and used like the ink of a printing press for printing patterns on the cloth.

After it dries the cloth bears a raised pattern in artificial silk.

# the money, time and temper sav ing tire pump

S a rule, automobile tires never have t A proper amount of air in them. The is why some motorists have to buy a many new tires. Big tire bills are usually due to incorrect tire inflation. Too much air just as detrimental as too little.

In either case you cannot get your fu mileage nor keep your tire expenses down rock bottom. Improperly inflated tires me wear due to rim cutting —wear due to broken fabric

-wear due to drag of flat tire on road wear due to friction.

No one can, all the time, properly inflate tire by hand. Ask any tire company. The

# Stewart **TirePump**

cuts your tire bills down to an absolute minimum, will pay for itself in no time. Fills any tire in a lift for example: It will fill a 36 in. x 4½ in, tire in minutes. No more back-breaking work on a hand pay.

The Stewart Tire Pump is a beautifully finished it is built on the most modern engineering line. I piston is steel, hardened, ground and lapped. The bit of aluminum. The connecting rod is of harder steel. No cal can enter tire. This is the most modern up-to-date pump on the market. You should have the connection of t one on your car.

one on your car.

Price complete, with air pressure gauge and 13 f of high grade hose, only \$15.

The big automobile manufacturers are rapidly odding the Stewart Tire Pump as regular equipments of the property of the prope

For sale by dealers all over the world.

Stewart-Warner Speedometer Corporation Factories: Chicago and Beloit, Wisc.

Executive Offices: 1936 Diversey Blvd., Chic 17 Branches. Service Stations in all cities and large towns.

You can't beat Diamond Quality

Why pay more than Diamond prices?

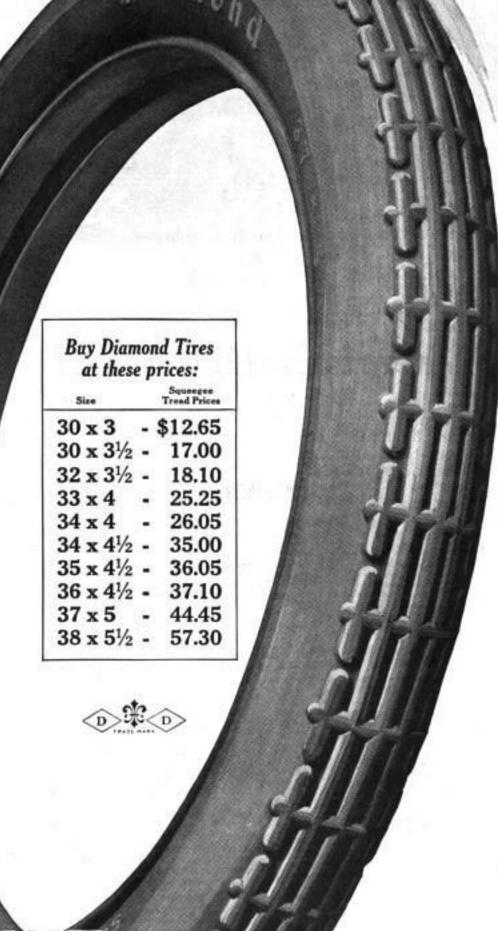

Your tire cost is going to be lower this year — your mileage per tire is going to be greater—

When you equip with Diamond Squeegee Tread Tires.

You are not simply buying tires—you are buying Diamond More-Mileage—Diamond Quality and Service—Diamond Squeegee Control—Diamond non-skid Certainty—that blocks the sidewise skid or forward slide.

The tough rubber Squeegees defend you against short mileage and long skids.

They wipe their way through muddy, slippery going to a firm, clean grip of the pavement.

Diamond squeegee Tires

# Where is the Difference?

Handsome streamline body; graceful, tapered bonnet; new style rounded radiator; modern fenders; left drive; electric lights; electric starter (if desired); light, powerful motor-these features of the new KRIT read like a list of specifications for a \$2,000 car.

And yet the KRIT sells for \$950 (\$1050 with electric starter). It is "the moderate priced car with the high priced car features." Glance over this partial list and compare the KRIT with cars costing \$1000 to \$2000 more:

Unit Power Plant Bosch Magneto Multiple Disc Clutch Electric Starter, Lights, Horn Stromberg Carburetoradjustment on steering column Underslung Rear Springs Stewart Speedometer Left Drive; Left Control— enter from either side Long Wheelbase Demountable Rima Tire Carrier at Rear Jiffy Curtains

Cork-linoleum, aluminumbound floor and running boards Deep Upholstery Clear Vision Windshield Gasoline Tank in Dash

# New Features; Proven Chassis

Though new in these features that produce style, comfort and convenience, there is nothing freakish or experi mental about the KRIT. It is a real, artistic achievement in motor car building. And mechanically it possesses the sterling qualities that have endeared KRIT cars to owners for five years; qualities that havemade possible records of 25,000, 50,000 and 100,000 miles in the service of these owners.

In the KRIT, at \$950 or \$1050, you find all you can demand in appearance, in comfort, in convenience-and more than you expect in the way of economy. Not only is it reasonable in initial cost, but because of its light weight, its sturdy construction, its well-balanced design, the KRIT keeps down the fuel and tire

# Why Pay for Useless Weight?

KRIT lightness comes from correct design-not from skimp-We save 120 pounds in weight by using aluminum for our crank case and transmission case.

The sturdy, powerful KRIT motor weighs only 283 pounds—as against 400 to 550 pounds for motors in tars of the same size and power as the KRIT. And so on throughout the car.

Engineers tell us that the KRIT is two years ahead of its field-for it possesses, at \$950, the quality features you find in cars at double the price. sensational sales record made by the new KRIT is an endorsement by critical motorists that proves these experts

So, we ask you, what more can you get in a higher priced car? More weight, perhaps, but weight only adds to the expense of upkeep. More rated horse-power, but much of the extra horsepower is used up in carrying around the extra weight-and the rest of the excess power you don't need. For the KRIT will take you anywhere you want to go; it will take you there speedily, safely and comfortably.

### Take a KRIT Ride

Let the new KRIT itself win you. Go to the nearest KRIT dealer-name on request. Ride in the car; drive it yourself; test it in any way you wish. We are sure the car itself will convince you; and the price will prove an ad-ditional reason for buying.

"TEXT BOOK OF MOTOR CAR ECONOMY" FREE.—This booklet gives some important facts for every motor car buyer or user. If you are interested in securing more satisfaction at lower cost for your motor car expenditure, send in the coupon today,

### KRIT MOTOR CAR COMPANY

Dept. A

Detroit, Mich.

# The Wireless confession

(Continued from Page 7)

"She was picked up by a schooner and landed at Gloucester. She will arrive to-morrow morning. Tell the others, Charles. They would like to know."

"Indeed they would, sir," blubbered Charles, and left the room hastily.

Paul Morton confronted the great crisis of his life. She was alive and coming back.

of his life. She was alive and coming back.
What would his life be now? He cursed
the message—her first—that had made it impossible for him ever again to be happy.

If he had been living in a fool's paradise he should know it. Of course! And yet—

He paced the room till the small hours, He paced the room till the small hours, a prey to doubt, the victim of a million surmises that settled nothing. She was coming back. He would see her. If he met her at the station he would have to go through the motions of happiness—a demeaning simulacrum of joy. The newspaper reporters probably would be there. She might so behave that he might wish willfully to blind himself to the personnial willfully to blind himself to the perennial menace of her unfinished message. He had loved her insanely, like a fool, like an old man! She could do as she wished with him; she was irresistible! He feared her—and

his weakness!

If he did not go to the station he would have an understanding with her here at home. Mrs. Fanning, the housekeeper, could go with the motor to the station.

To wait for her at home was to ask her to find the confession and give it to him to read. If he forced her to do this she could never again be to him what she had been! And suppose the confession were a trifle, indis-cretion rather than guilt, how would she take his unforgiving attitude? And if there had been an error of transmission, then his jealous doubts became deadly insults that she could never forgive.

Perhaps it was wiser to forgive and forget, to let his love win her love and his respect hers. Magnanimity works wonders with hearts.

But if she had deceived him once, as implied by her message, and he had never dis-covered it, what was to prevent her from deceiving him again? At forty-two a bitter awakening is ruthless, but at fifty-two it would be fatal! Why had he thought himself the one exception to the experience that says any man of forty-odd who marries a

girl of twenty is an ass?

The only solution that he could see was death! He would not live without her and he could not live with her. A bullet would end it all!

He sat down and wrote:

"Anne:
"I could not bear to see you after your
Torsive you. PAUL."

He thought a long while and then he inserted "cannot" between the "I" and the "forgive," for he could not and did not forgive her!

But die and not know why she had implored him to forgive her? It was an exasperating thought, but it made suicide an about dity

absurdity.

He did not once think that his death ould make her his sole heiress.

He threw the letter into the fire and went to bed, where he lay thinking, thinking, and never once deciding! At dawn he fell asleep, only to be awakened as usual at eight by his valet.

At breakfast he found that the newspapers had not published the news.

Had she kept it from the reporters?

Why? He could eat nothing, so he went upstairs to the library, sat down in the easychair and thought.

Would he wait for her at home or would he go to the station? Would he have his understanding before he kissed her, or kiss her before he knew? Those kisses! The flower-like cheeks he loved to fondle! Was it not wise to ignore the message, to forgive er without knowing; or was it wiser to listen and then decide whether or not to forgive? Again, while forgiveness now was difficult, suppose her confession made it

impossible to forgive?

How did she look? Had she suffered much? Fashioned of flower-petals, and a week in a boat! She had nobody but her husband, poor little -

What was it that she had to confess? Without his knowing, could he forgive? Could he love again?

Go? Never! He would stay at home. When she came he would demand that she tell him the truth. If she was not worthy to be loved he should know it. And time heals wounds.

But worthy or not, if she only permitted him to love her, what did anything else matter? What was life without her? If he were young he could love again. But for the few years he had to live, why let a foolish doubt torture him?

It was better not to know! But he could not forget! But he was a fool to remember!

A knock at the door.
"Come!" said Paul Morton, and rose to

his feet unsteadily, his face livid. Charles opened the door and said: "The motor is here, sir!" and waited for Morton to speak.

After all a man must be a man. He re-membered the father who had feared nothing except that his son might really become a millionaire.

Was this the revenge of money on his soul? He would go. He would see her. He would fight his battle. If it was ordained that he was not to know happiness on earth he might at least spare himself the reproach of cowardice.

He went downstairs firmly. It was the determined composure of a man on the way to the gallows who has made up his mind to die game for the benefit of the spectators. The butler and the housekeeper had agreed that there must be lavish floral displays, fragrant welcomes in every room. As it fragrant welcomes in every room. As it would be rather expensive the butler was going to protect himself by asking the master. But when he saw Paul Morton's face he turned away his own eyes. And the other servants also saw the grim, set jaws and the pallor and the haggard look, and dared not meet the eyes that always go with math a feet the eyes that always go with such a face.

She was the first one to alight from the Pullman. She looked thinner, less beautiful, but there was something war-worn, proved about her. She looked less like a doll, much more like a woman. The loss of that ethereal quality that always made him feel so keenly a sense of her aloofness from him unpleasantly shocked him. Here was no longer a doll to fondle and caress, but a woman to love. And yet he could not say that he saw the clay more plainly. It was not that exactly. It was different in some curious manner. Indeed he suddenly felt that his own suffering had given him different every to see with And northers her own. ent eyes to see with. And perhaps her own hardships had made her different. There

was a curious strangeness about her.

This girl was not the girl he had loved and he himself was not the man who had loved her!

He was so full of this constraint that he held himself firmly in leash, though he could not have told what would have happened

had he let himself go.

She stepped from the car platform and be noticed that she limped slightly. It filled

him with concern.
"Are you lame?" he asked quickly. "No! I—I wrenched the muscles a little."

She was at last on the station platform, surrounded by valises and by obsequious baggage porters. It was impossible to be affectionately demonstrative amid such surroundings.

She looked at him and there was about her glance a new scrutinizing quality that disturbed him and then vaguely irritated. She held out her hand, said, "Well?" and

smiled not at all guiltily.
"Well?" he echoed heavily. She was less exquisitely fragile, but infinitely more beautiful; less suggestive of flower-petals, more of flesh and blood. He realized now that he had before plunged, boylike, into a senti-mental orgy, born of inexperience. But this new and marvelous woman was one be could fight for and kill for! He had never loved her because she had not existed. He never had won her, but he could not lose her! He could not! If he could have this woman he would never again think of the other woman, who had gone away from him forever on the Atlantis!

He had forgotten everything else. That

what love is for! "Aren't you glad to see me?" she asked with the maddening coquettishness of women when they are sure of your love but ish to test your physical self-control.

He looked at her so strangely, there was such mighty love and longing in his blazing

eyes, his face was so pale and so full of deeply bitten lines, that she turned pale. Her eyes, that so lately had looked death in the face, stared fascinatedly into his. Then her own filled with tears and, oblivious of the people about her, she threw her arms

"Oh, Paul, darling! God was good to

us! God was good to us!"

Never before had she called him darling. Never before had she admitted her love. But even now it might be remorse, perhaps a second confession of guilt. Indeed, he told himself he had heard a prayer for absolution! He couldn't give her up! His soul and his body with ten thousand voices exhorted him to forgive and forget!

He did not know. He need never know. He loved her. He did not wish to know. More composed now, she looked at him with shamed eyes, in which shone subtle suggestions of defiance—as though she would do it again no matter who looked on! She took his arm in both hers, little-girl-wise, and as they walked toward the Concourse she asked in his ear:
"After you found the note I left in the

third drawer, could you forgive me?

His throat suddenly went dry and his vocal cords were paralyzed, so that he couldn't answer. He tried to speak, but it was impossible. He felt himself trying to swallow, in a desperate effort to restore fexibility to the vocal cords.

"Were you angry—or sad? When you thought of the two of us drowning together——"

"I—I—never ——" he said chokingly.
"I—n-never found—the paper!" He
pushed her away from him. He wanted to die-out of her sight, so he turned his

head away.

"Oh!" she exclaimed happily, "then you didn't suffer as much as I feared!" The face she turned to him was that of a naive child. She added regretfully: "I might have spared myself a lot of worry, thinking of what you might think of me."

Should he tell her what he had thought of

ber?

How could he and not kill?

"I shouldn't have done it, Paul. But in a way it was your fault. You spoiled me. You treated me like a doll. And all the time the dreadful suspense! When they were getting the lifeboats ready I kept on saying to myself: 'I must keep cool! I must keep cool! If I only had told Paul the truth!' So I went about it calmly and put on a life-preserver, and all the officers said I was the coolest person on the ship and told some frightened men to look at me and learn to be brave. But they didn't know! They didn't know!" "Didn't know what?" asked Paul Morton

huskily.
"I forgot you don't either. My con-science made me suffer tortures. But, Paul,

science made me suffer tortures. But, Paul, as long as you didn't know, what's the use of suffering—what is the word—retroactively? Forget all about it."

"I can't!" he said almost involuntarily.

"Well," she said resignedly, "I might as well face the music. But you won't scold me, Paul, dear?" Her lips trembled slightly.

slightly.
"Will you, dearest?" she persisted and shook his arm. "I've been punished enough.
I promise that I'll never again keep anything from you, good or bad. But if you insist we'll find the note together and ——"

"Certainly. And you couldn't find it! It was in the third drawer."
"Which third drawer?"

"Together?

"Don't you remember the old Gothic desk we picked up at the Sturtevant sale? Don't you remember the three secret drawers? The third is behind the second, and the second behind the first. That's the one we agreed I should use. Don't you

"I had forgotten!" he said. He would not tell her that he had looked in every drawer of every piece of furniture in every room in the house. He wished to be happy. He wished to disbelieve and he yearned to believe. So he maintained outward calmness by forcing himself not to look at her as they drove home. This was not difficult, because she chattered away like a magpie,

overwhelmed by the sights of New York.
"I never expected to see that or that!" she kept on saying, for every familiar build-ing became an old and welcoming friend and every trolley car greeted her affec-

tionately.

The reception of the servants at the house upset her. The men's eyes as they shook hands with her leaked quite as freely

as the sniveling maids'! The butler, with a red-faced majesty never before equaled even by himself and never surpassed by any emperor, told her: "It's a great day for the house, my lady!" as he had once heard, when a how his father tell the Month when a boy, his father tell the Marchioness of Cheeston on the birth of the heir-after fifteen years of prayers! But just as the butler looked round for applause, Bolton had to blubber!

After she had enjoyed a few tears herself, the mistress of the house led her husband to the luxurious little living room on the third floor.

She pulled out one secret drawer after another until she took from the third drawer

a sealed envelope addressed to him.
"I don't think I'd better give it to you now, because I can make you very happy and—if you don't know you'll never scold."

Something in her voice made his heart ump. It couldn't be a very serious confession after all!

"I've never scolded you, have I?" he

asked very gravely.

"That's the trouble! That's the trouble!"
she said vehemently. "That's why I did it!
I could see from the first that you were not in love with me. You didn't love me ——"
"Anne!" He was shocked by her vehe-

mence and by her utter blindness to his

worship.

"Not with me but with a toy, a silly little doll. What you loved was to love! You wanted me so that you could love me your way, but in your life I was nothing! I counted for no more than a particularly beautiful painting."
"Anne!" he said again. It was all he

could say because what she said was so true that he could not fight back. He was

hearing her reasons and they were good reasons. He had not known this woman! "What I have gone through makes me different and our life from now on must be different," she said determinedly. "I don't want to feel that I am a bought bibelot!
But, of course, it was my fault, because you
were so happy in your love and so anxious
to do what you thought I wished, that I
had not the heart to tell you that I was tired
of town. I wanted to go on some hunting of toys. I wanted to go on some hunting trip, to go to Central Africa with you, to be your woman! I made up my mind to have a serious talk with you. Then I—and then came sister Grace's cablegram and I knew if I told you you'd never let me go. And I was so afraid Grace——"
"She doesn't know," he interrupted.

"They've kept the news from her, but she is better. I'll cable at once." "Yes, do, and say I can't go because I'm

going to stay with you, unless you insist upon my being a toy. In which case I'll run away. There! Read it!"

He opened her confession. It said:

"Doctor Carr says there is no doubt, and I am glad; but I was afraid you would not let me go if I told you. I'll take very good care of myself and when I come back to you I know you will be so glad you will not scold me. And, besides, if you did scold it might be bad for me, and it is your duty to love me more than ever now that at last I am really and truly
"Your own wife who loves you very much,
"ANNE."

"Do you mean --- "His trembling voice

could not finish. "Of course," she said with a triumphant calmness that made her seem almost unreal to him. "Of course! And I serve notice on

you that I am your wife, not a ——"
"Hush, dearest!" he entreated shame-

facedly.

"Certainly I won't," she said determinedly. "I'm not going to be a doll any longer! Do you hear me?"

She went up to him and looked straight in his eyes. "I'll show you I am not what you thought. Damn! How do you like that from your little Dresslen sheeplers's?" that from your little Dresden shepherdess?'

"It—it isn't good for you to stand, darling," he pleaded. "Please sit down!" She looked at him in despair. Then she denched her fists and rushed toward him. He felt himself grow both cold and para-He felt himself grow both cold and paralyzed. But she merely jumped and, throwing both arms round his neck, pulled herself up as if she would climb on his shoulders.

"If you talk that way again I'll tango every day," she threatened.

"My de——" he began, but stopped because he felt her arms relax. Whereupon, inspired by love, he snarled at her: "I'll give you a crack on the jaw, do you hear?"

you a crack on the jaw, do you hear?"

The arms tightened about his neck again.
"I wish you would!" she murmured.

# For Rent This American Adder

# Ten Days Free Then 10c a Day

This offer is made to workers—to men who must buy their own Adders. To men who add figures in a slow, hard way, and who often make errors.

That all such men may have this help, we make this rental offer:

We will place this machine in your office for a ten-day test, without cost or obligation. Then, if you want it, you may pay the cash price. Or you may pay \$3 down and \$3 monthly until you pay \$37.50.

# What It Does

This American Adder adds, subtracts and multiplies. It does all you could do with \$150 machines.

It is rapid and competent. It easily computes a hundred figures a minute, and it never makes mistakes. It is so simple that a child can operate.

It makes play of addition. The longest columns are added quickly, and the totals are always correct.

It will do all this for you for ten cents a day. Then, after one year, the machine becomes yours.

# An Ideal Adder

Good Adding Machines have heretofore cost from \$150 to \$750. Now this competent Adder costs \$35, and all men who add figures can afford this help.

In less than nine months, over 17,000 offices have adopted this American Adder. Among them are hundreds of very large concerns,

general Railway offices and the U.S. Government.

But the greatest welcome has come from workers who heretofore went without Adders. It has come from Accountants, Railway Agents, City and County Officials and Employees, Storekeepers, etc. Our price and our rental plan place this new Adder within reach of all such users.

# Send This Coupon

If you deal with figures, we ask you to send this coupon. Let this machine do your work for ten days. Note the time it saves, the labor and mistakes. Judge for yourself if it earns its way. Do this in justice to yourself.

If you find it essential, pay as you wish-all cash or 10 cents a day. This offer will probably not be repeated, so send the coupon now.

AMERICAN CAN CO. 1246 Monroe Bldg., Chicago

You may send me, express prepaid, one American Adder for ten days' trial. will then either reject it, pay your cash price of \$35.00, or pay \$3.00 down and \$3.00 monthly until I pay you \$37.50, then the machine becomes mine.

Unless you are rated, kindly give refer-

The \$2.50 extra charge on the rental olan barely covers interest and the cost of twelve collections.

# Different Office Needs Call for Different Typewriters

# The Remington Line offers you 44 choices

PORTY years ago modern business was a youngster. The original Remington typewriter was its first companion.

They have grown up together.

They have branched out together.

Every year develops some new business need—which calls for an improved typewriter.

Every improved typewriter put on the market opens up new short cuts in business practice.

WE long ago outgrew the idea that any one model would answer every need.

Today's business needs are multitudinous. A great variety of typewriters is required to meet them.

The character of your work should determine your choice of typewriter.

This is why the line of typewriters now offered by the Remington Company has grown from one elementary model to 44 specialized machines.

Each is a fully equipped, easy running typewriter, designed for general use. Each has special qualities for special business purposes.

THE day is past for selling typewriters on the strength of this or that feature alone. We do not attempt to narrow your choice to any one type of machine—we offer you by far the widest range of typewriters on the market to choose from.

You know your business needs. Let us help you to select the machine which best fits those needs.

For example:

In the Remington Typewriter Line (including the Remington Standard, Monarch and Smith-Premier models) you will find the following qualities—and many others. Some are in all models others in only certain models.

# Do you require-

Twenty manifold copies?

The lightest possible touch?

Writing on extreme top and bottom edges of page?

Dependable shift from black to red printing?

Durability (therefore fewest repairs)?

Clean stencil cutting?

Instant tabulation — in any number of vertical columns?

Tabulation of dollars and cents in selected columns?

Conspicuously visible writing?

Accurate writing on ruled lines?

A key for every character?

Interchangeable carriages of various widths?

Retail billing and charging devices?

Special type characters for weights, measures, foreign currencies, etc.?

Typing in any foreign language?

Writing on paper as wide as 32½ inches?

Easy writing on stiff cards?

Guides for addressing envelopes?

Addition and subtraction? (See opposite page)

Adjustability of carriage tension for typists with different touch?

Carriage return for right-handed typists?

Carriage return for left-handed typists?

Ease in changing ribbons?

Ease in making corrections?

Ease of operation?

All the above features in various combinations are in the Remington Line of typewriters.

It goes without saying that Remingtons have all-sufficient speed. The typist has yet to be born who can go faster than Remington machines can print.

In each of the three Remington models shown on the opposite page totally different kinds of typewriting efficiency have been achieved. But in no case have the fundamental good qualities—ease of operation, durability and clean, clear results, been overlooked in the slightest degree.

The test of a typewriter is not on a few mechanical devices alone but the machine's complete adaptability to your work.

In the Remington Line you will find typewriters for every business requirement.

Get posted on the Remington Line of typewriters now. It will save time when you buy. Write to our New York office for descriptive booklets.

# The New Remington Idea

# One Speedy Operation

Types your bills Adds the items Proves the totals

X/E have told you of our general line. Now for the newest achievement.

If your clerk first writes out a bill and then stops to foot it—this latest Remington time-saver is needed, for bills are now automatically added and proved while they are being typed.

Any clerk can be accurate eventually. This machine is accurate instantaneously.

The figures mechanically add as fast as your typist strikes the keys.

Your discounts automatically subtract with equal ease.

One quick operation begins and completes your bills and statements. No time is spent in addition or subtraction - no time wasted in looking for errors or making corrections.

The speed is limited only by the speed of your typist's fingers. Idle machines are costly. The

Remington Adding and Subtracting Typewriter need never be idle.

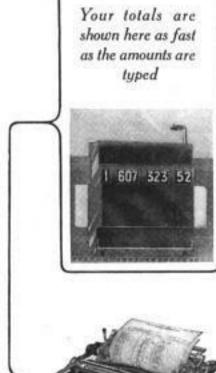

If your typist wishes to write letters, she simply touches a lever. She then has an up-to-date correspondence typewriter.

If a clerk wishes to list and add some items he has a complete accurate adding machine.

Said an office manager recently, "The uses to which we put this machine are so varied, that it is in operation constantly throughout the day."

Thousands of offices and retail stores, large and small, find that it saves a vast amount of time on billing alone.

A quick way to find out how much you need this epoch-making machine is to send today to our New York office for descriptive booklet, "The New Remington Idea."

# Sense and Nonsense

The Gold Test

LIKE the weird remedies and tests of medicine in the Middle Ages are some I medicine in the Middle Ages are some of the very latest means science has devised to detect and classify forms of insanity and brain affections. Salts of gold in solution, drops of spinal fluid, bits of the tissue from the covering of a normal person's brain, and various other similar materials are the means employed.

The gold test, for instance, is now being used to prove definitely the existence of paresis, meningitis and several other forms of nervous disease, though in practice it is used mostly as corroborative proof rather than the only proof. Solutions of salt of

than the only proof. Solutions of salt of gold of carefully graduated strength are put into test tubes, with the weakest solu-tions at one end of the row grading up to the strongest at the other end.

Fluid from the spinal column of the person who is being examined is then dropped into the tubes. The presence of certain kinds of brain or nervous trouble is then indicated by the colors produced in some of the tubes. The particular color produced and the strength of the solution that shows the color strongest give the clew to the kind of disease.

Another peculiar test for certain other kinds of brain trouble is to take a drop of blood from the person examined and place in it a prepared solution from a tiny parti-cle of brain-covering of a normal person. Epilepsy causes an easily detected reaction on the combined solution, while other brain disturbances are detected by a similar process, using other materials in the same

### The Elusive Jeopard

AN APPLICANT for a place as teacher in one of the colored schools at Louisville was being examined touching his fitness for the position. He was a small, dapper, yellow person, wearing gold spec-tacles, a long black coat and an abiding air

tacles, a long black coat and an abiding air
of great dignity.

The examination was in part oral and
syntax had been reached.

"What is your definition of the word
'jeopardized'?" asked the examiner.

The candidate's brow wrinkled.

"Which?" he inquired.

"What do you understand the word
'jeopardized' to mean?"

For just one short half-minute he hesi-

For just one short half-minute he hesi-tated. Then he answered sonorously: "In reply to yo' question I would state that that would refer to any act committed by a jeopard."

### The President's Privilege

PRESIDENT WILSON has had his nails I manicured by a professional manicure just once in his life. That once was after he was elected President and before he was inaugurated.

He had some time in New York and decided to use it in a visit to a manicure. A fluffy blond person officiated with the

orange stick and pumice.

She took the hand of the future President, began operations and began conversa-

tion at the same time.
"Where do you live?" she asked archly.
"In Princeton, New Jersey," Mr. Wilson

replied.
"Oh," she said ecstatically, "what a privilege! Have you ever seen the house in which Mr. Cleveland lived?"

# Ready Wrapped

A SECRETARY for a Massachusetts congressman had never seen a cotton seed. A few days ago he happened to be in the office of a representative from the South and saw several small sacks on the floor.

"Cotton seed furnished by the Depart-ment of Agriculture for distribution down our way," the Southerner explained.

A sack was opened and the Yankee exthe Southerner explained.

amined the cotton seed with great interest. He picked up some and observed the lint that clings closely to the seed. He pulled at this, but was not successful in removing any of the lint.

My!" he said. "The Department certainly treats you fellows fine. Just think of wrapping up each seed so carefully in cotton! How do they do that?"

### The Latest in Lenses

A CAMERA that will take seven pic-directions—and then blend them into one photograph is being used for taking pic-tures from balloons in Germany.

The seven lenses are arranged in a circle, each pointing down at an angle of forty-five degrees; so that the face of the combination camera, seen from below as it swings under a balloon, looks like the inside of a

Pictures taken by this camera give a panoramic view of the ground; and by the new science of mapping from photographs they furnish the necessary data for a very reliable map of the section, with the distances all represented properly.

# New Fire Alarms

A FIRE ALARM which discriminates between ordinary heat and any fire that may start, and another which makes more racket the hotter the fire is, are two additions to the great number of recent automatic fire alarms. The discriminating alarm is based on the theory that a dangerous fire will cause a sudden rise in temperature in a room, but that ordinary temperature changes due to heating systems or to the weather are slow.

The new alarm pays attention only to the sudden change.

One thick glass tube and one thin glass tube contain liquids that will vaporize and make pressure in the tubes when they are heated, and the alarm will ring when the pressure in the thin tube is greater than in

the other.

With a slow increase of heat the liquid in both tubes vaporizes at about the same rate, but with a sudden heat the thin tube

acts more promptly.

The other fire alarm is based on the electric resistance of a metal. It can be dropped by a cord into a ship's hold, for instance, and if there is heat there it will time gently or view or the cord one. ring gently or vigorously—in accordance with the degree of the heat.

# A Clear Windshield

A DOCTOR living in a rainy climate, whose calls took him out often in wet weather, undertook the problem of maintaining clear vision through the windshield of his automobile regardless of rain; and he succeeded in making a prescription that would do the work.

The prescription calls for one ounce of water, two ounces of glycerine and one dram of salt. This is poured on a piece of gauze and then wiped over the glass, care being taken to have all the strokes downward. The effect of the treatment is to prevent raindrops from clinging to the

### Star Gazing

IT IS not often that Representative Mann, of Illinois, is stopped in debate; but Representative Fowler, from Mann's own state, sewed up the doughty leader of the Republicans the other day.

A bill relating to the importation of convict-made goods was under consideration and the discussion had taken a wide range and had reached the foreign childlabor phase. After a time Mann offered an amendment.

Fowler rose and told a story of a man who was peddling telescopes in the old days in Illinois. He stopped at a farmhouse. The farmer had never seen a telescope and was much interested. The peddler explained the workings of the telescope and told him to lead to the preservity. to look at the moon with it.

The farmer adjusted it and looked at the moon. He walked round the yard with ye, gr

sky, fell into a cistern and was drowned.

At the funeral the children were overcome with grief, but the widow retained her composure.

One of the girls said:

"Ma, don't you think that was an awful way for pa to die?"
"I don't see that it makes much differ-ence," the widow replied. "If your father had been looking at things closer to home he would be alive now.'

"That is very smart!" was all Mann could think of in retort.

# Young Men's Personality in Clothes

If you're a young man, or feel young, you probably want your clothes to suggest youth. You prefer garments that are sprightly and yet in good taste.

You will find that in

# Sincerity Clothes

They will meet your utmost requirements as to fabric, workmanship, and especially that difficult thing to findpersonality. They are distinctively thoroughbred garments.

# MY SON

(Continued from Page 22)

spend the whole evening in the kitchen. With the cook stove piled full of wood, a red tablecloth over the kitchen table, with the kerosene lamp throwing out its soft light, with the pans and kettles shining and the tea-kettle singing on the back of the stove, I don't want any better place. As a matter of fact we stayed on here this evening unconsciously. Ruth and Jane brought out their sewing and sat down by the table. Offhand Ruth appeared to do nothing but listen as she bent her head over her work. But every now and then she lifted her eyes and smiled in a way that clinched an argument, or put in just the word to keep the talk along the right track.

I watched young Moulton and I saw that nothing we said had half the effect that just Ruth's sweet presence had. The high

that nothing we said had half the effect that just Ruth's sweet presence had. The big, brave facts of life, the sweet, sane facts of life, always hovered about her. Sitting there by the lamp in our kitchen mending a tear in Billy Junior's rompers, she expressed things that even a young man could understand. Wealth in dollars, worldly ambition of the noisy sort, the gaudy show features of life, all faded into insignificance when compared with such sterling realities as Ruth expressed.

I didn't say any of the things I had intended to say. I watched this vigorous young college athlete, eager for life that was as yet meaningless to him, and saw him glimpse a meaning in it. I watched him puff his pipe and saw new hopes born within him. I don't believe the minister in his baccalaureate sermon did as much as this for him or the orator of the day with his phrases, his lofty thoughts and wide ges-

phrases, his lofty thoughts and wide ges-tures. It was late in the evening before the talk became very personal, and then Ruth said, as she rested her sewing in her lap for

a moment:

"I'm almost as glad as your father that you're back home again, Horace. There are so many things here waiting for the young men to do."

The boy took his pipe from his mouth and leaned forward with his elbows on his

knees.
"I never thought of there being anything to do here," he said.
"Oh, do you think we are all quite perfect?" she laughed.

perfect?" she laughed.
"I meant there didn't seem to be any big things," he said. "I've sort of felt I wanted to get into the city game. That's where most of the fellows are going."
"Yes," said Ruth, "that's where most of them are going. That makes it all the more important for some of them not to go, doesn't it?"
"But all the big chances are there," said Horace.

Horace.

"I wonder," said Ruth, as though thinking—"I wonder what you call the big chances, Horace."

"The big chances in business and politics," he said.

"Chances for doing good?"

"In a way," he said.

She raised her blue eyes to his and I saw the boy look into them and blush. If his answer was not written there it was written in another pair of eyes somewhere waiting in another pair of eyes somewhere waiting

for him.

"There are so many chances right here," said Ruth. "We farmers count for something in the world, don't we?"

"It's a good thing we have the farmers to offset some of the big business done in town," said Dick.

Then in some way the talk drifted to the

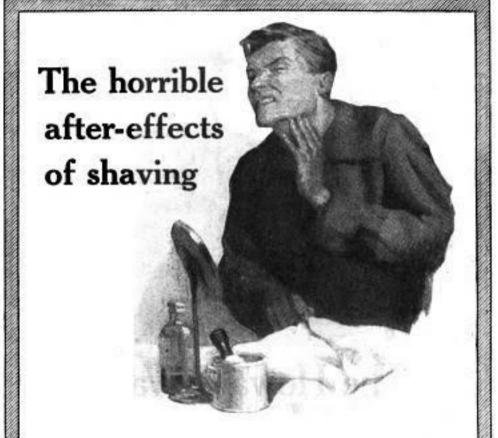

country store. It counts for a lot in the country town," I said; "and might be made to count for a lot more."

"Eh?" said Horace. "What about that,

"I've thought of it," said Moulton. "If was ten years younger I'd certainly try

"It's a job for a young man," I said. "It's a job for a man who won't wait for his

"It's a job for a man who won't wait for his customers but who'll make them."
"How make them?" said Horace.
"The way the railroads are doing; the way the mail-order houses are doing," I said. "The day has gone by when men accept existing conditions and make the best of them; the keynote of progress today is to make the conditions of the best. The railroads don't wait any more for business to come to them; they make business. If traffic falls off along their lines they go after immigrants, loan them money to buy their

EVERY man has felt them; many experience them every time they shave.

Don't have them - Hot, smarting skins, ingrowing hairs, unsightly face eruptions, belong back in the Dark Ages of shaving.

There is a Shaving Cream which will give you a quick, smooth, delightful shave, with no "horrible after-effects." It lathers up with the brush almost instantly, requiring none of the mussy "rubbing in" with the fingers, which irritates and makes the

Most important of all, it contains no free caustic nor other irritant, which are the chief causes of

the painful and distressing features of shaving. Hundreds of letters have been received from men who now know the real cause of their former shaving troubles. For years they blamed their razors-now they have no cause for complaint—the creamy, instant beard-softening lather of

# MENNEN'S Shaving Cream Solved their troubles

One of these converts to Mennen's says: "Prior One of these converts to Mennen's says: "Prior to the time I used your cream, shaving was a torture that had to be endured. My razor pulled while shaving and my face smarted afterwards. I used numerous kinds of soaps, powders, creams, etc., finally deciding it was the fault of my razor, so I bought different razors, all to no purpose. Now, in using your cream, I can use any of the razors with the same good effect—no pulling while shaving, and no smarting afterwards."

Another writers: "It seemed as if it were involved."

Another writes: "It seemed as if it were impossible to find a shaving soap or cream with entire

freedom from smarting, until I used your shaving cream. The aftereffects were both surprising and delightful, and I knew for the first time the joy of a perfect shave."

Another: "My skin is extremely tender and never before could I shave for several days in succession until using your cream, and now the trouble has been completely overcome. It has a soothing aftereffect on the skin I find to be marvelous, while its beard-softening simply gr

The Mennen Way saves your face and your time.

Apply Mennen's Shaving Cream direct to the face.

Work up the lather with the brush (no mussy "rubbing in" with fingers necessary).

Shave your entire face (no re-stropping nor re-lath-ering). No after smarting.

# The Howard Watch

THE predominance of the Howard Watch among yachting men illustrates some interesting conditions in American business and professional life.

There is in this country no exclusively yachting class, as such. Practically every American yachtsman is a man of affairs, who finds his greatest relaxation on the water, and who takes his HOWARD Watch with him when he goes aboard.

The thing that makes him a yachtsman and an American disposes him to like the HOWARD Watch-with its fine traditions, its trim, racy lines, and its way of showing its clean American heels to the talent of the watch-making

The wonderful character of the Howard Watch is that it meets men of so many different kinds and occupations on their own ground. Men in commerce, in the technical industries, in the professions, in official life.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is fixed at the factory and a printed ticket attached —from the 17-jewel (double roller) in a Crescent Extra or Boss Extra gold-filled case at \$40, to the 23-jewel in 18K gold case at \$170—and the EDWARD HOWARD model at \$150. HOWARD model at \$350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigsbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it, Drop us a post card, Dept. N, and we'll send you a copy.

SAMUEL KANNER, 554 Broadway, New York

land, put up their houses and barns, even furnish them with stock. They create traffic by creating prosperity."

"A railroad can do that sort of thing,"

They haven't done it until recently," I "They haven't done it until recently," I said. "It's a brand-new idea. It's modern business. The railroads aren't the only ones who are doing it. There's a mail-order house that recently appropriated one million dollars to be given to the farmers; one thousand dollars to a county to be used for promoting better farming. There's modern business for you."

"Jove!" said Horace, rising to his feet;
"there's a field big enough for any man!"
"It doesn't make much difference today
where your office is," I said. "You can get
into touch with as much of the world as you're big enough to handle wherever you

The boy of course did not make up his mind right there and then to remain in the village, but the evening started him to thinking. He came over several times after this and struck up a friendship with Dick that has steadily grown. that has steadily grown.

Horace, before making up his mind, spent the whole summer in his father's store. He went over his father's books for the last twenty years, studying the nature of the business done and the changes in the character of the business. The thing that impressed him most was the rapid decline in had debts which had taken place in the in bad debts which had taken place in the last few years. It began the first season of the Pioneer Club and the Pioneer Products Company and had become now almost a negligible item.

But in the end I don't think it was these business facts that so much decided Horace

to tackle life right at home as it was the talks he had with Ruth. She had done a lot of serious thinking during the last few years in connection with her own boys and had reached some pretty definite con-

"Do you know," she said to Horace, "I think what we need today is big men who will accept the little duties of life, if you call them little. We need big men who will tackle plain everyday business and not hunger after the presidencies of big corpora-tions; we need big men who will help lift up plain, everyday politics without using that as a stepping stone to get to Congress; we need big men in our villages as well as in we need big men in our villages as well as in our cities; we need big men on our farms. We need those big men to lead their big lives among ordinary folk, content with what they do rather than what they get. I suppose it's natural for every mother to want her son to be president of the United States, but I don't feel that way about Billy Junior. If he will be just good and brave and ordinary I won't care. If he will just settle down here and marry and rear good children I'll be satisfied."

"And you wouldn't care if he never got rich or famous?" said Horace.

"I wouldn't care if he never got rich or

"I wouldn't care if he never got rich or famous enough to be known to the daily papers," said Ruth. "I want him to have just money enough to do the good things he wants to do and not have to worry, and I want him to be famous just among his own. It seems to me, Horace, that it's more important to have people greatly of just important to have people speak of just Bill Carleton with pride than it is to find it necessary first to win a title before any pride is felt. It's even more important to the country. Bill Carleton, of Brewster, can

the country. Bill Carleton, of Brewster, can be just as important as Senator Carleton, of Massachusetts, or Maine, or Montana."

"And Horace Moulton, of Brewster, as important as the Honorable Horace Moul-ton, president of the Blank Trust Com-pany, vice-president of the And So Forth corporations?"

"Why not, Horace?"

"It's a queer way of looking at it, but I don't know but what you're right."

"It's the way it was done in the old days and it made this nation. When we needed a big man we found him tucked away in

a big man we found him tucked away in some small village. We found Washington there; we found Lincoln there; we found Grant there. We need to develop just such men and keep them in reserve. There's ambition enough for you. Be ready even if you're not called, and in the mean while use

you're not called, and in the mean while use your big strength doing the big little things that are getting neglected."

So it happened that in the fall the old sign over Moulton's grocery store was taken down and a new one put in its place. And the new sign read like this: "Horace Moulton & Son, Grocers."

(TO BE CONCLUDED)

UFF makes more jacks than any other maker in the world.

DUFF builds jacks for every lifting and leverage purpose in the world.

DUFF represents at all times the most advanced and efficient development in ALL types of jacks.

BECAUSE of this pre-eminent position, Duff is the great clearing house for all new jack ideas, as well as the most active source of improvements in its own organization. Duff adoption of any jack device or improvement means that it becomes immediately and deservedly standard.

For great bridge building operations, for big engineering projects like the Panama Canal, the lifting and leverage problems are solved by Duff. Duff-built

# THE STREET of seven stars

(Continued from Page 25)

the evening of the following day, for Vienna. The strain of the confession was over, but he was a victim of sickening dread. To one thing only he dared to pin his hopes. Anita had said she cared, cared a great deal. And, after all, what else mattered? The story had been a jolt, he told himself. Girls were full of queer ideas of right and wrong, bless them! But she cared. She cared! He arrived in Vienna at nine o'clock that

night. The imminence of his interview with Marie hung over him like a cloud. He ate a hurried supper, and calling up the Doctors'
Club by telephone found Peter's address in
the Siebensternstrasse. He had no idea, of
course, that Marie was there. He wanted
to see Peter to learn where Marie had
taken refuge, and incidentally to get from
Peter a fresh supply of moral courses for Peter a fresh supply of moral courage for the interview. For he needed courage. In vain on the journey down had he clothed himself in armor of wrath against the girl; the very compartment in the train prothe very compartment in the train provoked softened memories of her. Here they had bought a luncheon, there Marie had first seen the Rax. Again at this station she had curled up and put her head on his shoulder for a nap. Ah, but again, at this part of the journey he had first seen Anita!

He took a car to the Siebensternstrasse. His idea of Peter's manner of living those days was exceedingly vague. He had respected Peter's reticence, after the manner of men with each other. Peter had once mentioned a boy he was looking after, in ex-cuse for leaving so soon after the accident. That was all.

The house on the Siebensternstrasse loomed large and unlighted. The street was dark, and it was only after a search that Stewart found the gate. Even then he lost the path, and found himself among a group of trees, to touch the lowest branches of any of which resulted in a shower of raindrops. To add to his discomfort some one was

To add to his discomfort some one was walking in the garden, coming toward him with light, almost stealthy steps.

Stewart by his tree stood still, waiting. The steps approached, were very close, were beside him. So intense was the darkness that even then all he saw was a blacker shadow, and that was visible only because it moved. Then a hand touched his arm, stopped as if paralyzed, drew back slowly, fearfully. slowly, fearfully.
"Good heavens!" said poor Harmony

faintly.

"Please don't be alarmed. I have lost the path." Stewart's voice was almost equally nervous. "Is it to the right or the

It was a moment before Harmony had

breath to speak. Then:

"To the right a dozen paces or so."

"Thank you. Perhaps I can help you to find it."

"I know it quite well. Please don't bother.'

The whole situation was so unexpected that only then did it dawn on Stewart that this blacker shadow was a countrywoman speaking God's own language. Together, Harmony a foot or so in advance, they

made the path.
"The house is there. Ring hard, the bell
is out of order."

Are you not coming in?"

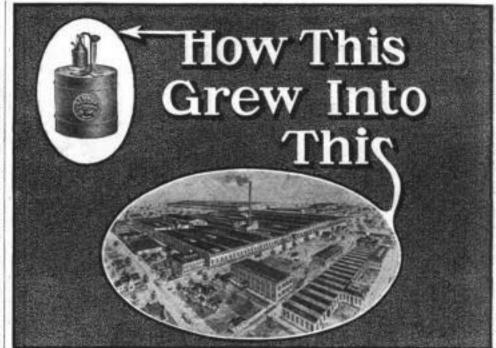

"No. I-I do not live here." She must have gone just after that. Stewart, glancing at the dark façade of the house, turned round to find her gone, and a moment later heard the closing of the gate. He was bewildered. What sort of curious place was this, a great looming house that concealed in its garden a fugitive American girl who came and went like a shadow, leaving only the memory of a sweet voice strained with fright?

Stewart was full of his encounter as he took the candle the portier gave him and followed the gentleman's gruff directions up the staircase. Peter admitted him, looking a trifle uneasy, as well he might with Marie in the salon.

Stewart was too preoccupied to notice Peter's expression. He shook the rain off

his hat, smiling.
"How are you?" asked Peter dutifully. "Pretty good, except for a headache when I'm tired. What sort of a place have you got here anyhow, Byrne?"
"Old hunting lodge of Maria Theresa."

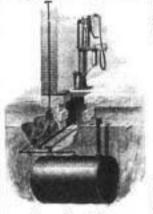

replied Peter, still preoccupied with Marie

In the last twenty-nine years S. F. Bowser & Co. have saved untold millions to users of Gasolene and Lubricating Oils.

The original Bowser System was the self-measuring oil pump invented by S. F. Bowser. Today there are over 500 different Bowser systems. These range from Bowser underground storage tanks for

the private garage to complete yet simple Oil Storage, Filtering and Circulating Systems for million dollar power plants.

Oil Storage Systems

In The Garage

Bowser Underground Systems store the Gasolene out of the "danger" zone. Pipe and pump it any distance into the garage. Deliver it in any predetermined quantity. Keep the "punch" in—the dirt out. Fire-proof, weather-proof, leak-proof, vapor-proof. No dirty oil. No clogged engine. No lost power. Easily installed. A Bowser often in the garage will often pay for itself in a few months. Think of the added often pay for the competence of the utility.

efficiency—the great saving—the comfort—the convenience—the utility. Underground tanks, and self-measuring tanks on wheels for the public garage. These compel accuracy, economy, safety. Multiply the efficiency of the garage.

## In The Store

No more oil tainted merchandise. A Bowser System for the store keeps the oil and delivers it in automatically measured quantities. No loss any way. No fire hazard. Adds to the store's capacity. Pays for itself in oil saved, and better oil sold. The Bowser line includes systems for wholesale and retail selling of kerosene, paint and lubricating oils, varnishes, etc.

# In The Factory

Centralized and Individual Clarifying and Circulating Systems. Safety,

economy, convenience, dispatch. Also Central Oil House Systems for large plants and Departmental Storage and Distributing Units for large and small

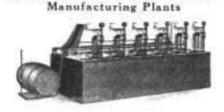

# Bowser Will Advise You

Tell Bowser your oil storage needswhether you're a garage owner or large manufacturer. Ask questions. Possibly Bowser can help you, Bowser has solved a million such problems in the last 29 years. Use the coupon. No cost to find out. No obligation. Put it "up to Bowser." Send the coupon today.

# He Was Worth More Than \$40.00 a Month

In a certain Indiana City, a young man entered the employ of an express company. He kept the books and handled packages. His salary was \$40 a month.

He knew he was worth more. His position offered no promise of advancement. There was one thing to do: qualify himself for other work. He enrolled as a student of structural engineering with one of the national correspondence schools and devoted his evenings to study. After he graduated, he entered the employ of a well-known architect and made A few years later he opened an office of his own, specializing in reinforced concrete construction.

His fees for one year averaged over \$800.00 a month.

This is the experience of one man who recognized his limitations and courageously set out to remedy them.

Now if you feel you are in a rut, we want to hear from you. Thousands of persons have, through our Scholarship Plan, secured the training needed to fit them for bigger positions. We paid their tuition charges. We will pay yours in any college, musical conservatory, technical school or business college. Let us tell you all about our Scholarship Plan. and what was coming. "Rather interest-

ing old place.
"Rather," commented Stewart, "with goddesses in the garden and all the usual stunts."

"Goddesses?"

"Ran into one just now among the trees. 'A woman I foreswore, but thou being a goddess I foreswore not thee.' English-speaking goddess, by George!" Peter was staring at him incredulously; now he bent forward and grasped his arm

in fingers of steel.

"For heaven's sake, Stewart, tell me what you mean! Who was in the garden?" Stewart was amused and interested. It was not for him to belittle a situation of

his own making, an incident of his own

telling.
"I lost my way in your garden, wandered among the trees, broke through a hedgerow or two, struck a match and consulted the

Peter's fingers closed.
"Quick," he said. Stewart's manner

"Couldn't see her. She spoke English.
Said she didn't live here, and broke for the gate the minute I got to the path."
"You didn't see her?"
"You didn't see her?"

"No. Nice voice though. Young."

The next moment he was alone. Peter in his dressing gown was running down the staircase to the lower floor, was shouting to the portier to unlock the door, was a madman in everything but purpose. The portier let him out and returned to the bedroom.

"The boy above is worse," he said briefly. "A strange doctor has just come, and but now the Herr Doktor Byrne runs to the drugstore."

The portier's wife shrugged her shoulders even while tears filled her eyes.

"What can one expect?" she demanded.

"The good Herr Gott has forbidden theft and Rosa says the boy was stolen. Also the druggist has gone to visit his wife's

mother."
"Perhaps I may be of service; I shall

go up."

"And see for a moment that hussy of the streets! Remain here. I shall go."

Slowly and ponderously she climbed the

Stewart, left alone, wandered along the dim corridor. He found Peter's excitement rather amusing. So this was where Peter lived, an old house, isolated in a garden where rambled young women with soft voices. Hello, a youngster asleep! The boy, no doubt.

He wandered on toward the lighted door of the salon and Marie. The place was warm and comfortable, but over it all hung the indescribable odor of drugs that meant illness. He remembered that the boy was

frail. Marie turned as he stopped in the salon doorway, and then rose, white-faced. Across the wide spaces of the room they eyed each other. Marie's crisis had come. Like all crises it was bigger than speech. It

was after a distinct pause that she spoke.
"Walter, I am sorry. Do you hate me?"
She had dropped the familiar "thou."

She had dropped the familiar "thou."

Stewart crossed the room until only
Peter's table and lamp stood between them.

"I didn't mean to be brutal," he said
rather largely, entirely conscious of his own
magnanimity. "It was pretty bad up there
and I know it. I don't hate you, of course.
That's hardly possible after—everything."

That's hardly possible after—everything."
"You—would take me back?"
"No. It's over, Marie. I wanted to know where you were, that's all; to see that you were comfortable and not frightened."

Marie put a hand to her throat. "It is the American, of course." "Yes."

She staggered a trifle, recovered, threw up her head. "Then I wish I had killed her!" No man ever violently resents the passionate hate of one woman for her rival in his affections. Stewart, finding the situation in hand and Marie only feebly formidable, was rather amused and flattered by

the honest fury in her voice. The mouse was under his paw; he would play a bit. "You'll get over feeling that way, kid. You don't really love me."
"You were my God, that is all."

"Will you let me help you-money, I mean?"

Keep it for her." "Peter will be here in a minute." He bent

over the table and eyed her with his old, (Continued on Page 61)

round here and kiss me for old times.
"No!"

"Come."

She stood stubbornly still, and Stewart, still smiling, took a step or two toward her. Then he stopped, ceased smiling, drew himself up.

"You are quite right and I'm a rotter."
Marie's English did not comprehend
"rotter," but she knew the tone. "Listen, Marie, I've told the other girl, and there's a chance for me anyhow. Some day she may marry me. She asked me to see you."
"I do not wish her pity."

"You are wasting your life here. You cannot marry, you say, without a dot. There is a chance in America for a clever girl. You are clever, little Marie. The first money I can spare I'll send you—if you'll take it. It's all I can do."

This was a new Stewart, a man she had never known. Marie recoiled from him, eyed him nervously, sought in her childish mind for an explanation. When at last she understood that he was sincere she broke down. Stewart, playing a new part and raw in it, found the situation irritating. But Marie's tears were not entirely bitter. Back of them her busy young mind was weaving a new warp of life, with all of America for its loom. Hope that had died lived again. Before her already lay that great country where women might labor and live by the fruit of their labor, where her tawdry past would be buried in the center of distant Europe. New life beck-oned to the little Marie that night in the old salon of Maria Theresa, beckoned to her as it called to Stewart, opportunity to one, love and work to the other. To

America:

"I will go," she said at last simply.

"And I will not trouble you there."

"Good!" Stewart held out his hand and
Marie took it. With a quick gesture she
held it to her cheek, dropped it.

Peter came back half an hour later, downcast but not hopeless. He had not found Harmony, but life was not all gray. She was well, still in Vienna, and—she had come back! She had cared then enough to come back. Tomorrow he would commence again, would comb the city fine, and when be had found her he would bring her back,

the wanderer, to a marvelous welcome.

He found Stewart gone, and Marie feverishly overhauling her few belongings by the salon lamp. She turned to him a face still stained with tesrs but radiant with hope.

"Peter," she said gravely, "I must prepare my outfit. I go to America."

"With Stewart?"

"Alone, Peter, to work, to be very good.

"Alone, Peter, to work, to be very good, to be something. I am very happy, although —— Peter, may I kiss you?"

"Certainly," said Peter, and took her caress gravely, patting her thin shoulder. His thoughts were in the garden with Harmony, who had cared enough to come

back.
"Life," said Peter soberly, "life is just one damned thing after another, isn't it?" But Marie was anxiously examining the hem of a skirt.

The letter from Anita reached Stewart the following morning. She said:

I have been thinking things over, Walter, and I am going to hurt you very much—but not, believe me, without hurting myself. Perhaps my uppermost thought just now is rerhaps my uppermost thought just now is
that I am disappointing you, that I am not
so big as you thought I would be. For now,
in this final letter, I can tell you how much
I cared. Oh, my dear, I did care!
But I will not marry you. And when this
reaches you I shall have gone very quietly
out of your life. I find that such philosophy

as I have does not support me tonight, that all my little rules of life are inadequate. Individual liberty was one—but there is no liberty of the individual. Life—other lives seemed best and easiest, and carrying down with you into shipwreck the little Marie and-myself!

For, face to face with the fact, I cannot accept it, Walter. It is not only a question of my past against yours. It is of steady revolt and loathing of the whole thing; not the flash of protest before one succumbs to the inevitable, but a deep-seated hatred that is a part of me and that would never forget.

You say that you are the same man I would have married, only more honest for concealing nothing. But—and forgive me this, it insists on coming up in my mind—were

you honest really? You told me, and it took courage, but wasn't it partly fear? What motive is unmixed? Honesty—and fear, Walter. You were preparing against a contingency although you may not admit this to yourself.

I am not passing judgment on you. God forbid that I should! I am only trying to show you what is in my mind, and that this break is final. The revolt is in myself, against something sordid and horrible which I will not take into my life. And for that reason time will make no difference.

I am not a child, and I am not unreasonable. But I ask a great deal of this life of mine that stretches ahead, Walter—home and children, the love of a good man, the fulfillment of my ideals. And you ask me to start with a handicap. I cannot do it. I know you are resentful, but—I know that you understand.

ANITA.

THE little Georgiev was in trouble those days. The Balkan engine was threatening to explode, but continued to gather steam, with Bulgaria sitting on the safety valve. Austria was mobilizing troops, and there were long conferences in the Burg between the emperor and various bearded gentlemen, while the military prayed in the churches for war.

The little Georgiev hardly ate or slept. Much hammering went on all day in the small room below Harmony's on the Woll-badgasse. At night, when the man in the green velours hat took a little sleep, mysterious packages were carried down the whitewashed staircase and loaded into wagons waiting below. Once on her window-sill Harmony found among the pigeons a carrier pigeon with a brass tube fastened

on the morning after Harmony's flight from the garden in the Street of Seven Stars, she received a visit from Georgiev. She had put in a sleepless night, full of heart-searching. She charged herself with cowardice in running away from Peter and Jimmy when they needed her, and in going back like a thief the night before. The conviction that the boy was not so well brought with it additional introspection her sacrifice seemed useless, almost childish. She had fled because two men thought it necessary, in order to save her reputation, to marry her; and she did not wish to marry. Marriage was fatal to the career she had promised herself, had been promised. But this career, for which she had given up everything else—would she find it in the workpresser? it in the workroom of a dressmaker?

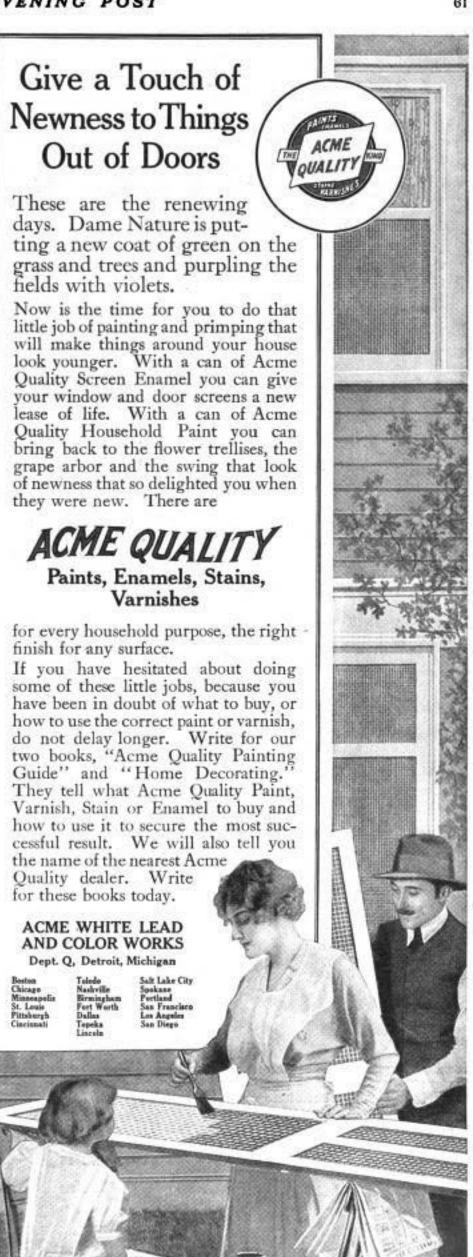

Ah, but there was more to it than that. Suppose—how her cheeks burned when she Suppose—how her cheeks burned when she thought of it!—Suppose she had taken Peter at his word and married him? What about Peter's career? Was there any way by which Peter's poverty for one would be comfort for two? Was there any reason why Peter, with his splendid ability, should settle down to the hack work of general reaction the very slough out of which practice, the very slough out of which he had so painfully climbed?

Either of two things-go back to Peter, but not to marry him, or stay where she was. How she longed to go back only Harmony knew. There in the little room, with only the

pigeons to see, she held out her arms long-ingly. "Peter!" she said. "Peter, dear!" She decided, of course, to stay where she was, a burden to no one. The instinct of the young girl to preserve her good name at any cost outweighed the vision of Peter at the window, haggard and tired, looking out. It was Harmony's chance, perhaps, to do a big thing; to prove herself bigger than her fears, stronger than convention. But she was young, bewildered, afraid. And there was this element, stronger than any of the others—Peter had never told her he loved her. To go back, throwing herself again on his mercy, was unthinkable. On his love—that was different. But what if he did not love her? He had been good to her. did not love her? He had been good to her;

There was something else. If the boy was worse what about his mother? Whatever she was or had been, she was his mother. Suppose he were to die and his mother not see him? Harmony's sense of fairness rebelled. In the small community at home mother was sacred, her claims

It was very early, hardly more than dawn. The pigeons cooed on the sill; over the ridge of the church roof, across, a luminous strip foretold the sun. An oxcart, laden with vegetables for the market, lumbered along the streets. Puzzled and unhappy.

Harmony rose and lighted her fire, drew on her slippers and the faded silk kimono with the pink butterflies.

In the next room the dressmaker still slept, dreaming early morning dreams of lazy apprentices, overdue bills, complaining customers.

Harmony moved lightly not to disturb her. She set her room in order, fed the pigeons-it was then she saw the carrier with its message—made her morning coffee by setting the tiny pot inside the stove. And all the time, moving quietly through her morning routine, she was there in that upper room in body only.

In soul she was again in the courtyard back of the old lodge, in the Street of Seven Stars, with the rabbits stirring in the hutch, and Peter, with rapt eyes, gazing out over the city. Bed, toilet table, coffee pot, Peter; pigeons, rolls, Peter; sunrise over the church roof and Peter again. Always Peter!

Monia Reiff was stirring in the next room. Harmony could hear her, muttering and putting coal on the stove and calling to the Hungarian maid for breakfast. Har-mony dressed hastily. It was one of her new duties to prepare the workroom for the day. The luminous streak above the church was rose now, time for the day to begin.

She was not certain at once that some one had knocked at the door, so faint was

the sound.
She hesitated, listened. The knob turned slightly. Harmony, expecting Monia, called "Come in."

It was the little Georgiev, very apologetic, rather gray of face. He stood in the doorway with his finger on his lips, one ear

doorway with his finger on his lips, one ear toward the stairway. It was very silent. Monia was drinking her coffee in bed, whither she had retired for warmth.

"Pardon!" said the Bulgarian in a whisper. "I listened until I heard you moving about. Ah, Fräulein, that I must disturb you!"

"Something has happened!" exclaimed Harmony, thinking of Peter of course.

"Not yet. I fear it is about to happen. Fräulein, do me the honor to open your window. My pigeon comes now to you to be fed, and I fear—on the sill, Fräulein."

Harmony opened the window. The wild

Harmony opened the window. The wild pigeons scattered at once, but the carrier, flying out a foot or two, came back promptly and set about its breakfast. "Will be let me catch him?" "Pardon, Fräulein. If I may enter ——"

"Come in, of course."

Evidently the defection of the carrier had been serious. A handful of grain on a wrong window-sill, and kingdoms overthrown! Georgiev caught the pigeon and drew the message from the tube. Even Harmony grasped the seriousness of the situation. The little Bulgarian's face, from gray became livid: tiny beads of cold sweat came out on

his forehead.
"What have I done?" cried Harmony.
"Oh, what have I done? If I had known

about the pigeon — "
Georgiev recovered himself.
"The Praulein can do nothing wrong,"
he said. "It is a matter of an hour's delay,
that is all. It may not be too late."

Monin Beiff from the next room called

Monia Reiff, from the next room, called loudly for more coffee. The sulky Hun-garian brought it without a glance in their

direction.
"Too late for what?"
"Fräulein, if I may trouble you—but glance from the window to the street below. It is of an urgency, or I -Fraulein!" Please,

Harmony glanced down into the half light of the street. Georgiev behind her watched her, breathless, expectant. Harmony drew in her head.

Only a man in a green hat," she said. "And down the street a group of soldiers."

The situation dawned on the girl then, at least partially.
"They are coming for you?"

"It is possible. But there are many soldiers in Vienna." "And I with the pigeon-Oh, it's too horrible! Herr Georgiev, stay here in this

room. Lock the door. Monia will say that it is mine \_\_\_"
"Ah no, Fräulein! It is quite hopeless.
Nor is it a matter of the pigeon. It is war,

Fraulein. Do not distress yourself. It is but a matter of—imprisonment."

"There must be something I can do," desperately. "I hear them below. Is there no way to the roof, no escape?" "None, Fraulcin. It was an oversight. War is not my game; I am a man of peace.

You have been very kind to me, Front I thank you.

"You are not going down!"
"Pardon, but it is better so. Sold
they are of the provinces mostly, and for a lady to confront."

"They are coming up!"

He listened. The clank of scabbi against the stone stairs was unmistaka The little Georgiev straightened, threw his chest, turned to descend, faltered, c

back a step or two. His small black eyes were fixed on I

mony's face.
"Fräulein," he said huskily, "you very lovely. I carry always in my h your image. Always so long as I Adieu.

He drew his heels together, gave a little bow and was gone down the stain Harmony was frightened, stricken. collapsed in a heap on the floor of her re her fingers in her ears. But she need have feared. The little Georgiev mad protest, submitted to the inevitable li-gentleman and a soldier, went out of life, indeed, as unobtrusively as he entered it.

The carrier pigeon preened itself of fortably on the edge of the washst Harmony ceased her hysterical cryin last and pondered what was best to Monia was still breakfasting, so increa brief are great moments. After a thought Harmony wrote a tiny mess English, German and French, and inci it in the brass tube.

The Herr Georgiev has been arrest she wrote. An hour later the carrier lazily from the window-sill, flapped way over the church roof and disapper like Georgiev, out of her life. Grim-vis war had touched her and passed on.

The incident was not entirely cl however. A search of the building lowed the capture of the little spy. testing tenants were turned out, beds dismantled, closets searched, walls sou for hidden hollows. In one room on mony's floor was found stored a qua of ammunition.

It was when the three men who had ducted the search had finished, when boxes of ammunition had been gather the hall and the chattering sewing had gone back to work, that Harmon her way to her dismantled room, p through the upper passage. She glanced down the staircase v little Georgiev had so manfully descen-

"I carry always in my heart your ir Always so long as I live." The clatter of soldiers on their way

to the street came to her ears; the cooing of the pigeons, the whirr of a machines from the workroom. The dent was closed, except for the he ammunition boxes on the landing, gu by an impassive soldier.

Harmony glanced at him. He wa ing her steadily, thumbs in, heels in out, chest out. Harmony put her ha

her heart. "You!" she said.

The conversation of a sentry, save holiday, is "Yea, yea," and "Nay, "Yes, Fraulein."

Harmony put her hands together, a gesture of appeal, infinitely touching
"You will not say that you have f
have seen me?"
"No, Fräulein."

It was in Harmony's mind to ask hungry heart craved to learn-of Pet Jimmy, of the portier, of anything belonged to the old life in the Sieben strasse. But there was no time. The selimpassive face became rigid; he bethrough her, not at her. Harmony to

The man in the green hat was or up the staircase. There was no fi chance to question. The sentry w to carrying the boxes down the stai

Full morning now, with the winter shining on the beggars in the marlo the crowds in the parks, on the flower in the Stephansplatz; shining on Harn golden head as she bent over a bit of cl on the old milkwoman carrying u whitewashed staircase her heavy ca milk; on the carrier pigeon winging it to the south: beating in through be the exalted face of Herr Georgiev; r on Peter's drooping shoulders, or neglected mice and the wooden se on the closed eyes of a sick child worshiped sun, peering forth the g window of the East.

annual passes from me. Captain Murray at the Montmorency Street Station is my pal. He can see a joke without plans and specifications. I promise you that the whole thing will go off like clockwork. We'll sup-pose that you have attracted the young man's attention during the performance. You would attract any man's attention, my

dear."

"I would stand up and bow for that compliment," said Miss Harrington, "but the waiter is looking. Go on."

"We will suppose that you have received a note from him," said Uncle Billy. "He is to meet you at the stage door. . . One time little scream—just one. . . . Would tiny little scream—just one. . . . Would you do that—for the sake of the ball club?"

Miss Harrington giggled.

"If you're sure that you can keep me out of it," said she, "I'll do it for the sake of the joke!"

UNCLE BILLY was a busy man for a few days, but he found time to state that he didn't believe that Tom O'Connor had anything to do with the Algonquin Club thing. He said it was so clever that Tom couldn't have thought of it, and he said it in the dressing room so loud that everybody heard him. Maybe that was the reason why Tom didn't suspect anything when he was asked to fill out a box party.

Pat Dunphy, Peachy Parsons and some of the rest of us were in on the box party, playing thinking parts mostly. Uncle Billy and Tom O'Connor had the front seats right up against the stage.

seats right up against the stage.

Miss Harrington was immense. If she'd had forty rehearsals she couldn't have done it any better. Before she'd been on the stage three minutes Tom was fumbling round for his program trying to find her name. Pretty soon he began to squirm in

his chair.

"By golly, that girl is looking at me all the time!" says he.

"Don't kid yourself!" said Uncle Billy.

"But I tell you she is! There—did you

"But I tell you she is! There—did you see that?"

"Maybe she wants to meet you," says Uncle Billy. "I've seen her at the ball park a lot of times."

"You think she knows who I am?" asks

Tom.

"Shouldn't wonder. You're right, Tom.
She's after you, that's a fact."

"Oh, rats!" says O'Connor. "Maybe I just think so. No, there it is again! Do you suppose, if I sent my card back \_\_\_"

"I'm a married man," says Uncle Billy.

"I don't suppose anything. But if a girl as prestiv as that \_\_\_"

pretty as that -

Tom went out at the end of the first act.

I saw him write something on a card and slip it to an usher along with a dollar bill.

When the second act opened Tom was sonervous he couldn't sit still. It was easy to see that he hadn't received any answer to his note and was worrying about it. Pretty soon Miss Harrington came on to sing her song about the moon—they've always got to have a moon song in musical comedy or it doesn't go—and just as the lights went down she looked over toward our box and smiled, the least little bit of a smile, and then she nodded her head. The breath went out of Tom O'Connor in a long sigh. "Somebody lend me twenty dollars,"

says he.
"What for?" says Uncle Billy, reachifig. for the bankroll.

"I'm going to meet her at the stage door after the show," says Tom, "and she won't think I'm a sport unless I open wine."

Well, he met her all right enough. The whole bunch of us can swear to that be-cause we were across the street, hiding in a doorway. When she came out Tom stepped up, chipper as a canary bird, with his hat in his hand. We couldn't hear what he said, but there was no trouble in hearing Miss Harrington.

"How dare you, sir!" she screams.
"Help! Police! Help!"
Two men, who had been loafing round

on the edge of the sidewalk, jumped over and grabbed Tom by the arms. He started in to explain matters to 'em, but the men dragged him away down the street and Miss Harrington went in the other direction.
"So far, so good," says Uncle Billy.
"Gentlemen, the rest of the comedy will be

played out at the Montmorency Street Police Station. Reserved seats are waiting for us. Follow me."

You can say anything you like, but it's a pretty fine thing to be in right with the police. You never know when you may need 'em, and Uncle Billy certainly was an ace at the Montmorency Street Station. We went in by the side door and were shown into a little parrow your with a lot of into a little narrow room with a lot of chairs in it, just like a moving-picture theater, except that instead of a curtain at the far end there was a tall Japanese screen. What was more, most of the chairs were

What was more, most of the chairs were occupied. Every member of the Old Guard ball club was there, and so was Al Jorgenson and Lije, the rubber.

"Boys," says Uncle Billy, "we are about to have the last act of the thrilling drama entitled The Kidder Kidded, or The Old Guard's Revenge. The first and second acts went off fine. Be as quiet as you can and don't laugh until the blow-off. Not a whisper—not a sound—s-s-sh! They're bringing him in now!" bringing him in now!"

There was a scuffling of feet and a scrap-ing of chair-legs on the other side of the screen. We couldn't see O'Connor and he couldn't see us, but we could hear every word he said. He was still trying to explain matters.

"But I tell you," says Tom, "I had a

date with her."
"Yeh," says a gruff voice, "she acted like
it! Don't tell us your troubles. Tell'em to Captain Murray. Here he comes now."

A door opened and closed and another

voice cut in:
"Well, boys, what luck?"
"We got one, cap," says the gruff party.
"Caught him with the goods on \_\_\_\_"
"Tom

"It's all a mistake, sir—captain!" Tom breaks in. "I give you my word of honor

breaks in. "I give you my word of honor as a gentleman —"
"Shut up!" says Captain Murray.
"Your word of honor as a gentleman!
That's rich, that is! You keep your trap closed for the present—understand? Now, boys, where did you get him?"
"At the stage door of the Royal Theater," says the plain-clothes man, who did the talking for the two who made the pinch. "Duffy and me, we saw this bird kind of slinking round, and we remembered that order about bringing in all mashers, that order about bringing in all mashers, so we watched him. A girl came out of the stage door and he braced her. She hollered for help and we grabbed him. Oh, there ain't any question about it, cap; we've got him dead to rights. We don't even need the woman's testimony."

"Good work, boys!" says the captain.
"We'll make an example of this guy!"

"Captain," says Tom, "listen to reason!
I tell you this girl was flirting with me all

through the show

through the show ——"

"That's what they all say! If she was flirting with you, why did she make a holler when you braced her?"

"I—I don't know," says Tom. "Maybe she didn't recognize me."

"No, I'll bet she didn't!"

"But, captain, I sent her my card and she sent back word ——"

"Oh, shut up! What's your name?"

Murray shot that one at him quick and Tom took a good long time to answer it.

Tom took a good long time to answer it.
"Smith," says he at last. "John Smith."

That raised a laugh on the other side of the

screen.
"Well," says the captain, "unless we can
get him identified he can do his bit on the
rock pile under the name of Smith as well as any other, eh, boys?"
"Sure thing!" said the plain-clothes men.

"The rock pile!" says Tom.

"That's what I said - rock pile! Kind of scares you, don't it? There won't be any scares you, don't it? There won't be any bail for you to jump or any fine for you to pay. We've had a lot of complaints about mashers lately and some squeals in the newspapers. You'll be made an example of. Chickens are protected by the game laws of this state, and it's time some of the lady-killers found it out."

Tom began to plead, but he might just as well have kept quiet. They whirled in and gave him the third degree—asked him for the las and a whole lot of stuff. We expected he'd tell his name and send for Uncle Billy to get him out, but for some reason or other he fought shy of that. We couldn't under-stand his play at first, but we knew why soon enough. The door back of the screen opened again.

"Cap'n," says a strange voice, "there's

some newspaper men here.

Well, that was all a stall, of course. We didn't let the newspaper men in on it because we wanted them for a whip to hold

over Tom's head in the future.
"What do they want?" asks Murray.

# On the Alleged Slowness of Philadelphia

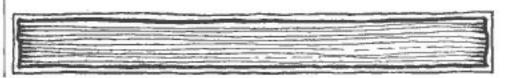

Some jokes gain currency because they are so picturesquely libelous; exempli gratia, the unreliability of gas meters; the undesirability of mothers-in-law; the Hobokenness of Hoboken. Call Philadelphia slow and raise a laugh.

Let us analyze that a little. Philadelphia is slow, but only in the sense that it is not fast. It has few lobster palaces and white waywardnesses. It is not a city selected by Pittsburgers to "blow in" large rolls between sunset and daybreak.

Philadelphia devotes itself to living not to seeing life. Its specialty is homes — not hotels.

A population of home makers and home livers interests the manufacturer seeking a permanent market more than any spot on earth. Into the best Philadelphia homes first thing in the morning goes the

"They're after this masher story," says
the stranger. "I don't know who tipped it
off to 'em, but they've seen the woman and
got a statement from her. She says she
thinks this fellow is a baseball player."

"I wouldn't care if he was the president
of the League!" says the captain. "You
know the orders we got to break up mashing
and bring 'em in, no matter who they are.

and bring 'em in, no matter who they are. Here we've got one of 'em dead to rights; and it's the rock pile for him, you can bet your life on it!"

"And serve him right," says the stranger.
"But, cap'n, wouldn't it be a good thing to
identify him? These newspapermen say
they know all the ballplayers. Shall we have 'em in to give him the once-over?"
"I'll send for 'em in a minute," says

Murray.

That was the shot that brought Tom off

That was the shot that brought Tom off his perch with a yell.

"Captain," he begs, "anything but that! I'd rather you sent me up for six months—yes, or shot me! If this gets into the papers it'll ——! Oh, say, if you have any heart at all—please—please—— Oh, you don't understand!"

We didn't understand either but "continue of the papers."

We didn't understand either, but Tom We didn't understand either, but Tom made it plain. I'm not going to write all be said: it made my face burn to sit there and listen to it. It took all the fun out of the joke for me. It seems that this rough kidder—this practical joker who never cared a rap how much he hurt anybody else's feelings—had some pretty tender feelings of his own. He opened up his heart and told that police captain something that he never had told us—told him about the little girl back in the home town who was waiting for him, and how she who was waiting for him, and how she wouldn't ever be able to hold up her head again if the story got into the papers and he

was disgraced. was disgraced.

"It ain't for me, captain," he begs; "it's
for her. You wouldn't want her shamed
just because I've acted like a fool, would
you? Think what it means to the girl,
captain! Oh, if there's anything you can

Uncle Billy beat me to it. I was already on

Oncie Billy beat me to it. I was already on my feet when he took two jumps and knocked the screen flat on the floor.

"That's enough!" says Uncle Billy. We had planned to give Tom the horse-laugh when the screen came down, but somehow none of us could laugh just then. If I live to be as old as Hans Wagner I'll never forget the expression on Tom O'Connor's face as he blinked across the room and say. face as he blinked across the room and saw us all sitting there, like an audience in a

theater.

"Tom," says Uncle Billy, "I'm sorry, but this is what always happens with a practical joke. It starts out to be funny, but it gets away from you and then the first thing you have somebody is hort. first thing you know somebody is hurt. You've had a lot of fun with this ball club, my boy, and some of it was pretty rough fun, but—I guess we'll all agree to call it square."

Tom got on his feet, shaking a little and white to the lips. He couldn't seem to find his voice for a minute and he ran his fingers

across his mouth before he spoke.
"Is—is this a joke?" says he.
"It started out to be," says Uncle Billy.

"I'm sorry."

Tom didn't say another word and he didn't look at any of us. He went out of the room alone and left us there. I wanted to go after him and tell him not to take it so hard; but I thought of the way he had shamed Al Jorgenson, I thought of the girl who wouldn't ever speak to Holliday again, I thought of the four kids who went home broken-hearted, all on Tom's account—and I changed my mind. It was a bitter dose, but I decided not to sweeten it any for him. any for him.

Tom O'Connor isn't funny any more, and I think he is slowly making up his mind that we're not such a bad outfit after all. To this day the mention of the name of Smith makes him blush, so I guess that in spite of the fact that he's never opened his mouth about it since, he hasn't for gotten what his own stuff feels like.

# *Heart of Gold*

(Continued from Page 18)

However, she has understudied the starit is safest to make it a waning star—and then, one night, the star falls ill and the little heroine takes her place, giving, of course, a far more brilliant performance than that of the star herself. Among all the models of ready-made styles in plots this is

one of the most popular sellers.

In unreal life, though—that is to say, the In unreal life, though—that is to say, the life of the theater—the understudy is not a very important institution. The reason is that, broadly speaking, actors and actresses are never ill. They may be what other people would call ill if they felt that way themselves. They may get up giddily in the morning, declining anything for breakfast but a cup of black coffee; their heads may feel as though they meant to burst. may feel as though they meant to burst, their voices be nothing but raucous whis-pers, their hands and feet nonsentient lumps of ice; but they obviously are not ill because at eight-thirty-seven—or whatever the precise moment is—they are waiting in the wings for the cue; the voice comes back miraculously for the first line, nobody in front knows that anything is the matter,

and the understudy in a mixture of rage and relief says: "Isn't it a lovely night? Let's go out on the terrace!" just as usual.

And so when, on the night that followed the first appearance of the rube, Hazel, about halfway through the first act, began walking crooked and saying things that were not in her lines at all—and finally, with an instinct not wholly submerged by with an instinct not wholly submerged by her delirium, started for the wings, where she tumbled in a heap just out of view of the audience—the members of the company

were taken as completely by surprise as though they had been a group of children. They got a doctor round from the front of the house who, after an examination, quieted what was almost a panic among the chorus by assuring them that she was not going to die then and there; but who said that her temperature was one hundred and four, that she ought to have spent the last week in bed, and who seemed inclined to hold Freddy Boldt criminally responsible for having allowed her to go on in such a condition. He and Keziah took her home in a taxi, where she was put to bed and dosed and coddled just as though she were a regular sick person.

Meantime at the theater an utterly

panic-stricken understudy—who was, it appeared, the only one in the company who did not know all Hazel's lines—was giving the worst performance of The Girl From Proctor's that ever had been seen on any

As Hazel's own doctor, who came the next morning, predicted, she recovered from the attack—the fever subsided and the terrible racking ache—and at the end of three or four days she was able to oxygenate what little blood she had with twenty

respirations or so a minute.

The girl herself noted these symptoms of convalescence rather apathetically. It seemed almost stupid to get well—as well as she could get. The one inducement she was conscious of was the desire to get rid of the trained nurse, whom she and Keziah detested about equally.

They did get rid of her within a week,

by which time the Swedish maid-of-all-work was adequate to supply Hazel's wants dur-ing the hours when Keziah was at the theater. Hazel did not want much, except to be let alone.

Every day during Keziah's absence Hazel made up her mind to ask her the question—the one great question that mattered-when she came home that night; but every night, in a panic of terror, she put the question off until the next morning, and every morning kept postponing it until it was time for Keziah to set out and it was too late for her to give the answer. The question was, of course, When was Keziah going to follow her son back West? Was it to be next week or next month? Or by any miracle of good fortune was Keziah going to wait until he had built for her the house he had talked about?

The old lady gave her no hint—said nothing to indicate in any way that anything had happened to change their old régime. They chatted a little every night and again in the morning, Keziah bringing her the Globe's daily budget of news and friendly messages from everybody. They were all anxious to come out and see her, Keziah said-everybody, from Willy Lord down to the members of the chorus-and

were only waiting to hear that she was strong enough to see a little company in order to begin making regular visits.

There were flowers nearly every day, too, which Keziah kept in the kitchen sink—or, on mild days, out on the fire-escape. Hazel could not bear them in the room. She said the smell of them made her think she was

The doctor came one morning before old Keziah had left for the theater, scowled over his patient in a ferocious manner, told her she was ever so much better than she thought she was, and ordered her to buck

spoke to Keziah.

"Have some of her friends come to see her," he said, "whether she wants them or not."

That afternoon, when the doorbell rang, as it frequently did, the maid, instead of bringing in a long pasteboard box from the florist's, stepped aside and admitted to the sitting room—well, just about the last person in the world Hazel had expected to ee—the big bronzed rube—no less—whom

she supposed to have been back in Arizona for the last fortnight.

Her first thought was that here was the answer to the question she had never yet dared ask old Keziah.

"You've come back to get her!" she said with a gasp. "Don't! Don't take her away from me—yet." He did not seem to understand at first;

and then he smiled.
"I didn't go back at all," he said. "I've
just been waiting for another chance to see

She gazed at him fixedly for the better part of a minute, though the look in his honest face had been plain to read in a glance. Then her head dropped back on the pillow and she turned her face away from

pillow and she turned her face away from him.

"Oh, please," she said with a weak little shiver. "Please go away!"

You see, his being there at all—to say nothing of the way he was looking at her—showed her the way out again, the way that was so easy for the taking. And what she meant was that she was not strong enough to make a fight against it, hold him off, show herself up to him, send him on his way properly disgusted with her.

off, show herself up to him, send him on his way properly disgusted with her.

He could not interpret it, of course; but he was not at all tragic about it—just smiled at her, with a touch of old Keziah's good-humored obstinacy, and told her that the doctor had prescribed visitors. It was just as well, he thought, that the first one should not be too interesting; so would she not let him sit down for a while and tell her about Arizons? about Arizona?

There was no resisting the way he pulled up a chair, and discovered where the light that shone into her eyes came from, and that she wanted a drink of water, and that that she wanted a drink of water, and that
the pillows were bunched uncomfortably
under the back of her neck. The touch of
his hands as he lifted her to settle the
pillows was curiously pleasant.

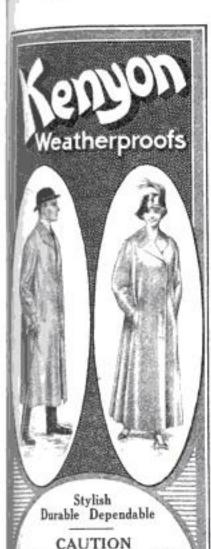

"I didn't mean to be so rotten," she said
with a washed-out smile—"just a grouch.
Where is Arizona?"

Well that was the way it begans and

Well, that was the way it began; and having let it begin the girl found it hard to first day—at least, it did not seem long, and the hour after he had gone did; but, like the camel that got his head into the tent, Newton rapidly made himself an inevitable part of the establishment.

Other visitors took to coming on succeeding days—people from the company on afternoons when there were no matinées: fat George Featherstonhaugh, and Zora. and Josephine Foster, and sometimes a bunch of the ponies—funny, bold, fright-ened little people with a cooperative bunch of violets or a box of candy. Willy Lord came too; and he used to cheer her up by telling her how rotten the show was with her out of it, and how much money she was losing him by not getting well quicker.

Then there was a desiccated young man with powerfully ground noseglasses and a way of saying things that did not begin to bite in until about a minute after he had said them; and a friend of his, with a disrespectful manner and a vast knowledge of unclassified subjects. Hazel explained to Newton after they had gone that one of them was a dramatic critic and the other wrote dope for a sure-enough magazinebecause, you see, Newton was always there

whether the others were or not; and he always stayed after they had gone awaylong enough at least to make sure she was not too tired and that she wanted nothing. He never got in the way—always dropped

cheerfully into the background, answered the bell, fetched things and carried them away, and-when there was nothing else for him to do-sat back in his corner and listened to the rapid-fire talk in a language he did not understand at all. She shot a look round at him every now

and then, as if to see what he was making of it or whether he was shocked; and the smile he gave her when he caught any of those looks almost brought a lump into her throat—it was so like old Keziah's.

There was no denying it was a relief, after the noise and the fuss and the sentimental farewells of the others had died away, to have him pull his chair up close, so that she should not have to speak loud, and talk to her about Arizona or East Weston, or the theater—which latter place, it appeared, he frequented during the odd hours when he was not taking care of Hazel.

This fact disturbed the girl more or less when she heard of it. It would be all right, of course, if she were there herself to keep an eye on people—guard his precious inno-cence as she had guarded old Keziah's. In her absence were they not likely to give him some horrible shocks—disillusion and disgust him completely? Well, was that not just what she wanted?

That question pulled her up with a jump. Would it not save her the trouble of doing just that very thing herself? Let her off the big fight with him that she kept telling her-self she was not strong enough for—yet? She dismissed the question from her mind in a rage, but she was too honest to avoid the answer; and she described herself to herself in terms that Newton, had he heard them, would have attributed only to de-

Things went on after that much as they had before-on the surface; but the girl was conscious of a difference underneath. She could not be sure whether Newton was conscious of it or not. And then one day the explosion happened.

Newton was out in the kitchen making her an eggnog when Hazel, who had been sitting up in the Morris chair, decided she wanted to look at the morning paper and got up rather too suddenly to get it. They were encouraging her to walk a few steps now and then, but this time the thing did not work. Everything went black and, after turning and trying to grope her way back to her chair, she fainted. The next

thing she knew, she was being kissed.

I will not pretend that it was a new experience to Hazel, but I do aver positively that it was a new sensation. The strength of it kept her from opening her eyes quite as soon as she might otherwise have done. When she did she found herself lying on her couch. Newton had been sitting on the edge of it beside her, holding her hands; but he let them go and rose rather precipi-

tately when she opened her eyes.
"I can't stand it!" she heard him say as
he turned away from her. "I can't stand

She steadied herself with a long breath or two, stolen while his back was turned to her in his patrol of the room. When he turned back he met her familiar, ironical smile. "I don't wonder!" she said. "Cooped up all day with a sick cat like me! Why

don't you go back to Arizona?"

He came all the way back to the couch and towered over her almost threateningly

before he answered.
"That's what I'm going to do," he said; "and I'm going to take you back with me."
"Get me a job as—what do you call 'em?
biscuit-shooter at the camp?" she inquired

He sat down suddenly beside her, and it sapped pretty near all the courage away from her to feel that he was trembling

uncontrollably.
"I know how you feel about me," he said, taking pains with every word, "how you must feel about anybody—any—rube like me after the people you're used to; but that doesn't matter a bit, because I'm not asking for a thing—just that you come up with mother as her—guest, and get well and strong again, so that you can come back here to your work and your-success,

and all that means such a lot to you here.

# 15,000,000 Spark Plugs are Produced Annually

5,000,000 Would Supply the Demand If They Were All Good Plugs

HOW much of your money is represented in this tremendous waste that motorists pay for?

It is almost a foregone conclusion that you have paid for more than a few spark plugs that did not give you anything like full return for your money.

Here at last is a spark plug that you can buy with confidence-a spark plug that is a quality plug -that is not made to compete on the basis of price with spark plugs in general, but with the one idea of giving the purchaser absolutely satisfactory service.

# SPARK PLU

Naturally, it costs more to produce such a plug. But we feel that motorists will gladly pay a slightly higher price —in order to be sure of getting full value for their money. Specially constructed and extremely heavy insulating core stands strains which easily break down ordinary insulators. Seat for insulator unusually wide and well cushioned, allowing ample toom for expansion and contraction.

Easily taken apart, cleaned and re-assembled. Always absolutely gas tight. If your dealer does not carry the Master Plug, send \$4.00 for set of four and prepaid shipment will be made direct.

Guarantee After using Master Spark Plugs for 30 days, if you will be refunded, if requested, on return of plugs where purchased.

# HARTFORD MACHINE SCREW CO.

476 Capitol Avenue

Established 1873

Hartford, Conn.

# O keep your auto looking just like new all the time—

as bright and attractive as the day it came from the factory, just clean and brighten it with LIQUID VENEER.

No matter how dull, dingy, greasy or marked the finish may be, LIQUID VENEER will help to restore its original beauty-and the frequent use of it will preserve the finish against the ravages of time and weather.

Renewing an auto with LIQUID VENEER is simple and cleanly—just a few minutes work with a little LIQUID VENEER on a piece of cheese cloth, that's all! There's no drying to wait for, so your car is instantly ready for use.

Thousands of auto owners now use LIQUID VENEER, and it is recommended by many of the manufacturers.

Any Auto Supply, Grocery, Drug or Hardware Store sells LIQUIDVENEER in 25c, 50c and \$1 bottles. The name, WMM, on a yellow package is a guarantee you are getting the original, dependable article.

BUFFALO SPECIALTY CO., BUFFALO, N. Y.

200 styles - carry a brill have

and say good-by—and you'll come back here. It'll all be understood from the start. I'm not asking a thing. Can't you do it

that way?"

"Not in a thousand years!" said Hazel. "I may not be much good but I'm not that kind of grafter." He sprang up at that and echoed the word grafter indignantly. "Well," she persisted, "isn't that what it comes to? Taking your charity——" He fairly dashed that word back in her

"Charity!" he said. "When all I want in the world is just to take care of you and

see that nothing gets a chance to hurt you and see that nothing gets a chance to hurt you again or frighten you!"

With that she sprang her trap.

"And you'd have me take all that," she interrupted, "everything you've got to give a woman, use it to get well on, and then hand you out a happy ta-ta and come back to work?"

He stared at her incredulously.

He stared at her incredulously.

"You know"—he said after a silence,
and hardly able to command his voice at
all—"You know what it is I want."

Her green eyes met his with their oldtime

straight stare.
"What is it that you want?" she de-

manded.

manded.

"I want you to marry me!" Under her stare a deep burning blush came up into his face. "You—you didn't think——"

"Oh," she said, "you make me laugh!"
The very last ounce of her control and resolution had gone into the contemptuous inflection of those words however. She could not help what happened afterward.

"I'm not making you laugh," he said quite simply. "I'm making you cry."
And with that observation he sat down beside her again and caught both her hands in his—and pretty nearly crushed them, he

beside her again and caught both her hands in his—and pretty nearly crushed them, he held them so tight. She turned her face away with a shudder.

"You couldn't marry me!" she said.

"I'm not what you thought I was that first night you saw me with the make-up on; but I'm more, a lot more like that than I am like the little innocent who didn't know what the things meant she said. what the things meant she said on the stage. Do you suppose a girl could live the life we do and not know? No—let go of me and listen! Let me tell you just a few

things."
"Not now—nor ever!" he said. "There's
"not now—nor ever!" he said. "There's just one thing you can tell me that'll get you rid of me for good in a minute. If you don't tell me that I shan't want to hear anything else."

She went almost as white as when she fainted and she felt her lips stiffening, but

she managed the question.
"What is that thing?" she asked.
"That you don't love me!" he said. "That you don't like to have me near you! That it hurts you to have me hold you like this! That you're happier when I'm away from you than when I'm with you! Can you tell me that?"

But Hazel could not. Presently, though, when he gave her another chance to speak,

when he gave her another chance to speak, she ventured a last protest.

"It's a rotten trick to play on—on your mother," she said.

"Letting me marry you?" he asked; and then he grinned. "I told her I meant to do it—that very first morning after you went downtown. She's been keeping me from setting discouraged ever since."

getting discouraged ever since."

"Can you beat that?" said Hazel; and she lay there in his arms so quietly and so long that he began to wonder what she was

thinking about.

"I've known some pretty good sports in my day," she said at last; "but, you can take it from me, the best sport I know who's got all the rest of them faded to a fare-you-well—is old Keziah!"

(THE END)

# Throwing Beams

TITTLE lamps that would hardly give being used for lighthouse purposes, throwing beams many miles. One little lamp rated at only thirty candlepower and op-erated by a battery has a record of being seen clearly at a distance of more than twenty miles.

The secret is the concentration of light. Every effort was made to keep the light source down to as fine a point as possible and then to keep it all concentrated in one narrow beam. This particular light re-volves, and as it comes round the fine pencil of beams will catch a person's eye miles

## The Comfort of "5130" Begins with the Pattern

One reason why No. 5130 Clothcraft Blue Serge Special is one of the most successful suits for men is because it is so well designed.

The time and money devoted to designing the patterns are well spent, for they result in a comfortable, easy fit. The suit keeps its shape and every detail of collar, sleeves, pockets, armholes and so on, is just right.

It doesn't cost you any more either; for doing each little operation in the one best way also means saving time and money.

It may be only a fraction of a minute in sewing a seam, or in trimming a lining, but altogether it means a good many dollars. That saving comes back to you in the painstaking work of the designer, and in better and better materials and workmanship.

And, remember, Clothcraft is the one GUARANTEED ALL-WOOL line of men's ready for service clothes at \$10

Drop in at the Clothcraft Store and see for yourself the substantial value of No. 5130 Blue Serge Special at \$15.

Write for the new Style Book and a personal note of introduction to the nearest Clothcraft dealer.

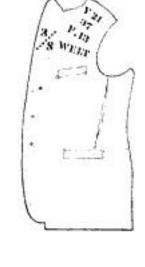

There is also a full weight Clotheraft Blue Serge Special or \$18.50 known as No. 4130

#### *A KING AMONG KING*S

(Continued from Page 9)

when John Hogaboom got him. Johnny had always been averse to changes. As he hitched these bony veterans to the plow he suffered another attack of that irritating dizziness and leaned for a moment against the side of the old white mare. He shivered when the spell had passed, and blamed it all on the chilly air, for the tule mists still

clung to the ground.

With an effort at cheerful shouting he guided the horses to the spreading live-oak, where the furrows were always started on the Waterloo Ranch. Once he had made this rather a ceremony, but now it was an empty form. The horses were stiff and awkward in the chill air. Old Dolly was not responding to his call, though the Colt betrayed a sort of willingness to begin the

betrayed a sort of willingness to begin the year's work.

"Now then, old girl!" urged Johnny as he set the point of his plow. "Come on there, children! Off you go! Hay-yup!"

The Colt shambled and forged a step ahead; but Dolly strained at the traces, fell back, strained gallantly again, then stumbled weakly and went down in her tracks. Johnny was quickly at her side. The old mare tried feebly to lift her head and nawed the earth bravely with a foreand pawed the earth bravely with a fore-foot. Johnny knelt beside her and lifted

her head.
"What is it, old girl? Tell me what's the matter!" he called gently.

Dolly seemed to make the effort; but after a few seconds her owner rose to his feet and shook trembling fists at the empty

sky.

The mare was dead. A long moment the old man surveyed her. Then he mumbled old man surveyed her, bis luck, endearincoherently—curses for his luck, endear-ments for the horse.

He went back a step and looked away, idly studying the defaced gray front of the ranch house. A queer change marked his face; the iron of his resolution had strangely gone; every trace of expression but that of senile despair had been erased. Then he tried to raise his hands in what should have been a gesture of defiance; but queerly enough only the left hand came up. His right arm hung nerveless, immovable. In a dull stupor of alarm he glared down at

the inert member.

He strained to lift it, but it seemed to be no longer his own arm.

Panting now, he strained again, his fright-tortured face purpling with the effort. A moment he towered thus, then he swayed, stumbled, and went flabbily down beside the fallen mare. The Colt looked down on him with dumb surprise, but did not move.

Feebly he writhed there, trying to rise; but he was again in the swirl of that terrifying divisions.

out ne was again in the swirl of that terri-fying dizziness.

"I got a stroke!" he mumbled. "Of all the rotten luck! Three dry years, the mare dead, and me knocked out just at plowing-time. Oh, this is bad for the Waterloo Ranch!"

"O sole mio!" warbled a voice in the

distance.

The old man shuddered. It was his fate—that song; but he was too weak now for resentment. He closed his eyes and suffered the vision that through all the years had greeted him in darkness and in quiet—a vision of the San Joaquin billowing to its last acre with ripe wheat. He wondered whether he were dying and hoped—if he must go—that this golden panorama would float before him to the last.

Tony Jusi, proprietor of ten small acres, looking curiously from his two-acre vine-yard over into the Waterloo place, noted an unwonted thing there. His song gurgled to a sudden break and, parting the barbed wire of the fence, he hurried to the scene of the catastrophe.

Old Johnny's head reclined against the shoulder of the dead mare. He eyed Tony resentfully—Tony, glowing, ruddy with health, smelling of all the fruits of earth, with a tang of sweat! Tony ran lively eyes over the scene — eyes that betrayed a

"Maybe you can help me to the house," grumbled old Johnny weakly. "I was taken with a spell and the mare's dead; but I'm going to get another horse and plow

to plant wheat. You understand?"
"Oh, sure, I understand," replied Tony with a humoring, placating briskness. "Sure! Sure, I understand. Now I tell you—I carry you this way." He drew one of the old man's arms round his neck. "Now you lift the other arm."

"I—I can't," muttered the old man, painfully ashamed of his weakness. "But I'm all right—I'll be all right in a minute— and I'll plant wheat—nothing but wheat! Mind that!

"Sure! Sure to Mike-you plant plenty wheat! Pretty soon you plant a lot of wheat; but now you come with me. I think that better." And he lifted old Johnny as he would have lifted a child.

Old Johnny scowled and tried to cover his embarrassment by pretending more pain than he felt. The fact that this par-ticular despised dago was playing him the Good Samaritan distressed him more than the loss of his mare and his curious seizure. On ten of the old Waterloo acres this singing nuisance grew twenty different crops almost simultaneously—he and his buxon wife and his seven children. To him the San Josquin, which had yielded the Water-San Joaquin, which had yielded the Waterloo only wheat in diminishing quantities,
had given the fullness of the earth. And he
was only a singing, macaroni-eating dago!
As Tony, with his burden, trudged
stoutly across the yard to the house old
Johnny mumbled his creed:
"But I'll plant wheat—nothing but
wheat!"
"Sure! You plant all the wheat you
want," agreed Tony soothingly as he laid
the champion of that cereal on a disordered

the champion of that cereal on a disordered hed. "Now I run get the old woman. No doctor, padrone! All doctors are fools and banditti. My brother Luigi he had one, looking so wise with es-spectacles! And he say: 'I can do nothing; he too damn sick!' So Luigi he die pretty soon — and that doctor bring a bill just the same. No doctor for you, padrone! What to hell-a

Tony had learned his English where he best could, but he seldom left one in doubt as to his meaning. Now he darted cheerily out and old Johnny could hear him warbling O sole mio! as he crossed the field; but the tone was subdued and sympathy-bearing. It died away and for as many as five min-utes old Johnny heard no singing. Then the gurgling tenor came again to him. It was rather welcome now. It reassured him with its vitality, its suggestion of warm, willing kindness.

Tony entered, followed by his sympa-thetic wife, several pounds more substan-tial than himself, and a small boy, dark of eye and restless with life. And the woman, of course, carried her customary baby in

her arms.
"Now I think you take rest," advised
Tony. "My old woman she gona make something to eat, and pretty quick I come eat too—because she is not at home to cook—if you please, padrone. And little Tony here, he help to amuse you, mebbe. And we be all O. K."

He finished with a profusion of graceful flourishes and was out of the house again, his nourisnes and was out of the house again, his inevitable song floating back. Old Johnny looked helplessly at the woman. "Sorry to put you to all this trouble, ma'am."

"No troub'," said Mrs. Tony, smiling broadly. "My man he like you very much. You sell him big, fine land. We all very nice."

A twinge of conscience was here added to old Johnny's other discomforts. He had known when he sold the bit of land that there was a bad gravelly place in it; but he had thought it good enough for a dago. And literally it had been.

"I'm obliged to you, ma'am."

I'm obliged to you, ma'am." And the woman, seeing he was ill at ease, withdrew to the kitchen when she had drawn off his heavy boots and pulled the worn quilts about him.

"Now I'm up against it good!" muttered old Johnny. "I had a stroke—that's what I had. Now what am I going to do?"

He sank bewildered into this abyss of frustration. There was nothing to do apparently—just lie there forever, a useless

hulk.

Then presently he was sensible of a new influx of life; it was stirring in his old body, calling him to fresh, new effort. It was some time before he actually connected this invigoration with the novel odors that issued from the kitchen. To a weakened man who had long done his own cooking, and done it miserably, they were highly exciting odors—a blended chorus of them: and, high above them all, was one predominating odor—one deliciously appetizing scent, sharp, pricking, provocative. To old Johnny it was sweeter than the first

breath of spring to a winter-starved poet. He knew now that he was hungry—that he had been hungry a long time. He sniffed again and again, as if he would draw to him the succulent body of that drifting soul. Even in the days of the best of Chinese cooks there had come no such moddening cooks there had come no such maddening scent from his kitchen. It engrossed him so that, for the time, he forgot the morning's tragedy. Surely that subtle emanation was from a magic herb plucked in some far-distract valles. distant valley!

After an age of impatient waiting he heard again the music-cue for Tony's en-trance. Somehow he had ceased to resent the song and he no longer loathed the singer. That aroma from the kitchen had filled him with curiosity, anticipation and vast friendliness. The Italian bent solicit-

vast friendliness. The Italian bent solicitously over the bed.

"How you feel now, padrone?" he asked.

"Hungry!" replied old Johnny, with
eager brevity. Tony beamed.

"That is mighty damn well!" he said.

"When a man can eat I think he is pretty
O. K. When he is hungry he is well. And
there is plenty. Oh, Maria! The padrone
will eat!"

Maria hustled from the bitches.

Maria bustled from the kitchen, a maddening increase of the odors in her wake, and placed a small table by the bed. Then she brought in steaming dishes. They did not contain ranch food. There was a bowl of savory soup; a plate of macaroni en-riched with tender fresh mushrooms; an immature fowl in a casserole, bathed in a thick brown sauce. There was the inviting

verdure of a salad and a pitcher of red wine.

"Everything she grow on my own place," said Tony, beaming with pride—"even the wine. And it is good wine. I make myself. Sure to Mike!"

Old Johnny lifted the bowl of soup to his lips and drank a hearty draft. There was the subtle taste of which he had been inhaling the scent for half an hour; the same taste was in the macaroni-it permeated the tender chicken, which Tony neatly cut for him—and he caught whiffs of it from the salad; but the wonderful substance itself eluded him. He puzzled over this as he ate greedily. It seemed to him that never, even in San Francisco, had he tasted such food.

"It puts new life in a man," said old Johnny graciously after his second glass of the mellow red wine. "If I was better fixed I wish your wife could cook for me a while."

Tony shrugged his volatile shoulders.
"I would also wish that, padrone—but too many bambini. And my big daughter, my Terecine, she go to school now to learn all education like the smarts.
"Already she make native English writ-

"Already she make native English writing and counting in strange ways with figures, and geography of the lands; and but yesterday she say she learned that the principal products of California are gold, wine and fruit."

"That ain't right—she didn't remember right," objected old Johnny, revived by the food to some faint heat of resentment. "The principal products of California are gold."

wheat, wine and wood."

"My Terecine say nothing of wheat that is taught her," insisted Tony; "and she is very smart for her little size—that teacher of the school she tell my old woman so." Old Johnny frowned and a twinge of pain

showed in his face. The sympathetic Tony caught the train of his thought. "I guess mebbe Terecine she forget about wheat," he conceded. "Sometimes she for-get a lot—you think she forget her own head! They say wheat and she lose it from the brains."

Old Johnny frowned again, however.

"I guess she remembered it right," he said dejectedly. "They've been telling me for thirty years the times have changed. Maybe they have, and maybe the school-books have changed too. I'm the only one planting wheat. The rest are all gone—all except Jim Pierson and me; and Jim, he went into the drygoods husiness and got went into the drygoods business and got rich again-only Jim never was a ranch man. Wheat kings they used to call us, and that's all I got out of wheat!"

Tony gave way to excitement—a voluble. friendly excitement.

"But, padrone, you have still the best land in this whole valley of the San Joaquin. O Dio mio! If I have him I be a regular O. K. rich—I leave so many million dollars for the bambini, and the bambini of them. Oh, sure to Mike!"

Old Johnny smiled wanly.
"And what would you plant now if you had the land?" he asked, but without

# This is the only Trade Mark under which KW Master Vibrators are sold

You are particularly cautioned against imitations apparently re-sembling the K-W Master Vibrator in many details and being

offered by some dealers under private trade names. Look for the K-W Trade Mark and serial guarantee number.

A handsomely finished box means nothing. It's the electrical detail that makes a Master Vibrator reliable and efficient and years of service alone will prove this. Over 90,000 K-W Master Vibrators giving efficient service is proof that the K-W is electrically right. That is why every K-W Master Vibrator is "Guaranteed for life."

The K-W Master Vibrator is the Standard of Excellence all over the world. It's a tried and proven accessory for a Ford car, with 100 % efficiency.

Your nearest dealer will gladly show you the merits of the K-W Master Vibrator. Literature on request.

Tony's animation enlarged. His facile arms waved to all points of the compass, "Here the almonds; here the peaches; there the vines; over there the onions; down here those other vege-tabbles; below there the alfalfa!" With rapid gestures and quicker words he summarized all the groups that could be grown in California. crops that could be grown in California. His eyes widened as the vision grew. "And

old Tony and very much old Maria—all happy! That is the best crop of all for nappy: I hat is the best crop of all for California, padrone—so much room and so good to be children here. It is heaven for the Italian—some day I think the Italian have it all, for he know how to grow little things in little gardens, that you Americans say: 'Oh, what to hell! Such too little garden for any use!' Pardon, padrone! I talk too damn much!"

Silently old Johnny motioned for his pipe. The Italian filled it with cheap tobacco, gave it to him and held the lighted match. Both were silent, each seeing his vision— Tony his future of plenty; old Johnny his

misty, dwindling past.

Over acres and miles of waving grain, now glistening green, now ripened gold, old Johnny looked with his closed eyes. League after league the wheat stretched, from the tules of the San Joaquin River to the Sierra foothills. He heard the rumbling of the harvesters and in the distance the faint whistle of a river steamer; but it must be that wheat had had its day! They must truly have been wise and right who told him that times had changed. Now Webber's Landing at the end of the Mormon Slough was a city of skyscrapers—

six stories high, some of them. A stone city hall of ambitious architecture had replaced the wooden courthouse, and in the court about it there were few hitching posts, for the clumsy ranch wagons had all but dis-appeared, giving way to the motor car and the auto truck.

And the town hall, where formerly Lotta had sung and danced—actress-idol of California's fifties—was now an imposing theater, gorgeous with plush and polished woods. The Chamber of Commerce building, also made of impressive stone, was reared on the very spot where Captain Webber had apportioned Johnny Hogaboom his share of the San Joaquin for the drudgery of wheat.

And Johnny, of all the landholders, had remained true to the purpose for which the conqueror of the valley had intended it.

Had he been true too long? Would he be

driven out?
"No; by the Eternal -

He strained valiantly to move the be-numbed arm. There he was—helpless! He who had turned the first furrow for the wheat of the San Joaquin would never guide another plow. Must he become the partner of an Italian truck farmer in his squalid old age—he who had been a wheat king? He thought intently during a long silence, the Italian watching him with an understanding

Suddenly old Johnny turned his head and sniffed. That baffling scent from the kitchen had again assailed his nostrils.

"Say, Tony," he began, "you told me you grew all the stuff you gave me to eat. There was one thing I never have eaten before—something I don't know—that stuff that smells so good. It makes me hungry that smells so good. It makes me hungry again.'

Tony was puzzled. He reflected.
"The padrone would mean those little
mushrooms?"

"No, not the mushrooms—I know them well enough. It was something everything smelled of—soup and salad and chicken." Tony brightened.

"Ah, the padrone will mean the garlic— our garlic from the little garden."
"Was that stuff garlic? I always thought garlic wasn't good for any one but"—dagos he had been going to say. "I always thought it wasn't so good as that," he ended lamely.

"Certain thing it's good for all of us!" said Tony blithely. "Surest thing of whatever you know! Maria she put just a little bit in everything—not too much, but thy like the most tiny. It is a great help. See! I have one piece here. He drew a cluster of the second state of the second seco of the pungent vegetable from a pocket of his overalls. Old Johnny fingered it

respectfully.

"So that's it, is it? Well, now, you can grow that stuff here, can't you?"

"Sure! On your life!" assented Tony.

"Sure! Dio mio!—yes!"

"All you want—Dio mio!—yes!"

"Would it grow all over my place?"

feverishly demanded old Johnny.

Tony gasped. The sudden vision of a
hundred acres all in garlic was awe-inspiring

hundred acres all in garlic was awe-inspiring even to him.

"Padrone," he answered in slow, hushed tones, "you could grow here enough for many big cities."

Old Johnny clenched his unimpaired fist and banged it vigorously on the table.

"Then my mind's made up," he declared, the fire returning to his old eyes. "Not another grain of wheat will I plant! From now on I'm planting garlic and you're going to be my full partner, do you understand that?"

"But, padrone," pleaded Tony, "such vines; such peaches; such melons —"

"Not another word!" shouted old Johnny.
"I've always been a one-crop man. When

"I've always been a one-crop man. When I go for anything I go for it with both barrels. Garlic and nothing else! I'll show them I can be a king of something!"

"Dio mio!" whispered Tony with all reverence. "One hundred acres!"

Two years later John Hogaboom, one-time wheat king of the San Joaquin Valley, beamed over this paragraph in the Stockton

Gazette:

"John Hogaboom, Garlic King of the San Joaquin, leaves for San Francisco today for a conference with Peter Lucchetti, the Cabbage Baron. Mr. Antone Jusi, Mr. Hogaboom's partner, will look after his interests while he is absent. Mr. Hogaboom was formerly one of the wheat kings of the San Joaquin and is still in rugged health for his years."

#### The New Route

Oh, we have known the gales that blow About the Polar Sea, And battled racing tides that flow And combers rolling free. We're fought the winds that roar so raw We'll round the Horn no more!

We'll round the Horn no more!

We'll round the Horn no more! And bones of good men shall not bleach Upon that cruel shore.

The storms came shricking from the Pole, The ice floes clogged our course, And on our beam-ends we would roll Beneath the tempest's force. That was a voyage meant for Men—
Stout-hearted men of yore;
But we'll not brave that course again—
We'll round the Horn no more!

Past Colon town we shape our course. We'll round the Horn no more!

No more! We'll round the Horn no more, But loiter through the calm Canal That cuts from shore to shore, And rob the breakers of their prey.

We'll round the Horn no more!

Oh, you who follow after us Shall take the better way, Nor try the passage perilous We sentured in our day. Yet we are glad that we have known
The perils that we bore,
And thank our stars that day has flown—
We'll round the Horn no more!
No more!

We'll round the Horn no more, nd bones of good men shall not Upon that iron shore; For now we go by Panama.

We'll round the Horn no more! -Berton Braley.

#### THE FIRST YEAR

(Continued from Page 4)

Court in the oil and tobacco cases has made it impossible for the honest business man to know what is permitted and what is for-bidden. The reasonableness of the restraint of trade attempted has been made a matter of individual opinion, and until the highest judge has made his last guess the citizen is in a state of uncertainty. A clear and ex-plicit definition of the things prohibited is therefore necessary for the protection of the innocent and for the punishment of the guilty.

The establishment of an Interstate Trade Commission is the fourth remedy recom-mended. It will be the business of this commission to gather information for the Government, to impart information to the industrial world, and to prescribe the details of regulations that cannot be embodied in statutes. The growth of the work of the Interstate Commerce Commission suggests the possibilities that open before a trade commission that shall have for its object the establishment of equitable relations between corporate producers and the producing public, as the Interstate Commerce Commission endeavors to establish equitable relations between railroads and their

Fifth, the President recommends that in case of violation of the anti-trust law the punishment shall be visited upon the guilty individuals rather than upon the corporation. This has two advantages. In the first place, the stockholder does not consciously participate in the act complained of, and therefore does not stand in the same attitude toward the law as the managing director or official who deliberately violates the law. In the second place, a fine imposed upon a corporation carries no disgrace with it, whereas individual punishment does. This distinction alone is sufficient to account for the indifference now felt toward the anti-trust law by those who manage our great corporations. An ounce of imprisonment inflicted upon an individual is worth more than a pound of fines collected from corporations.

#### Latin-American Policies

These are the principal proposals made by the President for the elimination of the principle of private monopoly. How far he will succeed in securing the necessary legis-lation to carry out these principles remains to be seen, but his success thus far encour-ages us to believe that he will have the sup-

port of Congress in the enactment of all the remedial measures he has outlined. The foregoing enumeration of work ac-complished and tasks begun would seem like an abundant record for a single year. But the story is not yet finished. The Presi-dent has asked for legislation enabling the farmer to utilize his credits to a greater ex-tent than he has been able to heretofore, and a measure is being prepared embodying this relief. Congress has authorized the construction of a railroad in Alaska for the development of that territory, and a plan has already been prepared for the regulation of the use of water power.

And then to make sure that the Government, once freed from the control of favor-seeking corporations, shall not again become their spoil and prey, the President has recommended the enactment of a law that will provide for the nomination of presi-dential candidates at party primaries. A number of interesting questions have been raised in the consideration of this subject, but where there is an evil to be remedied and a genuine desire to remedy it, differences

can always be harmonized.

While the President has been busy with domestic questions he has been developing a foreign policy that has so far won the ap-proval of the country. In Latin America his aim has been to encourage, as far as this nation can do so, the establishment and maintenance of constitutional government. One of his first official utterances was directed against revolutions through which ambitious men seek to seize and use the government for the advancement of per-

sonal ambition or interest. He said:
"We hold, as I am sure all thoughtful leaders of republican government every-where hold, that just government rests always upon the consent of the governed, and that there can be no freedom without order based upon law and upon the public con-science and approval. We shall look to make these principles the basis of mutual

Dollars Day

AST Spring an inexperienced man answered one of our advertisements calling for representatives to secure subscriptions for The Saturday Evening Post. During July his earnings were \$461.80 - Seventeen Dollars a Day. During the entire summer he averaged over Eight Dollars a day.

We do not refer to him because of his success. Many others earned more. But we do refer to him because, being inexperienced, his earnings offer a fair standard by which can be forecasted the profits of any energetic representative.

These liberal earnings are attributable only in part to the natural ability of the persons themselves. They are due principally to the widespread demand for the publications represented.

We require the services of young men and young women all over the country to look after the subscription business of The Saturday Evening Post, The Ladies' Home Journal and The Country Gentleman. For this work we pay commission and salary.

It can be done in leisure hours and no experience is required, for we stand behind our representatives and tell them how to work. If you want to try it, write today.

Agency Division, Box 281

The Curtis Publishing Company, Philadelphia

intercourse, respect and helpfulness between our sister republics and ourselves.
We shall lend our influence of every kind
to the realization of these principles in fact
and practice, knowing that disorder, personal intrigues and defiance of constitutional rights weaken and discredit government, and injure none so much as the people who are unfortunate enough to have their common life and their common affairs so tainted and disturbed. We can have no sympathy with those who seek to seize the power of government to advance their own personal interests or ambition. We are the friends of peace, but we know that there can be no lasting or stable peace in such cir-cumstances. As friends, therefore, we shall prefer those who act in the interest of peace and honor, who protect private rights and respect the restraints of constitutional provision. Mutual respect seems to us the indispensable foundation of friendship between states, as between individuals. 
President Wilson has aided legitimate enterprises, and has sought to assure our investors a welcome in Central and South

America, by compelling an adherence to the highest business ideals. In refusing to indorse the so-called Chinese loan, he announced his opposition to methods that involve the principles either of monopoly or of interference with the rights of the country whose development is being undertaken. In the Japanese question, which arose out of the anti-alien land laws of California, he has endeavored to secure equitable treatment for the Japanese and to prevent any discrimination based upon

race or nationality.

#### Provisions of the Peace Plan

The Peace Plan, which by authority of the President was offered to all the world, has made extraordinary headway. In less than a year the principle embodied in the plan has received indorsement from thirtyplan has received indorsement from thirtyone nations, representing more than threefourths of the population of the globe.
Treaties have been concluded with thirteen,
and agreement is near with several other
nations. The plan provides for an investigation in all cases of international differences without any exception whatever,
each nation reserving the right to act independently after the investigation. The
advantages of the plan are threefold.

advantages of the plan are threefold: First, time will be allowed for investigation—the time agreed upon in the treaties already made is one year—and time itself is an important element in diplomacy. The war spirit is the spirit of anger and of passion. When men are angry they talk about what they can do; when they are calm they talk about what they ought to do. With nations, as with individuals, an interim between the offense and the time for retaliation is quite sure to result in an adjustment. tion is quite sure to result in an adjustment of differences. It would be well-nigh im-possible to declare war after twelve months' reflection.

Second, the period of investigation gives an opportunity for the separation of ques-tions of fact from questions of honor, and when the separation is made it is usually found that the facts can be reconciled and explanations exchanged in case an offense against honor has really been committed.

Third, efforts to promote peace have an educational value. They cultivate the spirit of peace, which, after all, is the con-trolling force. Men used to regard war as a necessity and to think in terms of blood; now they regard war as unnecessary and seek the means by which it can be prevented. As education increases men are able to take a more intelligent view of the subject, and intelligence is a champion of peace. An awakening conscience pleads even more strongly against force as a means of deter-mining issues. Right is becoming more powerful and mere might less respected.

The spread of the democratic idea of government is also contributing the weight of its influence toward the cultivation of a public opinion favorable to peaceful methods. The masses bear the burdens of war, while a few win its glories and prosper through the expenditures that it compels. All the great forces of society are at work on the side of peace, and the President not only is in sympathy with them, but gives to them

enthusiastic support.

Thus endeth the first year of the administration of Woodrow Wilson. If we can judge the remainder of his administration by that which has already become history, it will be marked by a large contribution to the public welfare, a contribution that will

be as permanent as it is large.

# The Bashful Boy

Self-confidence is a quality too many young boys lack. They are bashful in the presence of strangers. They know there is nothing to be afraid of, but still their tongues are tied. Their reserve is not merely respectful deference to their elders, but sheer embarrassment.

The parents' problem is to teach the boy self-possession without encouraging an impudent manner. By encouraging him in a certain form of recreation in which polite assurance is essential, the boy can be helped to strengthen his personality.

Thousands of parents are now employing this method to teach their boys respectful self-confidence. Just how it is done is explained in the booklet "What Shall I Do With My Boy?" A copy will be sent you free upon request. Write to-day to

## Credit Paper

WE MAY speak truthfully of the strength of paper; yet how like a paradox it sounds! From childhood we have been accustomed to take frequent liberties with the filmsy material, to fold and rend it according to our lightest whim, and now to speak of it as strong! But strong it is, and the business world of America is bound into a cohesive whole by the fibres of millions of notes, checks and drafts, which pledge the honor and credit of its citizens.

of its citizens.

In this paragraph we shall attempt to define three kinds of commercial paper—bills of exchange, promissory notes and bank checks—that are all business contracts. They are contracts, however, as to which business convenience decrees that the form shall be just as important as the substance. If I am hiring Regan, the contractor, to build my house and we fall out over our agreement, the court will consider every possible point connected with the transaction, in order to determine what our mutual intentions really were. But if I employ Regan to do the work and give him a promissory note in payment of his services, our rights, so far as that note is concerned, are largely determined by the exact form in which I issued it, taken in connection, of course, with the subsequent indorsements—that is, whatever written additions were afterward made to it in the course of business.

The vital feature of bills of exchange, or drafts as they are generally called, promissory notes and bank checks is their negotiability. That is to say, they are a special class of contracts, which are so framed and so favored by the law that, if certain rules are adhered to, they can be passed from man to man quite as freely and far more conveniently than actual cash.

An ordinary contract may be assigned or

An ordinary contract may be assigned or transferred from one to another. Thus, if I have agreed to furnish a large factory with knitting machines I may assign my right to be paid for doing so to Bogardus for a valuable consideration. Suppose, though, that I misrepresented some important feature of my knitting machines to the Success Textile Company, which ordered them, and after I have transferred my rights in the contract to Bogardus they find it out. Under such circumstances the Textile Company can employ the defense of misrepresentation against Bogardus just as readily as they could against me, for he has simply stepped into my shoes and is in no better position than I would be had I remained a party to the contract.

Now this is just where drafts, notes and bills, or, as they are often called collectively, negotiable instruments or commercial paper, differ radically from other contracts. While still in the hands of the original parties who gave them birth, they are subject to any defenses which one may have against the other, so that, if Curzon gives a promissory note for one hundred dollars, due in sixty days, to Plaisted, and then finds that through mutual dealings Plaisted really owes him five hundred dollars, he may, at the end of the sixty days, refuse to pay Plaisted the note and demand instead four hundred dollars from him. Suppose, however, that Plaisted has, meanwhile, sold the note to Rangely, who knows nothing of his debt to Curzon, can Curzon still set off Plaisted's debt and refuse to pay Rangely the note? Undoubtedly he cannot do so.

Such a case illustrates the distinguishing characteristic of commercial paper. Like a bird which has flown from the parent nest it is freed from any defenses which the original parties to it may have, just as soon as it has been purchased, in good faith and for a valuable consideration, by some third person. In every other form of contract the rule is otherwise: land bears its burdens from owner to owner, the assigned mortgage conveys no better title to the purchaser than the assignor had to give; but for the purely practical reason that, in trade, there must be some convenient representative of specie, which may pass from hand to hand as readily as actual coin, a general agreement and strength of custom among merchants bred the three forms of credit paper: the bill of exchange, the promissory note and the bank check, all of which travel, in the words of a great jurist, as couriers without luggage, and to all of which an innocent purchaser, for value, gets an absolutely clear title.

# Getting More Business

Longwell's Transfer Company of El Paso, Texas, states:

Two Willys - Utility Trucks are doing the work formerly per-formed by twelve horses, and they are covering from thirty to sixty miles a day. I am amazed at the low cost of upkeep, and before long expect to have five Utility trucks in service.

Jacob Piper, (Grocery and Meat Business) of Lima, Ohio,

The Willys-Utility Truck has proven a profitable investment in every sense of the word. Busi-ness has increased during this lime 25% owing principally to the extended delivery radius and the prompt service our old and new customers now enjoy.

Our truck makes from five to six trips a day, averaging 200 stops, the total daily mileage be-ing from 45 to 50 milea.

The Cleveland News of Cleveland, Ohio, states:

The Willya-Utility Truck makes a run every morning to Akroti loaded with from twelve to seventeen hundred pounds of Cleveland Leaders and returns empty. This is a round trip of eighty miles, ten miles of which are over very bed roads. Besides this the truck makes a run in the city of Cleveland, in the afternoon on our baschall edition, which I should say was in the neighborhood of twenty-five miles. The Willys - Utility Truck

John F. Harting of Webster, N. Y., states:

N. Y., states:

Yours of the twenty-fourth in-stant, requesting me to write you as to whether the Willys Uniting Tracks purchased of you prosed good and all about it, at hand.

I can say that I am well pleased to lar, having run the car about five months without herdly any trouble, and no great expense ex-cept the price of lubricant and the grandine, making as high as four trips to Rochester daily, a distance of about elevers miles, and it has never reduced to go in cold as marm weather.

I have had no ponctures in fract

I have had no gonetures in frost tires so far.

It is a mensy maker for me as a trucker, and can do double the business that can be done with form of horses with a great deal more doublost.

Theo. Becker of Geneseo. III., states:

Illes, netter in Grinesco, Illes states:

Replying to your favor of the twenty-first inst.—We beg to say that we are thoroughly satisfied with our Willys-Utility Truck. It has helped us expedite our bounces materially, as we are doing heating and plumbing in twenty-three small towns adjacent to Genesico. Before having the truck we see obliged to here teamsters to do see hauling, and in most theistone if would take a man and a learn an entire day to make one true. Since having the truck we are making three rings a day seer the same ground in the same length at time that it coquired a reanned steam of the same length at time that it coquired a reanned steam of the truck we are making three rings and learn incomely road as \$1.50 per title tagether with the expenses for house lend and board, making each true set mine dellars. The track is now making there there tups a day as \$27.00 per force dellars.

VERY one is daily confronted with any number of commercial obstad cles, snarls or questions that are difficult to overcome, smooth or straighten out. It is either "how" can we cut selling expenses—or "how" is Jones doing—or "how" is so and so's credit—or "how" were yesterday's orders, and so on until it just seems as though business is one continual "how" after another. Yet all these are secondary to the biggest and most burning "how" of all, namely—"how can we get more business?"

Broadly speaking the only way you can get more business is to utilize your working time to better advantage.

You cannot lengthen your days. But you can accomplish more work in the same time by adopting modern methods. Modernize your business, and your bank balance has got to increase in proportion. It never fails.

Willys-Utility Trucks conserve time. If you haul things, no matter what, they make it possible for you to do in 15 minutes, work that heretofore took 60 minutes. They permit two men to do the work of six. They make forty deliveries where horses make but fourteen-and often less. They make it possible for you to reach out for new and undeveloped business because they give you and yours the time and the means to do it with. They create new business-increase old business and get more business.

Read the letters on this page. These concerns thought, as you probably do, that they could not use these trucks to advantage. But please note what they say. And we have letters from merchants in every line of business.

In face of these logical facts - what easier way can you see to make more money?

Willys-Utility Trucks are helping merchants all over the world to develop new business.

They are cutting down expenses and increasing the volume of business.

They can do the same for you.

And we can give you all the bona-fide evidence you want from merchants right in your line of business.

Also remember the Willys-Utility Truck costs 30% less than any other similar truck made.

Our representative will be glad to call and go into all details, plans, specifications, prices, costs, etc. He will call whenever you say. Literature and special body book on request.

# THE LAME DUCK

#### Views of an Immocent Bystander

WASHINGTON, D. C.

DEAR JIM: Were you a truckler or an antitruckler? Did it outrage your sense of political honor to violate a section of the Baltimore platform, or didn't you give a hoot?

I ask you these questions because by the time you read this you will have had an opportunity to look over recent proceedings in the once perturbed but now placid cap-ital of the nation; because you will have viewed those eruptions and disruptions in the cold gray dawns of several mornings after. How about it, now that the tumult and the shouting have died, as R. Kipling was wont to inquire? Is all lost, including American supremacy on this continent?

And don't you think the reverse-English forensic honors, and all of them, may justly be handed to Champ Clark for his unrivaled performance of increasing a favorable vote of thirty to a favorable vote of eighty-six by the simple expedient of opposing such

iavorable action? You see, Jim, we go along stodgily for a time, and then it becomes absolutely necessary to put on a show. Talk about your tired business man who needs musical comedy to make him forget!—or make him remember, as it may happen. The tired business man isn't a marker in general lassitude and weariness to the tired congressman. He gets so tired his bones ache and his head aches, which, of course, is the same thing; and he howls for relaxation. So we take a rice little tearest stirm a temporal take a nice little teapot, stir up a tempest in it, keep stirring until the stirrers fall ex-

hausted, and then go on about our business of passing supply bills. Congress is a good deal like a periodical drinker—it has to have a spree once in a while. We've just had one, and the number of burning brows and furred tongues that are being endured as I write this passes belief. We had our spree, all right; but, wow!

how tough we felt the next day.

#### Blood on the Face of the Moon

While a combat like this one over the repeal of the free-tolls provision is going on it is all tragedy. There isn't a gleam of light athwart the murky skies. The newspaper boys go to it; and wreck of party, severing of lifelong alliances, disaster to the majority, closing of the career of the President, complicated political plots, surrender to England, sacrifice of our national honor, wounds that cannot be healed and breaches that cannot be repaired, are scattered profusely through the dispatches. The people read with amazement and shudder while they read about this frightful interparty strife. The dome of the Capitol rocks. The earth shakes beneath the tread of the opposing warriors. There is blood by the bucketful

on the face of the moon!

They clash. The cheers of the victors mingle with the groans of the vanquished. Then everybody takes a bromide and comedy comes romping in. What was it all about? Well, sure enough, what was it all about?

Listen, Jim, and I'll tell you. It was all about one Woodrow Wilson, who happens at the present time to be the President of the United States; and though I confess that a certain amount of serious consideration should be given to episodes which, as the veracious chroniclers say, "have not been equaled since the stirring days of the Civil War," I call your attention to the fact that most of the chroniclers and many of the chronicled had not been born at the time of the Civil War; and a lot of them got into the game considerably after the Spanish

Our legislative history is speckled with episodes that, at the time, were said to resemble in intensity those of the Civil War; but nothing happened, Jim, and nothing vill happen in the present instance save the coluntary and personal marking down to argain-sale prices of a number of so-called

It was all about Mr. Wilson. You see, hat able and alert President of ours, realizand that he must run his party if the party was not to stand still, early began running t. When Mr. Wilson, so remarkable is his fixity of purpose and his tenacity of mind,

begins running anything, party or what not, he invariably runs that thing. Having de-termined that it was his duty in the premises to bring about certain legislative processes, he began to bring those legislative processes about. He found himself in conjunction with a House of Representatives that was largely Democratic and largely inexperienced. He concluded that this Democratic House of Representatives should be amenable to reason, and he reasoned with it.

reason, and he reasoned with it.

However, he did not put all his faith in reason. If so be a club, say, or an ax, or any other impelling power of similar nature, was needed, he used it. In short, he ran his party and his party's Congress. He secured in ten months three big pieces of constructive legislation. He started several more, which in due time he will also secure. which in due time he will also secure.

Naturally there was resentment—not so much as you might think, but some. Inas-much as it seemed to the resenters that Mr. Wilson intended to keep on in charge of the control, of the gears and of everything else, they determined to put one over on him just to show him that, though he may be an excellent chauffeur, he isn't the owner

#### Wailing Over the Platform

Circumstances were fortuitous, as circumstances sometimes are. Somebody—identity not yet disclosed—came along and told Mr. Wilson that it was a violation of treaty rights and a deep dent in national honor to allow the free-tolls provision to stand as law. Just who that somebody was is an interesting problem. There are rumors that it might have been Ambassador Page, and those rumors may be true.

Mr. Wilson, having his attention called

to this alleged violation of a treaty, insisted that the free-tolls provision should be re-pealed. Whereupon the opposition con-centrated and decided that this was the time to show him he was not the entire works. It was a fine oratorical opportunity. works. It was a fine oratorical opportunity. There were reams of newspaper copy—of advertising—in it. National pride, aggression by England, truckling to foreign Powers, sacrifice of the Monroe Doctrine, we-built-the-canal-and-it's-ours, spirit of '76, and many other good talking and publicity elements, were there.

Furthermore, the Democratic platform, adopted at Baltimore, had a plank favoring free tells for American coastwise ships.

free tolls for American coastwise ships. Mr. Wilson was elected on that platform. How could be desert the platform-that sacrosanct compendium of Democratic principles-to abandon a single phrase of which were political treachery of deepest dye? They grabbed the platform. They wailed about it. They held up their hands in horror over its sacrifice. Treason? Why, Jim, to hear them talk, it was more than treason-it was assassination, foul murder, a crime unparalleled in atrocity. Would the President be privy to such an odious pro-ceeding? they asked in shocked surprise. He would, he told them. Also he told them briefly but with sufficient emphasis to pass

the repeal measure at once.

Well, that started it. All the anti-Wilson forces concentrated—and some not partic-ularly anti-Wilson, but with leanings. As an opposition feature it had great possi-bilities. There was a chance for an appeal to party loyalty and party sincerity by holding up the platform declaration. There was a chance to appeal to patriotism by calling the proceeding truckling to Eng-land. There was a chance to go deeper than that and use the argument of owner-ship of the canal and payment therefor, and to exploit the outrage on the American genius that built it, only to turn it over to England! As a spellbinding, oratorical proposition it was a wonder.

Every tragic performance has its comic relief, and the comic relief in this was the wailing and caterwauling about the viola-tion of the Baltimore platform. That, it seemed, was the crime of the ages. After it was all over I fancy most of the men who put such stress on the platform went and had laughs by themselves.

Well, they joined hands and decided they could whip the President. The move-ment seemed formidable, for Champ Clark, the Speaker, was in it; and Oscar Underwood,

the leader of the Democrats in the House and Claude Kitchin, who is to be leader if Underwood gets to the Senate; and John J. Fitzgerald, chairman of the Appropria-tions Committee; and Frank Doremus, the chairman of the Democratic Congressional Campaign Committee. They were all there, lined up vociferously against Wilson. Like-wise they had active and able newspaper

The Wilson plan was to pass the bill as soon as possible, for none knows better than the President that delays are dangerous, and that the proper time to strike is when the leaders are hot, and while the rank and file are still cold to outside influences. A rule was brought in, limiting debate on the repeal measure to twenty hours, and forbidding amendment—as neat a bit of cloture as Uncle Joe Cannon ever perpe-

trated; an artistic gag.

In reality it didn't make any difference whether the debate was to run for twenty hours or twenty minutes. The status of the case was determined before the rule was brought in. The Wilson people were possessed of two chunks of information: The first was that the recent bill was stronger. first was that the repeal bill was stronger than the rule; and the second was that the

rule was strong enough to get by. The yammering and yowling on the floor made no difference. It never does.

I have seen numerous similar forays against presidents in my time, and cannot remember many that won. The situation is this: The President of the United States gets what he wants. Otherwise the memis this: The President of the United States gets what he wants. Otherwise the members of his party in Congress do not get what they want. And as our statesmen are chiefly concerned in perpetuating themselves they ordinarily fall in with what a president desires. The little ethical question of violating a platform cuts no figure with them beside the greater question of standing well at the White House, in order to help themselves to remain in a position where themselves to remain in a position where they can have any standing at all thereat.

#### The President Stronger Than Ever

They passed the rule, despite the opposi-tion of Clark and Underwood, and Kitchin and Fitzgerald, and Doremus and Mann and Murdock. They limited debate to twenty hours; but that was purely per-functory. As soon as the rule was passed the fight was over; for after it was made certain that the repeal measure would be put before the House, as it was by a majority of thirty, there was nothing more to fear. If they couldn't beat a gag rule they couldn't beat anything. The rest of it was entirely theatrical. It was a show.

The calm, benignant, but somewhat in-sistent spirit of Woodrow Wilson was brooding over it all, and as a brooder in such circumstances Mr. Wilson challenges the admiration of the world.

It wasn't a question of betraying the party or violating a pledge or truckling to England, or anything else of that nature, with most of those Democrats. It was the purely personal question of standing by a Democratic President who had proved him-self greater than his party, and expecting that he, in return, would stand by them. That was all there was to it! With the That was all there was to it! With the heroics and the flubdub and the grand-standing and the humbug cut out of it, the questions of platform, or England, or right or wrong of tolls, had no more to do with the result than the question of rainfall in the Sahara.

Mr. Wilson, convinced he was in the right, demanded the repeal. He is President of the United States. Also, he is a Democratic President of the United States. Wherefore, out of a total of two hundred and ninety Democrats, only fifty-two voted with the leaders and against the President.

The percentage in our politics, my dear Jim, is always with the White House. So that is all there was to it. The defeat of the leaders merely emphasized the strength

of the President.

There is no cloture in the Senate. The deliberate gentlemen will growl and groan over the repeal for many weary days; but when the test comes, Jim, the chances are strongly in favor of a similar performance over there—the chances, Jim, are that the President will win after the dignified but highly oratorical senators have exuded hot air for a few days; for the Democrats have a majority in the Senate and will have some Republican help. And, as I have remarked, in cases of this kind, even as influencing the ungaggable Senate, the percentage is always with the house—that is, the White House. Yours, perfectly calm,

# CHEAP AT A MILLION

By EDWIN LEFÈVRE

OM MERRIWETHER, only son and heir of E. H. Merriwether, finished the grapefruit and took up the last of that morning's mail. He had acquired the feminine habit

of reading letters at the table from his father, who had the wasteful American vice of timesaving.

He read the card, frowned, glanced at his father and seemed to be on the point of speaking; but he changed his mind. isughed and tore the card into bits.

The day was Monday, and this was what the card

If Mr. Thomas Thorne Merriwether will go to 777 Blank Avenue any forenoon this week and answer just one little question about his past life he will hear something to his advantage.

Idle men who live in New York are always busy. Tom had many things to think about; but all of them were about the present or the future. His past caused him neither uneasiness nor remorse. On the following Monday Mr. Merriwether received, among other invitations, this:

If Tom Merriwether will call at 777 Blank Avenue any forenoon this week and answer one ques-tion he will do that which is both kindly-and wise!

It was in the same handwriting, on the same

kind of card and in the same kind of ink as the first. Now Tom had the Merriwether imagination. His father exercised it in building railroads into waterless deserts whereon he clearly saw a myriad men labor, love and multiply, thereby insuring freight and passengers to the same railroads. The son had to invent his romances in New York.

Ordinarily the second invitation would have given him something to busy himself with; but it happened that he was at that moment planning to do a heart-breaking thing without breaking any heart. Billy Larremore, the veteran whose devotion to polo was responsible for so many of the team's victories in the past, was not aware that age had bidden him cease playing. It would break his loyal heart not to play in the forthcoming international match. Tom Merriwether had been delegated to break the news.

Thinking about it made him forget all about the letter until the following Monday, when he received the third invitation:

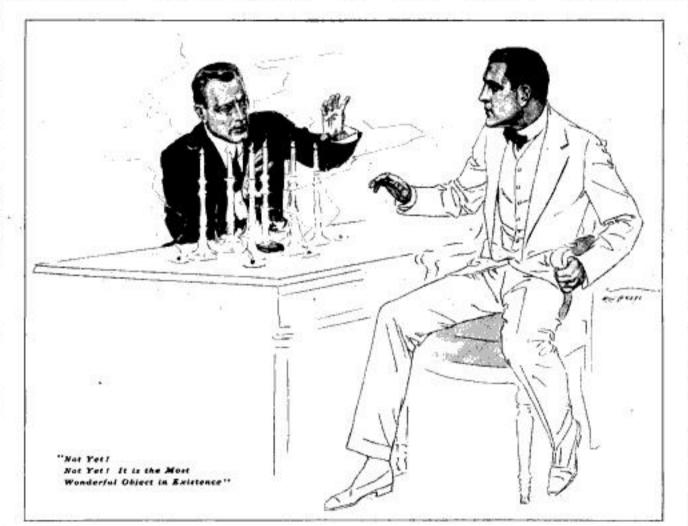

Merriwether:

Come to 777 Blank Avenue Tuesday morning at ten-thirty without fail and answer the question.

He crumpled the card and was about to throw it away when he changed his mindperhaps it would be wise to give it to a detective agency. But what could he say he feared? Then he decided it was probably a joke. Somebody wished to put him in the ridiculous position of ringing the bell of 777, showing the card-and being told to get out. It was to be regretted that this would seem funny to some of his perennially juvenile latimates at the Rivulet Club.

An hour later, as he waiked down the Avenue, he looked curiously at 777. It was one of those newcomer houses erected by speculative builders to sell furnished to out-of-town would-be climbers or to local stock-market bankers who, being Hebrews, were too sensible to wish to climb, but were not sensible enough not to wish to live on

Tom resolved to ask Raymond Silliman, who played at being in the real-estate business, to find out who lived at 777. Meantime he did a little shopping-wedding presents—and went to luncheon at his club. He had not quite finished his coffee when he was summoned to the telephone.

"Hello! Mr. Merriwether?" said a woman's voice-clear, sweet and vibrant, but unknown. "This is Miss Hervey-the nurse-Doctor Leighton's trained nurse. They asked me to tell you

about your father. Don't be alarmed!"

"Go on!" commanded young Merriwether sharply.

"It is nothing seriousreally! But if you could come home it probably - Yes, doctor! I am coming!" And the conversation ceased abruptly.

Tom instantly left the club. He took the solitary taxicab that stood in front of the club. He afterward recalled the fact that there was only one where usually there were half a dozen.

"Eight-sixty-nine Blank Avenue. Go up Madison to Sixtieth and then turn into the avenue. Hurry!"

"Very good, sir," said the chauffeur.

The taxicab dashed madly off, turned into Blank Avenue, and finally stopped-not before the Merriwether home but in front of Number 777. Before he could ask the chauffeur what he meant by it both doors of the cab opened at once and two men sandwiched between them Mr. Thomas Thorne Merriwether. The one on the west side threateningly held in his hand a businesslike javelin—not at all

the kind that silly people hang on the walls in their childish attempts at decorative barbarity. The man who half-entered the taxicab from the east or sidewalk side held in his left hand a goblet full of a colorless liquid that smoked, and in his right something

completely but loosely covered by a white linen handkerchief.
"Please listen, Mr. Merriwether!" said the man with the glass. "Do nothing! Don't even move! Hear me first."

"Is my father -

"I am glad to say he is well and happy, and working in his office downtown. The message that brought you here was a subterfuge. Your father is as usual. We arranged it so you had to take this particular taxicab. Don't stir, please!"
"What does all this mean?" asked Tom impatiently.

"I am about to have the honor of telling you," answered the man.

He had no hat and wore black garments. His clean-shaved face was pale—almost sallow—and young Merriwether noticed that his forebead was very high. His dark brown eyes were full of the earnestness of all zealots, which makes you dislike to enter into an argument-first, because of the futility of arguing with a zealot; and second, because said zealot probably knows a million times more about the subject than you and can out-argue you without trouble. So Tom simply listened with an alertness that would not overlook any chance to strike back.

"This glass contains fuming sulphuric acid. It will sear the face and destroy the eyesight with much rapidity and completeness. Also "-here he shook off the handkerchief from his right hand and showed a revolver-"this is the very latest in automatics; marvelously efficient; stop an elephant! I am about to solicit a great favor."

Tom Merriwether looked into the earnest, pleading eyes. Then he glanced on the other side, at the bull-necked husky with the businesslike spear. Then be turned to the

"I see I am in the hands of my friends!" said Tom pleasantly.

"The doctor was right," said the man with the glass, as if to himself.

"Come! Come!" said young Mr. Merriwether. "How much am I to give? You know, I never carry much cash with me."

"We, dear Mr. Merriwether," said the palefaced man in an amazingly deferential voice, "propose to be the donors. If you will kindly permit us weshall give you what is more costly than rubies."

"Yes?" Tom's voice was perhaps less skeptical than sarcastic.

"Yes, sir. Would you be kind enough to accept our invitation-the fourth, dear Mr. Merriwether-to join us at 777 Blank Avenue-right here, sir-and answer one question? Please listen carefully to what I am saying: You don't have to go. Moreover, if you should go you don't have to answer any question. We would not, for worlds, compel you. But, for your own sake; for the sake of your father's peace of mind and of the

He Could Descry the Staircase

Merriwether fortune; for the sake of your happiness in this world and in the next; for all that all the Merriwethers hold most dear-come with me and, if you are very wise, answer the question that will be asked you by the wisest man in all the world."

"He must be a regular Solomon --" began Tom; but the man held up the glass and went on, very earnestly:

'Listen, please! If you decide to accept our invitation to meet us in that house, and you will promise not to make an attempt on any one unless you consider that either your life or your honor is threatened, I shall spill this acid in the street and I shall give you this revolver. Also, I repeat, you do not have to answer the question! You will not be harmed or molested. I pledge you my word. Will you, in return, give me yours to follow me at once into 777, and that you will not shoot unless you sincerely think you are in danger?"

Tom Merriwether looked at the palefaced man a moment. He was willing to take his chances with that face. Also, he could not otherwise find the solution of this puzzling affair. Therefore he said:

"Yes. I give you my word."

Instantly the palefaced man with the high forehead laid the revolver on the seat beside young Mr. Merriwether

Tom saw him spill the furning acid into the gutter. The burly javelin-man took himself off. The temptation to use the butt of the revolver on the clerical-garbed man with the earnest eyes came to Tom, but he saw in a flash that if he should do such a thing he would be compelled in self-defense to tell a story utterly unbelievable.

Moreover, the palefaced man was a slender little chap of middle age and no match for big Tom Merriwether. So, assuring himself that the revolver was in truth loaded and that it worked, he put it in his pocket, kept his grasp on it there and got out of the taxicab. His one impelling motive now was curiosity. Afraid? With the pistol and his muscles and his youth, on Blank Avenue, at two-thirty in the afternoon?

The palefaced man, the empty glass in one hand, walked toward the door of 777 without so much as turning his Tom followed.

The door was opened by a man in livery who took Mr. Merriwether's hat and cane. Tom saw in the furnishings of the house-complete with that curious unhuman completeness of a modern hotel—the kind of furnishings that interior decorators usually sell to first-generation rich on their arrival at Blank Avenue residenceship. The furniture l ad every qualification possessed by furniture in order not home to live in. Wherefore Tom, wh always worked quickly, reasoned to himself:

"Rented for the occasion to the man who has made me come to him."

Also Tom noticed four men-servants, all of them well built and all of them owning faces that somehow were not servant faces. The revolver, which had seemed amply sufficient outside, seemed less so within the house. Supposing he killed one—or even two; the other two would down him in an affray. He tightened his grip on the revolver and planned and rehearsed a shooting affair in which four men in livery were disabled with four shots. A great pity E. H. Merriwether was such a very rich man- a great rity for his son Tom!

At a door, on the center panel of which was a monogram in black, red and gold, the last of the footmen knocked gently. The door was thereupon opened from within.

"Mr. Thomas Thorne Merriwether, 7-7-77!" announced the intelligent-looking footman with a very pronounced English accent.

Mr. Thomas Thorne Merriwether entered. It was a nouveau-riche library. The Circassianwalnut bookcases and center table were overelaborately carved, and the hangings of rich red velvet were over-elaborately embroidered. The bronzes on the over-elaborate mantel looked as though they had been placed there by somebody who was coming back in a minute to take them away again.

Altogether the apartment suggested a salesroom, and there was a note of incongruity in a colden-oak filing cabinet such as one would find in a business office.

At one end of the room in an armchair, with his back to a terrible stained-glass window, sat a man of about forty. He had a calm, remarkably steady gaze, with a sort of leisureliness about it that made you think of a drawling voice. Also, an assurance—a self-consciousness of knowledge that was compelling. His chin was firm and there was a suggestion of power and of control over power that reminded Tom of a very competent engineer in charge of a fifty-thousand-horsepower machine.

"Kindly be seated, sir," said the man in a tone that subtly suggested weariness.

Tom sat down and looked curiously at the man, who went on:

"Sir, I have a question to ask you. If you see fit to answer, be good enough to answer it spontaneously and in good faith. Do not, I beg you, in turn, ask me questions-such as, for example, why I wish to know what I ask. If you decide not to answer you will leave this house unharmed, accompanied by our profound regret that you should be so unintelligent at your life's crisis." The man looked at Tom with a meditative expression, then nodded to himself almost sorrowfully.

Tom, though young, was a Merriwether. He said politely:

"Let me hear the question, sir."

He himself was thinking in questions: What can the question be? Who is this man? What is the game? What will be the end of it all?

"One question, sir," repeated the stranger.
"I am listening, sir," Tom assured him with a quiet but quite impressive earnestness.

"Where did you spend your vacation at the end of your Freshman year?'

Tom was so surprised, and in a delicate way even disappointed, that he hesitated. Then he answered:

"In Oleander Point, Long Island, in the cottage of Dr. Charles W. Bonner, who was tutoring me. I had a couple of conditions and I stayed until the third of September."

"Thank you! Thank you! That is all-unless, Mr. Merriwether, you wish to do me and yourself three very great favors. Three!"

He looked at Tom with a sort of intelligent curiosity, as of a chemist conducting an experiment.

"Let's hear what they are," said young Mr. Merriwether

It was at times like these that he showed whose son he was—alert, his imagination active, his nerves under control, and his courage steady and at par. He had, moreover, made up his mind that he would do some questioning later on.

"First favor: Concentrate your mind on how you used to spend your bright, sunshiny days in Oleander Point and your beautiful moonlight nights. Recall the pleasant

people you were friendly with during those happy weeks. Visualize that summer! Make an effort! Think!"

It was a command, and Tom Merriwether found himself thinking of that summer. He closed his eyes. His grip on the revolver in his pocket relaxed. . . . He aw his friends. Some had not seen in years. Others he saw almost daily. And somehow it seemed to him that all the girls were pretty and kindly; and in particular-well, there were in particular three. But the affairs had come to nothing and were almost forgotten.

He could not have told how long his reverie lasted—the mind traverses long stretches of time,

as of space, in seconds.
"Well?" said Tom at length.

"Thank you," said the man with the matter-of-fact gratitude a man feels toward a servant for some attention.

He took from his pocket a small black velvet bag, opened it and spread on the table before Tom Merriwether a dozen pearls, ranging in size from a pea to a filbert. They were all of a beautiful orient.

"I beg you to select one of these. You need not use it. You may give it to your valet if you wish, or throw it out of the window. Only accept it as a souvenir of our meeting. That, Mr. Merriwether, would be favor Number two."

He pointed toward the pearls. Tom picked one-pearshaped, white, beautiful - and put it in his waistcoat pocket. The man swept the rest into one of the drawers of the long library table.

"I thank you very much," said Tom. He was not sure the pearls were not genuine.

"No; please don't," said the man. There was a pause. Presently he asked: "Do you know anything about pearls,

"I am no expert," answered Tom.

"Characteristic. You Merriwethers are brave enough to be truthful and wise enough to be cautious. Have you any opinions?"
"I think they are beautiful," said Tom.
"They are more than that. They represent, Mr. Merri-

wether, the hope of the Kingdom of Heaven. The pearl is the symbol of purity, humility and innocence. Do you know the legend of the mild maid of God-Saint Margaret of Antioch?

"No."

"Margaret is from margarites-Greek for pearl. And the reason why faith -But I beg your pardon. Men who live alone talk too much when they are no longer alone. I beg you to forgive me. Tell me, Mr. Merriwether, did you ever hear of Apollonius of Tyana?"

"Not until this minute," answered Tom.

He felt almost tempted to ask whether the poor man was dead, but refrained because he was honest enough to admit to himself that the question would savor of bravado. Tom was consumed by curiosity as to what would be the end of it all. To think of it: on Blank Avenue, New York, in broad daylight—all this!

How money was to be made of him he could not yet see. "I will show his talisman to you-the Dispeller of Darkness!" The man clapped his hands twice. At the summons a negro walked in. He was dressed in plain black and wore a fez. The man spoke some guttural words and the negro salaamed and left the room. Presently he returned with a silver tray on which were seven gold or gilt candlesticks and candles, and seven gold or gilt small trays or plates, on each of which was a pastil.

He arranged the seven candlesticks in some deliberate design, carefully measuring the distance of each from the other, and of all from a point in the center. He arranged the plates and pastils about the candlesticks. Then he left the room, to return with a lighted taper, with which he lit the seven candles and the seven pastils. Tiny spirals of fragrant smoke rose languidly in the still air.

Again the negro left the room and returned with a small parcel wrapped in a piece of raw silk which he gave to his

fully carved ivory box. He opened the gold-hinged lid

master. He then went away for good. The man began to mutter something to himself and very carefully took off the silk cover, revealing a wonder-

"Mr. Merriwether, This Has Been Stolen From the British Museum !"

ad took out a silver case. He opened that and from it took a gold box elaborately though crudely chased. He pened the gold box and within it, on a little white velvet ad, was a cross of dull gold curiously engraved. He put he pad, with the cross on it, in the middle of the seven ghts. On the arms of the cross and at the intersection on saw seven wonderful emeralds, remarkable as to size, sentiful as to color.

"Look at it, Mr. Merriwether. It is priceless. The ms alone are worth a king's ransom. If you consider it erely as a piece of ancient art there is no telling what a an like Mr. W. H. Garrettson would not give for it. And a talisman, with its tried wonder-working powers, there not enough money in all the world to pay for it."

Tom stretched his hand toward it.

"Please! Do not touch it, I beg," said the man in a ice in which the alarm was so evident that Tom drew shand back as though he had seen a cobra on the table. fot yet! Not yet!" said the man. "It is the most wonrful object in existence. It is a cross that antedates wist!"

"Really?"

"It is obviously of a much earlier period than the Messiah. est scholars have thought it a legend, but here it is

lore you. It belonged Apollonius of Tyana, wonder-worker. Phitratus, who wrote the of that great man, does mention this talisman: fared not! Apollonius, o to this day is not we were to have died, wit to a disciple, who wit to a friend.

'We know who has ned it. It was worn by adius in the fifth ceny. The Goths took it Alaric gave it to the ighter of his most sted captain, who comnded his citadel of cassonne. Clovis, a dred years later, seeditat the sack of Toue. We have records of aving been praised by jus, the famous jewof Dagobert, in the enth century. It was uded in the famous sures of Charlemagne. ent to Palestine durthe first and third ades-the first time ied by a maid who d a knight who did love her. She went as quire, he not suspectersex until they were ly back in France, a he married her.

It is a wonderful talan. The emeralds afrom Mount Zabara. It have the power to away the evil spirits also to preserve the tity of the wearer.

sover, they give the power to foretell events. Apols did—time and again. This is historically true. But he, of all the men who have owned it, never had affair; hence his clairvoyance. I have bored you, ive me!"

Come With Me and

Will be Asked You"

Answer the

Question That

vot at all. I was interested. It is all so—er—so——" ncredible—yes! There is no reason why you should we it. It is of no consequence whether you think me atic or a charlatan."

stic or a chariatan."
said this with a cold indifference that made Tom incuriously at the man, whose obvious desire was to e curiosity. Then the man said, with an earnestness impressed the heir of the Merriwether railroads:

fr. Thomas Thorne Merriwether, classified in our s as 7-7-77, you are the man I need for this job!"

ndeed?" said Tom politely.

(es, you are." Tom bowed his head and looked

ned. He deliberately intended to look that way. The

went on: "The reason I am so sure is because I know

who and what you are."

th, you know me pretty well then." Tom could not the mild sarcasm.

have known you, young man, for eighty-five years; and longer." The man spoke calmly.

aps longer." The man spoke calmly, indeed!" said Tom. He was twenty-eight.

Yes. On top of that cabinet is a book. After the name mas Thorne Merriwether you will find 7-7-77. In the net—seventh section, seventh drawer, card Number

77-you will find clinical data, physiological and psychological details, anecdotes, and so on, about you and your father, E. H. Merriwether, and your mother, Josephine Thorne; your grandfathers, Lyman Grant Merriwether and Thomas Conkling Thorne, and of your grandmothers, Malvina Sykes Thorne and Lydia Weston Merriwether. Indeed I know about your great-grandfathers and three of your great-great-grandparents; but the data in their case are of little value save as to Ephraim Merriwether, who in 1763 killed in one duel three army officers who laughed at his twisted nose, bitten and disfigured for life by a wolfcub he had tried to tame. Facts not generally known, but, for all that, facts, young Mr. Thomas Thorne Merriwether, which enable me to say that I have known you these hundred and fifty years—if there is anything in heredity, environment and education! And now, shall I tell you what favor Number three is?"

"If you please," said Tom.

For the first time he felt that the usual suspicions as to a merry-making game could not be justified in this particular instance. It was much too elaborate for a practical joke. He did not know how the matter would end; but he did not care. In New York, on Blank Avenue, on Tuesday afternoon, he was having what, indeed, was an experience!

It a legend, but here it is afternoon, he was having what, indeed, was an experience! that size in existence. Two

"I beg that you will listen attentively. You will take the Dispeller of Darkness with you. Do not open the gold box under any circumstances. Tonight go to 777 East Seventy-seventh Street so as to be there at eight o'clock sharp. The door will not be locked. Don't ring. Walk in. Go up one flight of stairs to the front room—there is only one. You will stand in the middle of the room, with the talisman resting on the palm of your hand—thus! Do nothing! Say nothing! Wait there! The talisman will be taken from you by a person. Do not try to detain her—this person. After the talisman is taken from you count a hundred—not too fast! At the end of your count leave the room and come back here and tell me whether you have carried out my instructions.

"Now, young sir, let me say to you that you don't have to do what I am asking you to do. There is no compulsion whatever. There is no crime in contemplation—no attempt is to be made against your life, your fortune or your morals. I pledge you my word, sir!"

The man looked straight into Tom's eyes. Tom bowed gravely. This man must be crazy—and yet he certainly

. This interested Tom by perplexing him as he had never been perplexed in his eight-and-twenty years.

"Mr. Merriwether, this will be the most important step of your life. Its bearing on your happiness is vital—also, on the success of your great father's vast plans. I give you my personal word that this is so." There was a pause. Tom had nothing to say. The man went on: "If you care to take reasonable precautions against attack do so. Thus, keep the revolver you now have in your pocket—it is excellent. Try it and make certain. You may write a detailed account of what has happened and leave it with your valet; but mark on it that it is not to be opened unless you fail to return by ten P. M. Also, you may, if you wish, station ten private detectives across the way from 777 East Seventy-seventh Street, and instruct them to go into the house at a single shout from you or at the sound of a shot. Believe me, it is not your life that is in danger, sir!"

"I believe you," said Tom reassuringly.

"Will you do me favor Number three?" The man looked at Tom with a steady, unblinking, earnest—one might even say honest—stare.

Tom considered. His mind worked not only quickly but Merriwether-fashion. He saw all the possibilities of danger, but he saw the unknown—and the lust of adventure won. He looked the man in the eyes and said quietly:

"I will!"

"Thank you. There is the talisman. Each of the seven emeralds is flawless—the only seven flawless emeralds of that size in existence. Two of them have been in great

kings' crowns, and the center stone was in the tiara of seven popes; after which, the Great Green Prophecy having been fulfilled, it came back to its place on the cross. Apollonius raised people from the dead, according to eye-witnesses. The pagans tried to confute the believers in Christian miracles by bringing forward the miracles of the sage of Tyana-and they did not know that Apollonius wrought marvels by the Sign of the Son of Man-the Cross! This cross! I pray that you will be careful with it. Show it to nobody. You have understood your instructions?"

Tom repeated them.

"Precisely! I did not
make a mistake, you see.
In spite of your father's
millions you will be what
your destiny wills. Young
man, good luck to you!"

The man rose and walked toward the door. Tom Merriwether followed him and was politely bowed out of the room. From there to the street entrance the four athletic footmen, with the over-intelligent faces, took him in tow, one at a time. And it was not until he was out on the avenue, headed north, walking toward his own house, that Thomas

Thorne Merriwether, clean-living multimillionaire idler, shook himself, as if to scatter the remnants of a dream, felt the butt of the revolver, hefted the silk-wrapped parcel in which was the talisman, and said aloud, so that a couple of pedestrians turned and smiled sympathetically at the young man, who must be in love, since he talked to himself:

"What in blazes is it all about?"

11

HIS perplexing experience developed so insistent a curiosity in Tom that he grew irritable even as he walked. That some sort of a game was being worked he had no doubt; but the fact that he could see no object or motive increased his wrath. He discarded all suggestion of violence, though he was bound to admit now that anybody could be kidnaped in New York in broad daylight.

He decided to begin by verifying those allusions and references that he remembered. He walked down Fifth Avenue to the Public Library and there he read what he could of Apollonius and of Eligius, the marvelous goldsmith who afterward became Saint Eloi. The helpful and polite library assistant at length suggested a visit to Doctor Lentz, the gem expert of Goffony & Company, a man of vast erudition as well as a practical jeweler. Tom promptly betook himself to the famous jewel-shop.

They knew the heir of the seventy-five Merriwether millions and impressively ushered him into Doctor Lentz' office.

# ANYBODY'S BUSINESS

#### WHERE TWO HEADS ARE WORSE THAN NONE

THE government of an American state involves the settlement of business, political and social problems vastly broader, more complex and more difficult than those which confronted the men who framed our political institutions on eighteenth-century models. The demand for a reconstruction of these institutions along the lines of definite individual responsibility and business efficiency, especially in the legislative branch, has been growing rapidly during the past ten years.

That conservatism, which takes no account of the new realities and the fresh and growing facts of society, would lift its voice in protest against the proposal to abolish the two-house state legislature, and to replace it with a one-house legislative body of small membership, was to have been expected:

For of the wholly common is man made, And custom is his nurse! Woe, then, to them Who lay irreserent hands upon his old house furniture.

furniture, The dear inheritance from his forefathers! For time consecrates;

And what is gray with age becomes religion.

Quite in the spirit of this quotation, one hears it asserted that the bicameral legislature has become "an axiom of political science," and reads lengthy extracts from the writings of Adams, Hamilton, Kent and Story, cited in defense of the system—as though in this day of changed conditions some high-sounding phrase were sufficient to sanctify a system that practical men of today have found to be antiquated and inefficient.

However, the great names are not all on one side of the controversy. The practical Franklin, writing in 1789, compared the two-house legislative system to a cart with a horse hitched to each end, pulling in opposite directions. He called attention to the fact that one chamber may and is just as liable to obstruct the passage of good laws as to prevent the passage of bad ones; and he cited the mischiefs of a second branch, the delays and great expense in carrying on the public business—even to the preventing of the defense of the provinces during several years and also the unfortunate experience with the second chamber in connection with the iniquitous demand that proprietary property be exempted from taxation.

John Stuart Mill in his famous essay, Considerations on Representative Government, recognized the fact that laws can be intelligently framed only by a small and experienced body of a very few experienced men with an accurate and long-sighted perception of their effect; and he explicitly said: "I attach little weight to the argument often urged for having a second chamber—to prevent precipitance and compel a second deliberation; for it must be a very ill-constituted house in which the established forms of business do not require more than two deliberations."

#### The Trend Toward One-House Legislatures

NEITHER has the bicameral legislature become "an axiom of political science," for there are said to be fifty-three governments which now have one-house legislatures, and historically the drift has been away from multiple legislative bodies. In many European countries there were originally a three and in some instances four chamber legislative system. Now none have more than two. In England, so says the Encyclopædia Britannica, "the double chamber was originally more a fortuitous product of the English political revolution than the application of any reasoned principle of parliamentary machinery"; and in the United States we have the bicameral system solely because of English and colonial precedent. Thus it came about that for more than a hundred years we have been putting new wine in old bottles and spoiling the wine.

Curiously enough, the tendency in England and her later colonies has been away from the bicameral system, until now its existence is merely nominal. For all practical purposes the House of Commons is today the British Parliament. The House of Lords has been shorn of all its power as a coordinate branch of the British legislature, and in the colonies one-chambered legislatures have gradually won out. The English county council, which to some extent corresponds to our state legislature, has only one house, and the council of every English city is unicameral.

Even in the United States, dissatisfaction with the bicameral system began almost with its adoption. Constitutional conventions have exhausted their ingenuity in devising new restrictions on the power of our legislatures,

## By George H. Hodges

Governor of Kaneae

It Requires Much More Than Honesty to Make Laws for a State

and it may be noted that every state constitution has been drafted by a single-chamber body.

The popular demand for the initiative and referendum, already adopted in twenty-two states, is striking evidence that the bicameral system has been found wanting as an instrument of really representative government.

Governor O'Neal, of Alabama, in his address before the Governors' Conference, at Colorado Springs last summer, said:

"Candor compels the impartial observer to admit that the efficiency and character of state legislatures has been lowered and that general distrust has succeeded what was at one time universal and unreserved confidence. This distrust has in many states grown into open contempt for our lawmaking bodies. Not only is the convening of the legislature looked forward to with dread, but while it is in session a spirit of unrest prevails and an adjournment is always hailed with a genuine sense of relief."

The writer heard no dissent from this statement of the case by any of the twenty-six governors present.

Last year a disastrous fire at the Kansas State Penitentiary and the conditions growing out of the severe drought seemed to demand an extra session of the Kansas legislature. The mere suggestion of it developed an almost universal opposition to an extra session, even among the members themselves; and so we got on very nicely without one. Such a state of the public mind is surely begotten of the reasonable conviction that state legislatures, as at present constituted, have utterly failed to realize in actual practice the high ideal claimed for the system by its defenders.

In view of the confusions, contradictions and absurdities that make American statute law, both as to substance and form, the subject of common reproach by judges, lawyers, people, and even by legislatures themselves, can it be fairly asserted that the two-house system has realized in practice the main thing postulated in its favor? Has the second house served as a check on bad legislation by providing a jealous and critical revision of all proposed laws by a rival body of men? And why should there be rival bodies of men whose sole functions are to revise jealously all enactments originating in the other house and put

stumbling-blc ks in the way each of the other!

Members of a legislature are chosen for a common purpose—to enact laws for the public good. Instead of revision by rival houses, to accomplish the best revalts there should be only unity and cooperation by the members of both houses.

There are in America alone over six thousand volumes of decisions of fifty or sixty different courts, and this number is being added to every year at the rate of nearly two hundred volumes. I venture to assert that the decisions construing the output of American bicameral legislature constitute at least one-third of this vast library of judicial ingenuity. Take down at random a volume of the West Reporter System—say, Volume 90 of the Pacific Reporter, containing the appellate decisions of thirteen Western and Pacific states, and about one thousand decisions rendered within the two months from June 10 to August 12, 1907. For hundred and sixteen of these decisions are concerns with the construction of statutes or constitutions.

Take the last volume of the same Reporter, containing about the same number of decisions an covering the period from October 20 to December 1913, a period of six weeks, and one finds for hundred and sixty-one sections of various statute construed. Other volumes of the Reporter Syster show about a similar proportion of statutor cases—which is to say that at the present time nearly one-half of the cases in our appellate cour involve the construction of statutes.

#### Bungling Law-Makers

MOST of this results from legislative bunglir and unskillful draftsmanship. In good particular results from the incidental effect on other and apparently unrelated statutes, which mannew statutes are found to have when it is a tempted to administer them, but which are new suspected during the process of enactment, chief because little or no attention or consideration ever given to this phase of legislation by the awage legislator. The flood of decisions given over explaining to litigants what the legislature fails to put in plain, simple and direct language of its spells the condemnation of the system.

The system has not provided rival bodies that critical and scientifically revise the hasty and crude efforts, ea of the other, but practically two divisions of one hou. The two houses no longer represent different classes society; and the original purpose of the upper house, as trepresentative of aristocracy—to limit popular power legislative matters—is voiced only at rare intervals by so one bold enough to say: "The people be damned!"

By dividing responsibility and making it impossible locate blame, the two-house system provides an admira machine for grinding out crude and ill-digested legislati. And this end is admirably furthered by the short sessitive expense of the system compels and the enormnumber of bills that must be considered in the forty to hundred and twenty days to which the sessions are usual limited, and by the want of legislative experience or fitte on the part of the overwhelming majority of the members.

The efficiency of American industries is the result of fixed individual responsibility. The success of the Pana Canal venture was in doubt for years. A commission nine, after serving for some time, was dissolved with results. A second commission of seven met practically same fate; but from this commission of seven an execut committee of three, which had distinct duties, became sort of factor. Nothing definite was accomplished, he ever, until a committee of one man—charged with respicibility and accountability—accomplished the great industrial achievement of the age in the practical comtion of this gigantic enterprise.

It requires something more than honesty and g intentions to make good laws. Mr. Austin, the well-km jurist, has well said: "What is commonly called technical part of legislation is incomparably more diffithan what may be called the ethical. In other words, far easier to conceive justly what would be useful law t so to construct that same law that it may accomplish design of the lawgiver."

Take the case of the member of the last Kansas leg ture who introduced a bill to regulate the passage of tr at points where one railroad crosses another. His in tions were good, but his bill was worded like this: "W two trains approach each other at a crossing they shall

come to a full stop and neither shall start up until the other has passed over." A member of the legislature of another state is quoted as saying: "When I came to the legislature I introduced a bill to prevent the manufacture of filled cheese, but it would have prevented the manufacture of all other kinds of cheese too."

Here is a bill that actually passed the last Kansas legislature. The law governing the inspection of hotels and lodging houses contains this provision: "All carpets and equipment used in office and sleeping rooms, including walls and ceilings, must be well plastered, and be kept in a clean and sanitary condition at all times." In this act there are three distinct, different and diametrically opposite sections fixing the time when the act should go into effect.

For six years there stood on our statute book, as a part of the law regulating automobile traffic on the public highways, the following paragraph, which was doubtless added by some hilarious politician, who was impressed by the bandwagon idea of party management:

Nothing in this section shall be construed as in any way preventing, obstructing, impeding, embarrassing, or is any other manner or form infringing on the prerogative of any political chauffeur to run an automobilious bandwagon at any rate he sees fit compatible with the safety of the occupants thereof; provided, however, that not less than ten or more than twenty ropes be allowed at all times to trail behind this vehicle when in motion, in order to permit those who have been so fortunate as to escape with their political lives an opportunity to be dragged to death; and, provided further, that whenever a mangled and bleeding political corpse implores for mercy the driver of the vehicle shall, in accordance with the provisions of this bill, "Throw out the lifeline!"

#### Here is another:

If any stallion or jack escape from his owner by accident he shall be liable for all damages, but shall not be liable to he fined as above provided.

By being somewhat heedless to the ordinary rules of grammar some court might decide that it was the owner and not the stallion or jack that is made liable for damages under this act.

An act which particularly shows the inefficiency of legislatures is the bill that had for its purpose the raising of convicts' wages, to be paid to a dependent wife and the children of men and women confined in the Kansas Penitentiary. The bill was drawn by its friends and had for its purpose the increasing of the wages of convicts from three cents a day to thirteen cents a day; but so clumsily was it drawn and so ambiguous was its phraseology that only by a decided stretch of the imagination and sympathy for the convicts by our attorney-general were we permitted to continue to pay the convicts three cents a day, their former wages-much less give them the additional ten cents a day the enactment contemplated. This evidences another reason why we should have men in our lawmaking department who understand the how of things.

#### Blunders of Careless Lawmakers

THE enactment that created the non-partisan body I known as the Irrigation Board provided that the board should be appointed by the governor for the first two years. Some ambitious legislator tacked an amendment on the bill, which provided that thereafter they should be elected, but that no more than two of the three members should belong to the same political party. He neglected, however, to provide any means whereby the bipartisan provision could be carried into effect, either at the primary or at the

the practice of Chiropractic-whatever that is. I allowed

this bill to become a law without my signature; but, on examination, I found that it required me to appoint, as members of a board, three chiropractors who had practiced their art in Kansas for two years. In order to comply with this provision of the law I should have been compelled to appoint men or women who had been openly violating the medical registration laws of our state for two years-a thing which, as governor, I refused to do; but my right to refuse was only settled at the end of a mandamus suit in the Supreme Court.

Another law sent to my office for signature was found, on examination, to contain a negative that made the act exactly contrary to what it was intended to be. This bill was only one of fifteen others returned to the legislature by me for correction in particulars more or less important. Two bills that were exact duplicates passed both houses and came to my desk before the duplication was discovered. I am informed that exactly the same thing happened in Pennsylvania. In one instance a bill was passed amending another that had been passed some days previous, and both the original act and the amendment were enrolled and reached my office about the same time.

A number of bills passed both houses without any enacting clauses—a matter absolutely requisite to their validity as laws; and in the session laws will be found a large number of resolutions authorizing corrections in a number of acts. Not many years ago an act was passed establishing a county court in Douglas County. The act contained contradictory provisions-one requiring that the judge should be appointed and the other requiring that he be elected. The Supreme Court declared it void.

An old act, providing for the destruction of grasshoppers in the western part of the state, driving them from the cultivated fields on to the prairies and firing the grass, required ten days' notice by publication, without making it clear whether the notice was for the benefit of the farmers or was a legislative recognition of the constitutional right of grasshoppers to due process of law.

In 1873 the New York legislature passed a charter for the city of New York, and the repealing clause threatened a general jail delivery. The defect was discovered in the governor's office before the bill was signed. Conditions do not appear to have improved in New York since, for in 1910 one hundred and thirty bills were recalled from the governor's office by the New York legislature for further consideration after having once passed both houses.

Through a legislative blunder the Supreme Court of Ohio was deprived of a large portion of its jurisdiction in 1902 and an act of a special session was required to undo the mistake.

The recently enacted Illinois law providing commission government for cities is said to be so badly drafted as to defeat the purpose intended; while the Wisconsin Eugenic Marriage law was so radical that the Supreme Court of that state recently declared it unconstitutional.

Nor does the Congress of the United States make any better showing than state legislatures in the matter of crude legislation. Take the Hepburn Act, which is the amended interstate commerce law, and the mass of judicial decisions interpreting it. It has been described by Professor Stimson, of Harvard, as a mass of contradictions and overlying amendments, and fills twenty-seven closely printed pages. Mr. Stimson asserts: "Any competent lawyer who is also a good parliamentary draftsman could put those twenty-seven pages of obscurity into four pages-at mostof lucidity with two

days' honest work."

circuit courts, contained so many errors that it had to be reënacted for the sole purpose of correcting the errors—and, at that, left it still in doubt whether the two-thousanddollar limit qualified all cases provided for or only a part of them. Section eleven of the act of Congress of July 1, 1882. imposing certain duties on the Capitol police, led to the discovery that there was no such body.

The specific instances of blundering and crudity cited are not sporadic and occasional. The statute books of every state are full of them. And how could it well be otherwise? In the large membership of our state legislatures there are usually a scant dozen men of superior ability and experience; the rest are for the most part firsttermers, without special experience or special fitness as legislators.

And yet legislatures so composed add something like twenty-five thousand pages to our statute books every year. Last year-1913-the session laws of California made a book of 1746 printed pages, exclusive of indexes; the session laws of Colorado, 696 pages; Delaware, 846 pages; Indiana, 967 pages; Minnesota, 918 pages; Missouri, 788 pages; New Hampshire, 572 pages; Nebraska, 810 pages; North Carolina, 746 pages; Massachusetts, 1200; New Jersey, 846.

#### The Horseplay of Legislators

THE session laws of Kansas for 1913 made a book of 594 pages containing 336 laws, of which 67 were appropriation bills and 147 amendments and repeals of existing statutes and 122 new laws, many of them local or trivial.

These conditions were not unusual. The amendments and repeals in 1911 and 1909 were practically the same as in 1913. About half the time of each succeeding legislature is taken up in undoing what former legislatures have done. The Kansas legislature sat exactly forty-nine days or parts of days; consequently an average of seven laws passed both houses each day. Now it is hardly possible for a member to study conscientiously and intelligently seven bills each day. It must be remembered, however, that something like seventeen hundred bills were introduced and more than half of these were reported for passage by committees, and that a great deal of time was occupied in considering bills which were ultimately killed in one house or the other.

Often a good deal of valuable time is wasted in horseplay over bills like one introduced at a recent session of the Kansas legislature requiring that women should wear skirts which should extend at least four inches below the patella; or the one introduced into the Nebraska legislature to prohibit the wearing of corsets and bloomers; or the one in Michigan to prohibit the wearing of tights at circuses and theaters; or to prohibit the use of any language except English on the menu at hotels.

An amusing bill prepared and introduced by a Kansas senator had for its purpose the dissolution of the marriage ties after ten years of wedded life. The act contemplated an absolute legal separation of man and wife on presentation of the marriage certificate to the judge of the District Court ten years after the date of its issue. As soon as the senator heard from his wife he dropped the matter. Bills of this sort, introduced by rural statesmen with perfect seriousness, afford opportunity to waste public time that should be devoted to matters of real public concern. (Continued on Page 44)

## THE ME

BY ALL the loaded canons of art that title should be The Two Bad Men, the Doctor, the Swede, a Little of Kerrigan, and Something of Steve the Night Bartender. But that would be too long-also misleading; for the Doctor was only Kerrigan's goat, using only in a large, wordy sense, and not to belittle the sprightly rogue.
"He's called Doctor," says Kerrigan,

"because he has the whishkers an' is akeilly destructive to human life"which is nicely enough phrased and important if true, especially to the Swede, who was last heard yelling sagas, or something just as good, to the petulant Doctor, with Kerrigan left saying the Doctor helped out a whole lot in a town like that; while the two bad men, one of them limping painfully—but perhaps the shorter title is better after all. And Steve, the night bartender, not even mentioned! We shall have to start again and come to Steve by way of the first bad man.

He was Bogie O'Leary-a very bad man indeed. He not only announced this, often on less than no provocation

at all, but he looked it so alarmingly that only the blind could have doubted. That he was a killer was widely believed, the notches in the stock of his blue-barreled revolver imparting poetic significance to this opinion. And he was as quick on the draw as any moving-picture bad man that ever lent vivacity to a film. Though past sixty he was light on his feet; and his red-rimmed little eyes saw true. Commonly he contorted his puffy old face into a scowl that was a very thundercloud of

Because of his peculiar talents and the piquancy of his past, Bogie served as major domo of Finnegan's Cave, though Finnegan designated him by the rather more abrupt term of bouncer.

Whether or not San Francisco's Barbary Coast was ever entitled to its repute for extreme wickedness is no longer of consequence, for that city now avers that the Coast has gone; but in those halcyon years when the city's boast was frankly quite otherwise Finnegan's Cave was to be entered from that block on Pacific Street which was the throbbing heart of the dance-hall district.

From our army and navy Finnegan drew the heft of his income. Soldiers and sailors found in the Cave, in one fashion or another, a speedy relief from the emoluments with which our Government thoughtlessly ladens them; but supplementing this largess-often to be had for the mere trouble of removing it from the uniforms of its slumbering trustees-there were opulent tourists to scatter gold along the Coast for the privilege of gazing wonder-eyed at its sinful life. And Finnegan, outshining the vested interests about him with the added attraction of a genuine bad man, drew heavily of this slumming revenue.

And Bogie O'Leary knew his value to the Cave. He wore his dignity consciously. Soldiers and sailors were beneath this dignity. Finnegan's deft waiters, with the assistance of a lethal squirt or two from the peter bottle back of the bar, usually effected what fiscal readjustments these seemed to invite; but the moneyed tourists from east of the Rockies-for these Bogie posed, and his heart was in his work. When a group of them, at a table beside the polished area of dancing floor, had been, by the waiter who served them, apprised of Bogie's dreadful prowess, Bogie would condescend to approach and allow himself to be wheedled into telling epics from his lurid past.

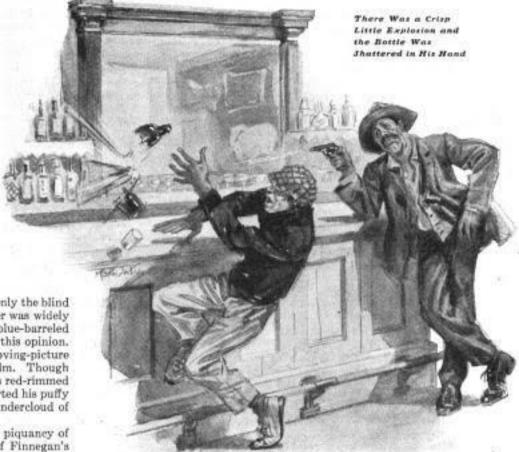

Also, at the proper moment, he extended empty handsand there in a twinkling was a gun in each! Bogie smiled villainously, while the slummers shuddered. Frequently, then, by some enthusiast in the party, he would be persuaded to part with the very weapon that had slain the two Mexicans. He purchased this memento in case lots and had relinquished dozens of them at a profit which handsomely assuaged the sentimental regret he seemed to suffer at parting with them.

Finnegan's brother divekeepers stoutly yearned to maintain bad men of their own, but they were discouraged by the police. The badness of Bogie was rather a mellow tradition and therefore something to be tolerated; also, he was not without influence. When, at intervals, it seemed essential to the gilding of his ill repute that he shoot out the lights in some neighboring resort, the police invariably arrived after he was gone. Bogie was bad as he listed and Finnegan throve.

The lights of the Barbary Coast had just begun to wink their invitation on a certain Saturday evening in June.

By HARRY LEON WILSON

To the syncopated product of the Cave's three-piece orchestra a few sailors glided decorously over the dancing oval with painted and thirsty partners. At the bar Bogie O'Leary began the consumption of his nightly quart of whisky. It was bad whisky, even for a bad man, and it was served by Steve, the night bartender, resplendent in white jacket, with his red hair plastered in a crescent above his not-too-lofty

"Heard the news over at the San Susy?" inquired Steve as Bogie poured his drink.

"Heard nothing! The burg's on the blink," replied

Well, they got a new bouncer over there yesterday and they say he's a bear."

Bogie scanned his informant suspiciously. It had more than once occurred to him that Steve was not above a certain veiled jocularity, which he would have described as kidding. Steve tenderly wiped the bar in front of Bogie, hummed a strain of Love Me and the World is Mine! and appeared to reflect on world matters at large. He threw a carelessly confident glance at himself in the mirror, fastidiously adjusted a vagrant strand of that scarlet splendor above his brow, and murmured, as though to himself:

"I only hope the bulls nail him before he starts anything rough in here."

Who's he?" demanded Bogie.

"The Pell Street Kid," announced Steve impressively. "That's all-just the Pell Street Kid. He says his other name is Ruin."

"Aw, him!" observed Bogie in scornful huskiness; but there was a jealous gleam in his little eyes, for word of the newcomer's rugged virtues had already reached him.

"They tell me," continued the glib Steve, "that last night he knocks out four sailors with just four punches and then piles a couple o' soldiers on top of 'em. Of course I don't know, but he's certainly drawin' the crowds over there. One of his ears is half bit away."

Bogie was instantly piqued by the last item. He found himself envying this disfigurement. He wished earnestly that one of his own ears had been thus mutilated.

"Aw, I bet he's on'y a yellow-livered four-flusher at that!" growled the Cave's bad man. "Me? I'd give him a hard slap and break his wrist-watch if he ever showed up here. I'd have him hard to ketch-don't you worry! But he'll never come on my ground."

"Which reminds me," continued Steve. "He's been giving it out pretty raw that he'll be in here tonight to look you over. He tells certain parties he wants to find out have you got the goods or not."

Bogie heroically gulped his full glass of whisky and immediately poured another. This he studiously regarded for a moment, then pushed it across the bar.

"Use that stuff to clean the sink with," he directed. "I got to keep a clear head.

"Might be just as well," agreed Steve. "Yes, sir; I got to have my wits about me and that red booze is the wrong dope. Gimme some ale with a dash of mulligan.'

Steve drew a mug of ale and set the cruet of peppersauce beside it. Bogie stung his drink freely with the confiment and drained the mug.

"They say he's an awful hungy maneater," suggested Steve. "Of course I don't know, myself -

"If that guy shows up here look out for a tidal wave on the Coast-that's warned Bogie. "I'll do him in jig time. I just smell the blood and I want to swim in it."

"They say he's some swimmer himself," said Steve casually; "in fact a regular high diver. But of course-"
"You're some handy lad with the

gossip, ain't you, now?" demanded Bogie bitterly; but he was deaf to Steve's deprecating retort, for now a slumming party entered and he was presently making his gunplay for them. He also hurled his long knife to the floor, where it quivered on its point. "The undertaking business is dead in this town," he loudly announced, "and I'm goin' to stimmylate it. Their fam'his has got to live an' Bogie O'Leary is guin' to see that they live high. On with the dance of death!

He rushed to the dancing floor, gliding in and out among the swaying couples, stamping his feet viciously and chanting his battlecry. The slumming party cautiously withdrew, despite Steve's assurance that Bogie never made any real trouble before a lady.

"He's a bad man; but he's got a good heart—I never knew him to kill any one in here," declared Steve warmly to the backs of the retreating group.

Bogie continued his sinister dance until thirst diverted him. As he stood, somewhat breathless, at the bar, spicing his ale with the peppersauce, even the cynical Steve was puzzled. He had never taken Bogie quite at his own valuation; and yet

"Say," warned Steve almost respectfully, "you ain't going to pull off anything in here? Remember, Pete's cense is worth something

"If that guy comes in," responded Bogie, "I'll start him on a cross-country Marat'on that ends back in New York Watch me—that's all—just keep lookin'!"

He had raised his voice for the benefit of sundry Coas familiars who were now dropping in. The word had appar ently gone out that more than the usual entertainment might be expected at the Cave that evening. The new comers mostly drank in watchful silence. Only among the feminine patrons was there a hushed murmur of prophecy and foreboding.

"He's the meanest proposition in Californy tonight—ba none!" whispered Cowboy Mag to Danish Kate.

And the latter, in blissful anticipation, agreed whole heartedly:

"The hardest nut that ever hit the Coast!"

At the bar Bogie toyed with his drink and muttere grimly. He knew that he must make good. Otherwise h foresaw a gaunt future in which he would have to beg hi drinks. He might even be "vagged." "Any guy say I was old?" he demanded ferociously a

"Old? Why, you're just a bear cub!" Steve hastened t

The crowd was nervous with expectancy; the dance wi abandoned; the musicians forgot to play, or perhaps waite

as the vaudeville orchestra waits for the acrobat to achiev his most perilous feat. The stage was set. "If on'y I don't lose my temper," murmured Bogic

"that's all I'm afraid of; when I get mad I'm unsafe!" The swinging doors flew wide on the Pell Street Kie

He flitted into the Cave with the sure footing of a cat. H brushed past Bogie O'Leary, affecting not to see him, after the manner of fighters in the ring who loftily pretend t ignore the existence of their opponents.

He was short of stature, but his shoulders were those of a gorilla. His features would have been considered advanced, even for a gargoyle. A cap pulled low and a sweater pulled high happily alleviated something of his facial effect. Bogie O'Leary glanced furtively at his rudi-ments of a profile. The lobeless ear was flaunted at him.

"Brandy!" commanded the Pell Street Kid in husky but confident tones. The lookers-on in Venice sat tensely quivering. How far would Bogie let this invader go? And Bogie was merely staring-staring, fascinated, at the partial ear of his rival.

"This here left sail of mine," remarked the Kid to Steve with seeming irrelevance, "was man-chewed back in Pell Street, N'York." He permitted himself a dramatic pause. "But the guy never saw nothin' again out of his right

lamp!"

He wriggled a thumb gruesomely and a delighted shudder swept the audience. He reached for the brandy bottle. There was a crisp little explosion and the bottle was shattered in his hand. With an unstudied yell of terror the Pell Street Kid whirled about and leaped through the swinging doors.

"He'll win a fight or a footrace!" shouted Bogie, speeding in pursuit, a blue-barreled revolver in each hand.

Pursued and pursuer dashed round the corner of Pacific Street into Kearny. The pursued held his hands high above his head and loudly invoked the law. The pursuer at discreet intervals fired shots at an unruffled sky. Two patrolmen on Kearny Street stepped dispassionately into dorways to afford the procession an unimpeded progress.

The Pell Street Kid fled toward the Hall of Justice, where burned the blue beacon of the central police station. At almost any other time he would have shunned this light as a plague warning-now it was a refuge. He flung open the door on two inoffensive policemen engaged in a checker game. It was some moments before he could regain the breath to explain why he had felt obliged to interrupt the game at a crucial point.

Bogie O'Leary, panting under the battle stress, made his way back to Finnegan's. An admirer had bought drinks for the house, and Bogie, over brimming glasses, was hailed

as the Cave's hero-

"If anybody else thinks I ain't got the punch let him speak now and I'll eat him alive!" announced Bogie.

As no one seemed eager to perish in this spectacular fashion the hero permitted himself to be mollifled and mellowed by more whisky. At his second drink a quietly carbed youth of stealthy manner and shifting eyes stole in and made his way to the hero's side.

"Duck," whispered the youth; "two fly bulls'll be up in

half an hour. They want you to beat it.'

Bogie had expected this message - a tribute to his recent victory and a delicate admission of the regard in which he was held by a discriminating constabulary. He paused only to quaff another beaker; then, with a gallant flourish to the applauding throng, he went out into the night.

it, he stalked majestically down Pacific Street; and as he reflected on the fine little details of his accomplishment its merit became enlarged in his mind. He was in that perilous state which has preceded the downfall of many an artist. Drunken with the glory of his masterpiece he burned to paint another while yet the fever endured. Let us not blame him! With sufficient mulligan in our ales which of us would

spire less daringly? Finding himself at the ferryhouse it occurred to his chivalrous soul that a brief journey beyond the city confines might save his

good friends, the police, what chagrin they would feel at actually finding him while merely pretending to hunt for him. He promptly bought a ticket and boarded a boat that proved to be bound for the Marin County side of the Bay.

Half an hour later he landed in the sedate and already sleepy town of Tiburon. As the needle to the magnetic pole, albeit more sinuously, he wove a course to the only saloon.

He hungered for the sweets of applause, and his artistic temperament decreed that he should once again that night inspire fear in the hearts of men.

"Hey! Spill me out some booze!" growled Bogie in his best bad-man voice, and glanced about the dingy barroom to note what of terror he inspired. There were but a few loungers present and these regarded the newcomer with a rather listless indifference. One of them-a yellowwhiskered mammoth-did not even look up. He sat at a table in a far corner, engrossed in the solution of a small wire puzzle. Moreover the bartender served the desired drink with a quite perfunctory oblivion, continuing to one of the loungers his masterly analysis of the baseball prospects.

So spiritless a reception could not but affront Bogie. Had he not accomplished a wondrous, a historic feat? And in this contemptible suburb, was he to be denied the reward of popular acclaim? It was monstrous! It was unbearable!

The bartender absently reached for the bottle when Bogie had poured his drink.

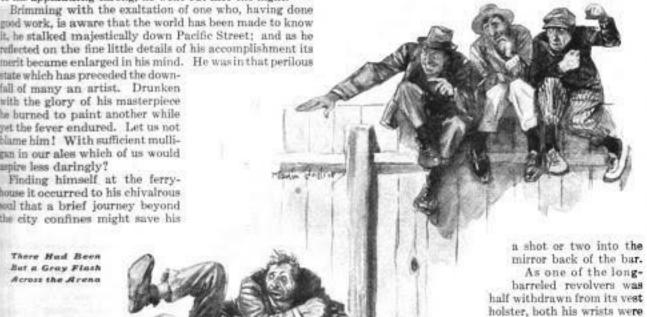

'Leave it!" exploded the indignant hero. "I want more! I want bucketfuls!

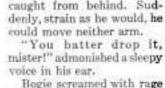

Two or three of the loungers now eyed the newcomer furtively; but the blond mammoth in the corner still sat intent on his wire puzzle. This man especially annoyed Bogie. He had a grinning, foolish face and the empty, bulging blue eyes of a Christmas doll.

"Don't rile me!" snarled Bogie, chiefly for the impressment of the puzzleworker. "I'll let you know I'm a bad man! I'm the worst man in California and I eat boobs raw-'specially Swedes. I smell one now and I'm goin' to chew both his ears off. Wait till I get my appetite.'

The bulky blond appeared to be deaf. He bent lower over his puzzle. Bogie had drawn his long knife and hurled it into the floor. It quivered on its buried point a few feet from the chair of the puzzleworker; but the chair's occupant gave no sign.

The bartender edged casually toward the end of the bar. Two of the loungers glided out with little ceremony. The others shifted awkwardly toward the rear of the room. Bogie, pleasantly aware of these belated tributes to his badness, was now on his best mettle. He would make history in Tiburon. First be would shoot the lights out—with

and pulled the trigger. The bullet narrowly missed one of his own feet; then his wrist was twisted so painfully that the revolver fell to the floor. "I'll eat your heart out!"

yelled Bogie. "Let me go! I'm Bogie O'Leary!'

The announcement made much less than the sensation he had expected. That fell

"I'm the Worst Man in California and I Eat Boobs Raw"

grasp on his wrists tightened. He thrust back his head and his teeth snapped as he tried for a primitive hold on the face of his antagonist—tried unsuccessfully; for at that moment he was skillfully tripped and fell face downward under a ponderous weight. Magically his wrists were caught together by handcuffs and he felt his pockets being

When he was at length jerked to his feet he saw through the haze that his cherished weapons had been laid on the bar-his long knife; two revolvers; the brass knuckles; the billy. Gazing at him with mild reproof in his pale blue eyes was the man of the puzzle.

"You ban nice faller!" remarked his conqueror with pained sarcasm.

Bogie thereupon made the place vocal with his most sulphurous language. Back on the Coast his profanity was highly considered, but his captor only surveyed him with renewed disesteem.

"You batter behave," he warned; "cursing and swearing like a loafer!"

He turned away and picked up the wire puzzle to lay it tenderly on the bar.

"I got to lock this faller oop," he remarked wearily to the bartender; "but when I come back I bat two dollar I do that puzzle before you have to shut.'

"Take these things off and I'll kill you!" shricked Bogie. "I'm a bad man! I'll come back and burn this town down and every squarehead Swede in it!"

"You ban make too much noise, Mr. O'Leary. Maybe you ban bad, but I ban constable and poundman, and I goin' lock you oop. Monday morning you tall the yustice -how you ban bad. Now you come along!"

Kicking and emitting a weirdly frilled profanity the bad man was propelled by an irresistible force down the deserted main street of Tiburon and halted before a small brick building.

"This here ban the pound," announced his captor. "We not have a yail, so I use the pound for a yail also. Maybe the trustees make a yail for me if you come again sometime, Mr. O'Leary. You ban a good faller, maybe I put you some place batter; but you ban a bad fool man-so in you go!"

"I'll cut your heart out for this!" screamed the bad

"Now I bat two dollar I do my puzzle!" remarked his captor, as with a firm but gentle push Bogie O'Leary was projected into the black of the doorway. Faintly a padlock snapped outside the closed door.

Bogie essayed a step forward and stumbled over a dog, which rose with a yelp and seized him by an ankle. As he sought to regain his feet a bitter blow impinged on his back-a goat had butted him.

And darkness was over all.

At noon the next day Steve, the night bartender, was oused from his sleep by the pound on the door of his modest bachelor apartment in the Gents' Bon-Ton Lodging House. Groping a sleep-blinded way to the door Steve was brought fully awake by a telegram thrust in on him. He signed for this, closed the door and fearsomely laid the yellow envelope on his bed. He stared at it there a moment, then gingerly lifted it and propped it against his mirror, where the handwriting of the address could be studied.

Presently it occurred to his quickening mind that this writing would probably be without the least personal significance. Thereupon he rapidly catalogued such members of his family as might have passed away during the night. There were several of these whose going he could have

read of with only a mellow regret. Still, it was a momentous business and he glowed with a pleased importance-for this was his first telegram.

Curiously enough, of all the myriad telegrams that have been sent over and about this busy world, not one had ever before come to Steve. That this first one told of death he was now certain. His imagination was powerless to conceive a slighter provocation. But whose death?

Casting reflective glances at intervals on the sinister missive he proceeded to the making of his simple toilet. Midway of this he paused, brightened suddenly and exclaimed:

"Uncle Roderick! Poor Uncle Roderick!"

That explained it. His Uncle Roderick had dropped dead up in Napa County-his uncle Roderick, who had more than once flatly declared an intention of making Steve the sole heir to his eighty-acre vineyard.

He rapidly finished dressing and was out in the modified Sabbath calm of Pacific Street, the unopened telegram clutched tightly in one hand. He was no longer apprehensive—in truth, a very definite elation filled his mind. Nevertheless he felt the need of a stimulant before he read the actual words. The Sans Souci was the first house of call on his way and Steve turned in. Momentarily he was made almost oblivious to his telegram, for the Pell Street Kid stood in lonely grandeur at the bar.

"Where's the quick guy?" demanded the Kid, not

ungraciously.

'Search me!" responded Steve. "But look here! I just got a telegram saying my Uncle Roderick's dropped dead and left me his eighty-acre vineyard."

"Say, pal, that old geezer's some nervous wit' his trigger finger," wheezed the Kid, who was not easily to be diverted with tales of legacies, "but I dunno's I want any hard feelin's as between man and man. I'm willin' t' let bygones be bygones, if it comes down to that."

"Have something?" invited Steve. "He was over ninety and he said he'd leave the whole eighty to me. I'm goin' to start a roadhouse up there-elegant location for the auto trade; right on the main road.

'Good!" said the Kid. "I'll take brandy."

"Same!" said Steve; and, with a last cautious survey of the envelope, he delicately tore open his telegram. The contents seemed to amaze him. He read at varying angles and from varying distances.

"Uncle left you a farm, did he?" inquired the Kid

"It-it don't seem to say anything about that," replied the dazed Steve. His feeling was that the telegraph com-pany had played him false. "It don't even mention a word about Uncle Roderick. It says something else. Here-you

The Pell Street Kid snapped the sheet with a masterful finger and read the simple message:

Being killed in jail here! Help, for God's sake!

"That's the old guy last night, ain't it?" asked the Kid. "Sure-that's his name," admitted Steve; "but I don't understand it. I thought it was Uncle Roderick dead-

 and the finest eighty acres of growing grapes you ever set eyes on-say, I better go see the head man at that telegraph office."

'Drink up!" urged the Kid. "And how do you get to this here place? I don't just make it."

"Oh, there?" said Steve. "You take the ferry and get off on the other side.'

"Sure!" agreed the Kid. "I know that much about ferryboats myself. C'mon, then!"

"Can't make it out!" insisted Steve. "He's ninety if he's a day; and only last March when I was up there he told me this here eighty was as good as mine-and yet, look at that telegram!"

The Kid was rushing ahead, however, and Steve followed, still muttering his perplexity. Even by his fondest admirers Steve had never been thought an intellectual giant.

On the boat they bought a Sunday per and scanned its crime news for light on Bogie's misfortune. They reasoned that Bogie had made a killing and was being tortured by the

"The bulls is givin' him the third degree," said the Kid knowingly; "but mebbe we can get in to him. I'll take him this noozepaper and get him a bag of grapes or somethin'.

"Grapes!" muttered Steve. "Eighty acres gone like that!" And he waved loose fingers in illustration.

The Pell Street Kid had made his way to the boat's lunch counter and was buying expensive grapes, suitable for one in distress. Steve hopefully scanned the paper anew for an item concerning his uncle Roderick.

They disembarked at Tiburon and were stared at curiously by a citizen of whom they sought information.

"Police station? What do you mean-police station?" demanded the citizen. "There ain't any. There's a pound and a Swede city marshal. The pound's down to the end of this street and the Swede's likely over to the Lutheran Sunday school."

"Was they a murder here last night?" ventured the Kid. "No," said the citizen frankly. "There wasn't ever anything here."

"C'mon!" directed the Kid to Steve, and they swiftly traversed the main street of closed shops

'Maybe he's dead a'ready!" suggested Steve, reluctant to believe that any telegram could mean less than death.

"Die myself," declared the Kid, "'f I had to stay overnight here! Say, think of a civilized burg without a jail! What's a pound look like, anyway? Would that be it?"

At a point where the town's commercial life waned into vacant lots stood a compact brick building, without windows and with but one door, stoutly secured by a bar and padlock. This sinister edifice was set at the corner of a high-walled inclosure, also of durable construction. They rattled the padlock without result.

"Walk round!" directed the Kid, who was a born leader, and they followed the line of the high wall. At the first corner they paused. From within came staccato hoofbeats, followed by a muffled thump and a howl of anguish.

"It's Bogie's voice!" exclaimed Steve. "I'd know it in a million."

"Hurry round!" ordered the Kid. They turned the corner, only to find another mute expanse of board wall, a dozen feet high at least. Passing this hastily they turned the second corner of the mysterious inclosure.

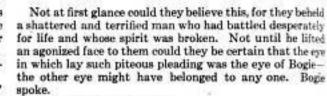

Here, midway of the third wall, a ladder was erected; and at the top of this a man leaned far over, apparently engrossed with whatever of action was occurring inside the walls. At the moment he was calling cheerily to some one below him:

"What'd I tell ye? Ain't he th' pet now! An'-would ye believe it?-he's just turned three year-not a day older! What's that? Come now! Come now! Shame on ye! Such is no talk f'r a Sunday!"
"Hey, pal!" called the Kid.

The man on the ladder turned a genial face to the pair below him. He was a plain, simple man-a workingman of the people, one would say-and enjoying his Sabbath leisure to the full. He beamed on them and beckoned

"Ye'll have th' fine seats t' enj'y it," he called, and forthwith edged himself cautiously from the ladder along the top of the wall. "Hurry, or ye'll miss th' next come-togither!"

The Kid mounted the ladder, followed by Steve. They perched precariously atop the wall beside their attentive host. Against a side of the inclosure below them was a dog kennel with a peaked roof; and astride this roof was the devastated remnant of Bogie O'Leary.

"Help!" he called feebly.

"What's it all mean anyway?" demanded Steve petu-lantly. "I made sure it was my Uncle Roderick up in Napa County had dropped dead—and here it's only you." 'Look!" hissed the Kid, pointing.

They both surveyed a creature in the far corner, until this moment undetected. It was a goat of heroic stature, superbly behorned and set with arrogance. He spurged the earth with a murderous forefoot and shook a contemptuous beard at the craven beyond his reach on the kennel.

"'Tis him!" shouted the joyous host of the ladder. "'Tis the good old Docther. I raised him meself fr'm a kid; an' will ye look at th' whishkers of 'm f'r three yearsan' th' hor-runs-an' him with th' stren'th of a lion! Hey there!" he called to the victim below. "Tell these gintlemin-ain't he got th' stren'th of a lion, now? Gwan! Tell thim! Has be not?"

'Get me out of this if you're men," pleaded the victim. "Kick his slats in," directed the Pell Street Kid.

Bogie glared at him from the one eye still in commission. "He's killin' me, I tell you!"

"Sure he manes little har-rum," put in the goat's proud owner. "Haven't I told 'm that often enough? He has th' spirit of adventure, 'tis true; but anny one'll tell ye that Kerrigan's Docther hasn't a wicked hair in his hide. Tis the play in him. Ye must 'a' done somethin' to vex him. I admit he's a divvil whin vexed, but that gintle at momints-manny's th' time I've knowed him show affection to wor-rse lookers than you, me boy. "Call him off, then," pleaded Bogie, "just till I can

get back inta that little house again."
"Wha'd you come out for?" demanded Steve, still

coldly critical. "And look at the state your clothes is in! Why couldn't you be a little more careful?'

"He was buttin' me in there shameful! That Swede let me out when he come this morning and I got him to send you a telegram; and then that he-devil got out tooand he butts me every chance he gets; and along comes that hyena up on the fence there and laughs his head of

"Come now! Come now!" broke in the slightly annoyed

Kerrigan. "A joke's a joke; but ye should mind what ye're sayin'." He turned to the newcomers in amiable He turned to the newcomers in amiable explanation. "Me house is just over a block there; an', the Docther bein' took up yistaday f'r resistin' an off'eer, I come over with this ladder f'r to cheer him a bit in his captivity, niver dreamin' he'd be havin' such ilegant sky-larks with yer frind here!" He glanced indignantly at Bogie once more. "To be sure I laughed, in measurebut 'twas imperrytive. Git down fr'm there wanst an' see if yer frinds don't laugh akeilly. Gwan now! Be a spoort! Make as if ye was goin' t' dash f'r th' door of th' little house agin—an' see if they don't laugh heartily whin it happens."
"You—you——" began Bogie;

but his need for words was too terribly great. His voice broke with something that, in any but a bad man, would have been called a sob. "Help!" he concluded piteously.

"I can't see what you got me all stirred up with that telegram for," put in Steve. "I can't do nothing for you. I ain't no wild-animal tamer, and you knew it well enough!"

"He ain't lookin' now," called the watchful Kid. "Quick! Make a break for the house!"

"It's just his trick," quavered the victim.

"Yer frind's right-I have t' grant him that," admitted Kerrigan gener-ously. "Th' Docther's deep; he's on'y pertindin' not t' notice.'

The monster had turned an unseeing back on his prey. His head drooped: his eyes apparently closed. He seemed to doze meditatively.

"Oh, my! Oh, my! But ain't he th' cunnin' skeezics!' said the delighted Kerrigan. "Tryin' t' loor 'm onta th' ground agin, where he can have another game with 'm! Ain't be th' pet now!"

"Try, anyway!" urged the Kid in cautious tones. "Mebbe you can The Doctor remained sneak by." immobile.

"I love th' beaucheous lines of 'm." murmured the fatuous Kerrigan-"'Tis like a gazelle he is!"

And Darkness Was Over Att

# Geraldine Farrar Tells Some Truths

By Charles Bloomingdale, Jr.

GERALDINE FARRAR'S chief charm lies in her candor. A muchtraveled young woman, she has

gone through this vale of tears with her eyes-and they are very large, dark, expressive eyes-quite wide open; so she has seen much, both in the way of things and of people. Then, too, she has talked to the worth-while men and women in this many-languaged world, for she is an accomplished linguist. She has read much; and so, plus the views of those with whom she comes in personal contact, she absorbs from the printed page. It has been her rare good fortune to have reached the topmost rung of the operatic ladder, and-rarer good fortune-to have done this as a native-born American. So, having traveled and seen much, met many people, read, sung, been applauded in every civilized country and today acclaimed among the world's greatest on the lyric stage, she has, at thirty-two, learned much more than is given to most of us to know.

From her great store of knowledge two big facts have crystallized and become Geraldine Farrar's creed of conduct:

First-Sincerity.

Second—Live! Live every minute!

And Geraldine Farrar's chief charm lies in

She sat in the study of her wonderful New York home on West Seventy-fourth Street one day last March—that is, she sat at intervals. She would begin a sentence on the divan, carry it on while she rose to go to the piano, bring it down to its finishing touch as she restlessly glanced out the window, and put on the period as she sank into a chair at her flat-top desk. Energy, intensity, nerves, with a magnetic personality that, via wireless, sends its message to you, the Farrar temperament fills a room and surcharges it as easily as it helps to fill an opera house. You cannot escape it if you want to—and you do not want to.

#### As to American Girls

OF COURSE I'll wear out," she said; "I'll burn out! Since I've been a child it has been dinned into me again and again and again—'Save yourself as much as you can!' But I can't—it isn't in me to save. When I sing a rôle I throw body and soul into it. I give all that is in me, every tiny particle of it, whether it be of singing or acting. And, having given, I want to give more—I keep nothing in reserve, for I have nothing left. I know that I'm going to give out young; but I'd rather do that than save. I'd rather be a spendthrift than a miser, and I'm a spendthrift in everything—nerves, strength, vitality. The day after a performance

I am limp, useless, worn-out, and must lie abed; but I don't regret. I've given my all, and nothing less than that satisfies me; for even if I did know how to save myself in this, that or the other scene, I wouldn't do it. I don't want to save—I want to give!"

The American girl is one of our time-honored institutions—a home-bred and home-cultivated product. We are a bit proud of her, and rightly; but listen to the candor of the Farrar as she pays her respects on passant:

"Of late the fad of repression would seem to have crept into our life. It finds its unhappiest expression on the faces of our American girls. I think, mind you, that the Amercan girl is the best-dressed, best-booted, best-gloved, besttatted girl on the globe; but watch her any sunny afternoon on the principal streets of our big cities. From her face would seem to have been massaged any damaging mobilty of expression. There is no rapturous joy in her looks, ittle of the God-given delight at being alive and young. she is repressed: it has been drilled into her that to show motion is to be unfashionable-bad form. She permits terself to be cast in a conventional mold that admits nerely of an occasional smile, and that of a cold, brittle sort, like a white winter sun trying to warm an icefield. And she maybe will go through life missing all the warm, sessiful touches, or else come a cropper one way or mother. Why doesn't she be alive and let her face show t? Good form, bad form—what does it matter when one's face can be made not only to show joy but to communirate it? Why be passive and allow to be ironed out and rubbed out of the face the beautiful things it can show?

HOTO BY SERLACH, BEILD

Geraldine Farrar as Tosca

The advancing years come all too quickly," concludes the Farrar grimly; "and these girls should remember that looks, unlike wine, won't improve with age!"

From the American girl to American music was but a step; and the nerve-taking, nerve-using Farrar had some original ideas on that subject also, ditto candor. "What art we have here," said she, "we import; for at

present art in America is a luxury and you must educate people up to it, whether it be a painting, a bit of sculpture, or an opera. But then, consider how young we are as a people. American music may come eventually-but when, is rather a matter of guesswork. Just think, though, how woefully, pitifully young we are—not out of our swaddling clothes as a nation. When Greece was at the height of its glory the Teuton was little more than a caveman. Today look where Germany stands in the art of the world! Yetand stop and think of this for a moment-fourteen hundred years after Christ was born this country didn't exist, even in the imaginations of men, much less on the map of the world. And a little over a hundred years ago the greater part of the United States was but a wilderness. We haven't had time yet to think of art; we're trying to clear up our material problems and at the same time make a living, leaving to the future generations, who will have more leisure, the task of developing artistic traits. We of the present are merely blazing the way; making the paths easier for those who follow us and will arrive quicker by reason of our pioneer work. It takes time and commingling of different bloods to make for art. When our art comes, the real American Art, it will be found that a mixed race produced it, with American soil as a background.

"I have heard it said," she mused,
"that the American voice is a resultant

of our climate; that it is a hard voice, unmusical, metallic. But is that true? Take our Southern women, for example. Few voices are more wondrously soft, more vibrantly musical, than those of our women of the South. Our climate does play a part, but it is a temperamental and not a vocal part, to my mind. I think the American climate gets on our nerves first, and not on our voices, except as a resultant from our nerves. It gives us a peculiarly electrical tenseness, a sort of nervous autointoxication. That makes us pitch our voices higher than is the way with most people of the world. The proof of this is often shown in the second generation of the immigrants who land here. The children born in this country of immigrants invariably have harder and higherpitched voices than their fathers and mothers. Many a time I have noted it; and the softspoken elders are in marked vocal difference from their offspring. So it must be in the air. Don't you think so?"

#### Two Wonderful Voices

"AND while we're on the subject of voices, one woman I know, and one man, have the most wonderful speaking voices in the world. The woman is Ada Rehan; and her voice is like a rippling song, or a shaft of warm sunlight, or a shimmering spun gold. And the man? Forbes-Robertson. His voice is different from Ada Rehan's in its color and virile timbre, but wondrous in its beauty and flexibility. And these two magnificent speaking voices belong not to Americans—for Forbes-Robertson was born in England and Ada Rehan in Ireland."

A refractory slipper claimed attention at the same time that a bow of ribbon at her waist must be untangled from a knot and two hairpins shoved back into place. The three operations, calling for individual effort at feet, waist and head, were accomplished almost in one motion by the never-resting Farrar. Then the clasped hands were looped over the crossed knees and the Farrar was off again, this time concerning the slim chance the American girl with a voice gets in her own country. And again the candor:

"At present the best way the American girl can obtain her ultimate American engagement is by going abroad and profiting by a routine which we cannot give her here—make her success there so substantial as to give her a name and claim in all musical centers."

A picture above the fireplace leaned the tenth of a degree too much to port. The Farrar's quick eye had spied it, and she was up and at it in a jiffy, had altered its course south by southeast, and

was back on the divan again, stabbing another hairpin.

There is a knock at the door, and the echo of it has not ceased before the bunch of nerves on the divan has hurled

ceased before the bunch of nerves on the divan has hurled itself to the door, taken the special-delivery letter, opened it, read it, thrown it on the desk and herself back to her old position.

"Rehearsal tomorrow!" she says by way of explanation to the interruption. Then:

"The audiences on the other side differ from ours. The American audience is more polite. If you're not liked here they simply stay away from the opera; they may come to one performance, but politely absent themselves in the future. In that way they tell you that you bore them. But in Europe if you are not liked they tell you so plainly and unequivocally, and make no bones about it.

"Oh, it's wonderful, that touch between the artist and the audience! You feel it the very instant your foot touches the stage and you come into view of each other. There's something personal and physical in the contact, like a handshake—no; it's more like a hug. And the audience seems to say to you: 'We love you, and we hope you have something real and fine to show us. We're here to help you.' That is why one should give the public always of the very best, and also one reason why I cannot help doing so.

"Then heart, soul and brain of you go out to them. You want to shout back as loud as you can: 'All of me—all of me—all of me—all of me you're going to have tonight! And with that help of yours I'll show you something worth while.'

# AN AMERICAN VANDAL

## Modes of the Moment—a European Fashion Article

MONG the furbearing races the adult male of the French species easily excels. Some fine peltries are to be seen in Italy, and there is a type of farming Englishman who wears a stiff set of burnishers projecting out round his face in a circular effect suggestive of a halo that has slipped down.

In connection with whiskers I have heard the Russians highly commended. They tell me that, from a distance, it is very hard to distinguish a muzhik from a bosky dell, whereas a grand duke nearly always reminds one of something tasty and luxuriant in the line of ornamental arborwork.

The German military man specializes in mustaches, preference being given to the Texas longhorn mustache, and the walrus and kitty-cat styles. A dehorned German officer is rarely found and a muley one is practically unknown. But the French lead all the world in whiskers-both the wildwood variety and the domesticated kind trained on a trellis. I mention this here at the outset because no Frenchman is properly dressed unless he is whiskered also; such details properly appertain to an article on European dress.

Probably every freeborn American citizen has at some time in his life cherished the dream of going to England and buying himself an outfit of English clothes-just as every woman has had hopes of visiting Paris and stocking up with Parisian gowns on the spot where they were created, and where—so she assumes—they will naturally be cheaper than elsewhere. Those among us who no longer harbor these fancies are the men and women who have tried these experiments.

After she has paid the tariff on them a woman is pained to note that her Paris gowns have cost her as much as they would cost her in the United States-so I have been told by women who have invested extensively in that direction. And though a man, by the passion of the moment, may be carried away to the extent of buying

English clothes, he usually discovers on returning to his native land that they are not adapted to withstand the trying climatic conditions and the critical comments of press and public in this country. What was contemplated as a triumphal reëntrance becomes a footrace to the nearest ready-made clothing store.

English clothes are not meant for Americans, but for Englishmen to wear: that is a great cardinal truth which Americans would do well to ponder. Possibly you have heard that an Englishman's clothes fit him with an air. They do so; they fit him with a lot of air round the collar and a great deal of air through the slack of the trousers; frequently they fit him with such an air he is entirely surrounded by space, as in the case of a vacuum bottle.

Once there was a Briton whose overcoat collar hugged the back of his neck; so they knew by that he was no true

Briton, but an impostor—and they put him out of the union. In brief, the kind of English clothes best suited for an American to wear is the kind Americans make.

#### Shopping in London

I KNEW these things in advance-or, anyway, I should have known them; nevertheless I felt our trip abroad would not be complete unless I brought back some London clothes. I took a look at the shopwindows and decided to pass up the readymade things. The coat shirt; the shaped sock; the collar that will fit the neckband of a shirt, and other common American commodities, seemed to be practically unknown in London.

The English dress shirt has such a dinky little bosom on it that by rights you can-

not call it a bosom at all; it comes nearer to being what women used to call a guimpe. Every show-window where I halted was jammed to the gunwales with thick, fuzzy, woolen articles and inflammatory plaid waistcoats, and articles in crash for tropical wear-even through the glass you could hear each individual crash with distinctness. The London shopkeeper adheres steadfastly to this arrangement. Into his window he puts everything he has in his shop-except the customer. The customer is in the rear, with all avenues of escape expertly fenced off from him by the proprietor and the clerks; but the stock itself is in the

English Clothes are Not Meant for Americans

There are just two department stores in London where, according to the American viewpoint, the windows are attractively dressed. One of these stores is owned by an American, and the other, I believe, is managed by an American. In Paris there are many shops that are veritable jewel-boxes for beauty and taste; but these are the small specialty shops, very expensive and highly perfumed.

The Paris department stores are worse jumbles even than the English department stores. When there is a special sale under way the bargain counters are rigged up on the sidewalks. There, in the open air, buyer and seller will chaffer and bicker, and wrangle and quarrel, and kiss and make up again-for all the world to see. One of the free sights of Paris is a frugal Frenchman, with his face extensively haired over, pawing like a Skye terrier through a heap of marked-down lingerie; picking out things for the female members of his household to wear-now testing some material with his tongue; now holding a most personal article up in the sunlight to examine the fabric-while the wife stands hunbly, dumbly by, waiting for him to complete his selections.

So, as far as London was concerned, I decided to deny myself any extensive orgy in haberdashery. From similar motives I did not invest in the lounge suit to which an Englishman is addicted. I doubted whether it would fit the lourge we have at home-though, with stretching it might at that. My choice finally fell on an English raincoat and a pair of those baggy knee breechs such as an Englishman wears when he goes to Scotland for the moor shooting, or to the National Gallery-or any other damp, misty, rheumatic place.

I got the raincoat first. It was built to my measure; at least that was the understanding: but you give an English tailor an inch and he will take an ell. This particular tailor seemed to labor under the impression that I was going to use my raincoat for holding large public assemblies or social gatherings in-nothing that I could say convinced him that I desired it for individual use so he modeled it on a generous spreading design, big at the bottom and sloping up toward the top like a pagoda. Equipped with guy ropes and a centerpole it would make a first-rate marquee for a garden party-in case of bad weather the refreshments could be served under it; but as a mincoat I did not particularly fancy it. When I put it on I sort of reminded myself of a covered wagen.

#### At the Sporting Tailor's

NOTHING daunted by this I looked up the address of a sporting tailor in a side street off Regent Street, whose genius was reputed to find an artistic outlet in knee breeches. Before

visiting his shop I disclosed my purpose to my traveling companion, an individual in whose judgment and good taste I have ordinarily every confidence, and who has: way of coming directly to the meat of a subject.
"What do you want with a pair of knee breeches!"

inquired this person crisply.

"Why-er-for general sporting occasions," I replied

"For instance, what occasions?"
"For golfing," I said, "and for riding, you know. Am
if I should go West next fall they would come in ver

handy for the shooting." "To begin with," said my companion, "you do not get The only extensive riding I have ever heard of your doin was on railroad trains. And if these knee breeches yo contemplate buying are anything like the riding breech I have seen here in London, and if you should wear the

out West among the impulsive Wester people, there would undoubtedly be a goo deal of shooting; but I doubt whether yo would enjoy it—they might hit you!"
"Look here!" I said. "Every man!

America who wears duck pants doesn't ru a poultry farm. And the presence of assilt hat in the summertime does not necessar! imply that the man under it owns a yach I cannot go back home to New York at face other and older members of the Whe I-Was-in-London Club without some sart rial credentials to show for my trip. I a firmly committed to this undertaking. I not seek to dissuade me, I beg of you. M mind is set on riding breeches and I shat be happy until I get them."

So saying I betook myself to the estal lishment of this sporting tailor in the sis street off Regent Street; and there, withou much difficulty, I formed the acquaintan of a salesman of suave and urbane manner With his assistance I picked out a distintive, not to say striking, pattern in an effe of plaids. The goods, he said, were may

of the wool of a Scotch sheep in the natural colors. Th must have some pretty fancy-looking sheep in Scotlan

This done, the salesman turned me over to a cutter, w took me to a small room where incompleted garments we hanging all about like the quartered carcasses of animi in a butcher shop. The cutter was a person who droppy his h's and then, catching himself, gathered them all t

Jome Weird

and Wonder-

ful Costumes

again and put them back in his speech-in the wrong places. He surveyed me extensively with a square and a measuring line, meantime taking many notes, and told me

to come back on the next day but one.

On the day named and at the hour appointed I was back. He had the garments ready for me. As, with an air of pride, he elevated them for my inspection, they seemed commodious-indeed, voluminous. I had told him, when making them, to take all the latitude he needed; but it looked now as though he had got it confused in his mind with longitude. Those breeches appeared to be constructed for cargo rather than speed.

With some internal misgivings I lowered myself into them while he held them in position, and when I had descended as far as I could go without entirely immuring myself, he buttoned the dewdabs at the knees; then he went round behind me and cinched them in abruptly, so that of a sudden they became quite snug at the waistline; the only trouble was that the waistline had moved close up under my armpits, practically eliminating about a foot and a half of me that I had always theretofore regarded as indispensable to the general effect.

Also, right in the middle of my back, up between my shoulderblades, there was a stiff, hard clump of something that bored into my spine uncomfortably. I could feel it

quite plainly—lumpy and rough,
"'Ow's that, sir?" he cheerily asked me, over my shoulder; but it seemed to me there was a strained, nervous note in his voice. "A bit of all right-eh, sir?"

"Well," I said, standing on tiptoe in an effort to see over the top, "you've certainly behaved very generously toward me-I'll say that much. Midships there appears to be

about four or five yards of material I do not actually need in my business, being, as it happens, neither a harem favorite nor a professional sackracer. And they come up so high I'm afraid people will think the gallant coastguards have got me in their lifesaving device and are bringing me ashore through the surf."

"You'll be wanting them a bit loose, sir, you know," he interjected, still snuggling close behind me. "All our "All our gentlemen like them loose."

#### **Futile Surgery**

"OH, VERY well," I said; "perhaps these things are mere details. However I would be under deep obligations to you if you'd change 'em from barkentine to schooner rig, and lower away this gaff-topsail which now sticks up under my chin, so that I can luff and come up in the wind without capsizing. And say, what is that hard lump between my shoulders?"

'Nothing at all, sir," he said hastily; and now I knew he was flurried. can fix that, sir-in a jiffy, sir."

"Anyhow, please come round here in front where I can converse more freely with you on the subject," I said. I was becoming suspicious that all was not well with me back there where he was lingering. He came reluctantly, still half-embracing me with one arm.

Petulantly I wrested my form free, and instantly those breeches seemed to leap outward in all directions away from me. I grabbed for them, and barely in time I got agrip on the yawning top hem. Peering down the cavelike orifice that now confronted me I saw two spectral white columns, and recognized them as my own legs. In the same instant, also, I realized what that hard clump against my spine was, because when he took his hand away the clump was gone. He had been standing back there with some eight or nine inches of superfluous waistband bunched up in his fist.

The situation was embarrassing, and it would have been still more embarrassing had I elected to go forth wearing my breeches in their then state, because, to avoid talk, he would have had to go along too, walking immediately behind me and holding up the slack. And such a spectacle, with me filling the tonneau and he back behind on

the rumble, would have caused comment undoubtedly. That pantsmaker was up a stump! He looked reproachfully at me, chidingly at the breeches and sternly at the tapemeasure-which he wore draped round his neck like a pet snake—as though he felt convinced one of us was at fault, but could not be sure which one.

'I'm afraid, sir," he said, "that your figure is changing." "I guess you're right," I replied with gentle irony. well as I can judge I'm not as tall as I was day before

Pheasant Shooting is the Last Word in the English Sporting Calendar

He called his cutter into consultation and they went over me carefully, meantime uttering those commiserating clucking sounds one tailor always utters when examining another tailor's handiwork.

After this my tailor took a lump of chalk and charted out a kind of Queen Rosamond's maze of crossmarks on my breeches and said I might leave them, and that if surgery could save them he would operate. At any rate he guaranteed to cut them away sufficiently to admit of my

breastbone coming out into the open once more.

In a week-about-he called me on the telephone and broke the sad news to me. My English riding pants would never ride me again. In using the shears he had made a fatal slip and had irreparably damaged them in an essential locality. However, he said I need not worry, because it might have been worse; from what he had already cut out of them he had garnered enough material to make me a neat outing coat, and by scrimping he thought he might get a waistcoat to match.

#### Pike's Peak or Bust

HAVE my English raincoat; it is still in a virgin state so far as wearing it is concerned. I may yet wear it and I may not. If I wear it and you meet me on the street-and we are strangers-you should experience no great difficulty in recognizing me. Just start in at almost any spot on the outer orbit and walk round and round as though you were circling a sideshow tent looking for a chance to crawl under

the canvas and see the curiosities for nothing; and after a while, if you keep on walking as directed, you will come to a person with a plain but substantial face, and that will be me in my new English raincoat.

Then again I may wear it to a fancy-dress ball sometime. In that case I shall stencil Pike's Peak or Bust! on the sidebreadth and go as a prairie schooner. If I can succeed in training a Missouri hound-dog to trail along immediately behind me the illusion will be perfect.

After these two experiences with the English tailor I gave up. Instead of trying to wear the apparel of the foreigner I set myself to the study of it. I would avoid falling into the habit of making comparisons between European institutions and American institutions that are forever favorable to the American side of the argument.

To my way of thinking there is only one class of tourist-Americans to be encountered abroad worse than the class who go into hysterical rapture over everything they see merely because it is European, and that is the class who condemn offhand everything they see and find fault with everything merely because it is not American. But I must say that in the matter of outer habiliments the American man wins the decision on points nearly every whack.

In his evening garb, which generally fits him, but which generally is not pressed as to trouserlegs and coatsleeves, the Englishman makes an exceedingly good appearance. The swallow-tailed coat was created for the Englishman and he for it; but on all other occasions the well-dressed American leads him-leads the world, for that matter.

When a Frenchman attires himself in his fanciest regalia he succeeds in merely looking effeminate; whereas a German, under similar circumstances, bears a wadded-in, bulged-out, stuffed-up appearance.

I never saw a German in Germany whose hat was not too small for him—just as I never saw a Japanese in Occidental garb whose hat was not too large for him-if it was a derby hat. If a German has on a pair of trousers that

The French Lead All the World in Whiskers

yesterday by at least eighteen inches. And I've mislaid

my diaphragm somewhere, haven't I?"
"'Ave them off, please, sir," he said resignedly. "I'll 'ave to alter them to conform, sir. Come back tomorrow."

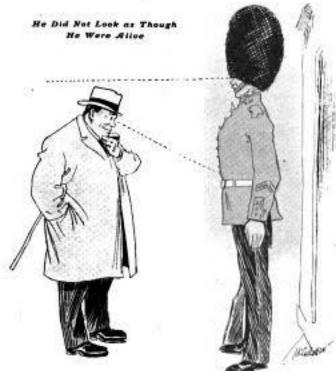

I had them off and he altered them to conform, and I went back on the morrow; in fact I went back so often that after a while I became really quite attached to the place. I felt almost like a member of the firm. Between calls from me he worked on those breeches. He cut them

up and he cut them down; he sheared the back away and shingled the front, and shifted the buttons to and fro.

Still, even after all this, they were not what I should term an unqualified success. When I sat down in them they seemed to climb up on me so high, fore and aft, that I felt as shortwaisted as a crush hat in a state of repose. And the only way I could get my hands into the hip pockets of those breeches was to take the breeches off first. Finally I told him to send them, just as they were, to my hotel address-and I paid the bill.

I brought them home with me. On the day after my arrival I took them to my regular tailor and laid the case before him. I tried them on for him and asked him to tell me, as man to man, whether anything could be done to make those garments habitable.

flare out at the bottom and a coat with angel sleeves—I think that is the correct technical term—and if the front of his coat is spangled over with the largest-sized horn buttons obtainable he regards himself as being dressed to the minute.

As for the women, I believe even the supercritical mantuamakers of Paris have begun to concede that, as a nation, the American women are the best-dressed women on earth. The French women have a way of arranging their hair and of wearing their hats and of draping their furs about their throats that is artistic beyond comparison. There may be a word in some folks' dictionaries fitly to describe it—there is no such word in mine; but when you have said that much you have said all there is to say. A French woman's feet are not shod well. French shoes, like all European shoes, are clumsy and awkward looking.

English children are well dressed because they are simply dressed; and the children themselves, in contrast to the overdressed, overly aggressive youngsters so frequently encountered in America, are mannerly and self-effacing, and have sane, simple, childish tastes. Young English girls are fresh and natural, but frequently frumpy; and the English married woman is generally dressed in poor taste and appears to have a most limited wardrobe. Apparently the husband buys all he wants, and then, if there is any money left over, the wife gets it to spend on herself.

Venturing one morning into a London chapel I saw a dowdy little woman of this type kneeling in a pew, chanting the responses to the service. Her blouse gaped open all the way down her back and she was saying with much fervor, "We have left undone those things which we ought to have done." She had too, but she didn't know it, as she knelt there unconsciously supplying a personal illustration for the spoken line.

The typical highborn English woman has pale blue eyes, a fine complexion and a clear-cut, rather expressionless face with a profile suggestive of the portraits seen on English postage stamps of the early Victorian period; but in the arranging of the hair any French shopgirl could give her lessons, and any smart American woman could teach her a lot about the knack of wearing clothes with distinction. Without setting up as an authority on dress I would like to add that the men and women of the other European countries we visited did not dress at all. They merely wore garments to cover themselves.

#### Foreign Clothes on Soldiers and Others

In England, that land of caste which is rigid enough to be cast iron, all men, with the exception of petty tradespeople, dress to match the vocations they follow. In America no man stays put—he either goes forward to a circle above the one into which he was born or he slips back into a lower one; and so he dresses to suit himself or his wife or his tailor. But in England the professional man advertises his calling by his clothes.

Extreme stage types are ordinary types in London. No Southern silver-tongued orator of the old-time, string-tied, slouch-hatted, long-haired variety ever clung more closely to his official makeup than the English barrister clings to his spats, his shad-bellied coat and his eyeglass dangling on a cord. At a glance one knows the medical man or the journalist, the military man in undress or the gentleman farmer; also, by the same easy method, one may know the workingman and the penny postman. The workingman has a cap on his head and a neckerchief about his throat, and the legs of his corduroy trousers are tied up below the knees with strings—else he is no workingman.

When we were in London the postmen were threatening to go on strike. From the papers I gathered that the points in dispute had to do with better hours and better pay; but if they had been striking against having to wear the kind of cap the British Government makes a postman wear, their cause would have had the cordial support and intense sympathy of every American in town.

It remains for the English clerk to be the only Englishman who seeks, by the clothes he wears in his hours of ease, to appear as something more than what he really is. Off duty he fairly dotes on the high hat of commerce. Frequently he sports it in connection with an exceedingly short and bobby sackcoat, and trousers that are four or five inches too short in the legs for him.

The Parisian shopman harbors similar ambitions—only he expresses them with more attention to detail. The noon hour arriving, the French shophand doffs his apron and his air of deference. He puts on a high hat and a frock coat that have been on a peg behind the door all the morning, gathers up his cane and his gloves; and, becoming on the instant a swagger and a swaggering boulevardier, he saunters to his favorite sidewalk café for a cordial glassful of a pink or green or purple drink. When his little hour of glory is over and done with he returns to his counter, sheds his grandeur and is once more your humble and ingratiating servitor.

In residential London on a Sunday afternoon one beholds some weird and wonderful costumes. On a Sunday afternoon in a sub-suburb of a Kensington suburb I saw, passing through a drab, sad side street, a little Cockney man with the sketchy nose and unfinished features of his breed. He was presumably going to church, for he carried a large Testament under his arm. He wore, among other things, a pair of white spats, a long-tailed coat and a high hat. It was not a regular high hat, either, but one of those trick-performing hats which, on signal, will play dead and lie doggo or else sit up and beg. And he was riding a bicycle of an ancient vintage!

The most impressively got-up civilians in England—or in the world, either, for that matter—are the assistant managers and the deputy cashiers of the big London hotels. Compared with them the lilies of the field are as lilies in the bulb. Their collars are higher, their ties are more resplendent, their frock coats more floppy as to the tail and more flappy as to the lapel, than it is possible to imagine until you have seen it all with your own wondering eyes.

They are haughty creatures, too, austere and full of a starchy dignity; but when you come to pay your bill you find at least one of them lined up with the valet and the waiter, the manservant and the maidservant, the ox and the ass, hand out and palm open to get his tip. Having tipped him you depart feeling ennobled and uplifted—as though you had conferred a purse of gold on a marquis.

With us it is the dress of the women that gives life and color to the shifting show of street life. In Europe it is the soldier—and in England the private soldier particularly. The German private soldier is too stiff, the French private soldier is too limber, and the Italian private soldier has been away from the dry-cleaner's too long; but the British Tommy Atkins is a perfect piece of work—what with his dinky cap tilted over one eye, and his red tunic that fits him

without blemish or wrinkle, and his snappy little swagger stick flirting the air. As a picture of a first-class fighting man I know of but one to match him, and he is a khaki-clad, service-hatted Yankee regular. Long may he wave!

There may be something finer in the way of a military spectacle than the change of horseguards at Whitehall or the march of the footguards across the green in St. James' Park on a fine, bright morning—but I do not know what it is. One day, passing Buckingham Palace, I came on a footguard on duty in one of the little sentry boxes just outside the walls. He did not look as though he were alive. He looked as though he had been stuffed and mounted by a most expert taxidermist. From under his bearskin shako and from

over his brazen chin-strap his face stared out unwinking and solemn and barren of thought. I said to myself: "It is tak-

ing a long chance, but I shall ascertain whether this party has any human emotions." So I halted directly in front of him and began staring fixedly at his midriff as though I saw a button unfastened there or a buckle disarranged. For a space of minutes I kept my gaze on him without consecution.

Finally the situation grew painful; but it was not that British grenadier who grew embarrassed and fidgety—it was the other party to the transaction. His gaze never shifted, his eyes never wavered—but I came away feeling all wriggly.

In no outward regard whatsoever do the soldiers on the Continent compare with the soldiers of the British archipelago. When he is not on actual duty the German private is always going somewhere in a great hurry with something belonging to his superior officer—usually a riding horse or a specially heavy valise. On duty and off he wears that woodenness of expression—or, rather, that wooden lack of expression—which is found nowhere in such flower of perfection as on the faces of German soldiers and German toys.

The Germans prove they have a sense of humor by requiring their soldiers to march on parade with the goose step; and the French prove they have none at all by incasing the defenseless legs of their soldiers in those foolish red-flannel pants that are manufactured in such profusion up at the Panthéon.

#### Fashion Notes for Soldiers

IN THE event of another war between the two nations I anticipate a frightful mortality among pants—especially if the French forces should be retreating. The German soldier is not a particularly good marksman as marksmen go, but he would have to be the worst shot in the world to miss a pair of French pants that were going away from him.

Still, when all is said and done, there is something essentially Frenchy about those red pants. There is something in their length that instinctively suggests Toulon, something in their breadth that makes you think of Toulouse. I realize that this joke, as it stands, is weak and imperfect. If there were only another French seaport called Toubage I could round it out and improve it structurally.

If the English private soldier is the trimmest, the Austrian officer is the most beautiful to look on. An Austrian officer is gaudier than the door-opener of a London café or the porter of a Paris hotel. He achieves effects in gaudiness that even the Italian officer cannot equal.

The Italian officer is addicted to cock feathers and horsetails on his helmet—to bits of yellow and blue let into his clothes—to tufts of red and green hung on him in unexpected and unaccountable spots. Either the design of bottled Italian chianti is modeled after the Italian officer or the Italian officer is modeled after the bottled chianti which, though, I am not prepared to say without further study of the subject.

The Austrian officer is the walking sunset effect of creation. For color schemes I know of nothing in Nature to equal him except the Grand Cañon of the Colorado. Circus parades are unknown in Austria—they are not missed either; after an Austrian officer a street parade would seem a colorless and commonplace thing. In his uniform he runs to striking contrasts—canary yellow, with light blue facings; silvers and grays; bright greens with scarlet slashings—and so on.

His collar is the very highest of all high collars and the heaviest with embroidery; his cloak is the longest and the widest; his boots the most varnished; his sword-helt the broadest and the shiniest; and the medals on his bosom are the most numerous and the most glittering. All Ringling and John Philip Sousa would take one look at

(Continued on Page 56)

# By Mary Stewart Cutting

ENSON CLARK, hat in hand, sat in the gilded lobby of the hotel, with its pictorial pink-and-green frescoed walls, just outside the gayly musical tearoom, where dancers tangoed carefully between its tables. His lean face—still young in spite of those deep lines in it, as though he had been pulling upstream for a long time-was bent eagerly forward, and his keen eyes, under their straight brows, watched the revolving entrance doors for the first glimpse of Cecelie's light figure lilting in, in that graceful way she had, with her golden head held high. It was a girl's privilege to be late, of course, though he had traveled for two days to see her and should leave the following night.

He had been waiting a long time, but so had

It began to seem like a mysterious game, in which the people who were seated watched for those who did not appear, while the newcomers eagerly scanned the lines for those who were not there—only at far intervals two figures scored by matching, in joyful, subdued surprise, before hurrying off together.

Benson was not a dweller in the big cityonly coming here on rare trips, like the present, from the mining town he happened to be in. All the sights and sounds—the environment, the people - had for the moment an agreeable foreignness that produced a vague exhilaration in addition to that absorbing prospect of meeting Cecelie, but with some vaguely depressing undercurrent, because as yet she had not come.

He had forborne to scan too closely the faces of the throng near him for fear of finding some hampering acquaintance—he had

traveled enough to be apt to meet people he knew in any scene—but now a large-busted, bare-throated lady, rising from the chair beside him, revealed just beyond a slender, prettily dressed young woman with a delicate profile about which there seemed to grow something pleasingly familiar. As his eyes rested on her she dropped her muff and, reaching for it, let fall a pair of gloves and a pocketbook. The next instant he was before her, stooping for them.

"Allow me, Mrs. Varley! Perhaps you don't remember

me, Benson Clark."
"Oh, I do! I do!" cried Mrs. Varley. A pretty flush overspread her face as she reached out her hand impulsively to him. "To think that it is eight years since we met, when Ferd and I were on our wedding trip! And you were so good! How did you happen to recognize me?'

"I didn't quite-until you began dropping things!" he answered with a smile, seating himself beside her, still conscious, as he talked, of every person who passed or entered the revolving doors, with that dual perception that was one of his characteristics. "That brought everything

back!"

"Wasn't itsilly!" said Mrs. Varley. Her eyes shone with delighted reminiscence as she began talking faster and faster. "And wasn't Ferd cross! I think people on their wedding trip are too funny for anything-neither one knows what the other is going to get deeply injured at. I can see his face now as he was introducing you to me on the hotel steps, and all my letters blew away, and the comb fell out of my hair, and the cologne bottle dropped from my bag and smashed!"

"You laughed," said Benson admonishingly.

"Yes; and that only made things worse. I think Ferd was morbidly afraid that people would think me childish and awkward—and he wanted me to seem perfect!" Her eyes brimmed happily. "You were so lovely that day taking us to dinner and for the drive, and never forgetting me for a moment; and showing all the time that you knew Ferd was really fine, when he was so miserable and grumpy, and couldn't say a word-not a bit like a honeymooner! Real things turn out so different from the way you dream them, don't they? We've often laughed over that day since—but we've always loved to talk of you. I nearly called my youngest child Clark! Are you married?"

"Why not? You ought to be-a man like you!"

He offered the official masculine answer:

"I can't get anybody to have me. It's true! You have more than one child?'

"Four!" She flashed a proud glance at him. "The youngest is two-so grown up! I haven't any baby any more." Her tone seemed to have a divine half-regret in it. She broke off: "What have you been doing all this time?"

"Working-mostly." He hesitated slightly before going on; something in her clear eyes seemed to draw him

to further speech. "You spoke of real things being different from one's dreams of them-don't you think we ever 'dream' true?"

She shook her head.

"No! Dreams turn out better, often; but, so far as the details go, always different. It's strange how clever they are in eluding us! I always thought my husband would have a tenor voice-and he's Ferd! Oh, here he is now! Ferd, who do you think this is?"

"I guess I won't have to go very far to find out," said

Mr. Varley heartily.

He had none of the graces of his wife; but in his large and slightly shabby aspect as a family man his kind smile, shining as through a dusty haze of business preoccupation, showed him to be the good fellow he was. Wealth was evidently one of the dreams that had not materialized.

They all stood talking together, both men with a little tender, chivalrous attitude toward pretty Mrs. Varley in the midst of the more jovial manner. When the couple parted from Benson, after an eager invitation for a future meeting, he sat down once more and watched them as they went off together, with a sort of God-bless-you-my-children feeling, though Varley ranked him by half a dozen years.

It made him somehow feel lonely. Just this big, simple, commonplace happiness of theirs was what he had grown to long for more than anything else in the world, though the chances seemed less and less that he would ever have it; the mere idea of linking Cecelie with it was like tethering a will-o'-the-wisp to one's hearthstone. All through the pleasant conversation he had been conscious of a gradual sinking of the heart.

The lobby was thinning out; people had drifted off. He realized now-what he had known from the first, with a foreboding to which he had refused to give heed—that she would not-after all her promises-come to meet him. The fact struck him hard.

It was over four years since they had first met; they had spent a month in the same summer camp together. He had not really known that he had fallen in love until he had gone home-perhaps because the mere fact of being

with her had absorbed all power of thought. She was a veritable gleam of a girl-when you left her everything else seemed dark and you could not tell in just what her charm lay. She had that magnetic drawing power which is often independent of the will of its possessor, and which, once felt by the victim, refuses to release its hold.

She was slender and not so tall as she looked; her hair was golden; her eyes varied in color with her mood; she had a pearly skin, and a red mouth that was as lovely when it drooped as when it smiled.

They swam and fished, and had played tennis, danced and driven together. She was what is called a good sport. They had tramped in the rain, and they had read lying out under the trees in the sun; she broke her engagements with every one else for him. She had the courage of her delightfully audacious moods-you never could tell what she might say or do!-and she had also the most irrational timidities, out of which she could not be argued. She had a physical elusiveness that partook of her quality of light.

As soon as Benson reached home he had written to her, asking her to marry him. She had replied very sweetly, pleading for time to decide. He had kissed the letter rapturously, with a fatuous vision of the happiness to be his.

It had been a stern chase ever since. She had never come to any decision—except that he had better give up caring for her, though she would miss him terribly if he did. They

had corresponded voluminously. Heavens! What hours he had spent writing to her from his bare room in the hotel in the Far Western town! What anguished days when her replies were delayed!

He had been on once or twice a year to see her, flying visits looked forward to passionately for months-only to fail of all satisfaction but that of letting his hungry eyes rest on her in the intervals of her many engagements, and leaving her surrounded by a host of men, with the anguished thought that if he could only stay he might win her. She wrote him candidly of all she was doing-scant comfort

There was the letter in which she thought it right to tell him that she had fallen in love with a young officer, home on leave. Benson would always remember the night after he received that letter-he had walked and walked, out of the town and along the railroad track that stretched lonesomely across the prairie-walked until the gray dawn drove him back, his face drawn and his eyes burnt out as if from the heat of the fires of hell. It was two weeks before he heard from her again; then she said, thank goodness, the officer was gone: and she hated every man but Benson.

Then there was that time he would always remember by what he had missed—it was just after his last visit—when she had been too unkind, and in one of her audacious flights she had journeyed thirty-six hours by train to the town where he then lived to tell him how dreadfully sorry she was, and take the return train that left in an hour. And then, in a panic of maiden timidity when she alighted at the station, she had taken that return train without seeing him! She had written and confessed it all. And she had been so near!

After that had come the period when she not only hated men but Benson among them, and had left the world to work among the little children in a settlement for two or three months—and was quite happy because, for once, she was some good in the world-or would have been happy if it were not for a strange feeling at times that there was something wrong about her; she could not seem to really love any one—not even him!—and so would have to miss what luckier women had. Then she had come back to society gayer than ever.

And once-he reddened now as he remembered thathe had captured her masterfully in his arms and kissed her. She had stood quite still, with an icy disdain that took all the fire from his blood.

"Well, I never! If here isn't my little Bennie again!"

A clear voice, with a strong English accent, brought him instantly to his feet as a tall lady, passing with a largely mustached gentleman, held out her hand. She had brilliant auburn hair, eyes of intense blue, with artificial shadows below them, and a high color so natural that it flooded her face as she spoke. Her clinging green silk gown, adorned with dabs of fur, revealed an angular yet graceful thinness; she wore a small straw hat, trimmed with pink rosebuds, gold braid and a mauve feather, on her vivid hair.

"Mrs. Batsford-Wring!"

"Well, we do meet, don't we? It was the Rawkies last. I haven't a moment now; but come and see us-we're visitin' friends at the Ayreslea. Do now!"

"I'd like to; but I leave tomorrow night," Benson called after her as she hurried on. Everybody was kind but Cecelie!

Benson had hurried, on his arrival the evening before, to the big house where she lived with her father. After her last letter he had telegraphed her that he was coming. Heaven only knows with what dreams he always came! She was lovelier than ever as she lilted across the floor to greet him, with her golden head thrown back and her laughing eyes raised to his. She seemed very glad to see him.

The room was filled with a family party. He had talked to her iron-visaged banker father, to large and smiling Aunt Ida, thin and joking Uncle Henry, and fragile old Cousin Bella, who seemed held together with such difficulty that she might dissolve at any minute.

After his first blank dismay he had been patiently sure of a reward. It came as he was leaving-Cecelie had asked him to meet her at the Venetia at half past four the next day, and they would have their afternoon uninterrupted. And, after all, she had not come! Oh, she never kept her promises-she fooled you every time! What would have alienated in another was only a deeper allure in her; she drew like a magnet, whatever she did. Why must she always fly from him when he was near?

He had an incredibly insistent vision of following after her down a long, dark street of years, when, as fast as she fled, he gradually gained and gained until his arms closed tight round her; and instead of standing icily still in that embrace she leaned to him, with her warm lips upraised to his. Different, indeed, from the reality!

In the intense bitterness that surged over him now existence seemed nauseating; this state of things was sapping at the very roots of life. What a spineless thing he had become! He swore to himself in an access of cold fury that, one way or another, this time the thing should end.

There she was now-coming down the corridor, with a slight, pale girl and two men, one dark, supercilious and foreign, the other a tall boy, leaning over her entranced. As Benson jumped up she detached herself from the group and ran forward to meet him, her light figure, under its long fur stole, arrayed in something blue and shimmery that puffed out above and narrowed down close round her slender ankles, the blue feather in her little hat tilting as

she stepped.
"Ah, Cecelie!"

As she stretched out both hands sheer delight filled him; her lovely face broke into an irresistible smile when her eye met his, as one who owns herself caught, and confesses and defies and pleads all at once. When she looked like that you could not help smiling too.

"You don't know how awfully attractive and gloomy you looked sitting there, with your head on your hand— I actually didn't recognize you!" She stopped short and stared at him blankly. "You don't mean to say you've been waiting for me here all the afternoon?"

"Oh, I've been strolling round part of the time," he replied with a startled glance at the clock. "I'd no idea it was so late; but everything's all right, now you've come."

"Oh, but I haven't!" she mourned. "I'm with a party. It was an old engagement. When I found I couldn't meet you I telephoned you. I felt dreadfully about it."

"All right; we'll let it go at that," said Benson gayly. "Leave your friends now and come with me!"

Her eyes sparkled.

"Very well-I will! Oh, no-I can't!" She looked genuinely distressed. There's a girl I can't leave—what a shame! I'll tell you-you come with us; it was one of the things I tried to telephone you about. We are to dine and go to the theater!" Her lips took on their coaxing smile; her eyes plunged into his. "Do! You shall sit by me all the time-I promise you."

His face changed. "No."

"Oh, dear! You make me so unhappy!" She gazed at him in tender concern, with that provocative effect of sweetly giving that meant—as he knew so well-instant withdrawal if one presumed on it. "Why do you take everything so seriously?" Her voice dropped to a pleading tone. "Why won't you be good and come with us?

"Because I'm tired of only seeing you with a ruck of other people. Will you be home tomorrow morning?

Her eyes grew suddenly misty.

"Why, yes!" She added hastily: "I have to go out at eleven."

Benson smiled, a peculiar smile that gave an oddly sweet expression to his worn face and a keener glance to his eyes. "This time I'll be there before you go out," he said significantly.

T WAS, in fact, hardly half past ten when Cecelie came slowly lilting down

the brownstone steps of the house, dressed in sober gray, with big gray furs, and a little gray hat pulled down closely over her lovely golden head. She looked thoughtfully up and down the street-the air was cold, the pale blue sky full of white and wandering clouds that had come over from the countryside across the river. Down the block some little children were roller-skating with gay cries, and no one else in sight, as she casually assured herself. As she gazed a limousine waiting opposite whirled round, stopped, and Benson jumped out, lifting his hat as he came toward her.

"Good morning! I told you you couldn't escape me this time.

"Oh, but I was coming back-honestly! I was, indeed. was only going up to the sewing school," she protested hastily. "I left word for you to wait for me. I

She stopped short suddenly and began to laugh, her eye resting on him with involuntary approval. He looked extremely well groomed and was dressed with particular nicety. His lavender tie harmonized with his brown suit and big overcoat, and the soft hat was brown of a slightly lighter shade; his gloves were of the freshest. His face, usually pale, had a color in it, and his laughing eyes seemed peculiarly bright. A new exhilaration breathed from him.

"But I'll go back to the house now. Come on in!"

"No; that's not necessary. I'll take you on to your sewing school—or whatever it is. Let me help you in."

He gave the directions to the chauffeur, stepping in after her hastily and closing the door. As he sat down beside her a certain tenseness in him seemed to relax; he gave a quick sigh of relief.

Where did you get the limousine?" she questioned.

"Hired it. Oh, I nearly forgot!" He reached down under the sent and brought up a great busch of violets. "Please put them on at once. Here's the pin."

"I thought I smelled something very sweet," she said gratefully, burying her flowerlike face in them. "Confess! Didn't you regret not coming with me last night?"

"Infinitely!" His bright gaze rested on her. "I went to see some nice people I'd met in the afternoon-they're very happy and have four children; you wouldn't le interested to hear of them. But I couldn't stay. Then a man I knew found me and I didn't get rid of him until he became intoxicated. I was wild for you! But I shouldn't have

fitted in with your party. I'd have knifed your dark friend and just naturally choked that slobbering youth. The young girl wouldn't have enjoyed herself. What's the matter?

"Oh, Benson, I wish you wouldn't care for me so much!" said Cecelie. Her eyes were full of tears. She put out be slim, gray-gloved hand and laid it on his coatsleeve lightly for an instant. "If you knew how I'd thought about you! I -

"Haven't you cared sometimes too—a little?"

"Yes-oh, yes-lots! When you're away you seem so near to me; I fancy each time before I see you that it's going to be - And then it isn't! I only want to get away! I've tried and tried to make myself love you, but there's some dreadful twist in me. I cry sometimes because you're so good to me—honest I do! I couldn't bear you not to care for me any more!" Her golden eyelashes drooped; her breath caught. "I've thought sometimes I'd get married and trust to the love coming afterwardbut I know I'd go crazy if I felt that I couldn't get free! There was something left out of my composition when the Lord made me—I just can't care for any one.'

She buried her tearful face against the violets, as if he comfort from their soft and fragrant depths.

"I wouldn't feel that way about it," said Benson. Something in his voice made her look up suddenly; her gaze took in the outer scene and her voice changed.

"Why, Benson! We've gone ever so far beyond Fiftyfirst Street! This is One Hundred and Fourth.' "Yes; I believe it is," he answered, his eyes following

her. "That's all right, though." "'All right!' What do you mean?"

"Why"-he fumbled for words under her direct and indignant gaze-"why, it's this way, Cecelieheaven's sake, don't look at me like that! Don't get any foolishness into your head! I'm not running away with you. But you never will give me a chance to see you alone and speak for myself; so this time I've taken it. You're going to spend this day with me." He put up his band detainingly as she made a movement forward. "There's no use in your talking to the chauffeur-he's fixed. I'w got it all planned out-I'm going to take you up into the country to Paley's. I telegraphed Mrs. Paley from the hotel this morning. I hear there's almost nobody therethis time in the week. We'll have a walk in the woods afterward and there'll be the long ride home. It's my last You'll either consent to marry me this dear-oh, in your father's house!-and go back with man tomorrow morning, or I drop out, so far as you are concerned. There'll be no more of me ever."

"You want me to marry you tonight?"
"That's what I said!"

She laughed.

"It does sound funny, doesn't it?" he answered with a responsive smile. "Hello!"

The car had slightly slackened its pace in avoiding a construction wagon that took up all the road. Swift as lightning Cecelie's hand was on the catch of the door - in another instant Benson's arms were round her, dragging her back shile she fought him wildly. Then there was a moment's herce and silent struggle until he held both her hands in his apable grip, and gently forced her down on the seat.

"Don't do that again!" he ordered sternly. "You little vildcat! Do you want to kill yourself?"

"You're not behaving like a gentleman!" she flared at

"All right; let it go at that."

"You're making me hate you—really!"

"Very well, only don't try jumping out again. It won't vork! You can't catch me off my guard." His voice hanged irritably. "For-heaven's-sake! Can't I for nce have what I want-when it's so little-without all

his fuss about it? You know you'd go off for motor ride with any one else without turning

Her face contracted, she moved herself dishinfully as far away from him as possible into he blue-cushioned corner, her gray furs half ound her. Her hair looked very golden, her kin very pearly, her lips very red-but there ras a stony look in the gray eyes that gazed ast him. Benson's eyes were fixed on her. They were whirling along now over the post-

oad under the wintry sky, away beyond the onfines of the city, with woods or fields or scatered houses on each side, and an occasional ateway leading into one of the big country laces. They rode on and on and on-in silence. Never had her magnetic charm been greater; et, with the quick perception of a lover, lenson was conscious that in this apparent uccess of his temporary capture of her he had st something-a slight instinctive leaning oward him, which he had always felt unerintly under all her caprices, had changed, with he merest hint of compulsion, into a steely sistance that might turn at any moment to downright dislike.

He grimly foresaw only failure at the end of is day; yet his exhilaration remained. Who tat says he has no hope really has none? We stahend in life by counting the milestones to te hopes we never reach! He wondered how such her pretty shoes cost, with a tender sense f possession; for the time being she was his

Suddenly Cecelie hid her face in her armse shook from head to foot.

"What's the matter?" he asked, bending or in quick distress. "Cecelie—you're not eling so badly as that, dear? Cecelie!"

"Don't!" she said in a strangled voice, and iddenly raised her face. She was shaking with aghter. "Oh, dear!" she gasped. "It's all perfectly ridiculous! You sit looking at me, ith your eyes getting bigger and bigger, like lowl's. It's anything but se-se-ductive! Oh, ser!" Her voice rose piercingly in peal after al, with a caught breath in between.

"Stop!" said Benson peremptorily as her tice became a hysterical shriek. "Stop! up! Stop! The people in the two cars that st passed us are looking back—one is turning and! We'll have the police after us. Stop, ecelie! Stop, I say!"

"I can't! I can't!"

"Yes, you can. You hear me? You must!"

"I can't! I can't!"

"You must!" The contagion of a smile read to his own face, but the control in his size reached her. "There, there! You're tting up a little. Lie back in the cushions id rest. Heavens! What a care you are to

"Yes; I hope you realize that!" she said fiantly. "I don't see what you brought me it for if you're only going to sit and stare at

"Oh, we've got plenty of time to talk. For e thing, I was wondering how much your othes cost—I see you'll be an awful bill of pense to me! But I fancy I can stand it— re been saving up for four years." His voice

r that Last Ride, by Browning, you used to read to me in aine? I'm not much on poetry, you know, but I liked at. I was imagining now how we might go on like this rever-in a limousine! That's modernizing it with a ngeance, isn't it? I'm counting a lot on that ride back

is evening. Suppose the world did end tonight?"
"Benson, don't!" she said plaintively. "I'm beginning feel queer." She put out her hand with an appealing tle gesture. Her red lips quivered; her lovely eyes ught his.

"Benson! Benson, I'm tired! If you love me take me ome. You don't know how nice I'll be to you; honest, I ill! Please do."

He looked at her searchingly-her eyes shifted; her eyelids fell. He smiled and slowly shook his head.

"Sorry; but I can't."

She flushed hotly and drew quickly over into her corner. "Then take the consequences!" she said, and turned her face from him.

III

DALEY'S was ninety miles from town. In summer it was a charming place—all a green latticework of dining balconies overlooking the woodland and the inlet; but in the frozen winter it had a somewhat chilly and meretricious air—like a lady in low-necked muslin standing on the ice. The small room, however-empty as Benson had hoped

"Oh! Oh, You Must Belleve Me Now!"

anged. "Another thing I was thinking of: You remem- it would be-was warm with crimson rugs and a leaping time. Now fire; the cloth on the little table set for two seemed dazzlingly white, the silver and glass on the oaken shelves unusually glittering. There was an atmosphere of warmth and hominess about the place; Mrs. Paley herself, rosycheeked and white-aproned, came forward to welcome them, and led Cecelie away to take off her wraps.

The little meal, when it was served, was charming, the waiter assiduous—his eyes popping out intermittently like rabbits from behind a bush. The only drawback was that Cecelie, lovelier than ever in the glow of the fire, sat with one elbow on the table, her head turned away, looking out the window at the frozen inlet and the tall lightningscarred tree in the distance-in the far top of which dangled something that the waiter explained was a fish-hawk's deserted nest-and refused, in spite of Benson's consternation, to even taste anything.

"But don't let that make any difference to you," she

urged amiably. "Eat all you want."
"Oh, I will!" he replied coolly, yet with a chagrin it was impossible not to feel.

He had looked forward to that little meal alone with her, had been boyishly desirous that everything should be of the best, and that it should please her. He was a hungry man; but it is hard to eat enjoyingly through a bill-of-fare with a speechless vis-à-vis who will not so much as drink a glass of water with you. The waiter's assiduity became

more and more agitated; he bent lower and lower with each dish, until he seemed almost to be proffering it on bended knee to the beautiful lady, who always refused.

There were voluble, half-heard conversations in the kitchen. Mrs. Paley herself appeared again, deeply solicitous. Was there anything the young lady would like? It could be cooked in a moment. Cecelie's golden lashes lifted; her eyes responded sweetly as well as

"Thank you so much; but I really don't

want anything."

Benson could hardly help fondly smiling at the effect she produced; but he pushed his dessert away from him untasted at last.

"I would like to shake you!" he stated soberly.

"Well, I never!" said a clear voice, with an English accent, "Well, we do meet, don't we?" Benson turned and sprang to his feet. From

the side door the auburn-haired Mrs. Batsford-Wring was approaching. She wore the furry green silk and yellow straw hat, with a motoring coat over her arm, and was followed by the gentleman of the night before, tall and robustly bony, with a big mustache slightly streaked with gray, well-cut features, and a military bearing.

"What a surprise!" said Benson, shaking

"This is my brother, Captain Hawkly, just back from Inja," announced Mrs. Batsford-Wring. "Oh, I've told him about me little Bennie! The motor broke down with us; we left it in the road with the chauffeur, and came over here for some tea before taking the train to town.'

"Miss Sherwood, this is my friend, Mrs. Batsford-Wring, who nearly saved my life once-when I was ill at Baden-and earned my undying gratitude—and her brother, Captain Hawkly," said Benson formally. "Miss Sherwood is the daughter of Mr. Nevitt Sherwood, of whom you may have heard."

"How d'ye do? Some people are so particular about whom they meet when they're travelin'—but I'm nawt," said Mrs. Batsford-Wring pleasantly, with a stare at Cecelie, who was deeply observing in her turn, while the captain's glance fell on her, with the instantly resulting gleam. "Bennie's not tellin', though, of the time he pulled me out of the snowbank by my leg-in the Dakotah blizzard. That was a night!"

"I should say so! And how is Mr. Batsford-Wring?" asked Benson, smiling.

"He came a cropper in the huntin' field a twelvemonth ago—and the best thing for every one too!" said his widow calmly. "Poor Batty! He always was a filthy brute-I never liked him. And you? Are you not married your-self?"

"No, indeed," said Benson, with an involuntary look at Cecelie, who, slim and graceful as a willow wand, was talking to the admiring

"Shall we have some tea together?" pursued Mrs. Batsford-Wring hospitably. "You were very late finishin' your luncheon, weren't you?—but a cup of tea is refreshin' at any

don't look at your watch, Bennie; you can' hurry off when we've so much to talk over. You'll have tea with us, Miss Sherwood?"

"Indeed I will!" said Cecelie gayly.

In the slight bustle that ensued in getting another table set and the preparation of the tea things, Benson found a furtive chance to press the hand by his side—a yearning, clinging touch, light as it was, that seemed to say: "Ah, understand how much I want to get off to walk with you!"

There was no response, however. Her eyes when they met his had an elfish, mocking light in them. His face reddened for an instant and then turned pale, set enigmatically in its lines of habitual patience.

# Government Ownership à la Française—By Will Payne

As SOON as I was fairly settled in Paris," said my friend from Chicago, "I decided to have a telephone put in my apartment, and of course I was in a foolish American hurry about it.

"I knew, of course, I should have to buy the instrument, for the French Government does not furnish that. I went to the manufacturer who had been recommended to me, picked out an instrument that seemed suitable for residence use, and paid one hundred and fifty-five francs for it. Then I went back to my office, called up Central and expressed a desire to have the instrument installed. It took Central some time to find out that I must call up a certain bureau for that purpose. I called up the certain bureau and was presently informed that I must call up another certain bureau. The second certain bureau told me it would be necessary to make a written

application on a form prescribed by the government, and the required blanks were to be had only at No. 24 Rue Bertrand.

"Rue Bertrand, I found, was on the other side of the river, some three miles from my office. I took a taxi over there and in due time was handed an official blank, which I carefully filled out; but the bureau could not receive the application until a twenty-five-centime stamp was affixed to it.

"'Very well,' said I, 'there is twenty-five centimes. Stick on the stamp.'

"Then I learned that this was a government bureau for the receipt of telephone applications, not a government bureau for the sale of stamps. The nearest bureau where a stamp could be procured was the better part of a mile away. Another taxi carried me there. I climbed the stairs to a dark office that looked more like a fence for stolen goods than a government bureau and bought my stamp. I felt I had the thing as good as done then and hurried back to Rue Bertrand; but there I was informed that my application could not be accepted until I brought a written authorization, also on a prescribed form, from my landlord to have the telephone installed on his premises."

#### Difficulties in Getting Telephone Service

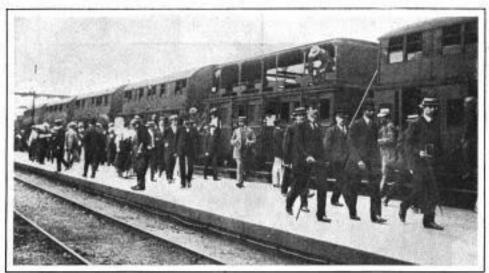

"IT IS true I need not have been in such a hurry, for after the application was completed in due form six days elapsed before the instrument was installed. I had paid a hundred and fifty-five francs for it. I had also paid one hundred francs cash in advance for the first three months' service. But then I could not use my telephone to talk outside of Paris until I deposited with the government

sufficient cash in advance to cover all probable toll charges for a month; nor could I transmit a telegram over the telephone without making a deposit to cover telegraph charges. I expected to use my 'phone both for long-distance talks and for transmitting telegrams to the telegraph office; so I made a deposit, explaining that I wished it to cover both telephone tolls and telegrams.

"A little later I tried to call up London. Central, after the usual investigation, said I could not talk to London over that telephone because I had made no deposit to cover toll charges. I insisted that I had made a deposit to cover both toll charges and telegrams. There was another investigation and Central replied that my deposit was entered on the record as applying only to telegrams; so I must have it changed before telephone tolls could be charged against it."

I repeated this experience to a Parisian acquaintance who assured me that my Chicago friend exaggerated the difficulties of getting and using a telephone in France; so I stepped into the telegraph and telephone bureau in the basement of the Bourse and asked what was necessary to be done in order to have a telephone installed. I was handed a sheet of instructions.

The sheet begins by stating that the object of telephones is: 1. To furnish direct communication between persons who are subscribers to

COPINIONT BY M. BRANCES, PAR

Passengers Leaving a Suburban Train

the telephone system; 2. To furnish communication between a person who is a subscriber and one who is not by notifying the latter to be at a certain telephone at a certain hour, when a message will be given to him.

Under conditions for Paris it says the charge for a telephone connected by direct wire is four hundred francs, or eighty dollars a year, payable quarterly in advance: that the administration will furnish the batteries, but the subscriber must furnish the instrument; that if it is necessary to run a special wire to your instrument the charge will be sixty centimes a meter—twelve cents for a little over a yard—if the line is underground, and half that if it is aërial; that the proper blanks may be had by applying at No. 24 Rue Bertrand. At Rue Bertrand I was handed three blanks—first, the application for the telephone service; second, an authorization by the landlord to have the telephone installed; third, an application to have the subscriber's name entered in the telephone directory.

To begin with, then, the person who wishes a telephone in Paris must buy his own instrument from a manufacturer whose output has been approved by the government. There are a number of such manufacturers; but a German newspaper correspondent who thought highly of the telephones of the Fatherland brought a German instrument to Paris, only to find that the government would not install it; and an American had the same experience with an American instrument. The approved instruments cost all the way from twenty to fifty dollars, but the cheaper ones are not recommended for more than local use by anybody except the manufacturers, and not very heartily by them.

The subscriber who wishes direct service in Paris must pay twenty dollars for the first quarter's rental on filing any one in any place where there is 1 to charge he must make a deposit with the government. There is no fixed limit is this deposit, but it is supposed to contabout one month's charges. If a madeposits ten dollars and uses a long distance 'phone frequently, so that seems his month's bill will run to twent dollars, he is notified to double his deposit, if the charges come near exhausting it he will be notified to increase his margin.

To one who knows how a greedy present the second of the charges of the charges his margin.

his application and a like sum each thre months thereafter. If he wishes to sen

a telegram over his 'phone or to talk t

To one who knows how a greedy provate corporation in the United States with install a nickel-in-the-slot telephone is anybody anywhere, and let the subscriber telephone and telegraph all on the country before it sees a penny of homoney, it is odd to find that the Frence Government will not under any circum

stances trust a telephone subscriber for a solitary so You must pay for everything you want some time belo you get it. What with the cost of the instrument, the quater's rental paid in advance, and the deposit for tolls at telegrams, the ordinary residential telephone user must pup from fifty to sixty dollars cash in advance before he at begin telephoning—and two hundred and fifty france quite a bit of money to the average Parisian.

#### **Hotel Rooms Without Telephones**

IT IS hardly necessary to add that, though telephones:
France have been in the hands of the government is more than twenty years, they are less used in that count than in any other with which it can fairly be compare. In proportion to population, there are ten times as much instruments in the United States as in France. Chicag has just short of twelve telephones for each hundrinhabitants; Paris has just short of three.

It is not necessary to look up statistics, however, to gethe fact. You see it everywhere. My Paris hotel contained five hundred bedrooms. One person manned it telephone switchboard and was by no means busy, either I discovered that he had a neat little ledger in which kept an entry of every call to a guest in the house, at all phone call being an event worthy of record. Of courthere were no 'phones in the bedrooms. One was court ously conducted down a long corridor, round the corrand down another corridor to the booth if one wished telephone, or if one's rash American friends trusted the communications to that medium.

The normal charge in Paris is eighty dollars a yes whether for office or residence use. Incidentally the su

scriber must agree to take and pay for the serice for at least one year. Outside of Paris a that vicinity the charge is twenty dollars I the first year, sixteen dollars for the secoyear, twelve dollars for the third year, and eig dollars thereafter, which is certainly cheo though the government runs the wires graonly within a radius of a little over a mile fro the exchange. But, however cheap it is, t telephone, comparatively speaking, is not use

As to service in Paris, there is universal agreement that it has been notably improved with a year, until it is now probably about as go as the London service. Some years ago en perated subscribers got up a league of telephousers, for offensive and defensive purposes. I league patriotically harried the government every occasion, but without producing must impression until—about two years ago—t principal exchange burned down, to the patriotical exchange burned down, to the patriotic patriotic publication of the telephoning publication of the telephoning publication that fair opportunity the government began measurably modernizing the system.

One very new improvement is the introduction of exchange names. With their passion is being logical, the French designated their to phones entirely by numbers. For example, given telephone, instead of being Main & would be 321.33. It was very logical—and the numbers grew big, very awkward.

Local Travel in Warm We ther

As to long-distance service, every one I inquired of said it was had southward—say, to Rome—but pretty good to Berlin. Above all other institutions, no doubt, stock exchanges demand fast communication, for two or three minutes' difference in time may mean a very large difference in money. The booths in the basement of the Bourse are, therefore, fitted up with instruments which are especially efficacious for long-distance conversations, and there the best service is to be had; in fact, it is quite common all round that neighborhood for telephone users who are really in a hurry for a long-distance talk to run over to the Bourse booths instead of trusting to their office instruments. I asked the courteous official in charge of these booths how long it would take me to get Berlin.

"Impossible to say," he replied with the utmost good nature. "It might be ten minutes or it might be two hours!"

To be sure, this was in the middle of the day; but one may sometimes want a prompt telephone connection even at a busy period, and I found that, in fact, it might be three hours before one got Berlin. It is true, also, that by paying a triple rate you can get a much more dependable service, and the brokerage business usually goes at the triple rate. The ordinary rate is a dollar and a quarter for three minutes; the triple rate is three dollars. The ordinary rate is fairly cheap; the triple rate is fairly dear.

There is little use, however, in considering telephone rates apart from the service. To a person who really wants to telephone, a bad service is dear at any price. I may as well take this occasion to say that I have a bushel of statistics on telephone and telegraph rates the world over. Some of them were prepared by advocates of government ownership; others were prepared by opponents. Consequently

each set of statistics absolutely proves the case of its sponsors.

To take one simple illustration: I could discover no recent authoritative statement as to whether government ownership of telephones in France produced a surplus or deficit, and so set out to learn what the fiscal results were. No. 24 Rue Bertrand referred me to another bureau of the ministry half a mile away; and, after due inquiry and explanation there, I met the official having that matter particularly in charge-a very obliging and pleasant person, with the insignia of the Legion of Honor on the lipel of his black frock coat. I may add that courtesy, frock coats and badges of the Legion of Honor seem to be universal in higher French officialdom.

#### Figures Unavailable

HE WAS very sorry he could not satisfy my curiosity. Telephones, telegraphs and mail, he explained, were all hadded by one organization. Many employees of the Postal Department were engaged with work touching all three handless of the service and there were a great many charges that had not been

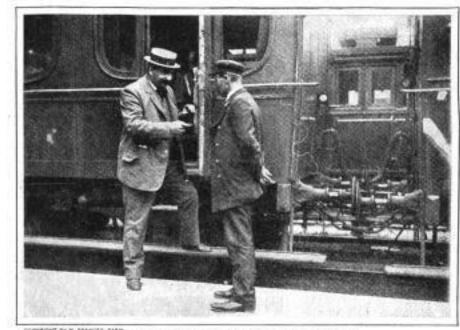

scientifically allotted among the three branches. The government was even then casting up the accounts with an approximately proper allotment of these joint expenses. Until that work was completed it would be impossible to say just what the fiscal results of telephone operation were; but he could assure me that if there was any deficit on

the telephones it was small. He thought, in fact, the service was self-supporting.

In all state-owned systems the same situation obtains, and often there is no exact allotment of expenses as between telephones and telegraphs, and both together and mail proper; so if you wish to prove that in a given country state-owned telephones are more efficient than those of the United States, all you need do is to leave out the joint telephone-telegraph employees, thereby demonstrating that each telephone employee handles a great many messages. On the other hand, if you wish to prove that state ownership is very wasteful you must include the joint telephone-telegraph employees.

In this country especially there are all kinds of telephone rates. I personally happen to pay fifteen dollars a year for a

telephone with unlimited service and no toll charges for messages within the county, which roughly means thirty miles east and west by twenty north and south. The instrument and wiring are good enough to talk with satisfaction to Chicago and Detroit—say, a hundred and fifty miles in each direction. How much farther they will work satisfactorily

Passenger Asking Information of Train Guard

even a grave statistical attempt to prove that the telephone is less useful to the people of the United States than to the people of France and of other countries where the telephone is publicly owned, in spite of the undisputed fact that there are several times as many telephones to a hundred inhabitants in the United States as in France, and of the indis-

putable evidence that anybody can gather by simply using his eyes and ears for a fortnight in both countries.

Therefore I shall not deal much with statistics—not because I lack them, but because I have so many that I know how misleading they may be. And I earnestly advise the reader to be careful in accepting statistics on this whole subject of government ownership.

#### Government Monopoly

ONE historical fact may be mentioned here: Though state ownership of telegraphs was common in Europe when the telephone began to be commercially developed, only two governments on the continent—Germany and Switzerland undertook to develop the new method of electrical communication.

In France, for example, telegraphing was a state monopoly; and the law governing the monopoly was so broad that it would have been impossible to introduce the telephone except by express permission of the government. Concessions or licenses running only five years were accordingly given to several private concerns, which proceeded to develop

telephoning, taking only the fattest territory and charging all the traffic would bear, as might be expected in view of the short term of the licenses; for they had to get back their investment within five years.

It then appeared that telephoning would become a rival of the telegraph, and the government built two or three exchanges on its own account, independent of the private concerns. Thus competition developed between the state and the private owners. In 1889 an act was passed providing for the purchase of the private lines by the state. The private owners refused to accept the terms offered; whereupon the government took possession of their plant by force. So telephoning has been a state monopoly in France for a quarter of a century. And today there are less than three hundred thousand telephones in France—or not so many as in the city of Chicago.

Telegraphing has been a state monopoly there practically ever since the invention of the art. The French telegraph service is good and cheap. The charge for inland messages is a cent a word, with a minimum of ten words that is, you pay ten cents for anything less than eleven words and a cent for each word more than ten. Both the address and signature are counted as part of the message; yet the cost of telegraphing is lower than with us and the service as good. The latest authoritative information I find, for 1905, indicates that the telegraph business was done at a loss of about a million dollars and three-quarters. What the situation now is I do not know, for reasons stated above.

It is a common charge against our amiable trusts that they retard or suppress new inventions which, if vigorously developed, would disturb their extensive capital investments in older methods. It seems a fair inference that France and other telegraphic-owning states have

(Continued on Page 72)

Passenger Helping Ladies With Their Baggage

I do not know, never having tried it. That is about as cheap as rural telephones in France, especially as I do not have to buy the instrument or pay for wiring.

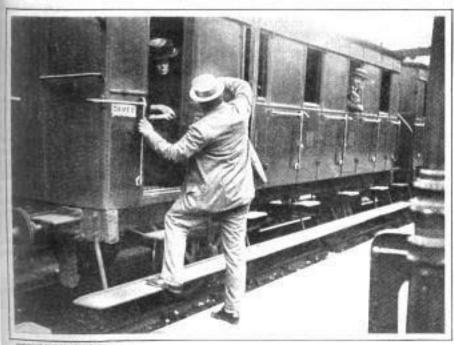

On the other hand, in the city of New York you pay two hundred and twenty-eight dollars a year for unlimited service and business use, and have immediate connection

> with three hundred and eighty thousand other telephones in Manhattan and the Bronx.

> Now a telephone, broadly speaking, is both more useful and more costly in proportion as it connects with other instruments. It would be impossible to give me my country telephone at fifteen dollars a year if there were three hundred thousand other telephones in the county with any one of which I might wish a connection at any time. Comparison of rates means nothing without comparison of conditions.

By statistically comparing the one and not the other you can get any sort of result you like

You can take American flat rates—unlimited service—and compare them with foreign measured rates, or vice versa, and get statistics that look important until they are analyzed. I have recently seen

Man Trying to Enter a Compartment Reserved for Women

# By WILLIAM CARLETON

THE year that Horace Moulton went into part-- nership with his father was the year Dick started his dairy. During the following months each man was too intent upon his own particular enterprise to take more than a general interest in anything else. Horace didn't find any spare time on his hands. He discovered that by applying the same thought and energy to this country grocery store that, as an ambitious young man, he would have applied to maintaining a position as an underling in some more pretentious city business he had all he could do. And here he was able to see results. He told me he doubled his business that first

Horace went out after new business and got it. Furthermore he saw there was just as much more to be had, and after that still more. At the end of the first six months he was no longer worrying that he would not be able to get as much business as he was big enough to handle.

The way Horace and Dick happened to get together on the new proposition grew out of the fact that Moulton's store had come to be a sort of

village clearing house. When any of the women folk had a surplus of pickles or jelly or what not they brought it to the store and traded it off. Horace was willing enough to take their produce, because he disposed of it quickly enough. Generally the woman who had too many pickles didn't have enough jelly, and so on. Now though the boy made a fair profit on the deal, he realized that he wasn't by any means getting by selling at home what such country-made products would bring in town. The prestige attached to such goods went for nothing; it was like selling Paris gowns in Paris with a New York market next door. Then, too, Horace had a notion that if this country grocery store idea had made such a success in the country it ought to make even a bigger success in the city where pennies count for even more.

About this time the Pioneer Products Company was feeling the need of a city distributing center. Finally along came Dick, who was getting all worked up over the cost of distributing his milk. The result of cooperation along these individual lines led to the next step, which was general cooperation. Our common market was the city. We had coöperated to sell our garden produce; we had coöperated to sell our milk; we had cooperated with Horace to sell our jellies and what not-why not combine to sell everything at once to this common market? No one of us could afford the undertaking by himself, but together it ought to be simple. It would furnish an outlet for the whole town and, as I've said before, though we don't as a town make much of a showing on the map, you take us all together as one plant and we loom up as a pretty big business. So does every country town. To realize this, just figure out how much money it would take to buy our plant at its assessed valuation. Not many business men, even in this day of millionaires, could get together enough money to do it. Only a few of the big trusts have as much money invested in their business as we have.

Horace needed a city store and wanted one more than he needed it; the Pioneer Products Company wanted a store and needed it more than they wanted it; Dick wanted a city store and needed it as much as he wanted it. It was inevitable that the three should get together. The suggese first from Dick. The problem of distribution and the big factor it plays in the final cost to the consumer.

"It looks to me dead wrong that people should pay almost as much to get their stuff to the door as they pay to have it raised. It's an injustice to the consumer and to the producer," said Dick.

"Isn't it partly the fault of the consumer?" said Horace. "Dad tells me that in the early days he didn't deliver anything-people came to the store.

That's it exactly—people came after their goods. They did part of the work. Now they're coddled to a point where they not only require you to deliver everything, but

The Women of Brewster Had Long Been After Him

demand that most things shall be all cooked for them. That's all right if they don't kick about the cost. They are welcome to any service they are willing to pay for. But when they aren't willing or aren't able to pay, then they ought to do part of the work. They haven't any right to shift that extra burden on the producer.'

"You're talking about what ought to be. As a matter of fact, the very ones who do the most talking about high prices are the ones who demand the most service."

"I guess you're right," said Dick; "but I'd like to put this up to them once. If they want to save money I'll help them, provided they'll do some of the work. If they don't want to save money then they'll have to keep quiet and pay the bill. I object to spending my time and money getting cost down to bedrock, and then allowing the customer to take what I save and turn it back to the deliveryman for the luxury of having his milk delivered at the door. I accept a profit of half a cent a quart in order to keep cost down to four cents; I allow a cent and a half for bottling and delivery to town, which is necessary. That leaves two and a half cents. The half cent I'm willing to give to the customer, but the two cents, twenty-five per cent of the total, he hasn't as much right to as I have. If he wants to save it and help cut down the cost, that's one proposition. If he wants to spend it, then he isn't as hard up as he pretends to be and will have to pay me better for my efforts."

Horace laughed.

"You have all the best of the argument, Dick," he said; 'but the public is always both judge and jury.'

"It isn't in this case.

"How?"

"Because it can't get my milk anywhere else. If I charged nine cents a quart it would still be better milk than can be bought anywhere else for fifteen."

'Jove, you're right! You can make the public come to

"It ought to come part way. I'm willing to cooperate with the customer, but hanged if he hasn't got to do some of the cooperating himself!"

The difficulty with Dick's proposition had been to find a station within reasonable access of his two classes of customers-the Little Italy customers and the uptown customers. Burlington, business manager of the Pioneer Products Company, had a market stall that would do for one station, but that still left the uptown milk to be delivered.

As I've said, Horace was eager for a city store. The sort of store he proposed to run must necessarily be fairly well uptown. It must not be in a section where folks couldn't afford to pay a fair price for superior country products, nor in a section where people could afford to pay for all the trappings and service that go with the highest-priced

goods. It was on just those things that Horace proposed to save. He wanted to reach the fairly prosperous class, who appreciate wholesome food and yet are forced to consider prices. It was just this uptown class willing togo a long way to get Carleton milk that Horace was after.

To Burlington, as another outlet for the company, an uptown store also appealed strongly. The women of Brewster had long been after him. They, too, wanted a chance to earn a little money and felt there ought to be a market for genuine homemade products - genuine home-made products, you understand, made of resi butter, eggs and milk, not the stuff that bakers put out under that name.

So you see that as we talked about the proposition the store began to look more and more as though it must be a cooperative enterprise. It couldn't be Dick's store or Horace's store, but it must be Brewster's store. It must represent the whole town. It was a new experiment in cooperative stores. Instead of being organized to furnish us with an inlet, it was organized to furnish us an outlet.

Holt and Burlington representing the Pioneer Company, Horace and Dick representing their own interests, and myself, appointed to represent the women of the town, worked on the proposition several weeks. As a result we decided upon a stock company with fifteen hundred shares, par value ten dollars each. This was to be divided as follows: Horace, five hundred shares; the Pioneer Products Company, two hundred and fifty shares; Dick, two hundred and fifty shares; five hundred shares for general subscription, limited to residents of Brewster. This was taken up within ten days. It shows that we had some spare cash in town and, what is more, that we had people who were willing to use it in backing any cooperative enterprises the Pioneers might suggest. It wasn't like that ten years ago.

We gave over to Burlington and Horace full authority to work out the details, subject, however, to the final indorsement of a board of five which besides those two included Dick, Holt and myself. This was in October. Within two weeks a store had been leased, and within another two weeks it had been fitted and stocked. Then in the daily papers the following announcement was made:

THE BREWSTER STORE

Country produce direct from Brewster. We shall carry every good thing to be found in a good country town. No frills, no credit, no deliveries. Every cent you spend here will be invested in produce and nothing else.

XVII

In the mean while Dick had sent out to his customers this announcement:

After November first no Carleton milk will be delivered at the door. It may be secured only at the following two places: The Pioneer Products Company stall, located

at —; and the Brewster store, at —.

This is done with the sole object of reducing cost both to the consumer and to the producer. If the experiment proves satisfactory the price of the milk will be reduced: if it does not prove satisfactory the price of the milk will be increased. We hope in this way to reach the people who really desire cheap, clean milk.

only tomers. Any milk unclaimed will be charged for. Any customer who fails to call for his milk three consecutive days will be omitted from our list.

Now that sounded pretty arbitrary. When the boy showed it to me I shook my head in some doubt. As for Barney, he looked perplexed for a moment.

Then he said: "Hang it all, it's a fair and aboveboard challenge anyhow."

"Do you know of any one deserving the milk who can't call for it?" said Dick.

"No," said Barney, "I don't. At the same time there might be such cases."

"If you find any let me know. If the scheme works I propose to cut the price of my milk to seven cents. Do you realize what that will save customers?"

"Three hundred and sixty-five cents a year."

"Which will be the price of fifty-two quarts of milk. What I say is that if there's any one who doesn't need that extra milk it ought to go to some one who does. I myself don't want any more money out of the enterprise than I'm getting."

And to do the boy justice that statement must be understood. The boy meant it. He was sincere. The expedient had no other object than to cut down cost for the benefit of the consumer.

As a result of that circular the boy received a batch of complaints; but mark this—not one from Little Italy. Of course one explanation is that those people don't do much complaining anyway. They are apt to accept 'most everything except when stirred up from the outside. But a better explanation is also that they were quick to appreciate the possible future saving and also the value of the milk they were getting. The complaints were all from uptown, and some of them were violent.

"It's an outrage," they wrote. "It's an imposition."
"Please cancel our order at once." Dick didn't hesitate two minutes about those cancellation orders. There were people right in Brewster who were willing enough to come to the barn for that milk, and he made more on every such customer than he did on any city customer even under the new arrangement. It saved him delivery to the stations and storage. There wasn't a day, moreover, from the time the new store opened when there wasn't an inquiry for Carleton milk. The fact that it couldn't be secured and that customers had to go on a waiting list had the usual effect of making the public more eager than ever for it. It was surprising how rapidly the milk advertised itself. Barney talked it all the time in Little Italy, while uptown every family that took it advertised it to the whole neighborhood. Then, too, the family physicians discovered its worth. Many of them came down to the farm to see for themselves how it was produced. To a man they went away urging Dick as a matter of public duty to increase his

Within two months of the time the store opened Dick kept his promise and reduced the price to seven cents. He figured that the non-delivery scheme saved over one cent and a half per quart, after deducting the storage cost which took its place. It was then that the newspapers began to look into the proposition. Seven-cent milk, if it had been nothing but ordinary milk, was news and good news. But when the papers had the milk analyzed and found that by every test it averaged as high as certified milk, which sold from twelve to fifteen cents a quart, they started a campaign that almost brought on a milk war. The regular dealers replied that this Carleton milk was purely a philanthropic enterprise and not a business. The papers came to Dick for an explanation, but acting on my advice he refused to be drawn into a controversy. The only reply he made was this: "It isn't fair to criticize dealers for their prices, but it is fair to criticize the standard of their milk. That's the important thing. I'm producing clean milk, and it isn't costing me but a trifle more than it costs to produce impure milk. That much the public has a right to know."

"Then you aren't losing money?" they asked.

"No," said Dick. "However, I'm willing to admit that I'm satisfied with a smaller profit than would content a pure business enterprise. But that added profit ought to go to the farmer and not to the dealer. That it doesn't is partly the fault of the public."

The papers wanted Dick to open up his books and go into details, but to neither of us did that seem quite fair to the other producers just at present.

"The scheme is young yet," said Dick, "Give it another year or two and I'll talk with you."

Of course Barney was eager to give the papers all they asked.

"Both the farmers and the dealers ought to be shown up," he insisted. "You've proved that clean milk can be produced and delivered at a profit by any dealer for less than is being done today. The public ought to know this."

"It's up to the farmer and he can't be changed in a minute," I said. "Give him a chance to learn."

"It's an earthquake and not a chance he needs," said Barney. But on his own responsibility Barney did publish some of his own observations on milk, and the articles did a lot of good. As usual, however, he was violent in them and stepped on a lot of toes. It didn't add any to his popularity in his own profession either.

#### XVIII

I HAVE told how the boy started, and the start is the important thing. Any level-headed man can follow up a success. The most interesting feature of it to me is the fact that Dick, an ordinary business man without experience, was able, with the help of free, expert government advice, to master the details of dairying in so short a time. In months he made himself a more genuine expert than many a farmer who has kept cows for thirty years.

To me the explanation is perfectly simple—he started without any theories or bad dairy habits of his own. He used horse sense, and horse sense is the most valuable capital a man can start with on a farm. He used his head in a business where generally speaking there is less head used than in any business of its size in the world. He used his head as much in handling the experts as he did in seeking them. Many experts go as much to extremes as Barney. Money can be wasted and wasted fast in over-emphasis of purity. If Dick had put in some of the sterilizing plants that were recommended his milk would have been no better and would have cost him ten cents a quart. It was as necessary for him to remain sane on the question of purity as on the question of impurity.

The basis of Dick's business at the start and the basis of it today is the efficient herd. Dick has increased the average production per cow from 2848 quarts the first year to over 3500 at present. The boy has some three-year-olds who are producing over 3000 quarts, and some two-yearolds running to over 2600. These are grade cows too.

Moulton's Store Had Come to be a Sort of Village Clearing House

Every such increase represents almost net profit, for the cost of upkeep is almost the same.

Dick now has his own registered bull which he selected on his record. He waited a long time before he made his choice and the result promises to justify this. The animal pays for himself outside his own stable.

The business has increased and increased rapidly, with no end in sight yet. There is no end. Every baby born is a new customer. As soon as people awake to the real food value of milk, its consumption will increase among adults. It's just as good man food as baby food. I don't believe within reason it is possible to over-produce milk. A man has in cream and butter a way of utilizing all surplus.

Dick has nearly doubled his herd. As far as the business is going he could increase his plant ten times over, and may before he is done. Up to now, however, he has preferred to see the business grow among the other farmers of the town. He is his own milk commission, and stands ready to accept milk and sell it as Carleton milk so long as any farmer keeps up to Carleton standards. Barney looks after that end of it. At least two hundred cows outside Dick's herd are now producing Carleton milk. It has come to be a big addition to the industry of the town.

This has led to another coöperative enterprise. Dick found that it was decidedly unprofitable to make any attempt to raise his own grain. This was because the market for garden produce offered by the Pioneer Products Company made the land too valuable to be put to this use. What was true for him was true for the others, of course. Not only was the land too valuable, but the dressing was too valuable. It could be converted much more profitably into the higher-priced vegetables. We were producing now a goodly quantity of manure. Where Dick first reckoned it to his dairy credit as worth \$1.50 a ton, it could under the new system be fairly said to be worth at least two dollars a ton, if not more.

But if grain had to be bought Dick didn't propose to buy it at retail. He made a canvass of the town, and found every man who kept a Carleton cow eager to cooperate with him in buying by the carload. In this way a saving of ten per cent was effected. The grain was not stored, but as fast as a shipment came in each man went to the car and took away his allotment. In this way no storage losses were suffered and the grain was ordered only as needed.

Dick built a new dairy house, larger and with better facilities and with one big improvement. It was connected with the barn by a covered passageway and contained a milking room. By this arrangement the cows, instead of being milked in the barn, were led to this milking room after being groomed and cleaned, and were milked there. This simplified matters a great deal and allowed more freedom in the stable. The milking floor didn't take up much space and could be washed out with a hose after each cow, if necessary. It seems to me this system could be easily used in any barn where the farmer can't afford to remodel. It doesn't cost much to erect a small shed, and if used for this purpose alone is certainly the next best thing to a clean barn. But the shed must be kept clean, and the cows must be cleaned before being admitted.

The cost is negligible when compared with the results attained. The farmer who says he can't afford so simple an outlay as this, and who says he can't afford to keep his

(Continued on Page 69)

# SEEING IS BELIEVING

## The Showman's Craft Helps Business Explanations

A BROOKLYN dock and a dull winter afternoon; knots of roustabouts tug like ants at piles of boxes, barrels and crates consigned to a steam-ship bound for South American ports. Ton after ton of variegated freight is disappearing in her roomy hold.

Presently the slings are fastened round a long, narrow, heavy box. A whistle blows shrilly; a donkey engine up on the ship's deck puffs and clanks, and the box rises slowly in the air, thirty feet above the dock. All goes well until it hangs over the wide hatch and is being lowered.

Then, quick as a wink—so quickly that men working below have barely time to get out of the way—the wooden end bursts out and a long steel bolt drops like a projectile, leaving the box intact in the slings. It crashes through the cargo and pierces the ship's bottom, for it is a thirty-foot steel shaft, made for heavy mining machinery.

Was it improperly packed? Was it carelessly handled? Probably the courts will have a chance to decide those points.

Meantime water comes into the ship so fast that before she can be taken to a drydock for repairs it is necessary to beach her on a mudflat; and there she lies, with nine feet of water in her hold, with delay and loss to her owners, and many thousands of dollars' damage to her cargo of flour and apples.

About a month before this accident a large party of business men might have been seen traveling round the New York waterfront. Now a fleet of motorbusses takes them along the North River piers, where miscellaneous freight passes in and out of ocean liners. They see tropical fruit unloaded and American automobiles taken through the sides of ships. They inspect refrigerating plants for preserving perishable products; walk about docks piled with everything under the sun; go down into holds to see cargoes stowed away.

Again, a railroad tug takes them over to the Jersey terminals to see cement, flour, heavy machinery and other bulky freight put on lighters; and they follow the lighters over to the vast, obscure dock system of Brooklyn, to see the stuff put aboard ships and watch import goods being unloaded.

Whenever they are hungry there seems to be a hospitable liner right at hand to entertain them at lunch; and, while they eat, steamship and railroad officials talk to them about export methods.

#### Lessons in Packing and Shipping

THESE sightseers are all connected with the export business of American concerns, and this is the first time that many of them have actually seen export-shipments in transit. From time to time their goods have been delayed or damaged and they have blamed the railroad or the steamship people. Traffic men have pointed out deficient methods too light packing; wrong routing; carelessness in making out export papers—but there have still

been hitches and mishaps, based chiefly on misunderstanding of technicalities. The shipper has suspected that the transportation man was unreasonable in his regulations, and the transportation man has felt that the shipper lacked sense.

Finally, on the principle that seeing is believing, and a much easier way of explaining technicalities than telling, an export trade-journal editor has arranged this tour of the docks. Railroad and steamship men fall in with the idea eagerly; New York's waterfront is organized with little trouble into a two-day exposition of export methods, because it is going three hundred days in the year; and export men from half a hundred inland manufacturing centers come down to the seaboard to watch what happens to goods when they are sent abroad.

At least one man in the party will thoroughly understand that accident to the ship sunk by the steel shaft when he reads about it next month. He is the man who has always visualized freight as something rolled from his shipping room on to a truck, and from the truck into a car, and rolled out again at its destination. For the first time in his life he sees freight swung fifty feet into the air in a sling, swaying drunkenly, and lowered into the hold of a ship. It gives him new conceptions of the strains that his export packing cases must stand.

## By James H. Collins

ILLUSTRATED BY CHARLES D. MITCHELL

Another man, whose export boxes containing machinery have been damaged by slipping out of the slings at half-equipped ports, discovers a way to bid for the favor of the third mate unloading a cargo and secure better handling. Instead of trusting to the mate's sling he provides a sling of his own on every export box by reënforcing it with wire rope or steel bands, which are brought together in a loop convenient for a crane hook.

Other men note better ways to pack goods; see devices to prevent loss and theft; understand the practical value of properly drawn export documents; and learn through their eyes in five minutes things that might never have impressed them through reasoning. Seeing is believing, and the business world nowadays finds more and more use for the showman's art in making things plain.

Demonstration apparatus is devised for selling purposes; educational exhibits are arranged for fairs and expositions of all sorts; factories are built or arranged with a definite view to entertaining sightseers. In a thousand ways business seeks to set before people—through the eye, vividly and succinctly—something that people should know.

Sometimes the public to be reached is large—no less than the population of a city. It is a busy, heedless public not likely to be much interested in technicalities. Business used to argue with that sort of public, lay special pleas before it, remonstrate with it, resist it—and be either ignored or outvoted. Now it is learning to go before people with technical arguments that even a street crowd can be interested in and understand.

A street-car company takes space at a city exposition. Its general manager has long had secret technical sorrows brooding in his soul—sorrows like the increasing cost of track and complexity of equipment; increasing difficulty in getting the public to work with the company for better service. Figures and curves showing track and equipment costs are dry stuff; but these things themselves, laid out in a sequence showing growth, are highly interesting.

So samples of actual roadbed are placed side by side, beginning with the oldtime horse-car track with its strap-rails and cobblestones, at about eight thousand dollars a mile, and winding up with the best modern trolley track with its welded rail-joints and granite-block paving, at ninety thousand dollars a mile—a little increase of over one thousand per cent in twenty-five years! Fifteen street-car motors are shown in another sequence, showing only about half the changes in twenty-five years—fourteen other obsolete types have disappeared altogether.

A moving-picture theater is set up beside these exhibits, and on special films, made for the company, little street-car dramas are given—one piece, for instance, is entitled A Two-Minute Delay, and shows a woman holding a car that long while she opens a grip, from which she takes a hand-bag, from which she takes a purse, from which she takes a ten-dollar bill—a line of passengers

standing impatiently behind her until her fare is finally paid.

Again, the public to be reached may be very small, very select, very wise in all the technicalities—yet not a bit less susceptible to a skillful eye-appeal.

About ten years ago the engineers of a big electrical manufacturing concern went to the manager of a big electric-light company. They had designs for an electric generator of five-thousand-kilowatt capacity—the largest ever proposed up to that time, but promising great economies in power production. The manager had it built and installed, and it proved to be as economical as had been expected.

Seven years later, while this generator still had years of mechanical life ahead of it, the same engineers came to the same manager with designs for a generator four times as big, showing so much greater economy that the first one could be scrapped and paid for out of a year or two of savings effected by this new giant.

The manager ordered that also; and it was so satisfactory that the engineers then took the earlier generator back to the factory and set it up at the entrance gate with a commemorative tablet—a sight for visiting electrical experts and a monument to the remote electrical past, seven years ago!

#### How the Business Showman Works

BUSINESS is rich in show material and is waking up to the fact that a little apparatus in connection with a humanly interesting idea has great possibilities in creating good will, good understanding on the part of the public, and good customers.

One of the underlying ideas that has humanized hundreds of business exhibitions is that of growth. People seem never to tire of comparing today with yesterday, and the day before, and the day before that.

Some months ago, for example, there was a parade of street cars in the city of New York, arranged by one of the companies to illustrate the developments of thirty years. Old equipment was brought to light and put on the street just as it had been used in the past. First came a genuine bobtail horse car, with seating capacity for only twelve passengers. Other types of the horse car followed: single horse cars, double horse cars, then cable cars, then electric cars of different sizes and types—winding up with the modern pay-as-you-enter, the stepless, the double-deck stepless and the storage-battery cars.

This odd exhibit traveled through the streets over the cartracks in chronological order and was arranged to empha-

size one of the chief tendencies of the street-car business, which is, development of new types of cars to meet new traffic conditions

Another striking way of depicting growth is that of a public-service corporation which has put up a big illuminated roof sign that shows how much electric light a dollar will buy today compared with the past. First, a small incandescent lamp flashes out in outline, with the date 1896. Then a little larger lamp replaces it, and another—until the old-style carbon filament bulb is replaced by the metal filament, which grows in size too; and finally the climax is reached in an outline fifty feet high and the date 1914.

Even so simple a device as a city map, with colored pins stuck in to locate each customer and new pins added daily as new customers are secured for goods or service, has an attraction for the public. There is a strong human interest in the whole idea of Watch us grow!

Another fertile field for the business showman is that of exhibiting big affairs in miniature reproductions—people like to see things in little.

A machinery concern put a new drophammer on the market—a big fellow for die-work, with a hammer, weighing a ton and a half, falling twenty feet—very effective and economical in machine shops, especially automobile plants. Any superintendent or manufacturer who saw it was

impressed with its good points; but it was not easy to impress prospective customers at a distance. The salesman could describe it to a customer, show photographs and give figures of production; but he could not make him feel this

So a miniature reproduction was made-an securate working model, readily carried round for se in selling. Results were so good that all salesnen were equipped with the model; and before ong others had to be made for use right in the nanufacturer's own plants, because it was found recisely the thing for breaking in new hammernen-they could get instruction without tying up ig hammers in the factory.

An express company ordered some new refrigertor cars for its service in transporting fish, meats, guit and vegetables. The carbuilding concern nade a miniature reproduction several feet long one of these cars.

It was perfect in every detail, with its own rack, doors opening, roof lifting to show interior rrangements, and so on-nearly three months ere required to build it.

That model refrigerator car works hard for the spress company the year round. At one season will be out in the great producing regions of he West as an exhibit at fairs and expositions. tother seasons it will be in the East among the conamers. Between times it can always be counted n to attract attention in one of the company's

In Europe there is a decided partiality for sinlature models of big things. As fast as new ans-Atlantic steamships are put into service the

ansportation companies have beautiful reproductions ade for exhibition; and one concern in London does a age business in the making of such models.

Not long ago an exact reproduction of a big English autoobile works was made. It shows several square blocks of uildings, with trains loading on the adjoining railroad, and streets, miniature trees-all worked out faithilly on a scale of a sixteenth of an inch to the foot. Even be tiny windows are all glazed and can be lighted by elecricity: and this model, shown at exhibitions, gives people n impression of the magnitude of the factory almost as efinite as would be received by a visit to the place itself.

This trans-Atlantic interest in miniature things impressed the London agent for an American automobile. He had a small-scale reproduction made of the car he was selling. It was only large enough to carry two children, the raised top coming a little short of a man's waist in height; but it was a faithful copy in every detail, even to the power, for that was supplied by an electric starter like that built into the big cars at home.

Self-starters are largely an American refinement in automobiles. Makers on the other side are just beginning to take them up. This ingenious demonstration of a strong selling feature in the car made a strong impression on

people who saw the baby automobile, for the starter in itself furnished enough power to take two little passengers about fifteen miles, and at a pace of ten or twelve miles an hour. After the model had been shown in England and France it was purchased by the British royal family.

At the factory of a large machinery concern in the East there is a toy railroad that would delight a boy, for it occupies several hundred square feet of floor space, and complete little engines run over a complete little railroad system of single and double track switches and blocks; and the whole affair is built on trestles, so that the engines run just about waist-high for a big boy, and he can follow them round the distance of a city block.

This system is for grown-up boys, however, because the miniature engines on their toy tracks operate full-size signal apparatus made by the company, and visibly demonstrate to railroad men how trains under different conditions are automatically safeguarded.

This exhibit cost twenty-five thousand dollars and is a fair illustration of another showman tendency in business-that of making a show place of the factory. Under this tendency the whole idea of a factory is changing. Manufacturing plants are being built of glass and tile, employees are given every facility for keeping clean and cheerful, and the places are thrown open to the public as permanent exhibits.

There are cities in this country where a stranger registering at any hotel finds at the breakfast table an invitation to visit some local factory that has been laid out on exposition lines, and which can entertain many thousand visitors yearly.

This has been most successful in plants where products are of a popular nature. The exposition idea goes naturally with food specialties, household conveniences and the

Other factories develop the show idea along narrower lines. Their products are chiefly of technical interest. The trip round them may be a walk of four or five miles, with almost nothing to see that the average spectator would understand. It has been found that when the average spectator is admitted to such a plant he usually picks out some wholly irrelevant show feature—something like the

(Concluded on Page 58)

# THE STREET OF SEVEN STARS

IMMY was dying. Peter, fighting hard, was beaten at last. All through the night he had felt it; during the ours before the dawn there had been times

hen the small pulse wavered, flickered, almost ceased. With the daylight there had been a trifle of recovery, enough or a bit of hope, enough to make harder Peter's acceptance f the inevitable.

The boy was very happy, quite content and comfortable. then he opened his eyes he smiled at Peter, and Peter, ray of face, smiled back. Peter died many deaths that ight.

At daylight Jimmy fell into a sleep that was really upor. Marie, creeping to the door in the faint dawn, and the boy apparently asleep and Peter on his knees eside the bed. He raised his head at her footstep and the irl was startled at the suffering in his face. He motioned er back.

"But you must have a little sleep, Peter."

"No. I'll stay until --- Go back to bed. It is very arly."

Peter had not been able after all to secure the Nurse lisabet, and now it was useless. At eight o'clock he let farie take his place, then he bathed and dressed and repared to face another day, perhaps another night. For se child's release came slowly. He tried to eat breakfast, ut managed only a cup of coffee.

Many things had come to Peter in the long night, and ne was insistent-the boy's mother was in Vienna and was dying without her. Peter might know in his heart at he had done the best thing for the child, but like armony his early training was rising now to accuse him. e had separated mother and child. Who was he to have ecided the mother's unfitness, to have played destiny? low lightly he had taken the lives of others in his hand, nd to what end? Harmony, God knows where; the boy ying without his mother. Whatever that mother might e, her place that day was with her boy. What a wreck he ad made of things! He was humbled as well as stricken, oor Peter!

In the morning he sent a note to McLean, asking him p try to trace the mother and inclosing the music-hall

By Mary Roberts Rinehart ILLUSTRATED WILJON

clipping and the letter. The letter, signed only "Mamma,"

was not helpful. The clipping might prove valuable.

"And for Heaven's sake be quick," wrote Peter. "This is a matter of hours. I meant well, but I've done a terrible thing. Bring her, Mac, no matter what she is or where you find her.'

The portier carried the note. When he came up to get it he brought in his pocket a small rabbit and a lettuce leaf. Never before had the combination failed to arouse and amuse the boy. He carried the rabbit down again sorrowfully. "He saw it not," he reported sadly to his wife. "Be off to the church while I deliver this letter. And this rabbit we will not cook, but keep in remembrance."

At eleven o'clock Marie called Peter, who was asleep on the horsehair sofa.

"He asks for you."

Peter was instantly awake and on his feet. The boy's eyes were open and fixed on him.

"Is it another day?" he asked.

"Yes, boy; another morning."

"I am cold, Peter."

They blanketed him, although the room was warm. From where he lay he could see the mice. He watched them for a moment. Poor Peter, very humble, found himself wondering in how many ways he had been remiss. To see this small soul launched into eternity without a foreword, without a bit of light for the journey! Peter's religion had been one of life and living, not of creed.

Marie, bringing jugs of hot water, bent over Peter. "He knows, poor little one!" she whispered.

And so, indeed, it would seem. The boy, revived by a spoonful or two of broth, asked to have the two tame mice on the bed. Peter, opening the cage, found one dead, very stiff and stark. The catastrophe he kept from the boy.

"One is sick, Jimmy boy," he said, and placed the mate, forlorn and shivering, on the pillow. After a minute:

"If the sick one dies will it go to Heaven?" "Yes, honey, I think so."

The boy was silent for a time. Thinking was easier than speech. His mind too worked slowly. It was after a pause, while

he lay there with closed eyes, that Peter saw two tears slip from under his long lashes. Peter bent over and wiped them away, a great ache in his heart.

"What is it, dear?

"I'm afraid-it's going to die!"

"Would that be so terrible, Jimmy boy?" asked Peter gently. "To go to Heaven, where there is no more death or dying, where it is always summer and the sun always

No reply for a moment. The little mouse sat up on the pillow and rubbed its nose with a pinkish paw. The baby mice in the cage nuzzled their dead mother.

"Is there grass?"

"Yes-soft green grass."

"Do-boys in Heaven-go in their bare feet?" Ah,

small mind and heart, so terrified and yet so curious!
"Indeed, yes." And there on his knees beside the white bed Peter painted such a Heaven as no theologue has ever had the humanity to paint—a Heaven of babbling brooks and laughing, playing children, a Heaven of dear departed puppies and resurrected birds, of friendly deer, of trees in fruit, of speckled fish in bright rivers. Painted his Heaven with smiling eyes and death in his heart, a child's Heaven of games and friendly Indians, of sunlight and rain, sweet sleep and brisk awakening.

The boy listened. He was silent when Peter had finished. Speech was increasingly an effort.

"I should-like-to go there," he whispered at last.

He did not speak again during all the long afternoon, but just at dusk he roused again.

"I would like-to see-the sentry," he said with difficulty.

And so again, and for the last time, Rosa's soldier from Salzburg with one lung.

Through all that long day, then, Harmony sat over her work, unaccustomed muscles aching, the whirring machines in her ears. Monia, upset over the morning's excitement, was irritable and unreasonable. The gold-tissue costume

had come back from Le Grande with a complaint. Below in the courtyard all day curious groups stood gaping up the staircase, where the morning had seen such occurrences.

At the noon hour, while the girls heated soup and carried in pails of salad from the corner restaurant, Harmony had fallen into the way of playing for them. To the musicloving Viennese girls this was the hour of the day. To sit back, soup bowl on knee, the machines silent, Monia quarreling in the kitchen with the Hungarian servant, and while the pigeons ate crusts on the window-sills, to hear this American girl play such music as was played at the opera, her slim figure swaying, her whole beautiful face and body glowing with the melody she made, the girls found the situation piquant, altogether delightful. Although she did not suspect it, many rumors were rife about Harmony in the workroom. She was not of the people, they said—the daughter of a great American, of course, run away to escape a loveless marriage. This was borne out by the report of one of them who had glimpsed the silk petticoat. It was rumored also that she wore no chemise, but instead an infinitely coquettish series of lace and nainsook garments-of a fineness!

Harmony played for them that day, played perhaps as she had not played since the day she had moved the Master

to tears, played to Peter as she had seen him at the window, to Jimmy, to the little Georgiev as he went down the staircase. And finally with a choke in her throat to the little mother back home, so hopeful, so ignorant.

In the evening, as was her custom, she took the one real meal of the day at the corner restaurant, going early to avoid the crowd and coming back quickly through the winter night. The staircase was always a peril, to be encountered and conquered night after night and even in the daytime not to be lightly regarded. On her way up this night she heard steps ahead, heavy, measured steps that climbed steadily without pauses. For an instant Harmony thought it sounded like Peter's step and she went dizzy.

But it was not Peter. Standing in the upper hall, much as he had stood that morning over the ammunition boxes, thumbs in, heels in, toes out, chest out, was the sentry.

Harmony's first thought was of Georgiev and more searching of the building. Then she saw that the sentry's impassive face wore lines of trouble. He saluted. "Please, Fräulein."

"Yes?"

"I have not told the Herr Doktor."

"I thank you."

"But the child dies."

"Jimmy?"

"He dies all of last night and today. Tonight it is perhaps but of moments."

Harmony clutched at the iron stair-rail for support. "You are sure? You are not telling me so that I will

"He dies, Fräulein. The Herr Doktor has not slept for many hours. My wife, Rosa, sits on the stair to see that none disturb, and her cousin, the wife of the portier, weeps over the stove. Please, Fraulein, come with me.'

When did you leave the Siebensternstrasse?"

"But now."

"And he still lives?"

"Ja, Fräulein, and asks for you."

Now suddenly fell away from the girl all pride, all fear, all that was personal and small and frightened, before the reality of death. She rose, as women by divine gift do rise, to the crisis; ceased trembling, got her hat and coat and her shabby gloves and joined the sentry again. Another moment's delay-to secure the Le Grande's address from Monia. Then out into the night, Harmony to the Siebensternstrasse, the tall soldier to find the dancer at her hotel, or failing that, at the Ronacher Music Hall.

Harmony took a taxicab—nothing must be spared now-bribed the chauffeur to greater speed, arrived at the house and ran across the garden, still tearless, up the stairs, past Rosa on the upper flight, and rang the bell.

Marie admitted her with only a little gasp of surprise. There was nothing to warn Peter. One moment he sat by the bed, watch in hand, alone, drear, tragic-eyed. The next he had glanced up, saw Harmony and went white, holding to the back of his chair. Their eyes met, agony and hope in them, love and death, rapture and bitterness. In Harmony's, pleading, promise, something of doubt; in Peter's, only yearning, as of empty arms. Then Harmony dared to look at the bed and fell on her knees in a storm of grief beside it. Peter bent over and gently stroked her hair.

The Le Grande was singing; the boxes were full. In the body of the immense theater waiters scurried back and forward among the tables. Everywhere was the clatter of silver and steel on porcelain, the clink of glasses. Smoke was everywhere—pipes, cigars, cigarettes. Women smoked between bites at the tables, using small paper or silver mouthpieces, even a gold one shone here and there. Men walked up and down among the diners, spraying the air with chemicals to clear it. At a table just below the stage sat the red-bearded dozent with the lady of the photograph. They were drinking cheap native wines and were very happy.

From the height of his worldly wisdom he was explaining

the people to her.
"In the box—don't stare, Liebchen, he looks—is the princeling I have told you of. Roses, of course. Last night it was orchids."

Last night! Were you here?" He coughed.

"I have been told, Liebchen. Each night he sits there, and when she finishes her song he rises in the box, kisses the flowers and tosses them to her."

"Shameless! Is she so beautiful?"

"No. But you shall see. She comes."

The Le Grande was very popular. She occupied the best place on the program; and because she sang in American, which is not exactly English and more difficult to

Then Harmony Fell on Her Knees in a Storm of Grie

understand, her songs were considered exceedingly risqué. As a matter of fact they were merely ragtime melodies, with a lilt to them that caught the Viennese fancy, accustomed to German sentimental ditties and the artificial forms of grand opera. And there was another reason for She carried with her a chorus of a dozen her success. piccaninnies.

In Austria darkies were as rare as cats, and there were no cats! So the little chorus had made good. The Le Grande was a good advertiser. Each day she walked in the Prater, ermine from head to foot, and behind her two by two trailed twelve little Southern darkies in red-velvet coats and caps, grinning sociably. When she drove a pair sat on the boot.

Her voice was strong, not sweet, spoiled by years of singing against dishes and bottles in smoky music halls; spoiled by cigarettes and absinthe and foreign cocktails that resembled their American prototypes as the night resembles the day.

She wore the gold dress, décolleté, slashed to the knee over rhinestone-spangled stockings. And back of her trailed the twelve little darkies.

She sang Dixie, of course, and The Old Folks at Home: then a ragtime medley, with the chorus showing rows of white teeth and clogging with all their short legs. The Le Grande danced to that, a whirling, nimble dance. The little rhinestones on her stockings flashed; her opulent bosom quivered. The dozent, eyes on the dancer, squeezed his companion's hand.

"I love thee!" he whispered, rather flushed.

And then she sang Doan Ye Cry, Mah Honey. Her voice, rather coarse but melodious, lent itself to the negro rhythm, the swing and lilt of the lullaby. The little darkies, eyes rolling, preternaturally solemn, linked arms and swayed rhythmically, right, left, right, left. The glasses ceased clanking; sturdy citizens forgot their steak and beer for a moment and listened, knife and fork poised. Under the table the dozent's hand pressed its captive affectionately, his eyes no longer on Le Grande but on

the woman across, his sweetheart, she who would be mother of his children. The words meant little to the audience; the rich, rolling Southern lullaby held them rapt;

> "Doan ye cry, mah honey, Doon ye weep no mo',
> Mammy's gwine to hold her baby,
> All de udder black trash sleepin' on the fo',
> Mammy only lubs her boy."

The little darkies swayed; the singer swayed, empty arms cradled.

> "Doan ye cry, mah honey, Doan ye weep no mo'

She picked the tiniest darky up and held him, woolly head against her breast, and crooned to him, rocking on her jeweled heels. The crowd applauded; the man in the box kissed his flowers and flung them. Glasses and dishe clinked again.

The dozent bent across the table.

-" he said. "Some day -

The girl blushed.

Le Grande made her way into the wings, surrounded by her little troupe. A motherly colored woman took then, shooed them off, rounded them up like a flock of chickers.

> And there in the wings, grimly impas sive, stood a private soldier of the old Franz Josef, blocking the door to be dressing room. For a moment gold dress and dark blue-gray uniform fronted each other. Then the sentry touched his

> "Madam," he said, "the child is it the Siebensternstrasse and tonight h

> "What child?" Her arms were ful of flowers.

> "The child from the hospital. Pleas to make haste."

Jimmy died an hour after midnight quite peacefully, died with one hand it Harmony's and one between Peter's tw big ones.

Toward the last he called Pete "daddy" and asked for a drink. Hi eyes, moving slowly round the room passed without notice the gray-face woman in a gold dress who stood starin down at him, rested a moment on th cage of mice, came to a stop in the don way, where stood the sentry, white in weary, but refusing rest.

It was Harmony who divined th

child's unspoken wish.
"The manual?" she whispered.
The boy nodded. And so just insid the door of the bedroom across from the old salon of Maria Theresa the sent; with sad eyes but no lack of vigor, we

again through the Austrian manual of arms, and because he had no carbine he used Peter's old walking-stick.

When it was finished the boy smiled faintly, tried ! salute, lay still. XXVII

DETER was going back to America and still he had n told Harmony he loved her. It was necessary that go back. His money had about given out, and there w no way to get more save by earning it. The drain Jimmy's illness, the inevitable expense of the small graand the tiny stone Peter had insisted on buying had maretreat his only course. True, the Le Grande had wish to defray all expenses, but Peter was inexorable. § money earned as the dancer earned hers should purcha peaceful rest for the loved little body. And after seei Peter's eyes the dancer had not insisted.

A week had seen many changes. Marie was gone. Aft a conference between Stewart and Peter that had be decided on. Stewart raised the money somehow, and Pet saw her off, palpitant and eager, with the pin he had se her to Semmering at her throat. She kissed Peter on t cheek in the station, rather to his embarrassment. Fro the lowered window, as the train pulled out, she waved moist handkerchief.

"I shall be very good," she promised him. The la words he heard above the grinding of the train were h cheery: "To America!"

Peter was living alone in the Street of Seven Stars, go ting food where he might happen to be, buying a litt now and then from the delicatessen shop across the stre For Harmony had gone back to the house in the Wo badgasse. She had stayed until all was over and un Marie's small preparations for departure were over. The while Peter was at the station, she slipped away again But this time she left her address. She wrote:

You will come to visit me, dear Peter, because was so lonely before and that is unnecessary no But you must know that I cannot stay in the Siebenster strasse. We have each our own fight to make, and 31 have been trying to fight for us all, for Marie, for dear little Jimmy, for me. You must get back to work now; you have lost so much time. And I am managing well. The Frau Professor is back and will take an evening lesson, and soon I shall have more money from Fraulein Reiff.
You can see how things are looking up for me. In a few months I shall be able to renew my music lessons. And then, Peter-the career! HARMONY.

Her address was beneath.

Peter had suffered much. He was thinner, grayer, and as he stood with the letter in his hand he felt that Harmony was right. He could offer her nothing but his shabby self, his problematic future. Perhaps, surely, everything would have been settled, without reason, had he only once taken the girl in his arms, told her she was the breath of life itself to him. But adversity, while it had roused his fighting spirit in everything else, had sapped his confidence.

He had found the letter on his dressing table, and he found himself confronting his image over it, a tall, stooping figure, a tired, lined face, a coat that bore the impress of many days with a sick child's head against its breast.

So it was over. She had come back and gone again, and this time he must let her go. Who was he to detain her? She would carry herself on to success, he felt; she had youth, hope, beauty and ability. And she had proved the thing he had not dared to believe, that she could take care of herself in the old city. Only-to go away and leave her there!

McLean would remain. No doubt he already had Harmony's address in the Wollbadgasse. Peter was not subtle, no psychologist, but he had seen during the last few days how the boy watched Harmony's every word, every gesture. And, perhaps, when loneliness and hard work began to tell on her, McLean's devotion would win its reward. McLean's devotion, with all that it meant, the lessons again, community of taste, their common youth! Peter felt old, very tired.

Nevertheless he went that night to the Wollbadgasse, He sent his gray suit to the portier's wife to be pressed, and getting out his surgical case, as he had once before in the Pension Schwarz, he sewed a button on his overcoat, using the curved needle and the catgut and working with surgeon's precision. Then, still working very carefully, he trimmed the edges of graying hair over his ears, trimmed his cuffs, trimmed his best silk tie, now almost hopeless. He blacked his shoes, and the suit not coming, he donned his dressing gown and went into Jimmy's room to feed the mice. Peter stood a moment beside the smooth white bed with his face working. The wooden sentry still stood on the bedside table.

It was in Peter's mind to take the mice to Harmony, confess his defeat and approaching retreat and ask her to care for them. Then he decided against this palpable appeal for sympathy, elected to go empty-handed and discover merely how comfortable she was or was not. When the time came he would slip out of her life, sending her a letter and leaving McLean on guard.

Harmony was at home. Peter climbed the dark staircase-where Harmony had met the little Georgiev, and where he had gone down to his death-climbed steadily, but without his usual elasticity. The place appalled himits gloom, its dinginess, its somber quiet. In the daylight, with the pigeons on the sills and the morning sunlight printing the cross of the church steeple on the whitewashed wall, it was peaceful, cloisterlike, with landings that were crypts. But at night it was almost terrifying, that staircase.

Harmony was playing. Peter heard her when he reached the upper landing, playing a sad little strain that gripped his heart. He waited outside before ringing, heard her begin something determinedly cheerful, falter, cease altogether. Peter rang.

Harmony herself admitted him. Perhaps-oh, certainly she had expected him! It would be Peter, of course, to come and see how she was getting on, how she was housed. She held out her hand and Peter took it. Still no words, only a half smile from her and no smile at all from Peter, but his heart in his eyes.

"I hoped you would come, Peter. We may have the reception room."

"You knew I would come," said Peter. "The reception room?"

"Where customers wait." She still carried her violin, and slipped back to her room to put it away. Peter had a glimpse of its poverty and its meagerness. He drew a long breath.

Monia was at the opera, and the Bohemian sat in the kitchen knitting a stocking. The reception room was warm from the day's fire, and in order. All the pins and scraps of the day had been swept up, and the portières that made fitting-rooms of the corners were pushed back. Peter saw only a big room with empty corners, and that at a glance. His eyes were Harmony's.

He sat down awkwardly on a stiff chair; Harmony on a velvet settee. They were suddenly two strangers meeting for the first time. In the squalor of the Pension Schwarz, in the comfortable intimacies of the Street of Seven Stars, they had been easy, unconstrained. Now suddenly Peter was tongue-tied. Only one thing in him clamored for utterance, and that he sternly silenced.

"I-I could not stay there, Peter. You understood?"

"No. Of course I understood."

"You were not angry?"

"Why should I be angry? You came, like an angel of light, when I needed you. Only of course -

"I'll not say that, I think."

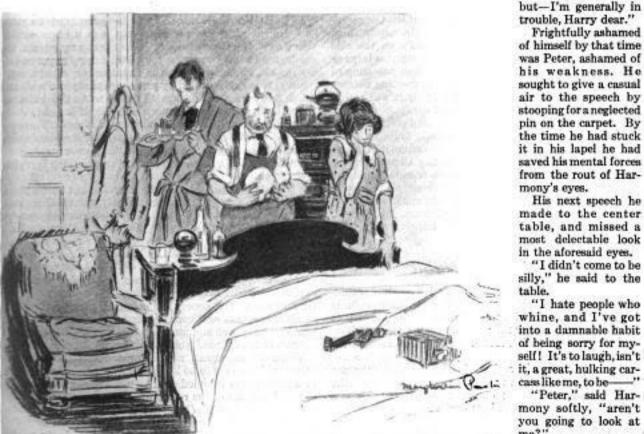

"Please say it, Peter!"

Peter writhed, looked everywhere but at her.

"Please, Peter. You said I always came when you needed me, only -

Only-I always need you!" Peter, Peter!

"Not always, I think. Of course, when one is in trouble one needs a woman; but -

Never Before Had the Combination Failed to Amuse the Boy

"That's cowardice. And I've fixed my hair a new way. Do you like it?

"Splendid," said Peter to the center table.

"You didn't look!"

The rout of Harmony's eyes was supplemented by the rout of Harmony's hair. Peter, goaded, got up and walked about. Harmony was half exasperated; she would have boxed Peter's ears with a tender hand had she dared.

His hands thrust savagely in his pockets, Peter turned and faced her at last.

"First of all," he said, "I am going back to America, Harmony. I've got all I can get here, all I came for ——''
He stopped, seeing her face. "Well, of course that's not
true, I haven't. But I'm going back anyhow. You needn't look so stricken: I haven't lost my chance. I'll come back sometime again and finish, when I've earned enough to

"You will never come back, Peter. You have spent all your money on others, and now you are going back just where you were, and—you are leaving me here alone!"

"You are alone anyhow," said Peter, "making your own way and getting along. And McLean will be here.'

"Are you turning me over to him?"

No reply. Peter was pacing the floor.

"Yes, dear?"

"Do you remember the night in Anna's room at the Schwarz when you proposed to me?"

No reply. Peter found another pin.

"And that night in the old lodge when you proposed to me again?"

Peter turned and looked at her, at her slender, swaying young figure, her luminous eyes, her parted, childish lips.

"Peter, I want you to-to ask me again."

"No!"

"Well, of course-

Frightfully ashamed

His next speech he

"I didn't come to be

me?

"I'm afraid."

"Why?"

"Now listen to me, Harmony. You're sorry for me, that's all; I don't want to be pitied. You stay here and work. You'll do big things. I had a talk with the Master while I was searching for you, and he says you can do anything. But he looked at me-and a sight I was with worry and fright-and he warned me off, Harmony. He says you must not marry."
"Old pig!" said Harmony. "I will marry if I please."

Nevertheless Peter's refusal and the Master's speech had told somewhat. She was colder, less vibrant. Peter came

to her, stood close, looking down at her.

"I've said a lot I didn't mean to," he said. "There's only one thing I haven't said, I oughtn't to say it, dear. I'm not going to marry you-I won't have such a thing on my conscience. But it doesn't hurt a woman to know that a man loves her. I love you, dear. You're my heaven and my earth-even my God, I'm afraid. But I will not marry

"Not even if I ask you to?"

"Not even then, dear. To share my struggle -

"I see," slowly. "It is to be a struggle?"

"A hard fight, Harmony. I'm a pauper practically." "And what am I?"

"Two poverties don't make a wealth, even of happiness," said Peter steadily. "In the time to come, when you would think of what you might have been, it would be a thousand deaths to me, dear."

"People have married, women have married and carried on their work, too, Peter.'

"Not your sort of women or your sort of work. And not my sort of man, Harry. I'm jealous-jealous of every one about you. It would have to be the music or me."

#### PHILADELPHIA, MAY 2, 1914

#### Our Foreign Trade

WHATEVER other angles and phases the case presents, the state monopoly of the oil trade in Germany is a substantial victory for the Deutsche Bank crowd in its contest with the Standard Oil Company for the German market. We may assume that the German oil crowd is spiritually superior to the American, yet the important point is that its government stood behind it with a helping hand, while our Government stood behind our oil crowd with an active boot. And, though curbing big and perhaps predacious concerns, our Government is doing less than it should to assist small and presumptively virtuous concerns in that rivalry for foreign trade which is growing keener all the time.

We are becoming importers of raw foodstuffs, instead of exporters. Raw cotton we can continue to sell in great quantities for many years, whatever our trade policy may be, because we have the best supply; but, with that exception, in selling goods abroad we must compete more and more on equal terms, except as our skill and organization give us the advantage.

In the matter of organization the consular service ought to be the chief item; but the pains and expense the German Government takes to promote foreign trade make our efforts in that line look inadequate. We are often niggardly with the consular service. Men who should be engaged with affairs of some importance—if they are worthy of their places and salaries at all—spend much time on petty details because there is no appropriation for a fifteendollar-a-week clerk. That is poor economy.

#### A German Difference

If WE had two of the greatest steamship lines in the world, whose commercial fleets sailed every sea and which together did a great part of the country's ocean-carrying trade, we should, of course, forbid them to combine, pool or make joint rate agreements. All the resources of the Government would be employed to keep them from combining and to harry them into competition. And that fact is possibly one of the reasons why we have no great steamship lines.

The two great German lines had an agreement, but failed to renew it. Some months ago a rate war that would probably become worldwide was announced, and that the companies did finally reach an agreement is everywhere attributed to the personal intervention of the Kaiser.

The power of the German Government, in short, was exerted in a direction diametrically opposite to that which our Government would have taken. A rate war between these companies would have been a disaster to German business, and the German Government is not looking for opportunities to breed disaster.

#### Talk Not Worth Printing

IT IS true that, with our scheme of government, Congress is by no means as important an institution as Parliament is in Great Pritain; yet observant foreigners are surprised at the

on in the national legislature. Our newspapers make no attempt to report congressional debate. Only when something extraordinary happens—a vote on a big bill or an incident of a sensational nature—do they dignify it with a headline.

For what they utter in debate, says the Constitution, senators and representatives shall not be questioned in any other place; and in the nature of the case they cannot be, because in no other place is the utterance known. Of course tens of thousands of particular speeches are mailed to constituents and mainly thrown into the wastebasket; but even though the particular speech is read, that does not constitute publicity of debate, because the reader does not get the rejoinder.

Now and then we get excited about a speech in Congress and turn expectantly to the Congressional Record in order to read it. What we usually find in the Record is this: "Mr. So-and-So addressed the Senate. His speech will appear hereafter."

The country's extensive ignorance of day-to-day proceedings of Congress seems to us rather unfortunate; but if you raise the point with a newspaper editor his prompt reply is: "The stuff is not worth printing!"—which is perhaps more unfortunate still.

#### Prejudiced Witnesses

You would have a peor opinion of a man who, as a regular occupation, harnessed half-naked women to carts and set them to crawling all day on their hands and knees through the hot, narrow passages of mines, hauling coal, and who bitterly resented every attempt to change that condition.

You would hardly care to belong to the same club with a man who was put into a towering rage by an attempt to stop him from working little children at the loom until they fainted from hunger and exhaustion. Yet good men have done these things.

There is nothing more terrible in any literature than those parliamentary reports on the condition of English labor in the fore part of the nineteenth century, from which Marx took the most important material for the first volume of Capital.

To read now of the awful abuses and of the stubborn resistance to reform gives one the impression of a cold and calculating ferocity that makes Milton's Satan look like a sentimental amateur. Yet it is perfectly certain that the British employers of that time were personally, in the main, good, kindly men—so far as they could see. A majority of the Southern slaveholders were personally good, kindly men—so far as their understanding went.

A long-standing abuse from which a profit is derived inevitably blinds its beneficiaries and makes them utterly untrustworthy witnesses. In child-labor legislation, the objections of employers of that labor should not be at all considered. Their position puts them out of court.

#### Swedish Elections

AN UNUSUALLY brisk canvass preceded the recent general election in Sweden for members of the lower house of Parliament. The Liberal party urged some constitutional reforms and the supremacy of Parliament in the government of the country—matters whose discussion obviously requires some study and thought; but the Conservatives were happily spared the bother of discussing them seriously, making the campaign practically on the sole issue of national defense, which means an army as large as the country can conveniently support. And one wing of the Liberals joined the Conservatives in treating defense as the most important question. Naturally it was rather expected that the Conservatives would win.

There are many urgent modern social and political problems that the conservative mind invariably finds confusing or irritating; but in several countries nowadays it is spared the bother of considering them by meeting all demands for reform with loud shouts for more regiments and battleships. So long as politics can be reduced to the simple matter of waving a flag and blowing a trumpet, the conservative can compete in it on rather more than equal terms. Militarism, the world over, is conservatism's most important and only dependable asset.

#### Getting the Habit

I T IS practically just as easy to form one habit as another. To one man the notion of a highball at three P. M. is very obnoxious, because it would interfere with his play at golf or tennis. Another man detests the notion of golf or tennis at three P. M. because it would interfere with his highball.

Physically, mentally and spiritually the two men are much alike. They have merely formed different habits, and with a little shifting of the respective scenes one might just as readily have formed the habit of the other.

One man is plunged into gloomy misery by the prospect of spending an evening away from his books and slippers. Another is unhappy unless he has an engagement that will

take him out of the house after dark, or company is coning in. Both men crave a strong reaction from the day; the office. One has formed the habit of finding it in literture—the other in lights, motion, company. By pressing different button, with a little persistence, each could have acquired the other's habit.

Hardly any other habit will stand a young man in bett stead than a reading habit, both for what it includes m what it excludes. Of all habits it is the pleasantest, to cheapest and the most dependable. You can indulge regardless of weather, seasons and location.

For almost any intelligent young man it is an ea habit to form. That and a habit of physical exercise w make nearly any man fireproof against chronic dissipation.

#### **Great Naval Strategists**

THE finest thing about your great naval strategist is the always ends by blowing himself up. His proposition is that the three sides of a triangle must always be equal only one side must always be longer than the others.

The world will lapse into chaos unless each one of jor five combinations exceeds all others. If it is the Miterranean which engages his attention he will demonstrate that England must predominate there or lose India the colonies—while Germany, Austria and Italy must it wise predominate; and in any event England can predominate in the Mediterranean without losing con of her home coasts and territory. Here is the devil, the deep sea; you may choose between them, but you have no other choice.

Now if all this paper naval strategy were only a sor weird game, played with building blocks in some home the aged in order to while away a winter evening, it m have much merit—because you may play it forever a out coming to any termination. The astounding thir that intelligent men, holding positions of great respebility, take it with deadly seriousness, and that vast s of actual, hard-earned money are squandered to keep it

We are amazed at huge follies of the past—a T? Years' War; a pre-revolutionary France; a Stuart rég a Mississippi Bubble. Our children will be equally am at the great naval strategy of our day.

#### One Abused Railroad

D<sup>O</sup> YOU happen to remember that when the St. 1 & San Francisco Railroad went into bankruptcy May its chief counsel rose in righteous indignatio declare that the innocent corporation was a victim of rageous interference and oppression by state legisla and the Federal Government, and society in general:

Well, the Interstate Commerce Commission tris discover the real reasons for insolvency and ran across items as a profit of seven million dollars to syndica partly composed of insiders—which unloaded vabranches and feeders on the parent system, and profit thirty million dollars to other syndicates and bankers underwrote and marketed the road's securities.

Obviously the real trouble with the St. Louis  $\delta$ Francisco was not too much interference, but too lit

#### The Rate Decision

WE HOPE the railroads will be permitted to freight rates five per cent—but it is a hope vistring to it. As Commissioner Prouty has pointed of are trying in this country a completely novel experimental by far the greatest business in the country, except culture, is entirely owned by private capital; but we taken away from the owners all power to fix the product—transportation—shall be sold

Imagine that situation in your own business. You hish the capital and the management, but somebook has absolute power to fix the price at which your good be sold. That is the novel experiment this country is in regard to railroads.

The net revenues of the railroads in the last thre have not increased at all commensurately with the interpretable capital investment, and we believe the Government—the novel conditions we have created—can far better to give the roads an inch too much than to give the inch too little. So we hope an increase in freight rabe granted.

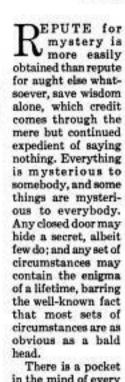

However, when we look over certain scandalous of railroad credit that have come to light of late yetie a string to the hope. We believe that a great roads are capably and honestly managed. We also that there has been and probably still is a shocking to figraft in the railroad world as a whole.

When we see great, flourishing transportation prises, which ought to be highly prosperous, dragge to a bankrupt or crippled condition, we want more ing explanations of the reasons than have yet beet coming; and we decidedly do not want any railroad another nickel for the management to gamble with

As to somewhat higher freight rates, yes. As t comprehensive and rigid public regulation, yes also

# WHO'S WHO-AND WHY

## Serious and Frivolous Facts About the Great and the Near Great

in the mind of every human being that contains the mental ingredients for belief in the inscrutable. And as every crank is cryptic, and most of us are cranks, it is plain to be seen why, on the slightest excuse - on mere

Tom Discretion, of Prudence, Circumspect County

say-so—we accept as mysterious what on examination will prove to be palpable; for it usually happens we are too lizy to examine, and thus many things pass as hidden that in reality are self-evident instead of secret.

Of course secrecy is one phase and mystery another; for though a mystery is not always a secret, a secret is usually mysterious; but when you hold a secret mysteriously then you have done what is easy to do, and thus you create your atmosphere of obfuscation.

Hence we who have to do with such matters speak of executive sessions of the United States Senate as both secret and mysterious. Those sessions have been held in that regard for many years. When one is imminent there is an ominous pause in the Senate. Some grave and digni-

fied statesman rises and moves that the Senate proceed to resolve itself into executive session. There is a great jangling of bells and the doortenders hurry out the dawdlers in the galleries. All clerks, reporters and attachés leave. The doors are swung to. Tom Dawson enters. Momentous affairs are to be discussed and mayhap decided.

Tom Dawson enters, than whom there is no more officially mysterious person alive and no franker one unofficially. Tom is the executive clerk of the Senate, the one man outside the accredited membership of the Senate who is allowed to hear those deliberations. The doors remain closed for such time as is necessary; then they open to show a few senators in their seats, to disclose some tobacco smoke drifting against the stained-glass ceilings, and to exhibit an atmosphere of mystery and

Pittsburgh stogies. To be sure, since

Senator Tillman made his impassioned plea to his colleagues to refrain from smoking in executive session because of his highly sensitized olfactory nerves, the tobacco smoke is absent on occasions when the senator is present; but usually the smoke is there.

Now then, that is a mysterious proceeding. What is said and done there is supposed to be inviolable-supposed to be. Mystery surrounds executive sessions-not because they are mysterious, but because it is the custom, and has been for many years, to say they are. This reputation, easily obtained decades ago, continues traditionally; but the only difference between regular and open sessions of the Senate and executive sessions is that when the executive sessions are important more is printed about them in the newspapers than about the regular sessions.

Taking themselves seriously, the senators take their executive sessions seriously, so far as the word goes, and weigh down Tom Dawson with the clerical responsibility that attends. They trust no other outsider. That, as it happens, shows much senatorial acumen, for if there is one citizen of this Republic eminently fitted by character, by temperament and by training to keep executive-session secrets secret, that person is Tom Dawson.

#### Leaks in Executive Sessions

 $\mathbf{T}^{ ext{HEY}}$  can burden that quiet, efficient man with any confidential information they have, from a contemplated foray on Mexico to the character of a candidate for a second-class postmastership, and Tom will never peep. Tom's other name is Discretion, and his place of birth was Prudence, Circumspect County, State of Wariness.

You see, the senators knew Tom—as well they might, for he had been among them a long time. Oddly enough, part of his business was to secure for the public press information concerning the very executive sessions he now guards so closely. Tom was a newspaper man stationed in the Senate Chamber, and he was stationed there for years. In common with a few other correspondents he had the privilege of the floor, but not when there were executive sessions. Then he had to go out and keep off the grass. However, after the executive sessions were over it was his duty to discover what happened, and he always so discovered.

No senator ever told him. Perish the thought! No senator ever tells any correspondent anything that happens in executive sessions—that is, no senator ever admits he tells. Some do. Very good reports are often obtained. I remember a time when a senator rose in his seat during the morning hour and denounced his colleagues for leaking about executive sessions. He was quite bitter about it.

He said it was a crying shame and he himself almost cried.

He read the report of a session on the previous afternoon which he said was outrageous in that it correctly told what happened at a gathering concerning which no senator could talk, by right. It was very affecting to me, because wrote the article this senator read and condemned—and he himself gave me the information!

For many years-twenty, probably-Tom Dawson wrote reports not only of executive sessions but of other Senate sessions as well. He supplied his reports to a press association and what he wrote went into most of the newspaper offices of the country. Naturally he had to be accurate, nonpartisan, unbiased-absolutely-and he was. Tom Dawson never wrote a prejudiced line in his life. He never telegraphed a word he did not think was absolutely in accordance with the facts.

Think what that means! He was no special man, writing for one paper or two or three directed by an editorial policy or by an editorial whim or by a partisan bias. He wrote for hundreds of papers. His part of the report was used as the basis of much editorial comment. In many instances Tom Dawson's stories were all the readers of papers saw, and on them they based their knowledge of what was happening in Washington.

A great trust, I should say! And Tom Dawson never violated it. A quiet, sincere, honest man, he exerted a greater influence than most people understand or appreciate; and there never was a minute in his writing life when he was actuated by any other impulse than to get the news, get it right, and send it along, regardless of whom he might help or hurt.

The senators liked him-all the long procession of senators who served during Tom's work as a correspondent; and when they needed an executive clerk they selected him, because they knew that whatever secrets they might have were safe with him.

Therefore when the bells clang and the doors close Tom is the only person not a senator who is inside; and whatever happens, now that he is out of the newspaper business, is as sure to stay unrecorded, because of him, as in the old days whatever happened was sure to be recorded because of him. In no other way could they keep him from printing the news.

He has been in Washington for a long time, has Tom Dawson: and for some years he was secretary to the late Senator Henry M. Teller, of Colorado. He owns a ranch in Colorado and raises hay and other crops there, but confines his agriculture at the Capital to the expert cultivation of some highly prized whiskers.

Hundreds of newspaper correspondents have passed through the press gallery on the Senate side since Tom

Dawson went there. and there is not one of them but has profited by the wisdom and experience of Dawson, for he is as kindly as he is efficient, and always ready with counsel and information.

Tom Dawson knows more about the Senate than any man in it, and when he was writing about it he did his work with less fuss and with more ability than most of his colleagues.

The influence men like Tom Dawson exert on the opinions the people hold on governmental affairs in this country is incalculable; and there never was a man in his position who had better motives, a stronger sense of responsibility, a more sincere purpose and a more honest execution than this modest, quiet, capable man who guards the executive secrets of the Senate now as faithfully as he diligently set them forth in the old days.

# Styleplus d

The same price the world over."

When you buy your clothes do you just pick out what "looks good" and take a long chance on the wear?

There is a simple way to avoid paying too much for your clothes or getting a suit of inferior quality-look for the Styleplus Label on the inside of the coat collar. The Styleplus Label is more than a tag, it is a promise. It means that the clothes are under bond to give you satisfaction or new ones will be furnished.

So when you see the Styleplus Label in a coat you know that the Merchant is back of it and the Manufacturer is back of it. They stake their business reputations on its genuine quality.

Style+all-wool fabrics. Style+perfect fit. Style+expert workmanship. Style+ guaranteed wear.

One leading clothier in nearly every town and city sells Styleplus Clothes. If there should not be a Styleplus store in your town, please write us, and we will refer you to one nearby.

You can tell a genuine Styleplus by the Label in the coat, the Ticket on the sleeve, and the Guarantee in the pocket.

## THE LAME DUCK

#### Views of an Imnocent Byetander

Washington, D. C. DEAR JIM: You may recall that I have made casual reference in this correspondence to the fact that nothing is done in Washington which is not political. Though we carry side lines of amelioration of the woes of the people, anxiety for the general good, reverence for the Constitu-tion, economy in public expenditure, and conservation of our resources, as well as conversation concerning constructive legis-lation and the uplift, our main stock is politics. We handle that almost exclusively; and when we do put out a sample of our other goods we always tie a modicum of politics in with it, that being our business—politics.

I am moved to further reference to this subject by a contemplation of the cities selected by Mr. McAdoo, Mr. Houston and Mr. Williams as regional bank centers. If you hark back a little you will remember that Messrs. McAdoo and Houston made a rather comprehensive and leisurely swing round the circle when they had the establishment of these banks in prospect; and it now appears that they went largely for the air. They needed rest and a change; for if that trip had any effect on the final deter-mination of the cities selected it is not apparent, now that they have been selected.

They had a nice trip, and when they came home they spoke admiringly of the size of this country and its wealth and resources. They were quite impressed with all those

features.
"It really is most interesting," they said
one to another, "to discover that there are
so many centers of population in this broad domain of ours where regional banks could well be established—most interesting.
Now—would you believe it?—there are
Baltimore and New Orleans; Louisville
and Cincinnati; Pittsburgh and Denver; and Cincinnat; Pittsburgh and Denver; Portland, Oregon; and Seattle—all busy marts of trade and quite populous; excel-lent cities, all of them—most commendable cities. We approve of them all. Public-spirited people in them too, and excellent hosts! We had a most enjoyable trip and met many fine people; but

#### A Session of the Buts

But! Sure, Jim-but! One but, two buts, three buts, four buts, five buts-a noble array of buts and a powerful. And the buts butted in, Jim; they butted in with a home-sweet-home effect. Let me classify them.

But Number One: William G. McAdoo,

born in Georgia. But Number Two: John Skelton Wil-

liams, of Richmond, Virginia. But Number Three: David F. Houston, erstwhile of St. Louis and ersterwhile of

But Number Four: Albert S. Burleson,

of Texas.

But Number Five: Colonel Edward House, also of Texas.

Of these buts the first three make up the

committee that selected the cities, and the remaining two make up the advisory board as pertaining to Texas. You see how it worked out.

"I move," said Mr. McAdoo, "that a

regional bank be established at Atlanta,

"Aye!" voted Williams and Houston.
"I move," said Mr. Williams, "that a regional bank be established at Richmond, the proud capital of my native state."

"Aye!" voted McAdoo and Houston. "I move," said Mr. Houston, who up said Mr. Houston, who up to this time had been discreetly silent, save when voting, "that a bank be established at St. Louis and another at Kansas City, both imperial cities of the imperial common-

wealth that claims my residence."

"Aye!" voted Williams and McAdoo.

"Further," continued Mr. Houston, "I now move that a bank be established at Dallas, a flourishing municipality in the

state of my affections, Texas."
"Aye!" yelled Albert Sidney Burleson and Colonel Edward House; and it was all unanimous and pleasant, and devoid of misunderstanding and acrimony.

## BEAVER BOARD is cut with a saw and put up with hammer and mails. Fer directions given to every user.

#### Easy to Build If You Follow Instruction

That's one of the 41 advantages of BEAVER BOARD walls and ceilings over lath, plaster and wall-paper. It also makes the house warmer in winter, cooler in summer, resists the passage of sound and never cracks.

A complete co-operative service brige every BEAVER BOARD user. The Department of Design and Decoration furnishes estimates of amount needed. as well as suggestion for parel designs and color schemes. The Builders' Service Department gives valuable information to the men who do the work. BEAVER BOARD dealers are always glad to show BEAVER BOARD displays and photographs of actual

There was no politics in it, Jim. Of course not! It was all based on friendship and loyalty to and affection for the old homes. State pride, James; and a lovely sentiment it is and patriotic! Who can wonder that the thoughts of William Gibbs McAdoo turned fondly toward dear old Georgie and the metropolis thereof when Georgia and the metropolis thereof when he had this boon to grant? And who is there to cavil at the loyal affection of John Skelton Williams for Richmond? And David F. Houston is a stern man, it seems, but sentimental-excessively sentimental and powerfully so, for he secured three banks for his share, aided, of course, by those emotional Texans, House and Burleson, whose eyes ever dim with tears when the beauties of dear, dear Dallas are re-called to them by word or deed—Burleson, who made his mysterious visit to the White House when the cities were under consid-eration, his mysterious visit now being mysterious no longer; and House, the silent, self-effacing House, who spends so much of his time in the Treasury advising, out of the fund of his vast experience, with Secretary McAdoo—House, of whom to say he is gum-shod and rubber-tired were as scanty an appreciation of his noiseless methods of oper-

appreciation of his noiseless methods of operation as to compare him with a brass band!

"But me no buts!" New Orleans and Portland and Denver and Louisville and Pittsburgh might well have exclaimed had they been apprised of what was politically in the wind; but they were not. And they were butted a few buts, Jim; butted a few as herein set down.

So starts the Currency Bill that is to

So starts the Currency Bill that is to assuage all our financial woes—so starts it in the manner aforesaid; and now we await the appointment of the board. Before you read this, that may have come to pass; but there is no inkling as yet of its possible or probable membership. Still, writing before the event, let it be said that if there is a sim-ilar exhibition of the home-sweet-home thing in the make-up of that board the Currency Bill, which began with such fair prospects, will be but a withered flower of legislation, instead of a proud bouquet of law.

#### The Terrible Meek

However, the President still maintains his grip on the Congressional lever and is still in full control. It is amazing, Jim, how that man runs things; how he gets what he wants in the face of any and all opposition! Every time I watch him in operation I am again of the opinion that the best descriptive phrase for him is the title of Kennedy's play, The Terrible Meek. He is a meek man, Jim, and we have his word for it, as note in his speech to the Press Club; but, hevings! how terribly meek he is! In all my experience I never knew a man who was softer-spoken, more deferential to the wishes and opinions of others, more affable and agreeable; and in all my experience I never knew a man who, once having set out to do a thing, so unrelentingly proceeded to do that thing! They tried to defeat his man Daniels, of

New Jersey, named for a vacancy on the Interstate Commerce Commission. The Senate refused confirmation for a long time. Then suddenly the Wilson forces took up the matter and after it was all over Daniels was confirmed. So it goes with everything. He hasn't missed a trick yet. Prophecy is selling away below par in the present market; but it might be worth while to take a flyer at a prognostication at that. Hence, in a guarded manner, I am here to say that eventually he will get his tolls-repeal bill through the Senate. It will take time, and maneuvering, and pressure and time, and maneuvering, and pressure and the thumbscrews for some, and the rack for others; but, unless all signs fail, he will get the bill through finally. That sort of thing seems to be his fixed habit of procedure.

Meantime the Democrats of the House continue along their well-known econom-

The House was proceeding with the legislative, judicial and executive appro-priation bills. There had been a proposition to cut down mileage allowances to actual cost instead of allowing them to re-main at the present rate of twenty cents a mile. This would have saved a hundred thousand dollars a year; but the formerly economical Democrats fell on the item with loud cries and tore it limb from limb. Also they tore it out of the bill. Then came a proposition to increase the salaries of Congressional clerks to eighteen hundred dollars a year. Not to have done this would have saved one hundred thirty-two thousand dollars more a year; but they did it.

THE REAL PROPERTY.

# nerce-

# A light car and a speedy one

■HEthought that went into Pierce-Arrows, to make them durable, also prescribed materials that were strong without being too heavy, and saw to it that these materials were secured and utilized at whatever cost. Today Pierce-Arrow Cars not only possess unequalled durability but are also lighter than any other cars that are compared with them.

The purchaser of a new Pierce-Arrow secures a car in which weight is present only in degree necessitated by requirements of safety and strength and in which even that weight is leavened by the genius of design. He secures a car of life-long durability at a cost which, when spread over years of service, over continents of travel, is insignificant.

The man who purchases such a car from its original owner, before that owner has begun to exhaust its built-in worth, secures the best procurable bargain in motor cars.

> Pierce-Arrow cars are built in three chassis sizes, 38, 48 and 66 horse-power. These chassis are equipped with many types of open and enclosed bodies, including a runabout, with interchangeable Victoria and

The Pierce-Arrow Motor Car Company, Buffalo, New York

a hundred thirty-two thousand dollars for their clerks, they looked about for some place where they might be really economical. They found it, Jim—found it in the barber shop; and they virtuously and economically fixed it so that the barbers must buy their own talcum powder and toilet water and such, instead of getting it free as heretofore. This saved five hundred deliver a recer and was considered a natable

Wouldn't that make you proud of your legislators? Wouldn't that cause you to rise up and give three hearty cheers for the statesmen who are spending a billion dollars and more of your money and my money? Doesn't that show the caliber of those patriots? They hold fast to their those patriots? They note last to their mileage grab of twenty cents a mile going to and coming from each session, and they give their own clerks three hundred dollars more a year, which means nothing in the way of increased efficiency of service, but does mean a little more pork for the boys; and they say sternly to the barbers that they must buy their own talcum powder and their own witch-hazel.

Meantime again, Thomas Riley Marshall, Vice-President and official guest, has bur-geoned in a fancy vest. It isn't a waistcoat. It is a vest, and it is fancy. One of the members of the Persian Legation gave the vest to him—that is, the Persian gave the Vice-President the cloth, or tapestry, or prayer rug, or whatever it is, and Thomas Riley had it fashioned into a vest. The way it came about was this: The Vice-President, it seems, has always had a longing for a fancy vest.

Mr. Marshall's Persian Waistcoat

Out in Indiana they do not wear fancy vests much, at least not in Columbia City. When he came to Washington the only fly in his ornate amber was the lack of a colored vest. He had everything else his heart craved. He was Vice-President, a nice easy job, and he never had to buy a meal except his breakfasts, which did not tax him much as he belongs to the no-breakfast cult. He had ample opportunity to get off his quips and funny sayings, and he presided over the Senate whenever he felt the need of employment.

He was having a bully time; but there was a drawback—he had no fancy vest. So one night when he was dining with the Persians he happened to remark to Mirza Ali Kuli Khan that a certain bit of gayly-colored stuff he saw there was some cloth!

"Will his excellency allow me to present it to him?" asked Mirza Ali Kuli Khan. Instantly the Vice-President felt a warm glow stealing o'er him. This filled his cup of happiness to overflowing. He could

make a vest of the cloth!

"If it pleases you I shall be glad to accept," Mr. Marshall replied; and the cloth was waiting for him at his hotel when he arrived, so prompt are the Persians in these little matters.

The pattern is two hundred years old and there is a separate shade of color for each decade. The tailor handled the cloth lovingly and cut it so skillfully that he lost not a single gaudy splash.

Isn't it strange how these presiding officers run to fancy vests? There was poor Tim Woodruff, who never got beyond being a presiding officer, and one of the reasons was a fancy vest; and here is T. R. Marshall, a presiding officer, who blossoms out in one! Probably he has no further ambitions; and, when you come to think of it, he has received a pretty fair political dividend considering the capital invested.

In conclusion I note that former President Taft has put out his plan for reducing and that President Wilson has had the temerity to edit some gems of English prose submitted by Doctor Eliot for label-ing the new Washington Post Office. Mr. Taft's words should carry weight. As a reducer he is second to none. Look at what he did to the Republican party! And as an editor Mr. Wilson seems to have the courage of his blue pencil, for he sticks to his revisions of the sentiments so happily expressed by Doctor Eliot; albeit, after the papers printed the statement that he had edited those phrases, it was given out officially that President Wilson, when he was editing the stuff, did not know Doctor Eliot wrote it. I suppose the President thought that Jimmie Sloan dashed it offor mayhap Tom Brahany. Yours for revision,

Bu.t.,

Thus, having secured a hundred thou-sand dollars for themselves in mileage and dollars a year and was considered a notable achievement along the lines of economy.

#### Benson's Day

(Continued from Page 17)

nere not for that restless knowledge of how may precious moments he was losingsynotin itself unpleasing. Mrs. Batsford-Wring had the English woman's soothing about attitude toward that superior being. man. After ordering for her brother the pecial accessories he liked, and sending tack his toast to be done over, and jumping up to pull down the blind a trifle to shade to 1508, she had solicitously placed a screen serven Benson and the fire, and then sat with her graceful lankiness drooping toward in, and her enormous violet eyes waiting so his as she offered up autobiography, an-

Benson was to call her by her pet name, hickie, as he used to do. She deftly cast a set of comfort round him. Once or twice, niced, he shot a glance at Cecelie, which aid dominantly: "This game is not over yet wait until my time comes!" while she had becent her golden larges at the careried beneath her golden lashes at the cap-um's handsome face, her light figure, with in suggestion of withdrawal, her head tilted bik as she leaned forward, proving, as ever, a nagnet.

she seemed to murmur only provocative national states to his persuasive eloquence, this was punctuated by the loud hawhaws tis delighted enjoyment. Once Benson

hard him murmur: "I es a silly ass! If you'll only tell me that you want me to say

and her answer:

"I'l tell you later if I get a chance."

and his again:

'Oh, if that's all you'll get it!" The remarks served to cut short the to-hour; Benson stood up suddenly and, arrang himself, went to settle with the samingly talkative Mrs. Paley, and to interies the chauffeur. There was time yet ir that planned walk with Cecelie before dereturn; but when he came back into the non Mrs. Batsford-Wring was there alone, estded out indolently in a big chair by

four young friend was tellin' us that ye and she are only by way of bein' dramy," she stated. "She says it's quite te hing here—you go off for the day withthe try preparation at all, you just telly the home—so simple, isn't it? My that is all for making what you call a the is it not?—with her."

And where is she now?" asked Benson,

more round.

She's gone out walkin' with him-thy're so interested in the fish-hawk's ed." said Mrs. Batsford-Wring. "Ah, that is this? Are they coming back

Geedie's face appeared in the doorway,

"I just ran back for an instant," she manned sweetly, "to ask you to return athe car with us, Mrs. Batsford-Wring—wand your brother—instead of going by ha. We can take them as well as not—we we not, Benson?"

Her tone faltered unexpectedly over the me sords as she looked at him. There was spickt pause in which some strange tinfor electrical disturbance made itself felt.

Certainly; that's a fine idea!"

There was a note in his voice she had there heard before. His face seemed to he changed to a coldness—a sternness indifference—so that he was no longer is same person. He began to laugh sud-

You come and see the fish-hawk's nest with me. Chickie!" He waved his hand to Seothers. "Go on! We'll follow."

THE path down which they walked slowly And over roots, briers, rocks, slippery web of winter, on which Mrs. Batsford-ling's gown left little dabs of fur in spite of all Benson's assiduous efforts in her

Chickie's coloring did not seem so barbee out-of-doors amid the general brownis and russet, the white gleam of the on inlet, and the brilliance of the suntomson ball before its setting. She cer-and had a nice way with one. She wanted te kind-to please him. It gave him a Hen warm sense of gratitude; he veered the to have been his. What was it that

The tea-table episode, however-if it Mrs. Varley had said? "Things turn out so different from the way you dream them?"
He lingered with Chickie along the way;

but when they finally reached the objective point the other two were there, sitting on a big, jutting stone in the midst of the dead leaves and the brown and beaten sedge— Cecelie with a downcast face and the cap-tain murmuring in her ear.

The tree stretched bare and gaunt far, far upward; above swung the deserted nest, from here a small rough black-and-white mass, to which the fish-hawk in his days of wild and flerce living, six feet of him from strong wing-tip to wing-tip, had triumphantly brought his gleaming prey. triumphantly brought his gleaming prey. Some sort of existence that—to swoop and strike and take and soar again, one's object accomplished, up, up into the wide kingdom of the sky and the safety of the winds and the rocking branches!

"And what is that hanging from the nest?" asked Mrs. Batsford-Wring idly.

"It must be a feather," said Benson, bending over her. "Would you like it as a souvenir?"

souvenir?"

"Very much—but you couldn't possibly get it, dear boy."

"Oh, couldn't I!" He laughed and stood up, beginning to take off his coat. "Just watch me!

"Why not?"

"Betson! Don't!" said Cecelie sharply.

He turned in surprise, as though he had
forgotten that she was there.
"Why not?" Why not?"

"Mrs. Paley told me that lots of boys "Ars. Paley tood me that lots of boys have tried to get the nest and couldn't. You can see where the lightning struck—those jagged branches may not hold you!"
"Oh, the tree's all right!"
"But, Benson! Please!" Her color flickered. "I ask you not to. It's idiotic! I

hate to see people in high places—it makes

"But Mrs. Batsford-Wring wants the feather," he argued seriously. "And if she wants it she must have it."

wants it sae must have it."

"Well, you are rather a dear, aren't you?"
said Mrs. Batsford-Wring caressingly.

"Oh, he's sporty!" agreed the captain.

"If he fails I'll bring it down for you, Miss Sherwood."

"I won't fail!" said Benson.

He gave a slight run and threw himself at the trunk of the tree, his feet grappling

at the trunk of the tree, his feet grappling for a footbold; his wiry form swarmed up until he reached the first branch and stood out on it erect, his figure black against the crimson light beyond before he turned and swung himself agilely upward, testing with eye and hand each jagged branch or stump before bearing his weight on it—up and up and up, with a clean, pulse-filling joy in the keen usage of his powers, until he reached the swaying nest and triumphantly waved the feather to the watching group

He rested a moment before attempting the descent, looking out over this brave new world—there was an invigorating tang in the air, the silver of the inlet reflected a rosy glow, the hoarse caw-caw of a swiftly flying crow broke against a wide, rarefied

stillness.
"Well, he can climb, can't he!" said Mrs.
Batsford-Wring. "Really he's quite an extraor'n'ry man, you know, Miss Sherwood—he does everything so well. The tales they tell of him out in Dakotah! My word, but those women at the ranch were mad over him! I thought he'd be married by now to the little Dalgarnie girl; but it seems he's nawt. Well, Bennie, you're back to earth again, aren't you?" Her violet eyes welcomed him.

Cecelie's face had flushed unaccountably. Was this the Benson she knew?

"And here's your feather, Chickie," he said, touching Mrs. Batsford-Wring gently on the cheek with it before handing it to her.

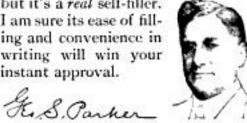

It was already dusk when the party at last started on the way back. Cecelie, looking stealthily at Benson from time to time felt strangely removed from him as she sat slim and straight by Mrs. Batsford-Wring, with the two men opposite. Something seemed to have gone from him—it was as if, though he was conventionally polite, he no longer had any sense of her presence. It gave her a frightened feeling, and Cecelie was not used to feeling frightened.

His keen, bright eyes met hers with no suggestion of interest in them—his lips had a line she had never seen before; he looked both cold and hard.

# This New Invention will increase your regard for Self-Filling Fountain Pens

The perfectly smooth barrel of the new Parker Self-Filling Fountain Pen is an advance step in self-filler construction which you will be quick to appreciate. Not a hump, bump or outside projection of any kind to interfere with your grip or writing. From all outward appearances it looks just like any standard fountain pen—

but it's a real self-filler. I am sure its ease of filling and convenience in writing will win your instant approval.

Press the Button-Pen fills in 2 seconds

Simply take off the shield cap at the end of the barrel, drop the pen point into any ink-well, press the button and the pen fills itself

# A CUCKY CURVE Self-Filling Fountain Pen

Any Parker dealer will gladly explain the ingenious invention that makes the Parker Self-Filler such a source of comfort and satisfaction to its users. This new pen is thoroughly practical, simple, sure and a marvel of efficiency.

#### Watch how the "Lucky Curve" prevents ink-stained fingers

The new Transparent Bakelite Pen gives you an opportunity to test Nature's law of capillary attraction, as demonstrated by the Lucky Curve. When you have finished writing with an ordinary fountain pen some of the ink is held back in

Bakelite Fountain Pen The barrel of this gon is made of a new transparent material which exactly resembles clear amiler. Besides untiching the facely Carre at work, rosecan at all times we tust how much liek there is in the battel and learn in advance when per will need refilling.

Transparent

the ink channel. Then, when the pen is returned to your pocket, expanding air caused by the heat of the body pushes the ink out into the nozzle, where it is liable to smear your fingers and soil your linen. Now the Lucky Curre, through its scientifically arranged contact with the wall of the barrel, drains the ink out of the curved inkfeed by capillary attraction. With no ink in the channel, no ink can be forced into the cap to leak out and stain your fingers. Hold the Transparent Bakelite Pen up to the light as shown in illustration and you can see exactly how and why leaking is prevented.

There are more than 200 styles of Parace Pens — Standard, Selt-Filling and Jack, Knife Safety. 15,000 dealers will their at \$2.50, \$3, \$4, \$5 and higher. With at \$2.50, \$4, \$4, \$5 and higher. With fight-gripping disappearing clip which snaps back to level of harrel when you write. 25c extrs. If unable to locate a dealer, write usuable we will be glad to wind you illustrated catalog showing all styles.

# Invest \$500 In A \$2000 Selden Truck

### Its Earnings Will Pay The Balance

THE Selden Sales Plan enables any reliable firm to start using the Selden Truck upon the payment of \$500, and pay the balance of the cost in monthly payments. Experience of Selden Users proves that the earnings of the truck itself meet these monthly payments.

This plan conforms with the credit requirements of modern business and enables every business house, large or small, to profit by truck delivery without drawing \$2000 from working capital.

# The Selden Truck

is guaranteed to carry 3000 lbs. Embodies the general principles of successful truck construction and is built of the best materials. Parts that bear the hardest strains are heat treated and in addition are larger and stronger than the best engineering practice requires.

Actual comparison with any truck of the same rated capacity will show that the Selden Frame, Axles, Springs, Wheels, Bearings, Bolts and Rivets are of larger dimensions than those of any other truck in its class

Owners of Seldens find that this large factor of safety in the construction of the vital parts of the Selden Truck, by putting the service into the truck itself, saves in maintenance and repair and is the best guarantee of continuous economical performance.

#### Specifications in Brief

> We want dealers in unassigned territory who know how to sell commercial cars and who appreciate the business proposition offered in the Selden Truck plus the Selden Sales

She had whispered, with sudden compunction, before they entered the car:

"I'm sorry—I'm sorry we are not to have our Last Ride together!"

And he had answered aloud, casually:
"Oh, it makes no difference at all, really!" It was strange to look at her and

feel that what he said was true.

Mrs. Batsford-Wring frankly composed herself for sleep, in which she had a brilliant cubist effect. Benson and the captain kept up an interested conversation on the sports in Inja and how they differed from those in the States, while the former kept up that double tide of thought which was not ex-sctly thought, but a sensation through everything of being free. It was as though he had been wounded so deeply that there was no more feeling left—something had been killed in him. He might wake some

been killed in him. He might wake some day to worse pain than ever; but just now it was entirely gone. Cecelie sat with her golden head against the cushions, her red lips slightly parted, her eyes flashing out under their golden lashes; that soft, bright pearliness of hers and her magnetic charm were never more apparent.

Captain Hawkly's continually staring eyes took note of her. Benson, for the first time in years, could gaze and feel no thrill or any desire for her—the girl he had loved so wildly! Why had he ever loved her? Why had he thought she would care some day—as he had always persistently, in spite of everything, felt in his heart she would? That was what had made him con-stant, had given him hope, had made him masterfully take this last stand. It was all masterfully take this last stand. It was all over now—and the beauty of it was that he did not care!

It was a long, long ride back—that ride to which he had so looked forward. Cecelie bent over once-ostensibly to pick up her handkerchief-as the car whizzed over a bridge, the lights above reflected in the black water that stretched out beyond on each side.

"Don't look at me like that!" she whispered fiercely between her little white teeth.
"I beg your pardon!" he responded
quickly in the same low tone. "I wasn't

conscious that I was looking at you at all,

truly!"
"I didn't ask you to bring me out!" she said, as though in answer to some voiced

aspersion.

"No, no: of course you didn't," he replied at once. "It was all foolishness on my part. at once. "It was all toolishness on my part.
The whole thing is done with. Suppose we
just let the subject drop."

"Very well," she assented, trying to keep
back the unexpected tears.
Mrs. Batsford-Wring emerged from her

"How you do fidget!" she said amiably to Cecelie.

It was a long, long ride—perhaps Cecelie was feeling that she had lost something, too, though she talked gayly to the captain.

They were speeding along the smooth postroad at last, rapidly nearing the town. Now the lights of the city came into view, the houses growing closer and closer to-

the houses growing closer and closer to-gether—more lights, and noise and clatter.

"And here we are!" said Benson as the limousine stopped before the Sherwood mansion. He helped Cecelie up the steps after her adieus to the other guests, while the machine still stood waiting. "I'll begin to say good night to you now, so as not to keep you standing here."

She looked up in blank surprise.

"Why, aren't you coming in?"

"No; I think not, if you'll excuse me."

"But, Benson! There are ever so many things I've been counting on saying to

things I've been counting on saying to you—all the way home. I expected you to

come to dinner, of course—I——"
"I'm sorry; but I promised Mrs.
Batsford-Wring to go back with them to
the Ayreslea—they've some sort of party
on hand tonight. And, by the way, I am afraid this will have to be good-by, too, for some years. It's not likely that I'll see you again—I leave tomorrow."

The door was wide open now; the warmth streamed out from the brightly lighted interior as they still stood there, her lovely face raised perplexedly to his.

"Not see me again! But I don't understand. Why do you talk that way? Benson, you're not like yourself—your eyes are so dark—you look so proud." He smiled involuntarily.

"Don't let my looks bother you," he re-sponded gently; adding, with a deeper note: "I shall always thank you for many kind-nesses in the past—believe that, Cecelie! You'd really better go in—you'll take cold standing here. Good-by!"

# Where Is the Pipe Smoker Who Won't Take a Chance?

Every man who smokes a pipe is forever engaged in a more or less happy quest for a better brand of smoking tobacco.

That's one reason why there are so many different brands—so many different forms of "cut" and "slice" and "cube" and "twist" and "granulated" and "shredded" tobaccos—and most of these mixtures and blend are mighty good.
You yourself probably think a lot of some

fellow who smokes a brand that you can' learn to like at all, and he wonders why you buy the kind of tobacco that's in your coa

We don't think for a minute, and neve have thought, that Edgeworth Ready-Rubbe would please every pipe taste in the country but the fact that of the many who try Edge worth the majority cling to it makes us fer pretty good.

Edgeworth is Burley, the best Burley the is raised, and it come in two forms-Slice Plug, which is the original Edgeworth, an Ready-Rubbed, which means all ready to past into your piece. into your pipe. Ready-Rubbed is

new that we are st introducing it—givin

introducing it—giving away decent-sized packages of it and inviting men to send for them.

It is gratifying to to find that most pig smokers are willing give Edgeworth a chan—to try it out at o risk and judge it on in merits. And the number who decide that they want to keep on smaing Edgeworth is surprising until you has smoked a few pipefuls yourself and found a how satisfying it is.

Most any old smoker you know will tell y that Edgeworth is a very high-grade tobard will you write us, give your address and you dealer's name and let us reciprocate by sending you a sample, free?

The send misses of Edgeworth Reads Rubb.

you a sample, free?
The retail price of Edgeworth Ready-Rubb is 10c for pocket size tin, 50c for large tin a \$1.00 for humidor tin. Edgeworth Sliced Pl is 15c, 25c, 50c and \$1.00. Sold practice everywhere, but mailed prepaid if your dear cannot sample.

cannot supply.

Write to Larus & Brother Co., 1 South 2
Street, Richmond, Va. This firm was estilished in 1877, and besides Edgeworth mal several other brands of smoking tobacco, cluding the well known Qboid-granula plug—a great favorite with smokers for me

TO RETAIL TOBACCO MERCHANTS: If y jobber cannot supply Edgeworth, Larus & Bro. will gladly send you a one or two dozen (10 c size) carton by prepaid parcel post at same p you would pay jobber.

I am the Ill show you He smiled again, took off his hat, ran down thesteps like one very glad to go away, and disappeared in the limousine, which went whirring down the street.

THAT was a fine night! Benson did not know when he had enjoyed himself so much, with a strangely unthinking pleasure that seemed to have no connection with either past or future, but to be just the outcome of the gay moment.

After the little dinner with Chickie and

the handsome captain, augmented by the presence of a sprightly young English artist and his pretty wife and young sister, the party had gone forth to take in the more conventional Bohemian shows.

They had danced experimentally, with much laughter, until after midnight, and supped after that. Mrs. Batsford-Wring, frankly solicitous for the pleasure of all the men, gave her pervading atmosphere of comfort to the evening, with a special little undercurrent of real warmth for Benson,

which touched him deeply.

"You'll not be wantin' me for a partner long," she warned him at the beginning of the revel. "My brother says I dahnce like a borse!"

"Yes—and a spavined one at that, you now," put in the captain.

"My word! But that was a nasty one, wasn't it?" said his sister agreeably.
"Oh, you can't scare me off that way!" said Benson. "You'll certainly dance as said Benson. well as I do."

"You're lookin' a lot more fit than you were; it's a pity I cahn't take you in hand oftener, isn't it?" she murmured once as, his arms round her, her graceful lankiness dipped and reared wildly to the rhythm of the music.

Benson's "Yes" gave quick assent; his hand pressed hers warmly. "You're the kindest woman I ever knew,

"Well, I've had some rawtten times my-self, you know!" she answered simply, pressing his hand in return.

Though it was so late when he got to bed in the small hotel where he always stopped, he rose early to a day that from his high window was all a blue winter sky and a gilding sun on the housetops, and smoke-wreaths mingling with the light. He was shaving, and whistling during the process, when the telephone on his stand rang; and

he put down the razor to answer it.
"Hello!—Yes, this is Mr. Clark. Who

is this?"

"Benson—it's Cecelie."

His face underwent a hardening change.

"Yes—Cecelie."

"Benson, I—I called you up so early because I was afraid you might go out. You forgot to leave me your address."
"I really don't know yet where I'm going

"Oh! Benson -

He curbed a rising irritation.
"Yes; I'm waiting."
Her voice reached him sweetly:

"I want you to come and see me this morning, Benson."

"I'm afraid it's impossible. I can't get so far uptown again before I go. I have business appointments."

The thought of going to that house again—of walking up those brownstone steps as he had too many times before—

was suddenly repugnant to him beyond words. He could not do it.

"But, Benson"—the lightness of her tone had changed to one of appeal—"I must see you before you go—honest, I must!" The familiar accents seemed to set some chord ribrating that he desired above all things. vibrating that he desired above all things not to feel. She went on: "If you can meet me at the Venetia—that's on your way—at ten o'clock, or before—any hour you say— I'll only keep you for a few moments. Benson, please!

There was a pause.
"Very well," he answered at last relucntly. "Make it three o'clock, then—I'll

be there if I can on my way to the train.
I've got to ring off now."
Why had she called him up? Itshadowed the day for him; it tethered him still to all that bitter past which he wanted to be done with. He finished his sharing him to be done with. He finished his shaving, but he no

longer whistled at it.

It was long after the appointed hour when he entered the revolving entrance doors he had watched all that other memorable afternoon for the sight of Cecelie. She was sitting now—as a quick glance showed him—almost where he had sat, the lobby and the corridors filled as before, her slender figure slightly drooping forward over the big gray muff, and her golden head leaning on one hand.

Her face, as she raised it smilingly to his, ave him a start-her eyes looked very large; there was a strange translucence in the unusual pallor of her cheeks, but she had still that drawing quality which a person might curiously observe even without

son might curiously observe even without feeling it. She rose eagerly and went forward to greet him.

"Oh, I'm so glad you've come! I've been waiting a long while."

"Yes; I was afraid I shouldn't be able to get here at all," Benson said formally. "I haven't much time now."

"Shall we go where we can talk?" she

saked him.

"Just as you say."

She lilted across the empty space of a big drawing room, her head thrown back as usual, to a windowed alcove half concealed by heavy red curtains that shut in the immense cushioned armchairs in which they seated themselves. He could not help thinking cynically that she seemed to know the place very well, as he sat facing her, with that new look in his eyes, one hand

lying on his knee, waiting for her to begin, while she leaned forward. "Benson, I'm so sorry about yesterday! I"—she went on with hurried lightness in spite of the slight stiffness that came over him—"I didn't know it was going to be like that to you—honest! I only thought ——" Her agitation grew; she twisted her slender hands together. "No! You must let me speak. I only meant—I thought it would be just something to laugh over afterward; I—Benson——" She faltered; the great tears suddenly brimmed in her lovely eyes, but she smiled through them. "I know I've been such a horrid girl! But last pight. een such a horrid girl! But last night I found out what it was to care—at last! I didn't know it could hurt so much; but—but—I do care for you! It's—it's dreadfully funny, isn't it—that I do?"

He had put up his hand at first as though to stop her, listening afterward with a forced patience; but now his face reddened violently—a strange tremor seemed to shake him. He looked round desperately as one

seeking to escape from something dread and mastering. His eyes searched her face and a bitter smile overspread his. "Oh, I don't believe you care—as much as you think now," he said. "It's very good of you—but it wouldn't last, you know; you'll feel quite differently tomorrow. I'd

better go now, Cecelie."
"But, Benson——"

She had risen to her seet now—as had he—drawing farther back into the shelter of the curtain, her eyes hanging on his. He stood irresolute. The words came as if in

spite of himself:
"Would you marry me now—and go

back with me?

She shrank instinctively, with drooping head. "Oh, Benson -

He raised his eyebrows, spreading out his

hands as he spoke.

"You see! That's what it all amounts to.
There's no use of my staying."

"You don't believe me?"

"No, I don't!

"But you shall!"

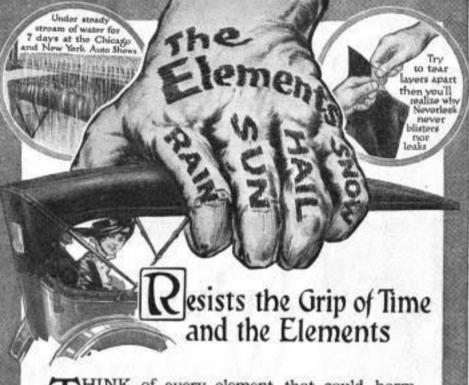

She flushed and paled, looking wildly round her; and then, like one who suddenly hurls herself from all hampering bonds, her arms—trembling—reached up round his neck and clung there; her lips—trembling too—reached upward for his; her exquisite magnetic charm stole through every sense. "Oh! Oh, you must believe me now!

Never-never for any man but you, Benson! I want to sit by your hearth; I want to be in your home—always; I want to—to be your wife—now—this minute—

any time you say!"
Was that a sob he gave as his strong arms closed round her, and oh, that mighty tide of love rushed back over him!

Hisday? Oh, Mrs. Varley was right; better than any dreams of it-far, far better!

HINK of every element that could harm your automobile top. NEVERLEEK Top Material is specially built to resist each of them.

It stands folding and unfolding for years without blistering or cracking.

It can't shrink or stretch or sag out of shape.

It can't fade, and dust and mud are easily washed off, leaving no stains.

It is not affected by blazing sun or arctic cold by hail or snow or soaking rain.

# Top Material Is Guaranteed Without Limit

Read this remarkable guarantee—the strongest that can be written:

NEVERLEEK Motor Top Covering is guaranteed absolutely waterproof, without time limit, in any climate, under all circumstances.

Any automobile dealer, anywhere, can, by writing us, arrange for recovering of any NEVERLEEK TOP, without expense to himself or his customerprovided such top leaks through the fabric.

NEVERLEEK is waterproof all through. You could cut away the outer waterproof coating with a knife and still you couldn't force water through it. One automobile manufacturer tested NEVERLEEK by letting a top stand with melting snow on it. He uses NEVERLEEK TOPS on all his cars,

A NEVERLEEK Top is handsome - a credit to any car, even after years of service.

#### Specify a NEVERLEEK TOP On Your New Car

Many of the best cars include NEVERLEEK TOP as regular equipment. Others will supply it on request. Ask your dealer. Write to your manufacturer. If your old top needs recovering instruct your top maker to use NEVERLEEK.

#### Let Us Send You Samples

Fill out and mail the attached Coupon and we'll send you samples of the new semi-bright and dull finishes, with full information. Write today.

# Industrial Efficiency and Westinghouse Electric

THE effect of the revised tariff on the profits of many American industries is a matter of great moment to manufacturer and public alike.

Meeting foreign competition on a new basis calls for every improvement possible in methods of production. Volume of output must be increased. Quality must not only be maintained, but bettered. Cost of manufacture must be reduced.

A careful study of operations affecting manufacturing processes has brought many industrial plants to consider electric drive. Westing-house Electric has helped manufacturers in many different lines successfully compete for trade against the world.

Westinghouse Electric is known all over the world as being pioneer and leader in electrical engineering design and practice. Westinghouse Electric was the first to employ a corps of application engineers to study the manufacturing processes of various industries with a view to increasing the output, bettering the quality of the goods and reducing the cost of manufacture.

Consequently, we are able to furnish motors and appliances to meet the specific requirements of your business.

Let us consult with your Engineer and General Manager in order to bring about some or all of these improvements in your own business.

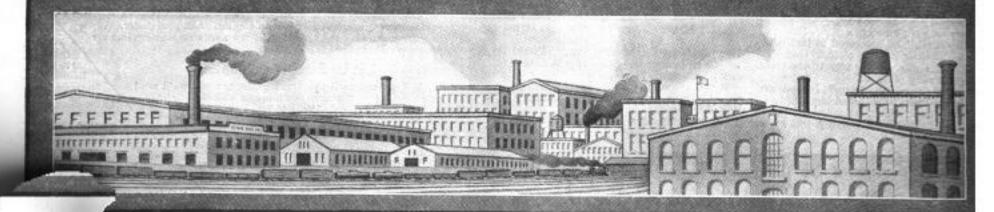

Westinghouse Electric Ware and other electrical household devices in your home will lighten labor and lessen the cost of labor for housekeeping.

The name "Westinghouse Electric" is a guarantee.

# Sense and Nonsense

#### Dry Wit

BECAUSE of a wreck, a fast train com-ing North from the southern coast country was laid out all night on a siding in Florida. When two Easterners aboard woke in the morning they looked from the window of the car on a waste of sand and scrub pines and bushy-headed palmettos, with no human habitations in sight except a dinky flag station and a one-room log shack. Over the door of the shack was a rudely lettered sign reading as follows: New York Bar—All Fancy Drinks Served Here!

Being minded to have some fun, the two travelers descended from their halted train and entered the shack. For furniture it contained a shelf, with three dark bottles and half a dozen smeary glass tumblers ranged on it, a rude counter, one chair and a rusty stove. The proprietor, a lanky Cracker, sat in the chair, with his bare feet on the stove base—for it was a chilly morning—intently reading a Jacksonville paper three days old.

The jokers lined up at the makeshift bar and one of them hammered with his knuckles on the wood.

"I'll have a pousse-café," he stated, ad-

dressing space.
"I'll take a dry Martini, made with French vermuth," stated his companion. The owner of the establishment did not

raise his eyes from the paper as he drawled:
"I kin lick any dam' Yankee in the house—and I ain't looked yit!"

#### An Uneasy Witness

IN TENNESSEE a railroad was being sued for a grade-crossing disaster, a freight train having hit a farmer's wagon and mussed up its occupants considerably. The accident occurred late at night. The principal witness for the defendant company was the crossing watchman, an elderly

negro with a wooden leg.
Taking the stand he swore positively that, being aware of the approach of the train, te had left his flag shanty and had waved his red lantern in warning; but in spite of this the farm wagon had tried to cross the tracks. On cross-examination he stuck to his story so firmly, and insisted so earnestly that he had swung the red lantern back and forth almost under the noses of the advancing team, that the jury gave a verdict for

the company.

Next day the division superintendent sent for the old man. Uncle Sam stumped

in, cap in hand.

"Sam," said the official, "your testimony yesterday undoubtedly saved us from having to pay out heavy damages. I want to thank you for your behavior while on the stand and to congratulate you."

"I didn't tell nothin' but de cold truth, your " said Ungle Sam

boss," said Uncle Sam.
"I'm sure of that," said the division superintendent; "but weren't you the least bit nervous when that white gentleman

began to ask you all those questions?"
"Yas, suh," confessed the watchman;
"I wuz."
"What made you uneasy?"
"Well, suh, I wuz wonderin' whut I wuz gwine to say ef dat man ax me wuz de lantern lit!"

#### Unquestionably

THE pop-eyed darky on the witness stand had been content during his examination in chief to answer Yes or No to all questions, but a controversy now arose between his lawyer and the lawyer for the other side. Wide-eared, he listened while they hurled long, jawbreaking words and impressive-sounding Latin phrases back and forth between them.

The opposing counsel turned on him

suddenly:

'Gabe," he demanded, "you have followed carefully this intricate discussion touching on the various aspects of medical urisprudence involved in the issue we have here before us for adjudication; and in view of that I now desire to know whether you do or do not find that your evidence still coincides with the theory advanced by my learned brother?"

The witness cast a triumphant side glance st his own attorney. Then he puffed out his lips and his chest. "Most doubtless!" he answered.

#### The Odorless English

A YOUNG Englishman went to a hunting lodge in South Carolina last fall to spend a week as the guest of some American friends. On the second day in camp they had a deer drive.

The Britisher was given the best station, with a negro guide to keep him company.

Presently, as the baying of the hounds grew
louder, a noble buck came bounding down
the runway, suddenly halted and, as the
Englishman aimed his gun, turned about
and darted off and darted off.

"Now why do you suppose the beast behaved in that fashion?" inquired the disappointed hunter of the darky.

"Didn't you see his nose sniffin', boss?" said the negro. "I reckin he must 'a'

"Oh, but that's quite impossible!" said the Englishman. "I had a barth only this morning!"

#### A Full Day

AT A RECENT dinner given to the Giants and the White Sox after their worldcircling tour one of the speakers said that a friend of his, named Cassidy, went to mass

and heard the priest preach on the Judgment Day. After the services he waylaid the clergyman.

"Father," inquired Cassidy, "I want to ask you something. You say that when the trumpet blows on Judgment Day everybody who ever lived in this world will come before the Judgment Seat to be judged for their sins on earth?"

"I so stated."

I so stated."

"Will Adam and Eve be there?"

"Undoubtedly."

"And Cain and Abel?"
"To be sure."
"And Jack Johnson and Jim Jeffries?" "I assume so.

"And Ban Johnson and Charley Murphy?"
"They will."
"And the A. O. H.'s and the A. P. A.'s?"
"And the A. O. H.'s and the A. P. A.'s?"

"And the A. O. H.'s and the A. P. A.'s?"

"I told you everybody would be there."

"One thing more: Will Hogan that sued me in the magistrate's court last week and me both be there?"

"I tell you, Yes."

"Then there'll be dam' little judging done the first day!" said Cassidy.

#### Too Cheap

A HUSKY-LOOKING person in a flannel shirt, who had evidently strayed some distance off his accustomed beat, walked up to the Waldorf bar, flipped a dime down on the mahogany and said:
"Gimme a drink of rye."
"We don't sell ten-cent drinks here,"

said the man in the white jacket.

The stranger reached for his dime, "I can't drink that nickel stuff!" he said, and passed out,

#### A Platonic Token

WHEN Mahally, who did the family W washing, came on Monday morning to get the bundle of soiled garments, she was wearing a black eye, which stood out vividly against the brown background of her broad and comely face.

"Dear me," said her sympathetic employer, "what has happened to your eye?"

"A nigger man hit me," said Mahally briefly.

briefly.
"Oh, that's too bad!" said the lady.
"Was it your husband that hit you,
Mahally?" "No, ma'm," said Mahally, with emphasis. "George, he don't never hit me. He treats me mo' lak a friend than a husband."

#### Optimistic Partners

A FIRM of notion dealers on the East Side had gone out of business via the bank-ruptcy court, and the attorney for the principal creditors was going through the accounts of the concern.

In the back of the safe he came on a partnership agreement, drawn up by the two bankrupts when they engaged in commerce and jointly signed by them. The second clause read as follows:

"In the event of failure the profits are

to be divided equally."

# Economy-Efficiency-Quality

T is impossible to judge an automobile by price comparison or its appearance. The best time to judge is after six months' or a year's use. It is then, and then only, that its real merits or defects are apparent.

The material in the Overland, its design and its manufacture, throughout, are such as to fully justify its undoubted and unparalleled reputation for economy, dependability and durability.

We are able to make the extremely low price of \$950 because of the enormous quantities which we produce. The picture on the left shows one piece of machinery which brings down the original cost to the buyer. It is known as a toggle press-the only one of its size and capacity in the world. It was especially designed and constructed for stamping out Overland bodies and fenders. It is the largest and most effective cost reducing apparatus in the automobile industry. This machine turns out two complete fenders every minute. In two minutes it furnishes the four fenders necessary for each car. This machine produces in one minute six times as many fenders as any other press now in existence. The average manufacturer doesn't produce enough cars to use even the next smaller similar machine. So the method he must employ takes fifty minutes to do what this machine can do for us in one minute. This is merely one item to show you the economy of producing cars in

lots of fifty thousand, as we do. The material in the Overland is of the highest standard. The workmanship is no better in any car, no matter what the price, and it cannot be better. The Overland price is simply and solely the result of enormous production. It is secondary to Overland quality.

Friction is what causes wear and consumes power in machinery of any kind, whether it be a watch or a threshing machine. Therefore, every device known to mechanics is brought to bear to eliminate friction in the Overland car. To that end, every part that coordinates with another part-such as pistons, bearings, shafts, gears, etc.,-is machined and ground to one onethousandth part of an inch, has a mirror finish, is tested, inspected and retested, until it is as perfect as human ingenuity and the finest machinery can make it.

In precision, fineness in fit and thoroughness in testing and inspecting, no car selling at or near our price exceeds the Overland. That accounts for the long life and economy of the Overland.

That is precisely why, while cars may appear on the surface to look as good, and may in a demonstration seem to act as good, they do not and cannot compare with the Overland after, say, a year's use.

When you buy an Overland you not only make a very material saving on the first cost, but, what is far more worth considering, on the second cost-that is to say, the cost of operation and

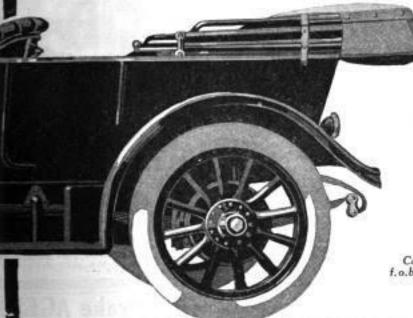

maintenance.

It is a fact, of which any Overland dealer can furnish you ample proof, that this car, because of its design, the materials in it, and our care and precision in manufacture, does " up" and is absolutely economical and

# Efficient, Economical Delivery For Furniture, Piano and

Department Stores Department stores in large centers or serv-

ing large territory, have found that their haulage divides itself naturally into two parts-the delivery of purchases in bulk to one or more distributing centers; and the distribution of the purchases from those centers to the individual customer.

For the first of these services motor trucks are almost a necessity today. They afford greater speed, greater efficiency and a considerable economy in actual cost as well. We would welcome an opportunity to analyze the particular conditions in your case and demonstrate these facts to you. And we can cite to you the successful experience with Federals of many of the leading department stores of the country.

In the piano business, where the tonnage per delivery unit is heavy, Federal trucks stand the strain of load and road with remarkable facility.

Furniture dealers — wholesale and retail who have Federalized their delivery service, report to us some wonderfully successful results which every merchant in this line should know.

We have prepared some especially interesting literature on delivery problems as related to department stores, furniture and piano houses, which we shall be glad to send on request.

#### THE TWO BAD MEN

(Continued from Page 10)

"Do something!" urged Steve. "We can't hang round here all day. I got to get back and see if another telegram ain't come

back and see if another telegram an't come for me."

With a muffled groan Bogie O'Leary eased one foot cautiously to the ground. With neck strained to watch the enemy over his shoulder he noiselessly moved the other to join its mate. A second later he had leaped again to his isle of safety. His scream of fright coincided nicely with the resonant impact of the Doctor's hardy brow against the side of the kennel. There had been but a gray flash across the arena.

had been but a gray flash across the arena.
"Wha'd I tell you?" came the sob-riven shout of the victim. His enemy stood off

shout of the victim. His enemy stood off and pawed the ground.

"Yer frind there's quick on his feet," said Kerrigan, with grudging praise: "but it vexes th' Docther t' have his fun shpoiled. Oh, ain't he th' j'yous elf!" He rocked perilously on his narrow seat and beat his thighs in ecstasy. "It's th' brisk young lad y' are, Docther! Watch him there, now! Good old Docther!" The Doctor ignored-his owner. "It's like 'm," continued Kerrigan to his seatmates. "He'll pay me no heed whin he's a game on. Ye'd think I was no more to 'm than anny total stranger. There he goes agin—pertindin' he's weary!"

The Doctor slouched to his corner and turned a deceitful back once more on the game.

game.

"Goin' to see me murdered, are you?"
demanded Bogie.

"Tut! Tut!" admonished Kerrigan.

"Murder's a crime! Don't be talkin' wild
like that whin ye're among frinds!"

"Mebbe he'd let you crawl over to the

"Mebbe he'd let you crawl over to the house," suggested the resourceful Kid.

"I tried that—the devil jumped on me with his pointed feet. He's a killer, I tell you!"

"An' t' look at th' innocent airs of 'm now!" purled Kerrigan, "An' d'ye note th' beauty of his quarthers? Oh, min! If on'y ye'd thought t' bring yer camaries! Ah, but 'tis worth th' two-dollars' fine I'll be made t' pay."

"I thought I had a friend in you, Steve," pleaded Bogie.

"I thought I had a friend in you, Steve," pleaded Bogie.

"Well, ain't I thinkin' about what ought to be done?" demanded Steve reproachfully. "Just remember Rome wasn't built in a day—and after the way you fooled me with that telegram this morning!"

"Ain't he th' stage-acthor!" insisted Kerrigan. "Watch him makin' out he wouldn't har-rum a baby—an' him in there this minute f'r resistin' an off'cer!"

"What officer," asked Steve, with mild interest.

interest.

"Th' Swede cop hereabout. Man, 'twas an ingratiatin' spectacle t' see thim come togither—I was goin' along on me truck. But th' Swede's a coward—he wouldn't fight fair. He roped th' Docther. Else he'd niver got'm. Th' Docther mistrusts Swedes.

Would ver trind he a Swede mehbe?"

Would yer frind be a Swede, mebbe?"
"Ain't there any justice in this land?—
for the love of heaven!" moaned the

for the love of neaven: moaned the victim.

"Keep your heart up, pal—I'll save you."
Thus the Pell Street Kid.

"You?" gasped Bogie. "Say, pal, I'm sorry if I done anything—"

"Fergit it! We got to stand together."
The Kid studied the field with a fine strategic eye. "We can draw up this ladder and put it down inside—" he began.

"Not my ladder!" put in Kerrigan firmly.
"I'll be fined two dollars now f'r maintainin' a dishorderly nuisance. An' d'ye think I

a dishorderly nuisance. An' d'ye think I want t' be arristed f'r helpin' a jail delivery? Besides, 'twouldn't be fair t' th' Docther." The Kid studied him coldly. Kerrigan at once became cold himself. Under a frivo-

lous exterior it became apparent to the Kid that the goat's owner carried convictions of weight, in behalf of which he would perish if need be. He also exposed a certain fluency of shoulder that the Kid liked less and less

as he surveyed it.

"Well, what can we do, then?" he demanded amicably. "My friend there's got the pull, all right. If your goat kills him ——"

"It's a shameful death!" moaned Bogie.

"Where's this cop, then?" demanded the

Kid.
"Hi! You fallers oop there!" hailed a voice from below. They turned.
"As I live, 'tis Officer Peterson himsilf!" said Kerrigan delightedly.

"You batter coom down; that ban gainst the law," warned the newcomer.

#### All Studebakers Leave Their Factory With This Spark Plug

The makers of your car have only one reason for selecting a certain spark plug.

Perfect ignition is a vital question for them, and for you. They take no chances-and you shouldn't.

HE toilet of the I mouth is incomplete without rinsing with a mouth-wash. Listerine is the most agreeable and efficient antiseptic mouth-wash that can be prepared.

"You'll have a dead man in there— you'll be arrested for murder," said the Kid and slid nimbly to the ground to confront

the Tiburon police force.

"He said he ban bad faller—mabbe that goat ban good deal more bad," retorted the officer, with a strenuous try for the retort

epigrammatic.
"He'll sue your county for fifty thousand

dollars' damages ——"
"Yah! I ban hear all about them law-

"And you'll lose your job if you don't get him out of that yard." Officer Peterson surrendered himself to a moment of serious reflection. "I'll have you broke—just like that!" threatened the Kid with a confidence

he was far from feeling.

"Give him some of these grapes," suggested Steve, who had been moodily consuming the Pell Street Kid's offering to Bogie, that busy sufferer having heatedly declined to trifle with them.

"He dislikes fruit," advised Kerrigan; "but ye might try th' little felly with some o' them gay nitchers fr'm yer paper. At

o' them gay pitchers fr'm yer paper. At times I've known him right fond o' one or two if th' printin' tastes right."

"Try him with this here funny page,"

suggested the Kid.
"I ban all in my new coat and pants—
yust out from Sunday school," faltered the

official.
"I'll do it myself," volunteered the Kid
intrepidly. "I used to know goats. C'mon!
Unlock the door."

Kerrigan grew tense again. Even the list-less Steve betrayed a languid interest in

less Steve betrayed a languid interest in what might ensue.

"Ain't he ever comin'?" wailed Bogie.

"It's goin' t' be good—it's goin' t' be good!" sang Kerrigan, and hugged himself.

"I don't see what you thought I could do," called Steve, "telegraphing me all over the country that way. I'd as lief handle a rattlesnake as one o' them goats. You might have known that, if you'd just stopped to think!"

"Have a care, Docther! Don't let them

"Have a care, Docther! Don't let them do ye a mischief!" called Kerrigan softly. The Doctor remained a gray statue. Only

the keenest eye could have detected his occasional sidelong glance at his prey. Bogie O'Leary was the only observer present who

felt sure of it.

The low door opposite the watchers opened softly on the Pell Street Kid. Behind him cowered the officer of the law. In one hand the Kid flaunted the bedizened

In one hand the Kid flaunted the bedizened comic supplement from his paper. He held it well from his side against the wall and hurled a pithy insult at Kerrigan's pet. The pet ignored this. He was still the semblance of a graven goat.

Emboldened by this indifference the Kid stepped bravely into the arena and waved his gaudy emblem where the Doctor could no longer pretend to ignore it. The Kid wove from side to side with a tigerish swiftness, showering on the Doctor such epithets as caused Kerrigan to hope he might be destroyed utterly. Something in the Kid's stealthy, crouching progress stung the bored Steve to reminiscence.

"Hooray! He's a bullfighter!" yelled Steve. "Look at him, will you? A regular bullfighter!" And, being a patron of the opera, he burst into fitting song: "Towray-a-dor!"

And then, to Kerrigan's accompanying cheer, the Doctor charved. Straight as the

And then, to Kerrigan's accompanying cheer, the Doctor charged. Straight as the lightning's bolt he shot for the Pell Street Kid, who now dashingly wore the gay sheet athwart his breast; but the Kid, in the quickness of his moving, was also like unto the lightning's bolt. When the Doctor very accurately hit his mark it shielded only the

solid boarding of his prison.

"Shame!" screamed Kerrigan, who saw
his pet crumple against the wall much in

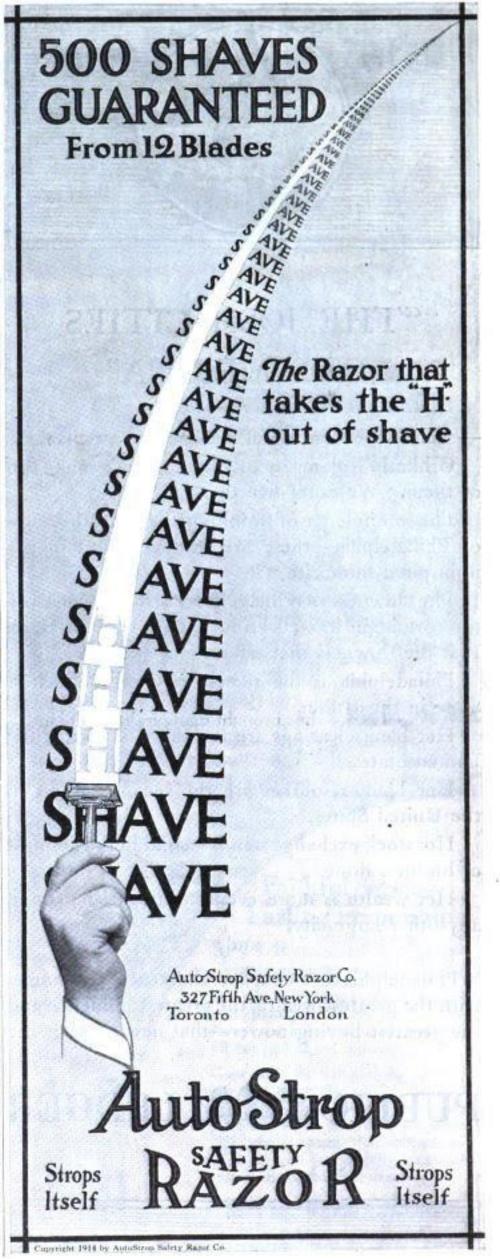

the manner of a squeezed accordion.

The Kid stood safely to one side, panting but collected. Already Bogie O'Leary crept tremulously toward the door where stood his Swedish guardian. The Doctor, after a few seconds' prone quivering, leaped nimbly to his feet. He tossed his head lightly and seemed to shrug his capable shoulders in mild annoyance. Then forthwith he fell daintily to the comic supplement. The Kid tiptoed softly to the crouching Bogie O'Leary and tenderly helped him over the

last dozen feet to safety.

"Twas unfair!" yelled Kerrigan. "Ye hur-rted'm. I dare ye t' wait there till he's et his paper! Gwan! I dare ye, now! Be

a spoort!"
"That's the stuff!" urged Steve. "Try it again. Maybe we can have some fun here this afternoon."

# "THE JOSH CITIES OF AMERICA"

-such is the heading of a magazine article.

Oshkosh, Kalamazoo, Kokomo—let's make fun of them. We don't live there.

The somnolence of Brooklyn, the dilatoriousness of Philadelphia-these are the last resort of the uninspired humorist.

The slowness of Philadelphia is the slowness of the tortoise in its well-known race with Brer Hare. It is the slowness that wins.

Philadelphia is the richest city of the richest State in the Union.

Her bank clearings are the third largest in the United States.

Her bank resources are the second largest in the United States.

Her stock exchange stands second in the amount of business done.

Her wealth is more evenly distributed than in any other large city,

in Philadelphia the newspaper that reaches the homes with the greatest wealth, the greatest influence and the greatest buying power-that newspaper is the

# PUBLIC LEDGER

But as no response came to this they regretfully descended. It seemed to them that nothing of an entertaining character

could now be hoped for.

In the little brick house Bogie O'Leary, with many groans, straightened to his full

with many groans, straightened to his full height.

"You saved my life, pal!" he cried warmly to the Kid.

"Fergit it!" begged the rescuer.

"Never!" responded Bogie fervently.

"And look where he put a white man!" he continued bitterly, pointing to the narrow quarters in which he had passed a night of horror. "And he had a bloodhound or something in here that nearly tore me limb from thing in here that nearly tore me limb from limb; then he turned me out with that mankiller."

mankiller."

The law's servant was, it seemed, not sensitive to criticism. He lolled in the doorway interestedly observing the last wisp of the comic supplement on which the Doctor chewed blissfully.

"Wall," Officer Peterson remarked quietly without turning, "you said you ban bad faller. I think you should ban with bad goat."

He was plainly for the service of the service of the control of th

He was plainly fond of this mot. His be-

He was plainly fond of this mot. His belief had been too apparent, the first time he
achieved it, that he was being witty. He
continued to observe the Doctor, his huge
frame all but shutting the light from the
doorway into the yard.

From the eyes of the Pell Street Kid there
flashed one look of deep meaning to the
capable eye of Bogie O'Leary. Bogie paused
only to regard behind him the open door
into the street. Then he crouched, a shoulder forward—even as the Kid crouched.
Officer Peterson clucked friendliness to the
now-observant Doctor and again became
sententious.

"Ay guess he ban good goat with good faller—but with bad faller he ban——"
"Three!" shouted the Pell Street Kid; and Officer Peterson, lifted by the force of a mighty and heaven-born inspiration, described an approximate purphels that ended

in his own shambles.

"Quick with the bar!" cried the Kid; and they did well to be quick, for scarcely was the door secured ere a great weight fell

on it. "Out!" said the Kid; and he and his companion stood once more in the benign

free spaces of earth.

Bogie O'Leary started feebly to run.

"Slow down, pal!" hissed the Kid.

"You'll put some one wise." Calmly he closed the outer door and methodically snapped the waiting padlock. Then he paused expectantly. "Listen!"

From within the inclosure came a stactor passage of hoofbeats ending in a glo-

From within the inclosure came a stac-cato passage of hoofbeats ending in a glo-riously softened thud. There followed a heartfelt peal of imprecation couched evi-dently in the speaker's native tongue. Bogie O'Leary shook a petulant fist. "Why don't he talk English?" he bit-terly complained. "You can't understand a word he's sayin'!"

"Look out for them two!" warned the Kid. "C'mon! Walk slow."

From round the corner came Steve and Kerrigan, the latter bearing his ladder. "Where's the Swede?" asked Kerrigan of Bogie O'Leary and the Kid.

"Where's the Swede?" asked Kerrigan of Bogie O'Leary and the Kid.

"He went back to play with your goat," explained the Kid brightly.

"Did he, now? Well! Well! He's a husky lad; but I think he's takin' a chance. However!"

"Bringin' me all the way out here for nothing!" grumbled Steve.

Bogie O'Leary and the Pell Street Kid followed slowly.

"Brace up, pal!" soothed the Kid. "We'll be on the boat and all right in a second. You get a shave and a shine and a drink—and it'll be happy days come again."

"I don't feel's if I could ever make it up to you," began Bogie weakly.

"Fergit it!" answered the Kid. "And here—you're limpin' bad!" He slipped an arm helpfully under one of Bogie's.

"There's a boat waitin'," he remarked a little later. "And the only thing I hope—I hope that squarehead Scandahoovian gets his pice were abother all durer hefore her

hope that squarehead Scandahoovian gets his nice new clothes all dusty before he starves to death!"

The Swoboda System can make you unusually well and vigorous and your body what it should be. I guarantee it.

## ™ SWOBODA SYSTEM

with the Least Expenditure of Time, Energy and Money and with no Inconvenience, Builds vigorous brains, superb, energetic bodies,

develops great reserve force, strong mus-cles, creates a perfect circulation, by vital-izing and developing the body, brain, and nerves to their highest power. When I say nerves to their highest power. When I say that I give something different, something new, more scientific, more rational,

effective, and immensurably superior to anything ever before devised for the uplifting of the human body to a higher plane of efficiency and action, I am only repeating what thousands of prominent men and women of every country on the face of the earth, who have profited by my system, are saying for me voluntarily.

of personal mail instructions in Physiological Exercise

logical Exercise

the best gymnasiums of the world. I have pupils in all the leading colleges of the United States. They have access to the gymnasiums and athletic training which is a part of the institution. Moreover, I have pupils in building private gymnasiums in their own homes. I have also pupils in the armies and navies of America and Europe, and I have blacksmiths, machinists, farmers and laborers who are very enthusiastic over my system. All these pupils prefer my system because it gives results which no other exercise can duplicate. You should profit by the experience of these people.

The Swobods System is not only a means of restering health but it is also a direct

The Swoboda System is not only a means of restoring health but it is also a direct vidual and compelling them to grow. It is the most condensed form of exercise; it strengthens the heart instead of overtaxing it.

The results are permanent; exercises need not be kept up indefinitely when the body is once thoroughly energized and the habit of greater cell activity is established.

The Swoboda System requires no drugs, no appliances, no dieting, no study, no loss gives good health without inconvenience. It is as you want it—"ideal" in every respect.

It is not the amount of exercise one takes which denotes the benefit to be derived, but, on the contrary, it is the amount of exercise from which, physiologically, each human organism can react, which will govern the character of results. If exercise built up the body and increased the energies directly, as most people seem to think is the case, instead of through secondary and tertiary reactions, it would then be true that the amount of exercise one takes would govern the character of the mount of exercise one takes would govern the beneficial results to follow. Exercise to be beneficial must always be adapted to each organism in full accord with its physiological limit and range of adaptation. This is precisely what I accomplish through my personal mail instructions. It is one of the secrets of the success of the Swoboda System.

#### WHAT OTHERS HAVE TO SAY

"The beauty of your whole adventionent is that every word of it is the treath. Your System is the most wooderful in the world: It gave me new energy, strength, and life; is other seeds, it made a new ran of me. I have been an advented of your System since the first day I need at. I have withstead a mestal strain during the past year which would have broken are shouthed in the state of the sta

when, by her way, we in my body."

"I know your System is all you claim for it."

"I are very thankful for the opportunity to take your coarse; it has improved me 36% in five works."

"I are really sorry to have year lessens case, as I have been greatly interested and be-erited; the improvement seems materapid than I architected."

"Your personal interest is surprising and highly appreciated."

I have at least 50,00.

"Can't describe the satisfaction I feel."

"Worth more than a thousand dollars to me in increased mental and physical capacity."

"I have been snabled by your System to do work of mental character previously suppossible for me."

"The very first lemons began to work rangle. In my gratitude I am reliain say creating and complaining friends, "Try brobods."

"Words can not explain the

ords can not explain the new life it imparts both to body

"Words can not explain the new life it imparts both to body and brain."

"It reduced my weight 19 pounds, increased my chest expansions 5 inches, nedaced my waist 6 inches."

"It cannot recommend your Soviem too highly, and without flattery believe that its propagation has been of great benefit to the health of the constry."

"My nearwe force unders me feet that nothing is impossible; my capacity both physically and meetally is increasing daily."

"I have beend your System highly recommended for yeigh, but I did not realise the effectiveness of it until I tried it. I am glat indeed that I are new taking it."

"Ten minutes of your exercise is equal in value to three hours of horseback riding."

"I feet ashamed that I hestated so long to give your System a tind; new I wonder why every see does not take it. I am 73 yours old, but your System is making a young inso of me."

"I have mute energy; my work service easier, and I am feeling much begiver."

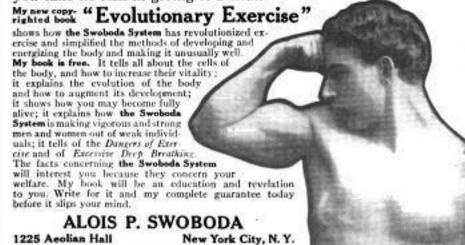

I have at least 50,000 similar testimonials.

If I could meet you face to face I know that I could the provide the provided as you must be to realize the joys of fiving in full, and that you are only half as well as you should be, half as vigorous as you can be, half as ambitious as you may be and half as well developed as you ought to be. The fact is that, no matter who you are, I can prove to you positively, by demonstration, that you are leading an inferior life, and I want to show you the only way in which you may, speedily and easily, without inconvenience or loss of time, come into possession of real health, vigor, energy, development, and a higher realization of life, success, and yourself.

The Swoboda System is no Experiment, I am giving it successfully to pupils all over the world. I have among my pupils hundreds of doctors, judges, senators, congressmen, members of cabinet, ambassadors, governors, thousands of business men, farmers, mechanics, and laborers and almost an equal number of womes.

Join the Sucobod Army of unarradity rigorous and healthy men and nomen. It is now more than two hundred thousand strong and growing fast every day. I offer my system on a basis which makes it impossible for you to lose a single penny. My guarantee is startling, specific and positive.

"I make your success with my System absolutely certain; you take no risk in giving it a trial."

#### *ANYBODY'S BUSINE*SS

(Continued from Page 7)

Then again, the bulk of all this lawmaking was done in hot haste in the last few days of the session and not infrequently bills were rushed through under omnibus rollcalls.

A great many legislative sins are com-mitted by the omnibus method. Measures that sometimes meet the positive disap-proval of a majority of the House or Senate are omnibused, though if considered sepa-rately in either body their passage would be impossible. I know of enactments on the statute books of Kansas that, after passing one branch of the legislature, were objected out of an omnibus reading and rollcall, and were never voted on in the Senate at all, but were shown afterward by the Journal as having passed the Senate in the usual legal way. The omnibus method would be impossible with a single-house legislature of few members.

Notwithstanding the fact that my executive clerk and the attorney-general did their best in the brief time allowed to scrutinize all the bills, Chapters 177 and 178 and Chapters 174 and 175, respectively, are duplicates. Chapter 75 of the laws of 1911 was repealed three times—first by section three of Chapter 75 of the laws of 1913; by section two of Chapter 123 of the laws of 1913; and then by section seven Chapter 124 of the laws of 1913. Chapter 318 of the laws of 1913 was immediately amended by Chapter 319 of the laws of 1913. Chapter 82 of the laws of 1911 was repealed by Section seven of Chapter 89 of the laws of 1913, and after being repealed was then amended and repealed by Chapter 108 of the laws of 1913. Fifteen bills were returned for the correction of serious mistakes.

The last session of the Kansas legislature appropriated about nine million dollars of public funds; and though these appropriation bills passed through the hands of the proper committees, yet a vast majority of the members voted for them without even having the most casual knowledge of what the bills contained. This vast amount of money was appropriated in less than three hours after the bills reached the House and

No big business would spend even a thou-sand dollars without first requiring a scientific report from men who have the matters in charge, and then giving the matter a thorough consideration—but the public's business is everybody's business; and that has prompted the oft-repeated statement that if a private enterprise conducted its business as most states do, it would become

bankrupt in a very short time.

With all that, the Kansas legislature of 1913 was as efficient, as capable, as upright and honest as any legislature that ever sat; it passed many wholesome laws. There was not a single suspicion of corruption. It was as good a legislature as can be gotten together under the bicameral system; but it requires much more than honesty to make laws for a state. Effective work in a legislature can only be done by men of experience, irrespective of intentions,

#### Legislation by Spasms

The Illinois legislature was in session twenty-three weeks. Three-quarters of the laws passed by it were passed in the last two weeks of the session. Commenting on this, THE SATURDAY EVENING POST, under date of August 9, 1913, said editorially:

"That is the inevitable legislative program—two or three months of preliminaries appointing committees, playing politics, squabbling over points of party advantage; then two or three weeks of earnest effort to get the machinery really started; then about ten days of frenzied haste, during which a large part of the important legislation is actually accomplished.

"A body constituted as our legislatures e cannot possibly work any other way. There would be exactly the same result with a bank or a railroad if once in two years the stockholders elected a large body of directors who mostly knew nothing in particular about banking or transportation, who were sharply divided by opposing professional interests, and who were to remain in session only three months; but the bank or railroad would not last long under the guidance of such a board.

"We legislate in convulsions when we legislate at all. The organism is so constituted that it must have a fit or lie dormant. "It is not a representative system. The people of Illinois do not conduct their personal affairs in rare bursts of frenetic energy divided by long periods of topidity. No farmer hires thirty men to debate about small grain from July fourth to July thirtieth and then harvest the oats on the thirty-Why should he regard a legislature which operates that way as representing

Describing another legislature, a wellknown writer in a magazine article that appeared in December, 1904, said:

"One-half these measures-eight husdred and thirty-eight - were passed the last fifteen days. On the last day there were passed seventy general laws, seventeen local laws, and six joint resolutions. On the next to the last day were passed fiftynine general laws, twenty local laws, and one joint resolution. A total of one hundred and seventy-three enactments, or one-lith the work of the session in two days. I wil grant that some of this grist had been ground out in committee, but how fre could even a committee grind so much grist? There are twenty-four hours in one day; in forty-eight hours one hundred and seventy-three laws were passed, or one law every sixteen minutes. But as the legisleture sat only twelve hours a day these rules of human conduct were created at the rate of one every eight minutes."

If it was the intention of our Constitution makers that the bicameral system of legislation, which now prevails, should be a system both representative and deliberative, they have utterly failed to secure that result under the present system. The average member of the legislature, and especially of the House of Representatives, does not even represent the people of his own little district. As a matter of fact, unless be spirits who run the legislature, about all the new member is good for is to vote as he

#### Law-Making at Albany

This is well illustrated by the following somewhat humorous account, written by a member of the New York Assembly, in the New York Evening Telegram of February 25, 1908:

"Before I came up here I had an idea that a legislator, after a profound study of the subject, would introduce a bill with a few words that would at once attract the attention of the press and through them the public. Presently, by some machinery which I never clearly understood, the bill would be taken up in its turn and after grave and serious argument would either be passed or defeated.

"But what really happens is this: You sneak up back of the desk and drop into a slot your bill, which half the time you do not know anything about yourself, because either your boss or your senator, or some organization in your district, gave it to you. By bothering the clerk next day you can find out what committee it has been referred to. If you are a member of that committee there is a good chance to get it reported, be cause the other members of the committee want your vote to get their own bills out If not, you are a hundred-to-one shot wites your senator comes over and sees Wads worth, the speaker of the assembly, or Mer ritt, the floor leader of the majority, about it

"The next thing you do is to ask for a hearing on the bill. You find out who is the chairman and hunt him up. When he see you are only a first-year man he insists if mistaking you for a doorkeeper or messen ger, just to let you know your place. After you get that straightened out and tell him what you want, he pulls a long face and talks about the flood of bills they have b

"That's all you can do. If the committee or, rather, if two or three men on the com mittee are willing to give your bill a chance you may get it out after begging like college president. Once on the calendar instead of the chairman of the committee you have one man-Merritt, the Republican floor leader-to convince before you can get a vote on the bill at all. All a per assemblyman is good for is to vote as hel told. If he does not do that, never a bill of his will see daylight. The committee hold the power of life and death over a bill."

#### The Great Safeguard

In the important crises, such as fienc, Lysol is used by nearly all loopitals, physicians and nurses. It in sared many lives by preventing

Lysol is equally necessary for persmil and household use every day. Diese can scarcely enter a home gunled by Lysol—the standard Anti-ignic, Germicide and Disinfectant.

HERE HAT CO., Dept. A. 830 Broadway, New York City

written so clearly that any intelligent citizen may grasp unmistakably its purpose, some ambitious legislator who has given the subject matter no study or consideration will insist on amending it until it becomes in its final shape a piece of surpassing obscurity.

In spite of all the remedies which have been applied, the fact is unquestionable and undeniable that the bicameral legislature remains a heavy and complicated mechanism, yielding quickly enough to the opera-tion of the political expert, but blocking at

Those of us who have had legislative experience know that this is true in varying

degrees of almost every state legislature.
If a body of crude and ill-digested legislation has resulted, it is the natural product of the system. Even though a bill is originally

every turn the attempts of the people to work it honestly and efficiently. And it is true, as has been said, that by a strange perversity of fate the fear of democracy and the passion for democracy have contributed equally to this result. And so it has come about that the people have been unable to maintain control over their own Govern-ment; and it has fallen more and more completely into the hands of the profes-sional politician, aptly described as "one who knows more about the voter's political business than he does himself."

So, though we set out on our political adventures as a nation firm of purpose to put the control of the Government in the hands of the people, we are just discover-ing, after one hundred and thirty-odd years of experience, that we have neither efficiency nor control. This is so largely because, in our attempt to set up a new order of things, we adopted the legislative machinery that was the product of the old order with which we were trying to break; and so we find our-selves at the beginning again, face to face with our original problem of finding means to make our Government representative, efficient, and at all times responsive to the public will and weal.

#### A Cartoon and Its Lesson

What President Wilson has said of city government is equally true of state govern-

"I take it that the problem we have set "I take it that the problem we have set for ourselves is the problem of responsibility. We want a Government which responds to public opinion and we have not been able to get it. The explanation you can hang on your wall if you choose, if you would only take the pains to buy a copy of that old cartoon by Tom Nast, which represents the Tweed Ring in New York as a circle of men, each with his thumb to he proper that the title of the picture being neighbor, the title of the picture being,
"Twas him." We have invented or stum-bled on a "Twan't-me system of government
and what we are in search of is a "Tis-you
system of government."

If the sovereign voter is ever to reach the goal of representative, responsible and effi-cient government, it must be through such a simplification of our legislative machinery as will permit the electorate to bring steady and persistent pressure on this great organ of government in the broad daylight of interested public discussion, and to fix the respon-sibility for any failure on the part of any member of the legislative body to respond to the will of the majority of the people. Under the bicameral system, when a de-

sirable measure fails to pass or an undesirable measure passes there is no way whereby the public can single out a particular member of the legislature and say: "You personally are principally to blame in this matter." Not only is it almost impossible to locate the man who is to blame, but often when he has been located it is very probable that voters of his district are not particularly concerned about what he has done though his action may be of great importance to the state, as a whole, while he is responsible to nobody except his own local constituents.

One county in our state has no publicly or privately owned utilities. Its representative received one hundred and eighty-eight votes; and though his party declared for a Utilities Commission law, he voted against his party pledge because it raised the taxes. Another member of the same party received four thousand votes; his county recognized the necessity of the enactment and he supported the measure. It takes a decided stretch of imagination to recognize a truly representative body wherein the power of one hundred and eighty-eight votes in one county equals that of four thousand in another.

This system of scattered responsibility puts the very smallest incentive on the

Now Heaviest with Juice!

This is the season when California oranges are heaviest with juice, sweetest and most beneficial.

Right now these sweet, juicy. California Sunkist Oranges should be used in every home as a food and Spring Tonic. Can you afford to be without them?

Over ten million Sunkist Oranges are being shipped every day from California and are now offered by dealers everywhere.

Because sixty-five hundred expert growers grow, pick, pack and market their fruit together they are able to bring the quality up to the very highest standard.

Every Sunkist Orange is glove picked and tissue wrapped-shipped on picking day, therefore always fresh.

Thin-skinned, highly flavored, firm, tender-meated and seedless - the finest oranges that ever grew.

And prices were never so low as now.

## Nature's Own **Spring Tonic**

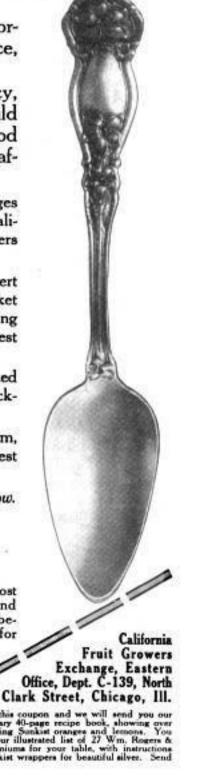

Sunkist Oranges are the world's most delicious fruit-fruit that is both good and good for you. Eat them at every meal, be-tween meals and at bed-time. Try this for Spring Fever.

Give the children this juice—this drink of natural purity. Any fruit dealer can supply you with genuine Sunkist Oranges.

Mail us this coupon and we will send you our complimentary 40-page recipe book, showing over 100 ways of using Sunkist oranges and lemons. You will also receive our illustrated list of 27 Wm. Rogers & Son's Silverware Premiums for your table, with instructions showing how to trade Sunkist wrappers for beautiful silver. Send

Ask for Sunkist

Rich, mellow, fragrant Velvet, all the sun that kissed you ripe,

You have sto'ed up in your bein' to release it in my pipe.

An' to ca'm my troubled sperit, you have saved the mawnin' dew

An' the soft, shy summer breezes that have whispered peace to you.

An' you've learned me how to gather all the good things that I can

To turn 'em into kindness an' good will to'ds fellow man.

JOE, like every "dyed-in-the-wool" pipe smoker, knows that there's a lot more than "just smoke" in good tobacco. He knows that Nature has stored up genial philosophy, sunny kindliness and real goodfellowship in the "blessed weed."

VELVET, the Smoothest Smoking Tobacco, is made of the choicest Kentucky Burley, the tobacco which Nature outdid herself to make all that pipe tobacco ought to be. VELVET is Burley de Luxe, perfected by slow and careful cur-

individual to accomplish effective results. Not only can he divide the blame with all the rest of the majority but he can offset it entirely by bringing forward some local excuse or justification. He can point to something else he has done that was of particular interest to his constituents and thereby avert any embarrassing consequences for a mistake or misdeed of profound importance to the state, as a whole—if, indeed, under the present system he is capable of accomplishing anything.

ing anything.

The second house, as Franklin pointed out, more often prevents the passage of good laws than hinders the passage of bad ones. In Kansas last year among the good laws of the utmost importance that failed because of the opposition of the second chamber were the Compulsory Grain Inspection Act, the Kincaid Bridge Act, a collateral-inheritance tax, a recording-mortgage tax, and an act prohibiting the foreclosure of mortgages until the owner or holder should either pay or show that he had paid all taxes which might lawfully have been assessed against it from its date. I do not recall any really had piece of legislation the second house killed. Much time, however, was taken up in passing worthless laws, like the Chiropractor Law and the Pure Shoe Law.

Generally speaking, the two houses do a lot of trading; the first house, in order to get anything, accepts the amendments of the second, and vice versa. In actual practice the two houses seldom seek a middle ground, at least not by formal methods. Two considerations do not necessarily mean a double consideration and two hasty considerations may not be as good as one thorough one. There is a tendency to assume that a subject has been consideration the other house when the consideration there has been very inadequate, or sometimes one house hastily passes a bill with the expectation that the other house will deal with it more carefully; and so there is frequently a shifting of responsibility from the property to chamber to chambe

chamber to chamber.

In 1905 the Equal Suffrage Resolution was submitted to the Kansas legislature for its adoption. The resolution passed the House of Representatives with practically no opposition. The members of the House were so positive it would not pass the Senate that they gave it their almost unanimous support. Even before the resolution reached the Senate sixty-five per cent of the House members were importuning their senators to vote against the resolution; and the senators, as though in duty bound and by reason of an expected reciprocity, smothered the legislation instantly. About the only real use of a second legislative body is to act as a scapegoat for the other.

other.

It is customary for amendments of the second house to be accepted without question on matters of minor importance. It is also customary to advance bills advocated by the party leaders, and on these the second chamber has little additional usefulness in furnishing consideration.

#### The Conference Committee

Then there is the Conference Committee, the easiest of all the points of attack—and the least open to public gaze—when the interests want to defeat a measure the public is demanding.

It is easy to get a bill of vital importance

It is easy to get a bill of vital importance amended in one house or the other; then, by a failure to concur in the amendments, the bill goes to a conference committee, usually composed of two members from the Senate and three from the House. The interests see to it that they have a reliable friend on that committee, who delays, argues, wheedles and cajoles; and in the end the committee fails to agree. So Conference Committee succeeds Conference Committee succeeds Conference reaches the adjournment day.

Two of the most important bills before the last Kansas legislature went to the legislative junkheap by the Conference Committee route. Such a thing would be impossible in a single-body legislature of a

dozen members.

Then there is the argument that it is more difficult to corrupt or wrongfully influence two bodies than one. The test of legislative efficiency is the ability to effect positive enactments. A good measure opposed by special or predatory interests may as easily be defeated under the bicameral system as under a one-house system, because all that is necessary is for the opponents of the measure to control one house,

and in cases of that kind the special interest has two chances with the bicameral system to one with the other. Indeed, the lobby, ist and the representative of corporations first attempt to defeat a measure objectionable to them in the committee; and if they fall there they concentrate their assent on the members of whichever house appears to offer the best chance of success in blocking the proposed legislation.

the proposed legislation.

A single-house legislature of large menbership, elected from numerous and widely
separated districts, would be almost as objectionable as the two-house system. Good
results can be obtained only from a single
house of small membership of trained men.
Membership in such a body would rank
not far below the governorship itself; and
this, together with an adequate salary,
would be more attractive to first-das
talent than membership in the Congress.

This plan would bring the legislature nearer to the people. That statement contradicts the first impression, but it is true nevertheless. The legislature of today is as remote from the people as possible. The people may rage and storm over some bill that has been passed or turned down, but the individual members of the legislature are shielded from blame by the simple fact that each member is safely lost in the shuffle. In a legislative body with sixteen members the newspapers would publish the rollesis on all important bills, and the people would have a clear picture of the kind of man who was representing them.

#### A Sixteen-Member Legislature

A small one-house legislature would be more responsive and obedient to public opinion and at the same time more efficient and less expensive than the large and cunbersome system now in vogue. It would be easy and inexpensive to call together in emergencies like those that existed in Kar-sas last year. Such a legislature would have enabled us to handle the gas situation; it would have enabled us to handle the situation with reference to the inspectional grain; it would have enabled us to hardle without trouble the difficulties arising from the destruction of our twine plant at the Kansas Penitentiary; it would have en-abled us to provide aid to those countries that have been sorely afflicted by the drought. And so every year such a body, able to meet without large expense whenever necessity required, would be a good business proposition for the people of the state. As it is, one coördinate branch of the state government is absolutely abandoned for a whole biennium unless the legislature is convoked in an expensive, extraordinary session by the governor. It is as though the head of an important department of some other big business should give only fifty days every two years to its management.

In such a legislature there would be no necessity for haste. Being paid adequate salaries, the members would devote their whole time to be identified as a business unit-

In such a legislature there would be to necessity for haste. Being paid adequate salaries, the members would devote their whole time to legislation as a business proposition. They would doubtless take time to study the bills presented, both as to substance and form, and give the people laws written in plain and direct English that would mean one and the same thing to every intelligent citizen.

A sixteen-member legislature would be harder to corrupt. This also contraint first impressions. There are many wis believe that the more people there are is pass on a measure, the harder it is to pass a bill by bribery. Just the reverse is true. The more conspicuous a man is before the public and the more clearly his responsibility is appreciated by the people, the harder it is for him to go wrong. Turn the strong limelight on a man and make him feel that he is performing before a large and important audience, and he will be hard to corrupt. Light is as salutary in politics a in hygiene.

in hygiene.

Finally, it is a matter of common knowledge that every legislature is controlled by a little group of leaders who exercise authority without commensurate responsibility to the people. The late "Blind Boss Brayton, of Rhode Island, long Aldrich righthand man in controlling that state legislature, stated the situation in a fewords of comment on the commission plafor states:

"We've got it now, only folks den' know it. Rid out the regiment of member who do nothing but vote as ordered; the fetch your little governing group out int the spotlight and make 'em responsibleand they'll feel the fear of God in the hearts as they never do now."

#### CHEAP AT A MILLION

(Continued from Page 5)

Tom shook hands with the fat little man, whose wonderfully shaped head had on it no hair worth speaking of, and handed him the pearl he had picked out from the dozen the man in 777 Blank Avenue had placed before him. Doctor Lentz looked at it, weighed it in his hand and, without waiting to be asked any questions, answered what

nearly everybody always asked him:
"Persian Gulf. About fifteen grains—
perhaps a little more. We sell some like it
for about thirty-five hundred dollars."
"Thanks," said Tom, and put the pearl

in his pocket.

If it was a joke it was expensive. If not, the other pearls the man had shown, nearly all of which were larger, must have been worth from fifty thousand to a hundred thousand dollars. Such is the power of money that this young man, destined to be one of the richest men in the world and, moreover, one who did not particularly think shout money, was nevertheless impressed by the stranger's careless handling of the valuable pearls. He concluded subcon-scously that the talisman was even more valuable. He took the package from his eat pocket and give it to Doctor Lentz.

"Raw silk—Syrian," murmured the gem expert, and undid the covering.

"Ha! Italo-Byzantine. The Raising of Tabitha. No! No!" He glared at young Merriwether, who retreated a step. "Very rare! It's the Raising of Jairus' Daughter. Same workmanship in the Lipsanoteca, Museo Civico, Brescia. If so, not later than fourth century. Very rare! H'm!" "Is it?" said Tom. "I don't know much

about ivories."

"No? Read Molinier! Græven!" "Thank you. I will, Doctor Lentz."
Doctor Lentz opened the little ivory box

and pulled out the silver case. "Ha! H'm! Not so rare! Asia Minor. Probably eighth century." "B. C.?"

"Certainly not. Key? H'm!"
"Haven't got it here," evaded Tom.
The little savant turned to his secretary

"Bring drawer marked forty-four, inner

compartment, antique-gem safe."

He was examining the little box, nodding his head and muttering: "H'm! H'm!" Tom felt the ground slipping away from under the feet of his suspicions even while his perplexity waxed monumental. And with it came the satisfaction of a man convincing himself that he is neither wasting his time nor making himself ridiculous.

The clerk returned with a little drawer in which Tom saw about a hundred and fifty

small keys.

"Replicas! Originals in museums of world!" explained Lentz. "H'm!" He turned the keys over with a selective foreinger. "It's that one or this one." And he picked out two. "Probably this! Damascus! Eighth century. Byzantine influence still strong. See that? And that? And that? And that? H'm!"

He inserted the little key and opened the casket. He saw the gold box within.

"Ha! H'm! Thracian! How did you get this? H'm!" He raised his head, booked at Tom fiercely and then said coldly: "Mr. Merriwether, this has been stolen from the British Museum!"

It beautifully complicated matters.
Tom's heart beat faster with interest. "Are you sure?" he asked, being a

Merriwether.

"Wait! H'm!" He lifted it out and examined the back. "No! No!! Thracian!
Of the Bisaltæ! Time of Lysimachus!
But — Well! Aryan symbolism! Posshly taken to India by one of Alexander's captains—perhaps by Lysimachus himself! And —— Oh! Oh, early Christians! Oh, early Philistines! See that? Smoothed away to put that — Oh, beasts! Here-tics in art! Curious! Do you know the efore opening

"It was in Greek, and -

"Yes. He said this had belonged to Apollonius of Tyana."
"How much does he ask?"

"It is not for sale."
"Inside is a pentagram?"

"No; a cross, with seven emeralds as big as that, all flawless."

"There are only two such emeralds in the world without flaws and we have one of them. The other is owned by the Arch-bishop of Bogotá, Colombia."

"He said these were flawless and that he has proofs. He says Eligius studied

"Mr. Merriwether, you have on your hands either a very dangerous impostor or else — H'm! He must be an impostor! How much does he want?"

"It is not for sale." "H'm! Worse and worse! If I can be of use let me know! They'll fool us all! All! Good day!" And Doctor Lentz walked away, leaving Tom more puzzled than ever, but now determined to go to 777 East Seventy-seventh Street at eight o'clock that

He went home and wrote an account of what had happened, placed it in an enve-lope, sealed the envelope and gave it to his

valet.
"If you don't hear from me by ten o'clock
there but don't tonight give this to my father; but don't give it to him one minute before ten. And you stay in until you hear from me." "Very good, sir."

He then went to the club, ordered an early dinner for two, and invited his friend Huntington Andrews to go with him. He did not go into details.

Shortly before eight he stationed Andrews across the way from 777 East Seventy-seventh Street and told him:

"If I am not back here at eight-fifteen come in after me. If you don't find me go to my house and wait until ten. My man has instructions. See my father." Tom was Merriwether enough to have in

readiness not only an extra revolver to give to his friend but also a heavy cane and an electric torch. Also he drove Huntington to within a hair's-breadth of death by

unsatisfied curiosity.

At one minute before eight Mr. Thomas
Thorne Merriwether went into the house of mystery, realizing for the first time how often the mystic number seven recurred. The Bible teemed with allusions to the seven stars, the seven seals, the seven-branched candlestick, the seven mortal sins. The Greeks had Seven Wise Men and Seven Sleepers, and the Pythagoreans saw magic in all the heptamerides. And there were seven notes of music and seven primary col-ors and seven hills in the Eternal City. Also, it had never before occurred to him that he was born on the seventh day of the seventh month. And now it had its effect.

He tried the door. It opened when he turned the knob. The hall was dark, but he could descry the staircase. He grasped his revolver firmly and entered.

There was a smell of undusted floors and unaired walls. The darkness thickened with each step as he climbed, compelling him to grope. And because he groped there came to him the fear that always comes with uncertainty. It permeated his soul and was intensified, without becoming more concrete, by reason of the ghostly emptiness peculiar to all unoccupied houses. The absence of furniture served merely to fill the corners with shadows that bred uneasiness. People had been there; people no longer were! The house was empty of humanity, but full of other beingn—impalpable suspects that made the flesh creep! It was like death—unseen, but felt with the senses of the soul.

There was no place, decided Tom, so fit to murder people in as an empty house. His adventure now took on an aspect of reckless folly. But though he felt in this ghostly house what might be called the ghost of fear, he also felt the impelling force of an intelligent curiosity. In this young man's soul was a love of adventure, a gambler's phi-losophy, a reserve force of cold intelligence and warm imagination such as is found in the great explorers, the great chemists and the great buccaneers of dollars.

That was why in the year of grace 1913 Tom Merriwether stood in the middle of the second-story front room of a house situin a very good street, only ree from Fifth Avenue, with his left hand outstretched, and on the open palm of it a cross with a Greek name that meant Dispeller of Darkness—in a darkness that could not be dispelled. His right hand grasped the butt of an automatic .45 loaded with elephant-stopping bullets—but of what avail was that against a knock in the head from behind?

Listening for soft footsteps, he seemed to hear them time and again—and time and again not to hear them! People nowadays, he finally decided, do not want to take

# **Exposition Chief Buys Haynes Car**

Chas. C. Moore, President of the Panama-Pacific International Exposition, has purchased a Haynes four-cylinder car equipped with the Vulcan Electric Gear Shift.

Worthy of note is the fact that this car is the twenty-seventh owned by Mr. Moore. It is in constant use-much more so than were any of its twenty-six predecessors, and, due largely to its simplicity of control, Mr. Moore frankly admits that only now is he deriving the real pleasures of motoring. No doubt about it-the hand shift method suffers by comparison.

Before you buy, look over other cars at the price you want to pay, compare the specifications, part for part, with those of the Haynes. Here are a few facts regarding the

The Haynes motor has a bore of 41/4 in, and stroke of 51/2 in.; cylinders cast in pairs; L-head design; valves enclosed; with a dynamometer rating of 65 and 48 horsepower on the 'six' and "four," respectively. Ignition is provided by the American Simms Dual High Tension Magneto; carburetion, by the Stromberg device; electric lighting and starting, by the Leece-Neville separate unit system; and cooling by centrifugal pump, pressed steel fan and cellular radiator.

Other Haynes specifications are the splash and gravity lubrication system; contracting band clutch; Timken and McCue full floating rear axles; twenty-one gallon gas tank on rear of chassis; motor-driven tire pump; extra demountable rim; and Collins curtains. Shock absorbers on the "six."

The Haynes "Four" . \$1785 and \$1985 The Haynes "Six" 130 inch wheelbase 2500 and 2700 The Haynes "Six" . 2585 and 2785 136 inch wheelbase .

"The Complete Motorist" by Elwood Haynes, Father of the American Automobile Industry, fully describing the Vulcan Electric Gear Shift, will be mailed upon receipt of ten cents in stamps. Write to

TWINPLEX SALES CO., 315 N. 10th St., St. Louis -- 172 Brandway, New York. Twinplex Sales Co. of Canada, Montreal

Presently he thought he heard soundsfaint musical murmurings in the air about him, low wailings of violins, scarcely more than Æolian harpings, and pipings as of tiny flutes—almost indistinguishable. Then a delicate swish-swish, as of silken gar-ments. Also, there came to him a subtle fragrance that turned into an odorous sigh changing into a summer breath of sweet peas; and he imagined—he must have imagined—hearing "I do love you!" ah, so softly!

He smelled now the odor of sweet peas, which stirred sleeping memories without fully awakening them, as all flower odors do by what the psychologists call associ-ation. He heard "I do love you!"—and then the Dispeller of Darkness was taken from his outstretched hand.

He stood there, his muscles tense, braced for a shock, ready for a life struggle, per-haps half a minute before the sound of foot-steps retreating in the hall outside recalled to him his instructions. He vehemently desired to follow and see who it was that had taken the Dispeller of Darkness; but he had pledged his word not to. He but he had pledged his word not to. He hesitated.

The odor of sweet peas was flooding him as with waves. And he heard "I do love you!"—heard it again and again with the inner ear of his soul, the listener of delights. He thrilled at the thought of being loved. It made him incredibly happy. He felt unbelievebly worse!

unbelievably young!
Suddenly it occurred to him that he had
not counted a hundred as he had promised, though he must have spent more than a minute woolgathering. He counted a hundred as fast as he could and then hastened from the room. It was plain that Tom Merriwether was already doing in-credible things or, at least, failing to do the obvious. Great is the power of suggestion on an imaginative mind!

He flashed his electric torch. He was in a bare room with a dusty hardwood floor, ivory-tinted wainscoting and a Colonial mantel. The hall was empty. He walked down the stairs, his steps raising disquieting

echoes and creepy creakings.

Mindful of his waiting friend outside he quickly walked out of the gloom into which he had carried the Dispeller of Darkness of Apollonius of Tyana, the cross of the seven emeralds. Huntington Andrews saw him coming and crossed over to meet him. "How did you make out, Tom?"

"I'm a fool, Huntington; and so are you! And so is everybody!"
"Right-o!" agreed Andrews, who was inveterately amiable and loved Tom.
"It's the most diabolical—" Tom

paused. "Yes, it is," agreed Huntington Andrews, so obviously anxious to dispel his friend's ill temper that Tom laughed and

said cheerfully:
"Come on, me brave bucko!" And together they walked to the corner and headed for 777 Blank Avenue.

"Huntington, you wait here; and if I am not back by nine-forty-five go to my house. At ten o'clock have my valet deliver the letter I gave him for my father. You can be of help to the governor if you will."

And Huntington Andrews asked no questions—he was a friend.

Tom rang the bell of 777. The door opened. One of the four over-intelligent-looking footmen stepped to one side respectfully.

"Is your ——"here."

"Is your ——" began Tom.
"Yes, Mr. Merriwether," answered the man with a deference such as only royalty

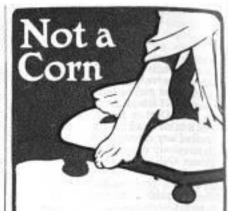

He then delivered Tom to footman Number Two, who in turn escorted him as far as Number Three: then Number Four led him to the door of the master's library. The footman knocked, opened the door and announced, with a curious solemnity:

"Mr. Thomas Thorne Merriwether, 7-7-77."

The strange man was there in his armchair, his back to the window. The room was lit by candles. The man rose and said respectfully:

"I thank you, Mr. Merriwether."
"Don't mention it," said Tom amiably.
The man bowed his head and looked at Tom meditatively. Tom was the first to break the silence.

(Continued on Page 53)

Last week that foot had corns. But the owner read of Blue-jay.

She applied it one night and the pain was instantly relieved. In 48 hours all the corns came out. And these corns will never come back.

That's the story folks have told about sixty million corns. And tens of thousands tell it every day.

Some of them used to pare corns, merely to relieve. Some of them tried treatments until they gave up in dis-

Now never again will they suffer from corns. When one appears, Bluejay goes on it.

There is no more pain. The corn is forgotten. In two days they lift it No annoyance, no pain, no

That sounds too good to be true. But remember, please, that about one million corns a month are ended in this Blue-jay way.

Why don't you let it put an end to

(Continued from Page 50)
v I ask what ——" Tom began, but "May I ask what was checked by the other, who held up his right hand with the gesture of a traffic policeman and said slowly:

"A message in the dark! You carried one to another soul, who waited for it. And that other soul is taking one to you. Some day you will meet her. You will marry her. There is no doubt whatever of that. None! Ask me no questions, Mr. Merriwether. I ask nothing of you—no more that the property of the pr money, no time, no services, no work, no favors-nothing! Your fate is not in my hands. It never was! You will follow your destiny. It will take you by the hand and lead you to her!"

That is very nice of destiny."

"My young friend, you are very rich, very powerful. You can do everything. You fear nothing. This is the year 1913. But I tell you this: The woman who will be your wife in this world and throughout eternity has received your message. It was ordained from the beginning. You have not seen her; you have not heard her; you have not touched her. And yet you will know her when you see her and when you hear her and when you feel her. Into the darkness you went. Out of the darkness she will come. Nothing you can do can change it. change it. Improve your hours by thinking of her. Think of the love you have to give her! Think of it constantly! Of your love! Yours! Of hers you cannot guess. The love you will give will make her your mate! Your love! And so, Thomas Thorne Merri-wether, think of the One Woman!"

"I know! Amusement, sneers, skepticism, anger—all are one to me. I ask nothing, expect nothing, desire nothing and fear nothing from you, young sir. A queer experience this—eh? An unexplained and apparently unconcluded little game! A plot? A joke? A piece of lunacy? Call it anything you wish. Again I thank you. Good evening, Mr. Merriwether."

And Tom was politely ushered from the room by the strange man and from the house by the four overintelligent footmen.

NEXT day Tom Merriwether found himself unable to think of anything but the mystery of the fateful Tuesday. He felt baffled. His curiosity had been repulsed at every step. In their definite incomprehensibility all the incidents that he so vividly recalled took on an irritating quality that made him a morose and uncomfortable companion. Huntington Andrews noticed it at luncheon; and so admirable was the quality of his amiability that after the coffee he said: the coffee he said:

Forn, I've got important business to attend to today, and if you don't mind I'll be off now. Of course if you think I can help you in any way all you have to do is to tell me what to do."

"Huntington, you are the best friend in the world. I've been thinking ——"

Tom paused and stared into vacancy. He was trying to recall whether the man at 777 Blank Avenue had a criminal look about

the eyes. Huntington Andrews rose very quietly and walked away. He knew his friend wished to think—alone.

Lost in his exasperating speculations Tom finally ceased thinking of the man and began to think of the girl. Was the game to rouse his interest in an unknown, later to be introduced to him? Was the scheme one that involved an adventuress? Why all the claptrap? And why had his thoughts, in spite of himself, dwelt so persistently on love and somebody to love? Why had the springtime—since the night before—come to mean a time for loving? Why had he begun to see, in flashes, tanta-Why had he begun to see, in flashes, tanta-lizing glimpses of rosy cheeks and bright eyes? Why had he permitted his own mind to be influenced by the strange man's remarks, so that Tom Merriwether was indeed thinking—if he would be honest with himself—of marriage? Was his affinity on her way to him at this very moment, as the man said? He began to hope she was.

He dined at home and was so preoccupied at the table that even his father noticed it.

"What's up, Tom?"
"What? Oh! Nothing, dad! I was

just thinking."
"Terrible thing, my boy—thinking at mealtime," said E. H. Merriwether with a self-conscious look of badinage.

Yes, it is. I'll quit."

"Is it anything about which you need advice—or help, my boy?" said the great little rullroad dynast very carelessly.

His eyes never left his son's face; but when Tom raised his gaze to meet his father's the elder Merriwether showed no interest. Tom knew his father and felt the aternal love that insisted on concealing

itself as though it were a weakness.

"No, indeed. There is nothing the matter—really. I was thinking I'd like to do a man's work. I guess you'd better let me go

with you on your next tour of inspection."
The face of the czar of the Southwestern & Pacific lighted up.
"Will you?" he said, with an eagerness

that made his voice almost tremble.

And that evening E. H. Merriwether delivered a long lecture on railroad strategy and railroad financing to his son, which

brought them very close to each other.
On the next day, however, all thoughts of being his great father's successor were subordinated to the feeling that, if Mr. Thomas Thorne Merriwether had to be the successor of a railroad man, he should himself take steps to provide his own successors. Feeling that he was his father's son made him think of paternity. And that made him think of the message he had delivered in the dark and of the message the man had said would some day come to Tom Merriwether. He drew a deep breath and thought he smelled sweet peas. And that somehow made him think of the girl he should marry. Try as he might he could not quite see her face. He thought he kissed her, and he inhaled the fragrance of sweet peas. Her complexion was beautiful. No more!

On the afternoon of the third day Tom decided that he was wasting too much time in thinking of the possible meaning of his queer experience, and also that it was of little use trying not to think about it. Therefore he would try to put an end to the perplexity.

He went to 777 Blank Avenue and rang the bell. A footman opened the door and stared at him icily. Tom perceived he was not one of the men whose faces looked too intelligent for footmen.

"I wish to see Mr.—er—your master."
"Does he expect you, sir?" The tone
was not so respectful as footmen in Blank Avenue houses used in speaking to the heir of the Merriwether millions.

"No; but he knows me."
"Who knows you, sir?"

"Your master."
"Could you tell me his name, sir?"

"No; but I can tell you mine.

"He's not at home, sir."

"I'm Mr. Merriwether. Say I wish to speak to him a moment."

"I'm sorry, sir. He's not in."

The footman was so unimpressed by the name of Merriwether that Tom experienced a new sensation, one which made him less sure of his own powers. He took out a card and a banknote and held them out toward

the man. I am anxious to see him."

"I'm sorry. I can't take it, sir," said the footman, with such melancholy sincerity that Tom smiled at the torture of the ockney soul.

Then he ceased to smile. The master of this mysterious house had compelled even the footmen to obey him!
"But if you will call again in an hour, sir,

I think perhaps, sir ——"

"Thank you. Take it anyhow!"

He again held out the banknote. The man saw it was for twenty dollars and

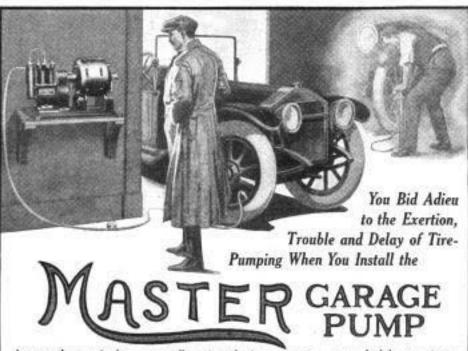

almost turned green. "I-I d-daresent, sir!" he whimpered, and closed his eyes with the expression of an anchoret resolved not to see the beautiful

Tom left him, walked over to the park and sat down on a bench. He settled down to think calmly over the mysterious affair

and looked about him.

The grass in the turf places had taken on a definite green, as though it were May. The trees were not yet in leaf, making the grass-greenness seem a trifle premature, but Tom noticed that the buds on the trees and shrubs were bursting; there were little feathery tips of tender red and pale greentiny wings about to flutter upward because the sun and the sky beckoned to them to go where it was bright and warm. The sky was of a spotless turquoise, as though the spring cleaning up there had been thorough. The clouds were of silver freshly burnished for the occasion. The air was alive, laden with subtle thrills; it throbbed invisibly, as though the light were life, and life were love. He saw hundreds of sparrows, and they all twittered; and all the twitterings

An actual necessity for every well-equipped private garage—a wonderful convenience that soon pays for itself in saving of time, exertion and tires. The pressure gauge insures the keeping of your tires at the right inflation essential to long life,

Will completely inflate a 37x5 tire to 90 lbs, pressure in less than three minutes. The most powerful equipment of its size on the market-12 inches high, 18-inch base, 8 inches in width.

May be set on floor or mounted on small shelf — delivery of pure air, absolutely free from oil, and out of the way—but always ready for service.

Equipment consists of a two cylinder pump driven by a small electric motor and mounted on about the should last at least ten years. small frame, 20 feet of best reinforced rubber air-hose furnished. General Elec. Co. motors used. Pistons of special steel carefully hardened and ground to exact size. No subber or leather packing rings used in entire construction. This insures

Rawhide gean used to connect motor to pump. Outfit is thus made practically noiseless.

No installation expense. Necessary only to connect motor with ordinary electric light circuit. Notank required. Pump delivers pare air in a steady stream directly to time.

10 DAYS TRIAL OFFER AND GUARANTEE

We will refund purchase price on return of pump after 10 days trial, if so requested. We guarantee "Master" Garage Pumps for one year against defects of material and workmanship. Price Complete with alternating current motor, \$60.00. Price Complete with direct current motor, \$55.00. Our stock motors are fee 110 volt disset current and 110 volt single phase 60 cycle alternating current, but where necessary we can furnish austors for 220 volt direct current, 110 volt, 25 or 40 cycle alternating current or 220 volt 25, 40 or 60 cycle alternating current. An Independent Company with an independent selling policy

were very, very shrill, and yet very, very musical. And, also, they twittered in couples that hopped and darted and aerially zigzagged-always together and always twittering!

A policeman stopped and said something

to a nursemaid. The nursemaid said some thing to the policeman. He was young and she was pretty. Then the policeman said nothing to the nursemaid, and the nurse-maid said nothing to the policeman. Then two faces turned red. Then one face nodded yes. Then the other face walked away, swinging a club; and—by all that was marvelous!—swinging the club in time to the tune the sparrows were twittering-in couples—the same tune, as though the clubswinger's soul were whistling it! Tom smiled uncertainly—he wanted to

give money, lots of it, to the policeman and to the nursemaid; and he knew it was impossible—it was too obviously the intelligent thing to do! So, instead, he drew a deep breath.

Instantly there came to him not the odor of spring and of green things growing, but of sweet peas and summer winds, and changing, evanescent faces pink-and-white as flowers, with flower-odor associations and eyes full of glints and brightnesses that recalled dewdrops and sunlight and stars, And these glittering points shifted in tune to the twittering of birds and the swinging of park policemen's clubs! Love was in the air! Love was making

Tom Merriwether impatient, as that love which is the love of loving always makes the mateless man.

He could no longer sit calmly. He could not sit at all. He craved to do something, to do anything, so long as it was motion. Therefore he walked briskly northward. At Ninetieth Street he halted abruptly. He had begun to walk mechanically and he could think of what he did not wish to think. So he shook himself free from the

spell and walked back.

An hour had passed. He again rang the bell of 777. The same footman opened the door.

"Is he in?" asked Tom impatiently. "Yes, sir-he is, sir. I told him the moment he came in, sir." He looked as uncomfortable as a lifelong habit of impas-

sivity permitted.
"What did he say?" asked Tom.
"He said: 'How much did he offer to give you when you said I wasn't at home?'
Yes, sir. That's what he asked me."
"And you said?"
"I said it was a yellowback, sir. That's
all I could see. I said I wouldn't take it,

and he said I might just as well have taken it. Thank you, sir! This way, sir." The footman led the way to the door in

the rear, rapped, and in the sonorous, tri-umphant voice that a twenty-dollar tip will give to any menial he announced: "Mr. Merriwether!"

The same man was in the same chair in the same room, with his back to the stained-glass window. Tom recalled all the incidents of his previous visits—recalled every detail. Also the old question: What is the game? Also the new question: Where

The man rose and bowed. It was the

bow of a social equal, Tom saw.
"Good morning, Mr. Merriwether.
Won't you be seated, sir?" And he motioned him to a chair.
"Thank you."
"How can I serve you?"
"Who is the worner?" said Tom ab

Jeannette, Pa.

Minneapolia Omaha Kansus City, Mo.

Atlanta

"Who is the woman?" said Tom abruptly.
"Your fate!" answered the man.
"Her name?"

"Her address?

"I don't know it."

"What is your game?"
"I have money enough for my whims and time enough to gratify my desire to help you. Eugenics is my hobby. I recognize that I cannot fight against the decree of destiny."

"I am tired of all this humbug."

"I ask nothing of you now. You can go or you can come. You can go to India or to Patagonia-or even farther. You may send detectives and lawyers, or even thugs, to me. You may cease your search for her—if you can!" "You have roused my curiosity -

"That is a sign of intelligence."
"I tell you now that I don't believe a
word of what you say."

"Free country, young man."
"I've had enough of this nonsense—

"Though I am always glad to see you, young sir, and would not wound your feel-ings for worlds"—the man's voice was very polite but also very cold—"I might be forgiven for observing that I did not ask you

"I'll give you a thousand dollars ----The man stopped him with a deprecatory

wave of the hand.

"One of the pearls I offered you, Mr. Merriwether, is valued at ten thousand dollars. You did not select that one; but I'll exchange the one you took for it—now if you wish."

if you wish."
"That's all very well; but ——" Tom paused and the man cut in:

"Do you wish to see her from a saje distance? Or do you wish to talk to her without seeing her? Or ——" "To see her and talk to her!" "Wait!"

The man intently regarded the tip of Tom's left shoe for fully five minutes. Then he raised his head and clapped his hands twice. The black manservant with the

fez appeared.

The man said something in Arabic—at least it sounded so to Tom. The black answered. The man spoke again. The black replied.

The man said what sounded to Tom like:

"Ay adad."
The negro answered: "Al-sabi! Al-sabi

The man waved his hand dismissingly and the negro salaamed and left the room.

After a moment the man turned to Tom

and said with obvious perplexity:
"I am not sure it is wise for me to meddle, but perhaps it is written that I am to help you three times. Who knows?" He stared into Tom's eyes as though he

would read a word there—either yes or no. But Tom said, a trifle impatiently: "Well, sir?"

"Go to the opera tonight. Take seat H 77. No other seat will do." "H 77—tonight," repeated Thomas

Thorne Merriwether.

"The opera is Madama Butterfly."
"Thanks," said Tom and started for the door. He halted when the man spoke:
"It is the seat back of G 77. None other will do.

"Good day, sir," said Tom, and left the (TO BE CONTINUED)

#### A Combination Cure

SUCH a combination of the most modern surgical and medical methods and de-vices was used recently in London to save the life of a boy aviator who had been badly injured in the fall of his monoplane that the case is attracting the attention of medical men in all countries.

The aviator's left leg was badly broken and was treated by one of the new prac-tices. The broken bones were spliced by metal plates called Lane's Plates. It had been feared that lockjaw might develop from the tear in his leg caused by the broken bones at the time of the fall; and after the bones had been spliced the dreaded lockjaw appeared. Tetanus or lockjaw an-titoxin was then injected into his back. This helped, but did not entirely stop the progress of the dreaded infection; so his leg had to be amputated.

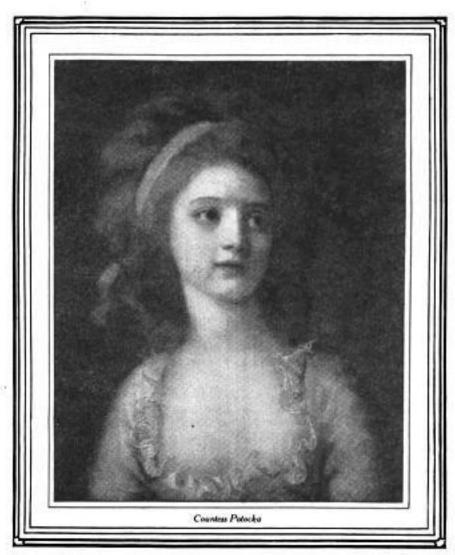

For various reasons it was inadvisable

and dangerous to give him ether in the ordinary way to produce unconsciousness during the operation; so he was anesthetized by injections direct into the blood. From then on for many days it was a battle to save him from death as a result of the shock of the operation, his other injuries and his weakness.

Antispasmodics and other drugs were given by injection, and at times he was kept alive by having him breathe oxygen bub-bling through alcohol. Altogether, six of the most recent medical and surgical methods were used in addition to many ordinary ones, and in two months he was discharged from the hospital cured.

# \$5,000 for Photographs of America's Fifty Loveliest Women

Ansco Company will present to the world at the Panama-Pacific Exposition, San Francisco, 1915, photographs of America's 50 loveliest women. Camera users of the United States and Canada, whether amateur or professional, are invited to make these photographs. Ansco Company will pay the sum of \$5,000.00 for the 50 chosen pictures.

IN little villages and great cities of America live women whose grace and beauty and personal charm would easily place them among the most fascinating in the world. You of the little village and you of the great cities know these women. And you can present their beauty before the world. Does that interest you? Will you help?

Poets, artists and historians have perpetuated the glories of Helen of Troy, of Cleopatra, of Salome; Poppæa Sabina, Francesca da Rimini, Marie Antoinette, Mary of Scotland, Josephine, and many other beauties of ancient days; but what of the lady of your own home-place whose loveliness excels them all?

Will you help Ansco Company perpetuate her glories?

Women whose charms have made and unmade kings are unquestionably fascinating, but in America—in the smallest villages and largest cities—one sees hundreds of feminine faces that for genuine loveliness eclipse the renowned beauties of olden times.

Somewhere in this land your "loveliest woman" lives—a wife, a mother, a sister, or a sweetheart or friend, but surely some one somewhere. It should be your pride and your effort that places your "loveliest woman" among the fifty whose fascination excels those of whom the poets sang. Her picture should be among "America's 50 loveliest women."

Will you place your faith in your "loveliest woman"? Will you make this Exhibition the most notable presentation of womanly beauty the world has ever gazed upon?

Conditions of this \$5,000.00 contest are very simple. The Ansco dealer in your town will present you with full information and instructions with our compliments, or we will gladly mail you copies of the contest folder, if you will write

The sign of the Associ

produces the Ansco, the amateur camera of professional quality; Ansco colorcalue film; Cyko, the paper that gives prints of rich, soft quality that never fade, and Ansco photo chemicals. Their value in producing superior results has been proven many years by amateurs and professionals. The No. 3A Ansee Speeder takes 3½ x 5½ size pictures and is equipped with a high-grade Anaco Anastigmat lens and Optimo sheller with a maximum speed of 1/300h of a second. The price is \$55,00,

# The shock of your daily steps

The jolt of your entire weight coming down on your heels in a two-mile walk gives you a total shock as great as if you stepped off a 16-story building.

If you wear heels of hard leather, this tremendous shock, amounting to hun-dreds of tons, is carried directly through your spine and nervous system every day.

Protect yourself with O'Sullivan's Heels of new, live rubber. Have them put on the shoes you work in, walk in, play in or dance in. They will take up the shock and save you from the result-ing fatigue, nerve fag and exhaustion.

They will increase your comfort and pleasure; make you more active and energetic and give you a brisk, youthful stride.

> O'Sullivan's Heels cost but 50 cents a pair, attached. All shoe-makers and shoe dealers will attach them to your shoes when you buy them, or at any other time. If you prefer, send us 35c and a tracing of your heel, and we will mail you a pair. O'Sullivan Rubber Co., 131 Hudson Street, New York.

# Attached Ready-to-Wear to the Hazzard Shoe

Ask your dealer for HAZZARD SHOES made with O'SULLIVAN'S HEELS right on them. If he does not carry them, send us his name and get our catalogue. It shows and describes servation newest ityles of comfortable, serviceable shoes in stock.

#### *AN AMERICAN VANDAL*

(Continued from Page 14)

him—and then, mutually filled with an envious despair, they would go apart and hold a grand lodge of sorrow together.

Also, he constantly wears his spurs and his sword; he wears them even when he is in a café in the evening listening to the orchestra, drinking beer and allowing an admiring civilian to pay the check—and that appar-

ently is every evening.

There was one Austrian colonel who came one night into a café in Vienna where we were and sat down at the table next to us: and he put our eyes right out and made all the lights dim and flickery. His epaulets were two hairbrushes of augmented size, gold-mounted; his Plimsoll marks were outlined in bullion, and along his garboard strake ran lines of gold braid; but strangest of all to observe was the locality where he wore what appeared to be his service stripes. Instead of being on his sleeves they were at the extreme southern exposure of his coattails; I presume an Austrian officer acquires

tails; I presume an Austrian officer acquires merit by sitting down.

This particular officer's saber kept jingling, and so did his bracelet. I almost forgot the bracelet. It was an ornate affair of gold links fastened on his left wrist with a big gold locket, and it kept slipping down over his hand and rattling against his cuff. The chain bracelet locked on the left wrist is very common among Austrian officers; it adds just the final needed touch. I did not see any of them carrying lorgnettes or shower bouquets.

One opportunity is afforded the European who is neither a soldier nor a hotel cashier to dress himself up in comic-opera clothesand that is when he a-hunting goes. An American going hunting puts on his oldest and most serviceable clothes—a European his giddiest, gayest, gladdest regalia. We were so favored by gracious circumstances as to behold several Englishmen suitably attired for the chase.

The conventional morning costume of an English gentleman expecting to call informally on a pheasant or something during the course of the forenoon consisted, in the main, of a perfect dear of a Norfolk jacket, all over plaits and pockets, with large leather buttons like oak-galls adhering thickly to it, with a belt high up under the arms and a saucy tail sticking out behind; knee-breeches; a high stock collar; shin-high leggings of buff or white, and a special hat—a truly adorable confection by the world's leading he-milliner.

#### The Sports of a King

If you dared to wear such an outfit afield in America the very dickeybirds would fall into fits as you passed—the very chipmunks would lean out of the trees and just naturally laugh you to death! But in a land where the woodlands are well-kept groves, and the undergrowth, instead of being weedy and briery, is sweet-scented fern and gorse and bracken, I suppose it is all eminently correct.

Thus appareled the Englishman goes to Scotland to shoot the grouse, the gillie, the heather cock, the niblick, the haggis and

other Scotch game.

Thus appareled he ranges the preserves of his own fat, fair shires in ardent pursuit of the English rabbit, which pretty nearly corresponds to the guinea pig, but is not so ferocious; and the English hare, which is first cousin to our molly cottontail; and the English pheasant—but particularly the pheasant

There was great excitement while we were in England concerning the pheasants. Either the pheasants were preying on the mangel-wurzels or the mangel-wurzels were preying on the pheasants. At any rate it had something to do with the Land Bill practically everything that happens in England has something to do with the Land Bill—and Lloyd George was in a free state of perspiration over it; and the papers were full of it and there was generally a great pother over it.

We saw pheasants by the score. We saw them first from the windows of our railroad carriage-big, beautiful birds nearly as large as barnyard fowls and as tame, feeding in the bare cabbage patches, regardless of the train chugging by not thirty yards away; and later we saw them again at still closer range as we strolled along the hawand-holly-lined roads of the wonderful southern counties. They would scuttle on

ahead of us, weaving in and out of the hedgerows; and finally, when we insisted on it and flung pebbles at them to emphasize our desires, they would get up, with a great drumming of wings and a fine conglike display of flowing tailfeathers on the part of the cock birds, and go booming away to what passes in Sussex and Kentler dense cover—meaning by that thicker dense cover—meaning by that thickets such as you may find in the upper end of Central Park.

They say King George is one of the best pheasant-shots in England. He also collects postage stamps when not engaged in his regular regal duties, such as laying corner stones for new workhouses and receiving presentation addresses from charity children. I have never shot pheasants: but, having seen them in their free state a above described, and having in my youth collected postage stamps intermittently. I should say, speaking offhand, that of the two pursuits postage-stamp collecting is infinitely the more exciting and dangerou.

#### Exciting Sport in October

Through the closed season the keepers mind the pheasants, protecting them from poachers and feeding them on selected grain; but a day comes in October when the hunters go forth and take their stands at spaced intervals along a cleared side flanking the woods; then the beaters dive into the woods from the opposite side, and when the tame and trusting creatures cons when the tame and trusting creatures come clustering about their feet expecting pro-ender the beaters scare them up, by wav-ing their umbrellas at them, I think, and the pheasants go rocketing into the air-rocketing is the correct sporting term—go rocketing into the air like a flock of Suniay supplements; and the gallant gunner downsthem in great multitudes, always taking due care to avoid mussing his clothes. For after all the main question is not "What did he kill?" but "How does he look?"

At that, I hold no brief for the pheasant—

except when served with breadcrumb dress

except when served with breadcrumb dressing and currant jelly he is no friend of mine. It ill becomes Americans, with our own record behind us, to chide other people for the senseless murder of wild things and besides, speaking personally, I have a reasonably open mind on the subject of wild-game shooting.

Myself, I shot a wild duck once. He was not flying at the time. He was, as the stockword goes, setting. I had no self-reproaches afterward however. As between that duck and myself I regarded it as an even break—as fair for one as for the other—because at the moment I myself was, as we say, setting too. But if, in the was, as we say, setting too. But if, in the interests of true sportsmanship, they must have those annual massacres I certainly should admire to see what execution a picked half dozen of American quali hunters, used to snap-shooting in the cane jungles and brier patches of Georgia and Arkansas, could accomplish among English pheasants, until such time as their consciences mastered them and they desisted from allowebbar! from slaughter!

Be that as it may, pheasant shooting is the last word in the English sporting calen-dar. It is a sport strictly for the gentry. Except in the capacity of innocent by-standers the lower orders do not share in it. It is much too good for them; besides, they could not maintain the correct wardrobs

The classes derive one substantial benefit from the institution however. The sport-ing instinct of the landed Englishman has led to the enactment of laws under which an ordinary person goes smack to jail # he is caught sequestrating a clandestime pheasant bird; but it does not militate against the landowner's peddling off his game after he has destroyed it. British thrift comes in here. And so in carload lots it is sold to the marketmen. The result is that in the fall of the year pheasants are cheaper than chickens; and any person who can afford poultry on his dinner table can afford pheasants.

The Continental hunter makes an even more spectacular appearance than his British brother. No self-respecting German or French sportsman would think of going forth after the incarnate brown hare or the ferocious wood pigeon unless he had on a green hat with a feather in it; and a greet suit to match the hat; and swung about he neck by a cord a natty fur muff to keep his hands in between shots; and a swivel chair

to sit in while waiting for the wild boar to come along and be bowled over. Being hunted with a swivel chair is what makes the German wild boar wild. On occasion, also, the hunter wears, suspended from his belt, a cute little hanger like a sawed-off saber, with which to cut the throats of his spoil. Then, when it has spoiled some more, they will serve it at a French restaurant.

It was our fortune to be in France on the famous and ever-memorable occasion last November when the official stag of the French Republic met a tragic and untimely end, under circumstances acutely distress-ing to all who believe in the divinely bestowed prerogatives of the nobility. The Paris edition of the Herald printed the lamentable tale on its front page and I clipped the account. I offer it here in exact reproduction, including the headline:

#### "HUNTING INCIDENT SAID TO BE DUE TO CONSPIRACY

"Further details are given in this morning's Figaro of the incident between Prince Murat and M. Dauchis, the mayor of Saint-Félix, near Clermont, which was briefly reported in yesterday's Herald. "A regular conspiracy was organized by M. Dauchis, it is alleged, in order to secure

the stag Prince Murat and Comte de Valon the stag Prince Murat and Comte de Valon were hunting in the forest of La Neuville-en-Hetz. Already, at the outset of the hunt, M. Dauchis, according to Le Figaro, charged at a huntsman with a little automobile in which he was driving and threat-ened to fire. Then, when the stag ran into the wood, near the Trye River, one of his keepers shot it. In great haste the animal was loaded on another automobile; and before either the prince or Comte de Valon could interfere it was driven away. could interfere it was driven away.

"While Comte de Valon spurred his horse in pursuit Prince Murat disarmed the man who had shot the steg, for he was leveling his gun at another huntsman; but before the gun was wrenched from his hands he had struck Prince d'Essling, Prince Murat's uncle, across the face with the butt. "Meantime Comte de Valon had over-

taken the automobile and, though threatened with revolvers by its occupants, would have recaptured the stag if the men in charge of it had not taken it into the house of M. Dauchis' father.

"The only course left for Prince Murat and Comte de Valon was to lodge a com-plaint with the police for assault and for killing the stag, which M. Dauchis refused to give back."

#### Few Bargains Abroad

From this you may see how very much more exciting stag hunting is in France than in America. Comparing the two systems we find but one point of resemblancenamely, the attempted shooting of a hunts-man. In the North Woods we do a good deal of that sort of thing: however, with us it is not yet customary to charge the pro-spective victim in a little automobile—that may come in time. Our best bags are made by the stalking or still-hunting method. Our city-raised sportsman slips up on the guide and pots him from a rest.

But consider the rest of the description so graphically set forth by Le Figuro—the intriguing of the mayor; the opposing groups rampaging round, some on horseback and some in automobile runabouts; the intense disappointment of the highborn Prince Murat and his uncle, the Prince d'Essling, and his friend, the Comte de Valon; the implied grief of the stag at being stricken down by other than noble hands; the action of the commoner, who shot the stag, in striking the Prince d'Essling across his pained and aristocratic face with the butt— exact type of butt and name of owner not exact type of butt and name of owner not being given. Only in its failure to clear up this important point, and in the omission of a description of the costumes of the two princes and the comte, is Le Figaro's story lacking. They must have been wearing the very latest creations too!

This last brings us back again to the subect of clothes and serves to remind me that, contrary to a belief prevalent on this side of the water, good clothes cost as much abroad as they cost here. In England a man may buy gloves and certain substantial articles of haberdashery in silk and linen and wool at a much lower figure than in America; and in Italy he will find crocheted handbags and bead necklaces are to be had cheaper than at home—provided, of course, he cares for such things as crocheted hand-

bags and bead necklaces. Handmade laces and embroideries, and sundry other feminine fripperies, so women tell me, are moderately priced on the Continent, if so be the tourist-purchaser steers clear of the more fashionable shops and chases the elusive bargain down a back

street; but, quality considered, other things cost as much in Europe as they cost here—and frequently they cost more.

In Paris or Rome you may get a five-course dinner, with wine, for forty cents—so you may in certain quarters of New York; but in either place the man who can afford to pay more for his dinner will find it to his ultimate well-being to do so. Simply because a boarding house in France or Italy is known as a pension does not keep it from being a boarding house—and a pretty average bad one, as I have been informed by misguided Americans who tried living at a pension, and afterward put in a good deal of their spare time regretting the experiment.

#### A Big Lira's Worth

Altogether, looking back on my own ex-periences, I can at this time of writing think of but two common commodities that, when grade is taken into the equation, are found to be radically cheaper in Europe than in America—these two things being taxicabs and counts. For their cleanliness and smartness of aspect, and their reasonableness of meter-fare, taxicabs all over Europe are a constant joy to the traveling American. And, though in the United States counts are so costly that only the marriageable daughters of the very wealthy may afford to buy them—and even then, as the court calendars attest, have the utmost difficulty in keeping them after they are bought—in Continental Europe anywhere one may for a moderate price hire a trueone may for a moderate price nire a true-born count to do almost any small job, from guiding one through an art gallery to wait-ing on one at the table. Counts make indifferent guides, but are middling fair waiters.

Outside of the counts and the taxicabs, and the food in Germany, I found in all Europe just one real overpowering bar-gain—and that was in Naples, where, as a general thing, bargains are not what they seem. For the exceedingly moderate outlay of one lira—Italian—or twenty cents— American—I secured this combination

package—to wit, as follows:

In the background old Vesuvius, like a wicked, fallen angel, wearing his plumy, furny halo of sulphurous hell-smoke; in the middle distance the Bay of Naples, each larcenous wave-crest in it triple-plated with silvern glory pilfered from a splendid full moon; on the left the riding lights of a visiting squadron of American warships; on the right the myriad slanted sails of the coral-fishers' boats, beating out toward Capri, with the curlew-calls of the fishermen floating back in shrill snatches to meet a jangle of bell and bugle from the fleet; in the immediate foreground a competent and accomplished family troupe of six Neapolitan troubadours-men, women and children-some of them playing guitars and all six of them, with fine mellow voices and tre-mendous dramatic effect, singing, the words being Italian but the air good American— John Brown's Body Lies a-Moldering in the Grave!

I defy you to get more than that for twenty cents anywhere in the world!

Editor's Note-This is the fifth in a series of articles by Irvin S. Cobb. The sixth will appear in an early issue.

# Cool Breezes to Order!

Step out of the hot, muggy, sun-baked street. Snap the button—whir-r-r! The little Robbins & Myers "STANDARD" breeze-maker starts going at top speed—and then you lean back and just soak in coolness and comfort, Why not see the local "STANDARD" dealer in your vicinity today?

# Robbins & Myers

Fan as low as \$9.00. That's a small price to pay for health and energy all summer long—and many summers to come. It uses less than half the current of an ordinary electric light. Made for either alternating or direct current. All modern improvements. For desk, ceiling, bracket, oscillating or exhaust. Write for free illustrated booklet. It will give you some fan pointers you ought to know.

(Concluded from Page 23)

flash and flare of electric welding, for instance, which is interesting as fireworks, but probably has no vital bearing on the product.

That is not so much an argument against admitting spectators, however, as an illus-tration that the showman's skill is needed to indicate what to see and how to see it. Factories of this sort are often famous showplaces for experts and executives from all over the world, and the show values are just as definite though the appeal is to a smaller audience.

One large machinery concern in the Middle West makes apparatus of little popular interest, and at the same time is constantly turning out new things of technical interest for shipment to distant places. Whenever a new machine has been designed, built and is ready to be sent away the management invites newspaper men, engineers, business men and others prominent in its home town men and others prominent in its nome town to see the new thing. Its use is explained if it cannot be actually demonstrated by working; and, though three-fourths of the visitors may never again lay eyes on such a piece of apparatus, the results of these little exhibitions are very definite, for they make the concern known in its own commu-nity and greate local good will for it as an nity and create local good will for it as an industry to be proud of.

The showman can sometimes go too far The showman can sometimes go too far for sound business purposes. Our automobile industry is a case in point. In the early days it was built largely on the spectacular interest created by racing. That was eventually overdone and had to be corrected by manufacturers. Then followed a period of automobile shows, which offered a quieter means of demonstration to the solid, want-to-know, buying section of the public; but shows grew in number and costliness, and had to be restricted by trade measures.

Few industries ever grew so fast or so soundly as the American auto business, however, and few have ever lived down their inherent evils so well. The elements of unpopularity that have risen in it from time to time have been as potent for harm as any that exist in the best-hated public-

service industries. There have been automobile accidents, automobile extravagance and, in the early years, the doubtful quality of the cars them-selves; but the shortcomings of the industry as well as its longcomings have always been out in the open, under the calcium light, with the music of a brass band. It is a business thoroughly explained and under-stood; and in this day of general expla-nation, when a question mark confronts all business, it is a fine model for other industries to follow.

Editor's Note-This is the third and last of a series of articles by James H. Collins.

#### The Dead Past

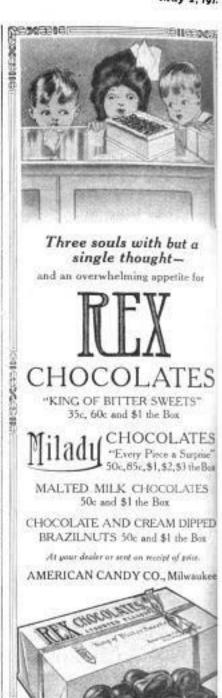

WHERE once the old sixshooter spoke
The copper's billy swings;
The glamour of the past is broke
By laws an' rules an' things.
What once was roarin' dancin'-halls
A deadly silence warns. A deadly silence wraps— Since punchers took to overalls Instead of spurs an chaps.

The click of chips ain't heard no more; The roulette wheel don't whir; The gamblin' joint's now a store, An' things ain't what they were The games is done; the curtain falls
On faro, stud an' craps—
Since punchers took to overalls
Instead of spurs an' chaps.

There ain't no gang comes whoopin' down The middle of the trail, A-shootin' up the little town An' drivin' strangers pale We're done with all them oldtime brawls An' crazy shootin' scraps— Since punchers took to overalls Instead of spurs an' chaps.

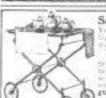

I s'pose the hull thing's fer the best; An' yet somehow I sigh Fer that old rough-an'-ready West I knew in days gone by. seems to me that life just crawls An' all its joys collapse-Since punckers took to overalls

Instead of spurs an' chaps. -Berton Braley.

#### Geraldine Farrar Tella Some Trutha

(Continued from Page 11)

"And then you don't hold back an ounce of yourself—just because they've given you their all and are helping you. Then something deep, deep inside of you takes hold and tells you what and how to do; and you obey and do. You're yourself, you better than yourself ever could be! An autointoxication of one's artistic soul which you

possibly don't recognize upon reflection.
"When it's all over, and you've taken
your last bow before them, then a great
wave of utter exhaustion comes over you and you feel that the spark that was in you is going out—just as the audience is.
They generated it and they're taking it with
them. And they have left you very, very
happy—and very, very tired."

Geraldine Farrar sat quite still. She looked very white and weary, as though she had actually lived for a few minutes through the scene she had pictured. It was an interesting psychological study to watch her at that moment—the tired look in her eyes; the drawn expression round her mouth; the absolute lassitude of her whole body.

Then a galvanic battery was touched off somewhere, the dead became very much alive—and she was over at the piano, taking a rose from a vase, pinning it to her corsage, and back again on the divan, breathlessly talking of American artists and American productions.

#### Opera Without Acting

"Our American operatic singers often lack in dramatic ability. They do not measure up to the acting standards of their foreign comrades. Standards in Europe are higher and their men and women are very much better operatic actors than ours. It seems to me that our artists are content merely to suggest emotions, are afraid to act for fear they may miss a vocal effect here and there, and that too much freedom in their acting might damage the lyrical ex-pression in their singing. Again, they have been taught repression; and they move through an opera automatically, singing their rôles with both eyes glued on the conductor. They haven't time to think of the rôle they are singing and the histrionic side of it, the dramatic that should go hand in hand with the musical. Bless you, no! All thoughts are centered on seeing to it that the notes come from the throat just right and that they catch the conductor's baton at the proper instant. 'Acting? What's acting to do with opera?' they'll ask. 'Act-ing's one thing and singing's another.' "They forget," says the Farrar very softly, "that opera is both!"

"One thing we do here quite as nicely if not better than Europe does," she con-tinued, "and that is our production of opera. I do not think it is possible to put on an opera better than it is produced at the Metropolitan Opera House in the city of New York. Judged from all the different angles—the managing of lights, scenery, costumes, orchestra, conductors, chorus and principals—old Europe must doff its hat to young America. There's a thorough-ness, a regard to detail, an artistic touch that have gradually crept into our produc-tion of opera in this country, until today the famous opera houses of the old country cannot surpass us. I have seen many beautiful productions abroad and have participated in them; have seen and been part of many, many ragged ones; but, taking them all in all and weighing them with pro-ductions in America, there is no question but that today grand opera is produced as beautifully here in America as in any big metropolis of the Old World."

She played with the ribbon at her waist made three bows, untied them, then plaited them, loosened them again, and then, hav-

ingrid herself of a lot of surplus energy, said:
"I've always thought of what one great tragic moment of my life would be, and 've come to the conclusion it will be when I stop—that is, stop singing. I know I'll do so before people wish I would; I'll have sense enough for that, because I know of no more pity-evoking spectacle under the sun than a singer trying to sing when she can't sing. And it may be hard to stop; but the hard part will be in realizing that I must stop-that will be the real tragedy, for my individual self.

# True Blue SAXON Makes Good Everywhere

Nearly 2000 Saxons are now in use in all parts of the country. They are being driven on all kinds of roads, under all sorts of conditions. And every-where they are making good. Owners are proving every day the wonderful power and stamina of these Saxon cars,

Ample Power for Heavy Going

From Texas comes the report of a long cross-country trip, fording cross, plugging through mud for miles and running away from bigger cars. J. McNair Ealy, a banker of Caro, Mich.—a private ownerdrove his Saxon from Detroit to Caro, Homiles through muddy March roads in 415 hours.

A strenuous trip over heavy Wisconsin roads made H. S. Wilson write us that "the Saxon takes long grades and hills better than most cars costing five times the women."

From Pittsburgh to Uniontown, Pa, three Saxons made the trip over mountain roads "so full of ruts and holes that a big car couldn't have gotten through at all."

#### Gallops Up the Hills

On the hills the sturdy Saxon is uncon-querable. In Boston it "galleps up Com-monwealth Avenue on 'high' alongside any big car at 35 miles per bour."

In Portland, Me., "the Saxon will climb on "high" any hill that any car can climb." On the steep Broadway Hill in Paterson, N. J., this car "started in at the bottom at 20 miles an hour and had picked up to 22 at the top."

at the top."

The rough Gilbert Avenue Hill in Cincinnati, 4,000 feet long, is easy for the Saxon with 2 passengers at 25 miles an hour. "Five miles per hour at the bottom, 25 miles at the top of Ninth St. Hill."

is the report from Lafayette, Ind. And so everywhere.

#### A Car for All Classes

Saxons are making good with all classes of people—for pleusure and business; for saving time; for keeping health. Recent purchasers include: Corporation officials and salesmen; stock brokers and physicians; contractors and real estate men; men of moderate means and men who can afford the most costly cars.

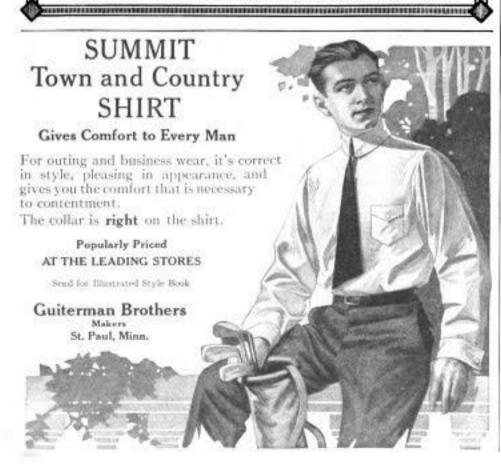

For the young man or the young couple—the Saxon is just the thing. For the man who belongs to a country club; for the family living in the country for the summer, the Saxon is an ideal convenience.

And the Saxon is economical too. Its first cost is less than a good horse and buggy. Its cost of operation far less. An official test, recently made in Detroit, gave a record of more than 30 miles to the gallon on average roads. If you count the time saved, it scheaper to drive a Saxon than to ride on street cars.

#### Buy Your Saxon Now

So buy a Saxon now—and get the use of it all summer. If you order at once our dealer can assure you early delivery.
Dealers allotments, we find, are small in proportion to the demand. Many territories will not have enough Saxons for all who want them. So the wise thing is to order now—today. Catalog on request,

Dept. C. SAXON Motor Company, Detroit.

"Then—then I will play! I haven't had time to play yet, for I'm not living for myself now, but for the public. I know that sounds like a pretty pose—like the usual 'Dear public,' and 'Art for art's sake' drivel; but I don't mean it that way at all, and I'm rather fond of telling the truth. and I'm rather fond of telling the truth. What I mean is that the operatic artiste must do one of two things, because she can't do both—she must live either for her public or for herself. And if she would preserve her art she must live for her pub-lic and practice self-denials innumerable. She must eat and sleep and mold her waking hours to a certain set of rigorous rules. After each opera she must prepare for the next, and in her vacation time she must study new rôles. You must live for your public and not for yourself. When you make your last bow, then you can play—

make your last bow, then you can play—
at other things,

"This is what keeps me a slave"—and her
hands went up to her firm, white throat—
"this is my master. I can't do this or I
mustn't do that—all on account of my
throat. Is there a draft somewhere?
Quick, quick; something to throw over my
throat! Is some one smoking? We must
get out quickly! Is a fine rain falling?
Bundle up, and a veil for protection! Are
the street-sweepers at work? Down with
the windows, though spring be in the air;
for a tiny particle of dust may get into the
throat! Eternal vigilance is the price of song
no less than of liberty; and we must coddle
and make much of, bow to and humor the
throat, for the throat is the master and we throat, for the throat is the master and we

are the slaves.

"Maybe I'll play soon—I'll burn out! And then to roam and see things, and live for myself! Neither marriage nor a nun-nery would be my choice; but playing just as enthusiastically as I have worked. Pray the Lord I'll have enough of my energy left to play hard!"
We shook hands in the fourth-floor hall.

As she waved adieu over the balustrade the phone bell in her study rang. "Excuse me!" she called out, and went to the phone on a dead run.

And as the maid let me out I wondered whether that nerveless, tireless, dynamic young woman named Geraldine Farrar ever really rested at night—or whether she walked in her sleep! Somnambulist she may be, but I will wager she would not walk!

#### The School for Art

WE DEVELOP a large number of ex-traordinary artists in baseball. The reason, aside from an almost universal interreason, asside from an almost universal interest in the game, is that anybody with a talent for playing ball can always get a chance to exercise it. If the first baseman of the Lone Ellum High School Nine shows real speed he will presently be invited to play center field in the semi-professional Big Bend Team. There the scout of the Tall Grass League finds him. If he has major-league form there is a broad and ever-open road form there is a broad and ever-open road for him from his native village to the Giants, Cubs or Tigers.

Opera singers mostly come from Europe, and their biographies, even when edited by the press agent, show the most picturesque variety of antecedents. Some come from the village smithy; some from the city cab stand. There are European regions where anybody with a voice gets about the same chance to sing opera that anybody in this country with a cunning left hand gets to

play baseball.

The barber's ambitious apprentice rolls up his apron, hurries down the alley to the stage door of a barn and takes a fall out of a leading Verdi rôle before a more or less ap-preciative audience that has paid ten cents a head to hear him. If he scores, some opera scout will presently hear of him. A singer now well on the way to fame confesses that he got his most valuable experi-ence singing leading rôles at six francs a week. The pay was meager, but the chance to sing before a real audience—albeit largely in blouses—was valuable.

We do not believe anything can make the drama a great expression of national life in this country without vastly freer, more diffused opportunity to get plays be-fore an audience. We could not have our major ball leagues without a thousand and one humbler teams in which talent may develop and disclose itself. Small city associations giving original plays in lofts, warehouses and livery stables would probably quicken the drama much more than any two-million-dollar project facing Central

#### Ironing Problem Solved

In the past eight years, thousands of homes have installed the Simplex Ironer because it does the ironing better, quicker, easier and with far less expense than any other method. It will iron a large table cloth in 3 minutes that would require 20 minutes to do by hand. Other pieces fromed with same proportionate saving.

produces a uniformly beautiful finish with no wear on the goods insued. Two to Four cents' expense will do an average fronting with m tired feeling or backache. It soon saves its out in labor, time, health and satisfaction, Write for name of our local dealer, 30 Day FREE Trial Offer and Catalog.

"And you make the choice!" said Harmony proudly. "Very well, Peter, I shall do as you say. But I think it is a very curious sort of love."

"I wonder," Peter cried, "if you realize what love it is that loves you enough to give you up."

"You have not asked me if I care, Peter."

Peter looked at her. She was very near

Peter looked at her. She was very near to tears, very sad, very beautiful. "I'm afraid to ask," said Peter, and pick-

ing up his hat he made for the door. There

he turned, looked back, was lost.
"My sweetest heart!" he cried, and took her in his hungry arms. But even then, with her arms about his neck at last, with her slender body held to him, her head on his shoulder, his lips to her soft throat, Peter put her from him as a starving man

might put away food.

He held her off and looked at her.

"I'm a fool and a weakling," he said gravely. "I love you so much that I would

gravely. There you so much that I would sacrifice you. You are very lovely, my girl, my girl! As long as I live I shall carry your image in my heart."

Ah, what the little Georgiev had said on his way to the death that waited down the staircase. Peter, not daring to look at her again, put away her detaining hand, annual his shoulder went to the door. squared his shoulders, went to the door.
"Good-by, Harmony," he said steadily.
"Always in my heart!"

Very near the end now: the little Marie on the way to America, with the recording angel opening a new page in life's ledger for her and a red-ink line erasing the other; with Jimmy and his daddy wandering through the heaven of friendly adventure and green fields, hand in hand; with the carrier resting after its labors in the pigeon house by the rose fields of Sofia; with the sentry casting martial shadows through the barred windows of the hospital; and the little Georgies, about to discuss the little of the control of the control of the little of th little Georgiev, about to die, dividing his heart, as a heritage, between his country and a young girl.

Very near the end, with the morning light of the next day shining into the salon of Maria Theresa and on to Peter's open trunk and shabby wardrobe spread over chairs. An end of trunks and departure, as was the beginning. Early morning at the Gottesacker, or God's acre, whence little Jimmy had started

on his comfortable journey. Early morning on the frost-covered grass, the frozen roads, the snap and sparkle of the Donau. Harmony had taken her problem there, in the early hour before Monia would summon her to labor—took her problem and found her

The great cemetery was still and deserted. Harmony, none too warmly clad, walked briskly, a bunch of flowers in oiled paper against the cold. Already the air carried a hint of spring; there was a feeling of resur-rection and promise. The dead earth felt alive underfoot.

Harmony knelt by the grave and said the little prayer the child had repeated at night and morning. And, because he had loved it, with some vague feeling of giving him comfort, she recited the little verse:

Ah, well! For us all some sweet hope lies Deeply buried from human eyes: And in the kereafter, angels may Roll the stone from its grave away."

When she looked up the Le Grande was standing beside her.

There was no scene, hardly any tears.
She had brought out a great bunch of roses
that bore only too clearly the stamp of
whence they came. One of the piccaninnies had carried the box and stood impassively

by, gazing at Harmony.

The Le Grande placed her flowers on the grave. They almost covered it, quite

eclipsed Harmony's.
"I come here every morning," she said

simply.

She had a cab waiting, and offered to drive Harmony back to the city. Her quiet almost irritated Harmony, until she had looked once into the woman's eyes. After that she knew. It was on the drive back, with the little darky on the box beside the driver, that Harmony got her answer.

Le Grande put a hand over Harmony's.
"I tried to tell you before how good I know you were to him."
"We loved him."

# Your Chance to Win

Yesterday you said, "Give me the opportunity and I'll make good!"
Here it is! Here is exactly the real moneymaking opportunity accepted by 15,000 other courageous people who began as local agents for the Oliver Typewriter and are making independent incomes today.

Good vacancies are now open to carnest men all walks of life. And you need not abundon your present employment—unless, like others, you find your position in our aggressive organization is far more profitable, pleasanter, bigger, broader than anything you have known. Four of our present head officials began as Oliver Agents in small towns and cities.

#### Experience Unnecessary

We train you at home at our expense, like we have trained thousands of dignified money-moders, through the Oliver School of Practical Salesamaship. And we give you exclusive control of Oliver sales in your territory during your agency armingement. We even nonetimes send our traveling experts to help you close prinspects. Yet you get your profit from every sale.

Typewriter The Standard Visible Writer

Now, more than ever, are Oliver Typewriters everywhere wanted. For a response nation wide has greeted the introduction of the new automatic Oliver—

#### The Silent Seven

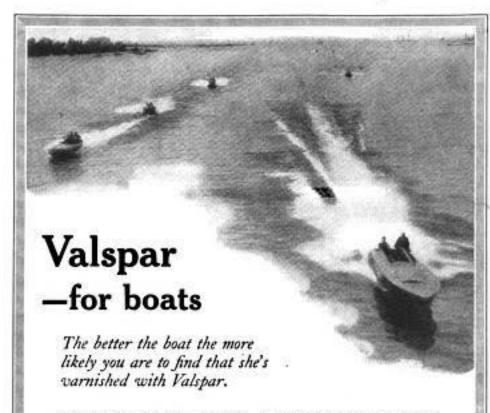

Visible reading, visible writing, automatic sp. providents added to previous Oliver epoch making inventions give this model understand simplicity with the lightest tunch known. Now the notice can start and write at once. Prospects Furnished

# When you go camping

-when you pack up your fishing kit, stuff your knapsack with blankets and cooking utensils and set out for the wild places, you'll need a good waterproof tent. Then it will make no difference to you whether the stars are winking through the branches overhead or a thunderstorm is drenching the woods around you. You'll be safe and sound-and dry. When you have a good tent for protection, why! camping is the greatest sport in the world-no matter what the weather.

You now can get the tent free of charge—a fine 7x7-foot wall-tent, complete with stakes, ropes and poles. This is one of the splendid prizes we award to our boys in exchange for their Rebate Vouchers.

How do they get Rebate Vouchers? By selling

The Saturday Evening Post

The Ladies' Home Journal

The Country Gentleman

Thousands of boys are earning from fifty cents to five dollars a week and in addition are receiving splendid prizes which they choose from our Book of Rebates.

This catalogue is one of the most interesting books you ever saw. A copy will be sent to you upon request. Don't miss it. Address your letter to

Sales Division, Box 288

The Curtis Publishing Company, Philadelphia, Pennsylvania

"And I resented it. But Doctor Byrne was right-I was not a fit person to-to have him."

It was not that-not only that -"Did he ever ask for me? But of course

"No, he had no remembrance."

Silence for a moment. The loose windows of the cab clattered.

"I loved him very much when he came," said the Le Grande, "although I did not want him. I had been told I could have a career on the stage. Ah, my dear, I chose the career—and look at me! What have I? A grave in the cemetery back there, and on it roses sent me by a man I loathe! If I could live it over again!"

The answer was very close now:
"Would you stay at home?"
"Who knows, I being I? And my husband did not love me. It was the boy always. There is only one thing worth while—the love of a good man. I have lived, lived hard. And I know."
"But supposing that one has real ability—I mean some achievement already, and a promise—""

The Le Grande turned and looked at

Harmony shrewdly.
"I see. You are a musician, I believe?"

"And—it is Doctor Byrne?"
"Yes."

The Le Grande bent forward earnestly.

"My child," she said, "if one man in all
the world looked at me as your doctor looks
at you, I—I would be a better woman."

"And my music?"

"Play for your children, as you played
for my little boy."

Peter was packing: wrapping medical books in old coats, putting clean collars next to boots, folding pajamas and suchlike negli-gible garments with great care and putting in his dress coat in a roll. His pipes took time, and the wooden sentry he packed with great care and a bit of healthy emotion. Once or twice he came across trifles of Harmony's, and he put them carefully asidethe sweater coat, a folded handkerchief, a bow she had worn at her throat. The bow brought back the night before and that reck-less kiss on her white throat. Well for Peter to get away if he is to keep his resolution, when the sight of a ribbon bow can bring that look of suffering into his eyes.

The portier below was polishing floors, right foot, left foot, any foot at all. And as he polished he sang in a throaty tenor.

"Kennst du da" Land wo die Citronen blühen," he sang at the top of his voice, and coughed, a bit of floor wax having got into the air. The antiers of the deer from the wild-game shop hung now in his bedroom. When the wild-game seller came over for when the wild-game sener came over for coffee there would be a discussion probably. But were not the antiers of all deer similar? The portier's wife came to the doorway with a cooking fork in her hand. "A cab," she announced, "with a devil's imp on the box. Perhaps it is that American

amp on the tox. Pernaps it is that American dancer. Run and pretty thyself!"

It was too late for more than an upward twist of a mustache. Harmony was at the door, but not the sad-eyed Harmony of a week before or the undecided and troubled girl of before that. A radiant Harmony, this, who stood in the doorway, who wished them good morning, and ran up the old staircase with glowing eyes and a heart that leaped and throbbed. A woman now, this Harmony, one who had looked on life and learned; one who had chosen her fate and was running to meet it; one who feared only death, not life or anything that life could offer.

The door was not locked. Perhaps Peter was not up—not dressed. What did that matter? What did anything matter but Peter himself?

Peter, sorting out lectures on McBurney's point, had come across a bit of paper that did not belong there, and was sitting by his open trunk, staring blindly at it:

"You are very kind to me. Yes, indeed.

Quite the end now, with Harmony running across the room and dropping down on her knees among a riot of garments—down on her knees, with one arm round Peter's neck, drawing his tired head lower until she could kiss him.
"Oh, Peter, Peter dear!" she cried. "I'll

love you all my life if only you'll love me, and never, never let me go."

Peter was dazed at first. He put his

arms about her rather unsteadily, because he had given her up and had expected to go through the rest of life empty of arm and "And you'll not be sorry?"
"Not if you love me."

Peter kissed her on the eyes very solemnly.
"God helping me, I'll be good to you always. And I'll always love you."
He tried to hold her away from him for a moment after that, to tell her what she was

doing, what she was giving up. She would

not be reasoned with.

"I love you," was her answer to every
line. And it was no divided allegiance she
promised him. "Career? I shall have a
career. Yours!"

"And your music?"
She colored, held him closer.
"Some day," she whispered, "I shall tell
you about that."

Late winter morning in Vienna, with the school-children hurrying home, the Alser-strasse alive with humanity—soldiers and chimney-sweeps, housewives and beggars. Before the hospital the crowd lines up along the curb; the head waiter from the coffee house across comes to the doorway and looks out. The sentry in front of the hospital ceases pacing and stands at attention.

In the street a small procession comes at the double quick—a handful of troopers. 2 black van with tiny, high-barred windows. more troopers.

Inside the van a Bulgarian spy going out to death—a swarthy little man with black eyes and short, thick hands, going out like a gentleman and a soldier to meet the God

of patriots and lovers.

The sentry, who was only a soldier from Salzburg with one lung, was also a gentleman and a patriot. He uncovered his head.

(THE END)

#### Wireleza Wondera

IT IS now possible to send photographs by wireless. Short distances would be most successful, of course; but it is entirely possible to send photographs by wireless as far as it is possible to telephone by wireless. Wireless telephony across the Atlantic is nearly a mechanical success now; so it is not a real prediction to say that in a few years. a rash prediction to say that in a few years. or perhaps even in a few months, a photograph will actually be sent across the Atlantic by wireless.

Sending photographs by telegraph wires is no longer a wonder, either in the United

States or abroad.

It has been done by a dozen methods and done well by more than one, with constant improvement. Of course the demand for such an expensive procedure is not great, and about the only use made of it anywhere, so far, is for sample demonstrations by newspapers.

A complicated apparatus at the sending end divides the photograph up into dots of various shades, like a half tone; and these dots are sent one by one to the other end,
where they are reproduced in the correct
order, with a half-tone picture as a result.

It has been found recently that electric
impulses not unlike those used in telephony

are sufficient for the transmission of pictures by wire, and that the distance affects the process to no greater degree than it affects distinct hearing in a telephone. With this as a start, it has been found possible to send the pictures by wireless, using much the same forces and methods as are used in

Another wireless wonder is the automatic recording of a talk by wireless telephone, or the dots and dashes of a wireless telegraph message, with the ultimate idea of having a wireless instrument that will receive messages when there is no attendant to look after it and recite the messages later as desired. This is simply a combination of existing devices depending upon a utilization of residual magnetism.

One of these devices is simply a form of talking machine that records sounds by the magnetic influencing of a wire, instead of by the common method of impressions in wax; so that in this combination the wireless message is recorded by a form of talking machine. The combination has been made and tried out with success, though there is still the problem of adding to the combination some other device to start and stop the apparatus from a distance by wireless.

# Absorbent Cotton

In a Patent Package

#### Won't Infect

The vital thing is to use Absorbest which will surely not infect.

Most Cotton is aseptic when it leaves the laboratory. But the probem is to keep it aseptic. Every touch contaminates.

B&B Cotton comes in a patent package. In using the Cotton you never take out the roll.

What you don't use remains wapped and untouched, just as it came from our laboratory. Safety demands such a package.

Our experts have specialized 25 years on this Cotton. It is ideal Absorbent. But the great fact is that B & B stays clean. Don't forget this vital fact when you buy next time.

(Continued from Page 21)

cows clean, ought not to be allowed to raise milk at all. The public can't afford to pay for the damage caused by such a farmer's lack of time and money. The public can't afford it any more than they can afford to pay for impurity in other kinds of food. Most states have passed certain laws with this in mind, but all a man has to do is to go into any country harn to realize how short into any country barn to realize how short a distance these laws reach.

The farmer isn't getting enough for his milk-or his other produce for that mat-ter. But that is another question. It oughtn't to give him the privilege of raising

oughtn't to give him the privilege of raising typhoid, tuberculosis and other things.

Dick figures that now he is producing milk at a cost of round three cents a quart. But he hasn't lowered his price below seven cents. He believes that clean milk is worth this, and that the extra profit ought to go back into the plant for the benefit of others. I think he is right. But he has made one change—he now has two prices. With the larger herd and two prices. With the larger herd and wider distribution he found that in many cases it was impossible for customers to reach either one of the two stations. A delivery service became necessary. So he bought a horse and a milk wagon and put the price of delivered milk up to nine cents. This gave customers a choice of going after their milk and saving the price of one hundred and four quarts of milk a year, or of spending that amount for delivery. Even then deliveries had to be limited to a route which the horse could reach. Dick couldn't have done it at this figure if the Brewster store hadn't been able to use the

team and man a few hours each day.

Incidentally I may say that this store does more business every year. It was rather a joke among the retail grocers at the start, but it isn't now. But that is

another matter.

In telling about the boy's business success I've neglected to tell about the boy himself, which after all is the important thing. But I haven't felt as free to do that as though it were myself I was talking about. Speaking in a second may have about. Speaking in a general way, how-ever, and lining his life up against the lives of such of his business associates of his own age as I have met, he looks to me to have made even a bigger success of his life than of his business. I try to view him im-personally. The boy was competent and had both intelligence and energy, although I don't think much beyond the average. believe that he had it in him to do most anything he wanted.

I haven't any doubt but what he could have a massed a considerable fortune if he had confined himself to the contracting business. I think he could have risen pretty high if politics had been his ambition. If he hadn't married he might have done both. Why he chose the career he did choose seems to me to lie in the fact that he accepted life as a responsibility. I think accepted life as a responsibility. I think sometimes a good many Americans don't see any other clause in the Declaration except that which voices their right to "the pursuit of happiness." They forget that the Declaration wasn't framed at Newport, but by certain earnest men in Philadelphia who had entirely different ideals.

There isn't any doubt in my mind but what the boy acquired his viewpoint unconsciously from the new pioneers with whom he was thrown in contact in Little Italy. It's rare when you find among those people any other unit but the family, and when in the family you don't find a con-sciousness of the larger unit making them members of the state and the nation. The family and then the nation are vital factors in their lives. You don't see many struggling for themselves alone down there.

That is counting for a lot today. It is going to count for a lot more in the future. e individual perishes, but the family does not. A hundred years from now this nation will be controlled, not by the indi-viduals of today but by the families of today. Your one-man life, your one-man business is snuffed out like a single candle in the dark.

Dick has three children and wants more. Jane wants more. The children have meant increasing care for them both. Jane looks after them herself, with the help of a woman who comes in by the day. It keeps her pretty busy. She doesn't have much time for anything else. She can't travel; she can't do much in a social way; she can't go in town to the theater any more. She still

# A New Way to Profits For Retail Merchants!

This machine automatically makes "Butter-Kist" popped corn—crisp, crackling, melt-in-your-mouth, pure creamery-buttered corn—the kind people walk blocks to buy. In scores of stores and shops it is making profits of \$25 to \$60 weekly.

Here, for the first time, is a pop-corn machine built expressly for high-class stores. A machine as handsome as the finest soda fountain or beautiful show-case. A machine that operates automatically.

A machine that turns the freely-spent pop-corn nickels of your community into your store. A machine that in many places is not only paying handsome profits itself, but has increased general store sales as high as 15 per cent!

Hint

manages to do most of her housework with Dick's help. If the day has been strenuous Dick gets the dinner. He doesn't mind. He brings home a steak or some chops and it is done in no time.

Neither of them has much time for anything else outside the home now while the children are young. But the remarkable fact is that neither wants anything more. When Jane's unburdened town friends come to see her she doesn't envy them. Most of them drive away in their automobiles of them drive away in their automobiles envying her, hard work and all. I've seen it in their eyes when I've happened to be there. Dick's partner drove down one Sunday afternoon, as a matter of duty, to see the children. He's been down every Sunday since. He looks to me like a man who is groping round in the dark for an explanation. explanation.

However, there are some women-childless ones—who have expressed to Ruth opposite views.

They have said they think it a great pity for a woman of Jane's intelligence to waste her life as a drudge.

"There are plenty of women," they say, "who are not fitted for anything else but to cook and scrub."

Of course there is a lot Ruth could say. There's a lot she would like to say. But she never replies. The women who make such statements are the women who aren't doing anything at all.

They neither cook nor scrub nor bear children. It's the women who cook and scrub who also bear. The childless ones are like the eight-hour men who are kicking for a six-hour day while misusing the time they already have.

As the children grow older both Jane and Dick will have more time, and then they will know how to use it. I heard Jane say one day to a young friend who was going to

"I'm going myself a little later on."
"You are? But how can you leave the children?"

"I can't. I'm going to take them with me as soon as they are out of college."

me as soon as they are out of college."

The friend gave a gasp.
"But that is years and years away."
"Only a few years," said Jane.
That's the way she felt. Days flew by for her like seconds while they flew by for the other like months. I have a notion that at forty-five or fifty Jane will be younger than that woman is today, in spite of the cooking and scrubbing.

Dick will be younger at that age, too, than most of his associates. He's bound to be.

most of his associates. He's bound to be. A man with an outside interest like the production of clean milk can't help it. A new customer is born every day, so that his business is always with the young. Then there are his own. A man can't grow old when he begins to grow all over a raise with when he begins to grow all over again with

Ruth and I began life fresh when the boy married. Now we are beginning again with our grandchildren. It's the only way. When a tree gets past the bearing period it

goes to decay unless new shoots are grafted on. With the new life it goes on forever. I'm proud of the boy. I'm proud of his home and his family and his business. Alone in the dark Ruth and I talk over these things. She is trying to make the others just like our eldest son. And she'll do it. Then she'll begin with the grandchildren.

(THE END)

#### Show-Window Lampa

SHOW-WINDOW lamps that can be adjusted to bring out to the best advantage goods of any particular color, such as green silks one day, for instance, and cotton goods with orange designs the next day, have now been perfected and are just getting to the point of going on the market.

Glass strips of various colors take the light rays from an electric lamp, make a mosaic pattern of the rays, and then gather them all together again, blending the light into a daylight effect.

By adjusting the glass strips the outcoming light can be modified so that it will intensify red or any other color, as desired. Such lights have been suggested for art-gallery use.

VERY step a pleasure. Perfect-fitting oxfords give your feet a cool, restful feeling that adds to the enjoyment of a Summer stroll. There's a Florsheim correct for business, sport and dress. Priced at \$5 and up to \$7.

The Florsheim dealer will show you the season's correct styles.

# (JOOD) YEAR Motorcycle Tires Built Just Like Auto Tires

When you're away out in the country with miles of roughest going between you and home, then, of all times, is when good tires count. Then is the time when tire confidence asserts itself, especially when your tires are Goodyears-"little brothers to the big Anti-Skid Auto Tires."

#### That Is Why

That is why three of every four 1914 motorcycles are Goodyear-equipped.

That is why all motorcycle manufacturers

use Goodyears. That is why motorcyclists, in referring to quick, clean, comfortable trips, often say "real Goodyear going."

#### Stand the Strain and Grind

Around curves, over rough roads, "across lots," and getting to out-of-way places that the auto can't reach— these are the things that tax treads and fabrics of ordi-

Vet Goodyears stand up under it all. A special inter-locking fabric insures against separation of Tread or Fabric. Under high pressure the rubber is forced through the warp and weave of the fabric, forming a myriad rubber

rivets that allow of no separation.

Every step in the Goodyvar process is mathematically exact. Machine-tensioned fabric insures uniformity and stability. This blowcests, another trouble due to ordinary construction, are also obviated in the making.

#### Hold All Records

Goodyear Motorcycle Tires hold every world's record in speed and durability tests-another reason they outsell all

others.

There is a Goodyear dealer in your town. Ask him to show you the how and why of these tires. Also write us for booklet which tells it all in print. (1502)

THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio Toronto, Canada London, England Mexico City, Mexico Branches and Agencies in 103 Principal Cities Dealers Everywhere

Is Half Your Fuel ExpenseWorthSaving? Read This Letter

Home Bank Building, Detroit, Mich.

The Peck-Williamson Co., Cincinsatt. Otio.

This is my third winter and I am perfectly satisfied with results. Am using slack coal at a cost of about \$3.65 per ton. when my neighbors are paying \$8 and \$8.50 for their fuel. A ton of slack kastas long as a ton of hard coal and with equal results. The UNDERFEED is the only system of heating, as it does not smother the fire every time you repletish the fael. The UNDERFEED system crowds the live coals nearer the point of attack and consequently gives more heat when replenished, than less, as is the case with the topfeed system.

Yours truly, GEO, M, CONDON.

# Why Underfeeds Cut Coal Bills in Two

Coal in the Underfeed is fed from below, and Coal in the Underfeed is fed from hilotr, and like a candle, hurns from top does. The fire must burn down into the fresh coal slowly, against the draft. As in the candle, this down-hurning gives the best and cleanest heat and makes the coal last longer. Simple and logical, isn't it? With the fire always on top, smoke and gases are consumed, making more heat with no soot, smell, smoke, clinkers or dirt, and few ashes. Cheep slack soft coal and pes or buckwheat sizes of hard coal yield in the Underfeed as much clean, even best as higher-priced coal in other heaters. The best as higher-priced coal in other heaters. The Underfeed is adapted to warm air, steam or hot water in buildings of all kinds, large or small. Shall we send you the names and addresses of over 2,000 Underfeed users—

Cut-Out View of Underfeed Fornace

You Need This Book

If you are tired of paying hig coal bills; if you want more heat at less cost or if more heat at less cost or if you are going to build, then you need our big free book. "From Overfied to Under-feed." This book will open your tyes and save you money.

The Williamson Heater Co. Fermerly The Peck-Williamson Co.

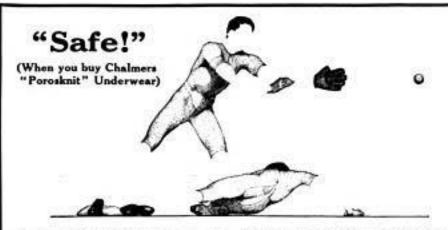

some right in your vicinity-who know by experience that clean, even, economical heat is obtainable with the Underfeed?

#### Our Startling Guarantee

We guarantee a saving over your present coal bills of at least one-half by means of the Underfeed, when properly installed and operated. Every Underfeed carries this guarantee, which is backed by a \$1,000,000 company. So you take no risk. The burden of proof is on the Underfeed. It has satisfied thousands—it will satisfy you.

The Williamson Heater Co., 196 W. Fifth Street, Cincinnati, Ohio I would like to know how to cut my coal bills from one-ball to two-thirds with an Underfeed. Stram or Hot Water (Mark at Nation system uncrossed in.)

196 W.Fifth St., Cincinnati, Ohio

To be "SAFE," insist on the genuine Chalmers "Porosknit."

Please read this and learn why you should avoid imitations.

Underwear may be made to look something like Chalmers "Porosknit." But none can match the genuine in "Porosknit" comfort, durability, quality of yarn, elasticity, lightness, coolness. None, now nor ever.

Protect yourself. Buy right. Look for the label.

#### Union Suit Comfort

Examine any genuine Chalmers "Porosknit" Union Suit. Turn it inside out. Notice how strongly the seams are reinforced—double-seamed by cover seaming.

No cumbersome flaps gape open. Stretch the fabric. See the extra stitches surrounding each ventilating hole. These, with the lock-stitch, prevent unraveling.

The "stretch" in knit goods runs one way. But in Chalmers "Porosknit" Union Suits

# GOVERNMENT OWNERSHIP À LA FRANÇAISE

(Continued from Page 19)

developed telegraphs at the expense of the newer and, on the whole, better method of electrical communication. At any rate, after more than twenty years of state ownership, it was only very recently that France seriously took up the matter of improving a very bad telephone service.

very bad telephone service.

That she is still far behind our private corporations in the matter of developing telephony is shown not only by the figures as to the number of instruments in use but by the quite onerous conditions she imposes on the telephone user—as by requiring him to purchase an instrument, to pay rental quarterly in advance, and to make a deposit covering all toll charges. Certainly no institution, public or private, which was anxious to sell the greatest possible amount of telephone service would impose such conditions.

France is in the railroad business also, owning and operating over five thousand miles of road, or a little more than onesixth of the country's total mileage.

The finest suburban train I ever saw runs over the state railroad from Paris to Versailles. It is propelled, lighted and heated by electricity. The cars are of steel, and so big and roomy that they immediately remind the American of home after some acquaintance with the diminutive equipment on the other side of the water. The aisles run through the center of the cars in the American fashion. More important still, the compartments are not boxed in after the all-but-universal European custom. The partition that divides one compartment from the next extends only a foot or so above the top of the seat. Thus the whole upper space is open, allowing circulation of light and air almost as in an American daycoach. Or, rather, because the seats are in pairs, face to face and back to back, the arrangement closely resembles that in our standard Pullman sleeping cars.

The windows, however, are larger than in our Pullmans; in fact, the sides of the cars are nearly all glass. They are finished in white or a very light color, and there are no mistaken attempts at decoration. In fine, they are beautifully bright, airy and spacious, so that you cannot see one without wishing to travel a long way in it.

#### The Best Cars and the Worst

I fully sympathized with the enthusiasm of the obliging station master who showed me over the train, and was able to tell him, with perfect candor, that there was not a suburban train in the United States to match it. When he incidentally explained that the aisles had been made wide so that passengers for whom there were no seats could stand, I realized that the state had gone a little farther than I first supposed in borrowing American ideas.

I was permitted to stand beside the driver of the first car in order to see the track. The train ran forty miles an hour between stops and there were many curves, yet it ran so smoothly that my footing was never disturbed.

These fine cars and the road over which they run are a matter of the last six months however. The run to Versailles is twelve miles and includes the gilt-edge suburban travel, the sort of influential traffic for which railroads everywhere put their best foot forward. With the exception of that twelve miles, there is nothing whatever to admire in France's management of railroads.

I rode in another suburban train on the same state railroad. You may get an approximate idea of the first ride by imagining a lighter and brighter standard Pullman car. You may get an approximate idea of the second one by imagining a dingy caboose of a way-freight train on a third-class American line. In a general way the cars look not unlike our box freight cars, only they are cut down, say, two feet in height

and a dozen feet in length.

The car is divided into five compartments, each containing two plain wooden benches running along the sides of the compartments and facing each other. The sides of the compartments are of plain wood, painted a sad brown and leaving some doubt as to their cleanliness. There is no communication whatever between one compartment and another. One enters

the compartment at the end through a door in the side of the car. When these doors are shut each compartment is a sealed how. No aisle or corridor runs through the car. Of course there is no toilet room in the car and there would be no way to get to it if there was. There is no communication between one car and another, the cars having no end platforms such as all our passenger cars have, but ending in a blank wall, like our freight cars.

Each of these hermetically sealed compartments is supposed to hold ten people, with such luggage as they may have. I rode only a dozen miles in one containing only eight people and there was not air enough in it for a mole.

They tell you these oldest style thirdclass cars are now used only for suburban travel, but I found suburban to be a somewhat elastic word; in fact such cars are run for journeys requiring several hours.

There is a first-class car on the state road. It is seven paces long or approximately twenty feet. The compartments are a little wider than in the third-class car. The seats are upholstered and no doubt the upholstery was once rather smart. It is soiled now.

There is no aisle or corridor through the car; consequently there is no way of getting from one part of it to any other part when the train is in motion. Naturally there is no toilet room.

#### The Scarcity of Fresh Air

These old cars, twenty feet long or thereabout, have only two axles, or four wheels. Running at high speed over light rails, not ballasted for heavy trains, they are decidedly roughriders; but the greatest affliction of all these cars is lack of fresh air. Riding only a dozen or twenty miles in newer types of cars that had corridors down the sides, I have been half stifled; and in this respect it seems to make no great difference whether you ride first, second or third class. People smoke and eat in their compartments and invariably keep the windows closed. After a train has been running an hour or two the only advantage of the corridor is that you get a sort of average of the bad air in all compartments instead of being confined to that in your own particular box.

I do not know whether you have ever ridden in the caboose of a way freight on a third-class railroad in the United States when there were as many passengers as the vehicle could well hold, most of them addicted to pipes and the sort of tobacco that comes in large, loose brown-paper packages. There was a time when it was my privilege to enjoy that experience rather frequently; and, except for the freeand-easy sociability of the caboose, that comes much nearer to conditions of travel on some state trains in France than anything else I have ever seen in the United States.

Between that and the Versailles train you have the worst and the best. It is only fair to say that the best is very new and there is little of it. Between the two extremes are various grades of various dates; but one thing that immediately strikes you is that there is no uniformity, no standard. It is obvious at a glance that whatever improvements there are have come in small and more or less haphazard patches.

For example, you go into the Pennsylvania or Grand Central station at New York, or the Northwestern at Chicago, and you see a whole and great transportation plant, practically span-new and all up to the mark.

It looks as though somebody had said:
"Throw the old stuff away and start fresh." But in every railroad station in Paris you will see, along with whatever they have of newest and best equipment, strings of sorry old antediluvian vehicles, unsightly, uncomfortable and unsanitary. You will even see the most unequal equipment in the same train bound for the same destination—1912, figuratively speaking, nose to nose with 1219.

Of course a great deal is true of the privately owned roads as well as of the state owned; yet there is an overwhelming mass of testimony to show that the stateowned road has given the poorest service and been the slowest to make improvements. It is hardly more than a year, in fact, since the government made the first serious attempt to bring its railroad up to date. Prior to that time poor equipment and late trains were fairly the rule. A few years ago patient patrons raised an incipient riot because a train was two hours late in running fifteen miles; and that was only a somewhat exaggerated instance of their daily experience.

If you look it up you will find that France is almost exactly the size of Indiana, Illinois, Michigan and Wisconsin combined. It is in good part an open, undulating country, offering hardly greater physical obstacles to the construction and operation of railroads than are to be found in those four American commonwealths. Its total railroad mileage is less than that of the states named by about ten per cent, and it contains about three times their population.

Now I imagine that if you were to show a Harriman or a Hill a territory the size of the four states named, with a somewhat smaller railroad mileage and three times their population, he would immediately begin to rub his hands in anticipation of fat dividends and large melons; but, in fact, railroading in France, broadly speaking, has never been profitable. From the beginning it has been heavily under the hand of the state. Whether it would have been profitable if private enterprise had been given as free rein as with us is another question. Transportation conditions in Europe are so different from those in the United States that assumptions as to what Americans would do in Europe, or Europeans in America, are very dangerous.

#### The Period of Speculation

Back in the thirties a railroad was built from Paris to Versailles. Then followed a long discussion as to whether the railroads of France should be built by the government or by private concerns. One result of this protracted debate was that, though the United States had four thousand miles of railroad in 1842, France had only three hundred and fifty. The more important result was a compromise between the policy of state ownership and that of private ownership.

To put it briefly, the government in 1842 granted concessions for nine lines, the state to construct the roadbed, the localities through which the lines passed to pay two-thirds of the cost of right of way, and the concessionary companies to lay the track, provide the rolling stock and operate the roads. Thus there was a mixture of state ownership, municipal ownership and private ownership. The localities, however, soon objected so strenuously to the cost thrust on them that the state relieved them

of their share in the partnership.

As was the case both in England and the United States, the beginning of railroad construction on an important scale was marked by a period of rampant speculation. Securities issued by the concessionary companies were eagerly bought and, as is also usual, promoters saw to it that the supply equaled the demand. By 1847 it was evident that a collapse in railroad securities was impending. In England or the United States the government, of course, would have allowed the collapse to take place. There would have been reorganizations, overoptimistic investors would have pocketed their losses, and the policy of private ownership would have continued.

The French Government, however, was a partner in the enterprise. Moreover, it regarded railroads primarily as public concerns and it did not wish investors to become discouraged from assisting in their construction. Therefore it granted various aids to the concessionary companies, sometimes advancing them capital outright, and in one case taking over the whole road and reimbursing investors. Thus aided, the concessionary companies undertook extensions. In ten years the conditions of 1847 were repeated on a larger scale and there was a panic in railroad securities. To reassure investors and to enable the companies to raise the capital needed to complete their lines, the government then adopted the policy of guaranteeing the interest on railroad bonds. This guaranty of interest by the government still underlies the whole railroad situation in France.

The private concerns had resolved themselves by that time into six great companies—the West, the North and the East occupying respectively the territory westerly, northerly and easterly from Paris; and the Orléans, the Midi, and the Paris-Lyons-Mediterranean, which, roughly speaking, take in the southern part of France. All of them except the Midi run to Paris; yet, with few exceptions, each has its own separate territory and there is little direct competition among them.

There was, of course, a demand for railroads by communities not yet reached, and the government, as a partner in the railroad business, could no more ignore those demands than our government can ignore the collective demands of a hundred communities for post-office buildings. Moreover the state wished certain lines constructed for military rather than commercial reasons, so government partnership in the railroad business was further extended, the treasury subscribing part of the capital for certain lines and in some cases building them outright. One set of unattached branch lines, which the Orléans Company refused to take into its system, was purchased by the state in 1877. Thus more than a generation ago the French Government owned outright nearly two thousand miles of railroad in the southwestern part of the country, an aggregation of poor lines so incoherent that it could hardly be called a system, yet known ever since as the Old State Railroad.

#### A Story of Deficits

This Old State Railroad has always been operated at a loss. The poor results obtained from that road and the extent to which the government had been obliged to aid other roads did not strengthen sentiment in favor of state ownership of railroads in general; but the Western Railroad began getting heavily into debt to the government, which was obliged year after year to advance sums to pay bond interest under its guaranty. These advances were charged to the road and were to bear interest.

The territory served by the Western Railroad does not produce a great amount of profitable tonnage or attract a heavy passenger traffic. In 1908 its deficit rose to five million four hundred thousand dollars—that is, it failed by that much to earn the guaranteed interest and dividends.

M. Clemenceau, a radical, was then prime minister. He proposed that the government purchase the Western Railroad, and by threatening to resign forced the bill through the Senate. The argument was that the road was a perpetual drain on the treasury anyway, and that it would in any event cost the state no more to own it than to make up the yearly deficits in guaranteed interest.

Thus the state came into possession of a fairly compact and coherent railroad system embracing some thirty-seven hundred miles. Together with the Old State road, it now owns and operates about fifty-five hundred miles, or slightly over one-sixth the total mileage of the country.

It is important, however, to remember how that situation came about. Practically from the beginning the government was a partner in the railroad business. It regarded railroads primarily as state instrumentalities rather than as mere instruments of commerce, often intervening to require the construction of lines for political or military rather than for strictly commercial reasons. In Eastern France you may see stretches of track with grass growing over the rails. They were built, not for business, but for war.

I do not pretend to intimate that this was not the best possible railroad policy for France, but it arose from conditions that have no parallel in the United States. Heaven knows we can learn a million things from France; but that we can learn anything about railroad management from her I deny.

And in northwestern France private enterprise in railroading distinctly broke down. Whether this was due to irremediable conditions, to faults of management or to the hand of the state, I do not know, and the point is of no importance anyway. The privately owned railroad system in that part of the country decidedly failed. For years on end it could not earn the interest on its bonds or the dividends on its shares. Under a like condition in the United States bondholders and stockholders, of course, would have gone without interest and dividends; the road would have been reorganized and its fixed charges cut down to a sum it could earn. The French Government, however, for reasons it considered sound, had guaranteed a return to investors in the road's securities,

PATENTABLE IDEAS WANTED, Manu-

Thus the situation was a good deal as though the railroads in Maine, Vermont, New Hampshire and Northern New York could not earn their fixed charges, which our Federal Government had guaranteed; so that the continuation of transportation by rail in that region depended on the treas-ury at Washington making good a yearly deficit. Under such conditions there would undoubtedly be a demand that the Federal Government take over the roads, and I think I should be in favor of it; but between that and a deliberate government purchase of roads that are prospering under private man-

agement there is a very obvious difference.

If our government, under such imaginary
conditions, did take over the New England roads I should hope it would do much bet-ter with them than the French Government has done with the Western Railroad. In 1908, the last year of private management, the deficit was something over five million dollars. After three years of state management it had about tripled. In those three years gross receipts increased by about three million dollars, but operating expenses increased by nearly twelve millions. This increase was largely in the payroll. During the three years the state added over four thousand to the number of employees. Operating expenses rose to ninety per cent of the gross receipts.

A parliamentary commission then ob-

"It can hardly be called in question that the number of officials and employees is far greater in relation to traffic on the state railroads than on the other systems. It has been attempted to explain these facts by been attempted to explain these facts by the special character of the traffic on the Western Railroad. Especially has it been claimed that at the time of the fruit har-vests the lines in Normandy and Brittany are subjected to demands that require the employment of a very large force. This argument does not seem tenable, for it would apply to all systems serving regions the pro-duction of which is somewhat specialized."

#### The Snarl of Red Tape

"The truth seems to be as follows: In October, 1910, there was drawn up a theo-retical list of positions for the whole system. Unfortunately in response to outside pressure the chiefs of the service have often increased the number of their subordinates up to the limits theoretically assigned to them, with the result that at certain points there has been a veritable plethora, manifest in the budgetary estimates and in the confusion itself."

Incidental to this report, here is an interesting little sidelight:

"All correspondence under the old com-pany was made with one copy. Under the state it must be made in triplicate, and one can appreciate the useless labor thus imposed when it is stated that for the arron-dissement of Caen the payment of the personnel, which under the old company occupied nine men three days, under the State administration demands the time of twelve men for six days. The station masters are bound up by an almost unbelievable amount of red tape. I have seen chiefs of petty stations sometimes obliged to sit up until two o'clock in the morning in order to

clarify their accounts."

The increased payroll appears to have been due in considerable part to the appointment of additional clerks and petty officials rather than of what we call wage-earners or workmen. The pay of these non-unionized underlings is of course very meager from the American standpoint. It is significant that one action of the state was to raise the minimum yearly wage to twelve hundred francs, or two hundred and forty dollars.

The state's generosity in providing jobs did nothing to ameliorate the relations be-tween employers and employees. On the contrary, in the memorable railroad strike of 1910 the employees of the state-own Western Railroad were the first to folic the lead of the Northern Railroad for and vote to strike.

It is true the Western Railroad was alwa poverty-stricken concern, with compa atively low earning capacity, poorly maj tained and poorly equipped. It was in rundown condition when the state took over and no brilliant results could reason ably have been expected from state in agement. It may even be questiwhether any argument, either favorage adverse to government ownership of ra roads in the United States, can be decofrom it; but if there is any argument certainly is not on the favorable sic State management to date has been be efficient than private management was.

Last year it was pointed out that the most fatal railroad accidents which h occurred in France were all on state-own lines, three on the Western and three on t Old State. I do not know that this is an gument against the state, but certainly th is no argument in favor of state ownersh

#### An Unbiased View

It cannot be said that state ownership railroads is the policy of the French G-ernment. It was in a manner forced in the ownership of fifty-five hundred mil but about five-sixths of the total mileag still privately owned and privately maged, though under strict government pervision. This group embraces what unquestionably the best two roads in country—the Northern and the Pa Lyons-Mediterranean. In short, if were going to pick a railroad in France would certainly be a privately assert.

would certainly be a privately owned of Just at this writing a report of state road operation in France has been my whereupon M. Thomas, Socialist depand budget committeeman, delivers him

and budget committeeman, delivers him in print as follows:

"They run! They run punctually, trains from the West—the trains that merly were ridiculed by all the cabs singers of Montmartre and by the Ma Travelers, manufacturers and merchi-all praise the state service. Some weeks all praise the state service. the apple dealers from Morbihan and Co du-Nord offered to give M. Claveille, excellent director of the system, a band to show their gratitude.

"Well-deserved gratitude! Time when it seemed absolutely impossible forward quickly the rich crops of Britts This year the crop was wonderful and edealer received the goods in time. All

proves that the service has improved.

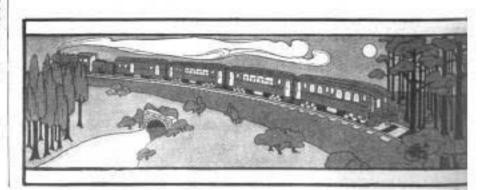

"Everybody says, All right! Very but the bill, if you please! Here the poics come in. The system works; bu what price? In 1908, the last business what price? In 1908, the last business of private management, the deficit amout to thirty-one million francs. In 1911 it sixty-seven millions and in 1912 sevent; millions. Parliament could have fore that the deficit in 1913 would amount eighty-four millions, and only by management of the private sevents are sevents. strong efforts to economize will they re-

strong efforts to economize will they re
it in 1914 to eighty millions.

"True, they spend a lot of money:
do they spend it wisely? They s
thirty-four millions a year to raise the
aries and wages of their employees.
you criticize that? Did not the rail
force hope for this when they dema
that the state should buy the line?

# NATIONAL MAZIDA

THE QUALITY LAMP

# Free Light with Every NATIONAL MAZDA Lamp

Your light bills are figured in watts.

A carbon lamp uses three watts to make *one* candlepower of light.

Any National Mazda lamp will give you three candlepower for the same current—two candlepower absolutely free.

And there's a range of sizes that you can't get in carbon lamps—thirteen sizes—from 10 to 1000 watts.

Every lamp as rugged as a carbon lamp, fits any socket, burns in any position and makes better, whiter light for homes, offices, stores, factories and all purposes where quality and high efficiency count.

#### Lowest Prices ever listed on NATIONAL MAZDA Lamps

Be your own judge of lamp efficiencies and don't buy lamps by candlepower alone. Buy them by cost of current per candlepower—by watts per candlepower—and you'll be able to tell what your light costs. Study this table and buy NATIONAL MAZDA lamps for quality, efficiency and economy.

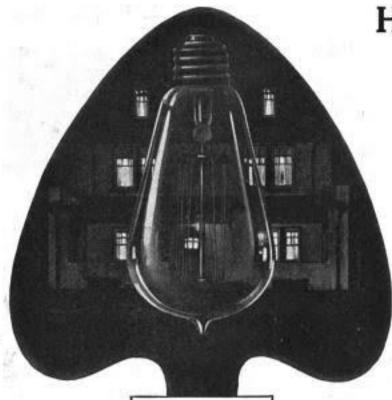

#### **New Low Prices**

10 watt—for all-night light . . . )
15 watt—for porches and hallways )
20 watt—for side and table lamps )

Made also in larger sizes and in round and tubular bulbs—a NATIONAL MAZDA lamp for every socket. Ask for information on the proper lighting of homes—the agent for NATIONAL MAZDA lamps in your vicinity will help you and give you valuable booklets on scientific lighting, or we will mail them free on request.

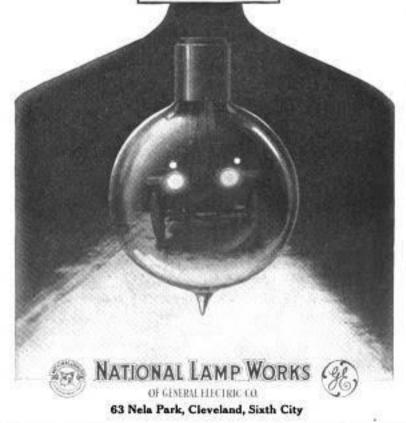

Get lamps in the Blue Convenience-Carton. Look for the display in the windows this week.

> Any of these labels is a guaranty of National Quality

world's foremost electrical engineer, says: I can see no reason why any person should condinue to use wasteful carbon large when rugged Manda large with solid drawn wire filamens are swallable at such low prices."

Housecleaning Starts with NATIONAL MAZDA Lamps

> Junk the obsolete carbon lamps. It pays. Don't hesitate to break the wasteful relics—it will save you breaking many a dollar for wasted current.

> Among all your household necessities, you can find no improvement so great, so far reaching, so profitable in money and convenience, as NATIONAL MAZDA lamps.

> Junk the carbon lamps and get two candlepower free from NATIONAL MAZDAS. Put one in every socket from cellar to attic and have more light, better light, and pleasanter rooms without paying more for current.

You owe yourself the thrift, the eye-ease, the convenience and the hospitality of NATIONAL MAZDA lamps.

#### NATIONAL MAZDA Lamps for Automobiles—all makes

Ninety-three per cent of the automobile makers specify Mazda lamps for their product. They are the rugged lamps that made it possible to light automobiles by electricity. They stay bright, stand the shocks of rough travel and are made for all cars—gasoline or electric.

The great merit of National Mazda lamps is their uniformity. They are from 30 to 70 per cent better than most other makes. They are standardized in voltage and construction. The National Mazda dealer will give you lamps exactly right for your car. Name your car and get a single lamp that you can depend on, or get a full set of six lamps in the National Carrying Chest, ready for any emergency.

Look for the Blue Convenience-Carton like the one in which you buy lamps for the house.

# THE FLOATING LABORER

The Case of John Smith-By Will Irwin

A Sheltered Corner

Riding on the Rail

THE people of the East remember, it snowed last February in the city of New York—snowed with a volume and violence unknown in those parts since the historic blizzard of 1888. For two weeks a new and harassed Commiscioner of Street Cleaning tried to dig the city out. Hampered though he was by want farts, he found a surplus of men. This had been a winter of unemployment. As usual,

Destarvelings of industry had crowded into the city, where there are saloons, public buildings and gratings to keep a The warm, bread lines and charity soup kitchens to fill his stemach in the last pinch. Before the snow abated, the our seioner had thousands of men heaping up the snow to await the slow pleasure of such carts as Tammany setractors would grant him.

Unsatisfactory workers they proved in bulk. I myself med to watch them picking at the hard ice cakes, thrusting ber shovels into the drifts; and it seemed to me that I exid perish from nervous exhaustion if any one forced to work at that languid, flabby pace. At that, they always resting when the boss looked away. By two more the snow army was deserting in squads and

You see, they don't want work," said a conservative bend who operates in Wall Street. "You see, they're terely the degenerate fringe of humanity," said another, a the more enlightened. "They couldn't get on under any irmmstances.

The next day, as it chanced, I interviewed a deserter ion that army. He had just asked me for a dime. There m beggars in New York, and again other beggars. One The to know the professional whine of the expert panarder. Somehow I perceived in this case one of genuine satt: so he got my dime and I a little of his conversation. weed him why he was not shoveling snow.

Too hard, boss," he said. "I tried it two days an' me tomach went back on me."

He shuffled away then, as though he wanted no more sestioning. I watched him bumping down Third Avenue. le was five feet nine or ten inches tall; his shoulders were read in symmetrical proportion; he was probably less han forty years old. Yet he shambled; and it was not 13 Ly the shambling of the city bum, the gait that betrays of all self-respect. More was it the manifestation of the inner weakness. What was it? Drink? Perhaps. ... was drink the cause or only the effect?

A week later a section of the I. W. W., blind rebels trasters whose faces they did not know, organized

Hitting the Grit

their now famous raid on the churches. I saw a crowd of these rioters, and they also had that gait and movement, as of a man carrying some hidden disease or newly released from the hospital. In all this army of the unemployed.—American, German, Irishman, Italian, Hungarian, Slav, Teuton, Saxon, Jew and Celt-that outward and visible sign of an inner weakness formed the one common factor.

Again, what was it? Were these, as my first conservative friend implied, merely the fated failures of humanity, the men born with defective minds and souls? Or were they, as the other conservative friend implied, the physical degenerates, the nubbin apples on the tree-half brothers to cretins, dwarfs and cripples? If so, what a margin of degenerates we have on the fringe of humanity!

Lombroso, yellow scientist that he was, drove sociology stark mad for a time with his theories of degeneracy. Since true science turned its cold eye on his theories we have known that crime, vagrancy and such phenomena cannot be accounted for, even in major part, by the easy word, degeneracy. Still less can this theory be stretched to cover the army of the unemployed in New York. There must be some better reason-in fact there is a better reason-to account for that nerveless movement at work; that weak, uncertain gait. And to make that reason clear, let me be concrete; let me tell the story of the working life of John Smith, American. It is not fiction, that story, as I shall show at the end; or if so it is that kind of fiction which is more true than fact.

John Smith is an American of old stock; the blood Anglo-Saxon, with a touch of Celtic. You must think of him as an average man, born with no exceptional powers, no exceptional weaknesses, no exceptional vices. The capacity for great heroism, great performance or great crime was not born in John Smith. Nature and the sturdy stock from which he sprang gave him a good, usable body capable of a satisfactory day's labor under direction. It gave him, also, a passably clear and active mind. Such as he are born to be the sport of circumstance and environment; but most of us are such as he. Had he sprung from the lap of affluence, had he received a college education, he might have made a fairly successful lawyer's clerk or staff doctor. Had he inherited property and acquired a business training, he might have become a fairly successful merchant's clerk. Had he sprung from the depths of the slums he might have made a fairly successful pickpocket.

Fate and social forces, together with that cumulative series of small circumstances by which Fate and social forces produce their larger effects, would always be the determining factors in the life of John Smith—not that he lacked will power; of that, also, he had the average quota. I repeat: four-fifths of the people for whom the Pilgrims pioneered and the Revolutionary forefathers bled are like John Smith.

His forbears on both sides had tended to follow frontiers, until, with the disappearance of a frontier, James Smith, John's father, found himself stranded as a tenant farmer in the Middle West. Most of us remember the time when the political orator boasted that the American farmer was a king, holding his own broad acres without let or hindrance from any other man alive.

We remember, also, the pity we used to feel for the tenant farmers of Ireland. That period has gently drifted behind us; it was a shock to many when the last census revealed that a quarter of our American farmers are out-and-out renters. To this class belonged James Smith. Half of his earnings from his hundred-acre farm went to the landed proprietor, an old gentleman who had retired from active life and lived in town on his income.

With the rest of the proceeds James Smith and his wife managed somehow to clothe the four children after a fashion, to feed them well enough so that they came to maturity with normal constitutions, and to keep them in country school until they were thirteen or fourteen. From some such beginnings many of our heroes of American romance sprang—Lincoln on the one side, Rockefeller on the other. Of course John Smith, the eldest son, to whom I am inviting your attention, was neither a Lincoln nor yet a Rockefeller, but an average man.

John left school in the seventh grade and went to work as a farm hand on the paternal acres. His father used to say in his pessimistic moments that this was a dog's life. As John grew up and became strong enough to do a man's work at plowing or pitching hay, he indorsed those sentiments. Life, except for the brief respite of winter, was just work, eat—work, eat—work, eat, sleep. Some of the other boys we knew, sons of proprietary farmers, had begun to go to the country dances—one or two of them got a few days in town; but John had no clothes for dances and no money for town visiting.

#### Little Nudges From Fate

In the winter when he was seventeen years old Fategave him two of those little, impalpable nudges that guide a man on the road of destiny. There was skating over on the pond. John had outgrown the pair of skates he got from the Christmas tree years before. He wanted a new pair and he boldly asked his father for them. In John's mind had been growing for some time the feeling that he had been doing a farm hand's work for his mere board, and he made his application with some confidence. It was a bad day to ask. The bill collector for the general store had called that morning to remind James Smith that the last payment on the mowing machine was long overdue.

"No!" said James Smith, concealing his real feelings by a show of brutality. "You wear out enough boots without skates. Skates! And me at the door of the poorhouse!"

Still smarting from this rebuff, John sat down that evening to pore over the weekly newspaper the Smith family managed to afford, and which gave them their one contact with the larger world. The Weekly Argus was printing a serial entitled: Farmer Bill; or, From the Plow to Wall Street. This was such a story as delighted us Americans twentyfive years ago; from the title you may guess the trend of the tale. John had read the earlier chapters with no great interest—they were all about the things he knew; but this one held him. The hero, by rescuing the beautiful daughter of the millionaire broker from the clutches of the broken-down French count, had won a raise in pay to fifty dollars a week, and had been invited to supper at the broker's house. The chapter, before it swung into action again and left the reader breathless for the next installment, described the rich broker's house.

One detail stuck in John's mind: there were gold plates on the table! He lay awake that night, dreaming of the city, that paradise where they are from gold plates. When, next morning, his father woke him with the announcement that

The Army of Unemployed, About Three Thousand, Leave San Francisco on the March to Washington

it was time to be about the chores, he was still dreaming in the back of his head, contrasting the home where you could not have skates, because they were out your boots, with the home where they are from gold plates.

The thing that was stirring in John Smith, had he only known it, was his pioneer blood. It was imagination in action. It was the call across the waste spaces, which made his great-great-grandfather leave a loom by the Clyde for a clearing by the Delaware; his great-grandfather leave a settlement by the Delaware for a log house by the Ohio; his grandfather leave a town by the Ohio for a ranch by the Missouri. Only the frontier is gone; and that young, adventurous blood sings through new channels. The great adventure, to John Smith's generation, is the city.

All winter, all spring, the next summer, he kept that dream to himself; but he worked, with the good, young will power he had, toward the one end. When spring plowing and planting were done he found a chance to cut wood by the cord for a neighbor. When he proposed to his father that he himself keep the receipts there was a short, sharp domestic argument, in which justice prevailed. The special advocate of justice in this matter was John's mother, to whom he had confided his ambitions and who sympathized with him. By this device or that John added to the hoard, which he kept in a little chink back of the chimney. When autumn came he had twenty-five dollars—enough for his fare to Chicago and a few weeks' board to spare.

And just when the work of harvesting was over for the season Fate gave him another nudge along the road he must travel. A city newspaper fell into his hands. Running halfway down a column of the help-wanted advertisements was a call for laborers—railroad construction—a dollar and seventy-five cents a day; cheap board; transportation furnished from Chicago. By another day, John Smith, an unseasoned boy of eighteen, but capable already of doing a man's work with any crude implement, had taken his pilgrim gown and scrip and gone to seek his fortune. So far it reads like any romance of youth on the quest of destiny.

Now, though John Smith was, as I have said, an average man, he was also an average American. Being such he had ambition, bred in him from those generations that had pushed ever westward that they might better themselves, He did not know that since his fathers used to seek the frontiers the whole world had changed. The older world was a world of mighty rough labors and of rule-of-thumb methods. On every hand lay untamed Nature, untapped resources. A man broke into the treasures of the earth. He found a working method of his own and according as he had luck and adaptability he won a fortune, a competence, or at least a living; but the frontier had shrunk.

The undeveloped resources were all preëmpted. The age of specialists had arrived. To get along in any occupation an average man must have some special training. John's education had acquainted him with the three R's and nothing more. He could not write well enough or cipher well enough to enter business. The only trade he understood, even dimly, was farming. And it was old-fashioned farming, of the kind we

used to practice on a virgin soil, which had been gathering richness an age long that man might rifle that richness in a generation.

Concerning any of the methods by which a farmer coaxed land that has lost its virgin richness, he knew nothing. He entertained a general idea that fertilizer meant barnyard manure, when you had it to use. His father, no better instructed, had at least a kind of instinct born of long experience. John Smith, barely eighteen years old, had, of course, not developed that instinct; yet here he was, an average man, taking his unskilled powers into a new world of specialists, and dreaming as he went of the rich house and gold supper service he expected to win when he had made his fortune, like the hero of Farmer Bill.

#### Farmer Bill in Real Life

HIS first night in Chicago he spent in a fifteen-cent lodging house, to which he had been directed by a policeman. The bed, after all, was little worse than his own bed at home, though he did lie packed beside twenty others, who snored and tossed and kept him awake. Even had they lain quiet, he could hardly have slept. That evening he had been walking the streets, marveling at the new wonders of the city, with its crowds of richly dressed people—for so the pedestrians on Dearborn Street looked to him—its luxuriant carriages opening at the doors of the opera—that was the interpretation he put on hired hacks and a cheap stock theater—its restaurant windows, with their glimpses of white linen, beautiful strange dishes, colored glasses and pretty women. A little terrified, but more exalted, he thought of these things as something in which he himself might some day share.

There was another thought in the back of his head, which he, with the soul shyness of a young boy, seldom permitted to come forward. Some day, like Farmer Bill, he would meet the broker's daughter and do valiant deeds for her hand. On the dream of this amorphic romance he fell asleep.

Next morning he learned from the clerk at the fifteen-cent lodging house how to find the employment agency; and he arrived before the doors opened. It dismayed him a little to find forty others in line before him. This was the beginning of the slack season, when from farms, grading camps, lumber mills and quarries the unemployed crowd into Chicago for the winter. At this very time a new party had arisen in railroad politics, a new alignment of forces. It became necessary to the larger policies of Wall Street that a certain railroad, long surveyed and laid out, should be graded and tracked before the snow flew. The employment agencies, greedy to pad their seasonal receipts, had spread the news through their own channels of publicity. When John took his place in line there were forty men ahead of him. When the doors opened the line behind him stretched to the corner of the block. As man after man stepped up to the

As man after man stepped up to the desk and held a brief interview with the little ferret-eyed clerk, John craned his neck across the line and watched. At the close of the conversation some of the men received cards. John perceived by their satisfied expression, and by the jovial remarks they dropped as they

Waiting Outside Municipal Lodging House for Admission

passed along the line, that these men had secured jobs. over the scraper and What he could not understand was the others, those who turned away with their shoulders bent to drop a curse or two about pull or fixed jobs as they passed back down the line,

These hints terrified John. He had not thought before that pull had anything to do with the matter; yet it seemed to him as he looked that there must be some truth in this charge. He noticed small men, flabby men, men whom his father would never have taken as farm hands, carrying away cards. He noticed big, stalwart fellows, whom he marked as likely workers, turned away. When he himself reached the window he was dumb with apprehension. The derk looked him over.

"Any experience in grading work?" he asked.

"No!" said John. He had intended to lie, feeling himself justified; but his nervousness stripped him to the truth.

"How old are you?"

"Nineteen," said John, recovering himself to add a year. "Huh!" said the clerk. Then suddenly, as though he had made his decision, he reached for a card, scribbled a line on it, stamped it, and passed it over. "Two dollars. Report at the address here at twelve. Here's our card. Come to us when you want work again. Next!"

Before he had recovered himself John was outside. clutching his card. It was not true about pull after all! That clerk was a slick fellow; he knew a worker when he saw him. There must have been something wrong about the big fellows.

So behold John Smith crawling out at daybreak next morning to the corrals of the grading camp, that he might harness the team of mules the boss had assigned to him. He had come up the day before in a box car with a string of laborers from the employment office. As they bowled

up the line to the camp his fellows sat on the floor, sucking their pipes and talking of this and that,

John had liked them but little. Their whole ambition, so far as he could see, was to accumulate a few weeks' wages, get back to "Chi," and spend their money on beer and the girls-always the girls. That afternoon John learned things about the evil of this world he had never known before. There had been more talk of this character in the bunk tents before the men rolled up in their blankets and went to sleep.

#### A Short Stay

HOWEVER, now it was morning and he was going to work—the beginning of his career! He harnessed Jenny and Judy, the mules, to his scraper and joined a long line of men and teams making for the grade. The boss, a big, two-fisted man, with direct eyes and a lined face, stopped him.

"Don't know anything about grading, huh?" he inquired. "Then

what the hell did they send you for? Well, you sink your scraper here and drop the snatch; you follow the line up to there and raise the snatch. Don't let me see you tying up the line—and keep your scraper full."

Presently John was following a line which moved with the regularity of a machine. You reached the pile. You seized the handles and, with one effort of your back, you turned

sank it deep. You lashed your mules. Out came the scraper, loaded. You reached the long mound, which was the railroad embankment just taking form. At the apex you released the snatch; over went the tray, dumping the earth. You followed the line round until you reached the soft dirt again and continued the motion.

Being a farmer's boy and accustomed to teams John had learned the trick by the third time round. And all that morning exultation grew in him. He was a man, he could do a man's work! This was the beginning of his fortunes. It all depended

now on his own diligence. He kept the proper distance from the next team; he studied the exact spot to release the snatch. By such diligence Farmer Bill and his other heroes of romance had founded their fortunes. As he ate his beans and salt pork from a tin plate in the chuck tent; as he rolled into his blankets that night, very tired, but still capable of a day's work—the dream followed him.

Coffee and Sandwicker at the Municipal Lodging House, New York

It was late the next afternoon when a box car drew up on the distant siding to discharge a new gang of men carrying blankets. John thought vaguely, as he watched them detrain, that the company must be doing a lot of work to have so many men; but, just as the grading gang stood waiting by the corral to unharness, he saw a sub-boss marching down the line, speaking to man after man. He

reached John. "Boss wants to see you in the main tent after supper," he said.

Hardly imagining what this might mean, John reported at the main tent. He found thirty other men, many of whom had come up with him from Chicago. His heart sank a little when he recognized them as the scrubs and riffraff of the camp. The boss entered.

"Box car's going back to Chi in the morning," he said. "You fellows get your time. You're fired!"

The thirty took it dumbly, all but one little man with a seamed face and fiery red hair.

"To hell with this camp! It's a graft!" he yelled, and shook his fist.

The boss turned on him his steady gaze and raised slightly one of those big, hard fists. "What did you say about this camp, kid?" he asked. The little man shrank back into the crowd and all complaint was over.

Next morning at dawn John received from the timekeeper a dollar and a half—two days' pay, less a dollar a day for board-and took the box car back to Chicago in a

state of utter juvenile depression. Somewhere within him rankled a sense of hard injustice. He knew he had kept up, knew he could do the work as well as any grown man on the job.

John really never knew the whole truth about this little transaction in labor.

Construction on that road was proceeding under the old rules of the game, whereby every one along the line took out his bit. The directors were also directors in companies that undertook contracts or furnished material.

#### Easy Money

BY KNOWING what contracts to stretch, the engineer got on and pleased his masters, who permitted him to have his own little graft in commissions. The grading boss knew about the constructing engineer's graft; so he was permitted a graft of his own. The employment agency that sent out John Smith collected two dollars apiece

from the laborers and gave fifty cents of that two dollars to the boss for throwing the business its way-a very simple arrangement.

One job for one man in one year means only two dollars. Twenty jobs for one man in one year means forty dollars. The proprietors of this agency, working with the grading boss, had reduced the matter of rotation in jobs to an exact science.

They picked for him a due proportion of men who could not keep up with the work, or of youths like John, whom a boss has a good excuse for discharging. Every few days the boss weeded out the undesirables and replaced them with new undesirables from the Chicago agency. He fired thirty men that night in camp and took on thirty others. His clean profit on the transaction was therefore fifteen

John Smith went back to the lodging house where he had assed his first night in the city, and the next day he visited the employment agency again. He had better nerve this time; he tried to tell the clerk he had really kept up-that it was unjust to discharge him.

"Tell your troubles to the police! You'll learn, kid," said the clerk. "That ain't the only job. Give me your address and come to see us every day or two. You get a job by sticking round."

For two days John, unaccustomed to city ways and with ' no definite trade, training or guidance, tramped the streets of Chicago, asking at alley doors for any kind of common work. He failed, as any one accustomed to city ways would have expected him to fail. It was autumn, when common labor is a drug on the market. Meantime he met in the lodging house that same red-headed man who had protested when the boss discharged the graders. The red-headed man-Charlie Crawford was his name—paid special attention to (Continued on Page 41)

Waiting for Jomething to Happen

# THE REQUITAL By Grace Ellery Chamming

MRS. HADLEY looked up from the accounts she was auditing for the local literary club just as Ellen came up the path. Pierre was strolling at her right hand and Henry Kilvert on her left—a usual arrangement; and Henry and Ellen were doing the talking while Pierre listened—also a usual arrangement, and responsible for the calmly pleased smile Mrs. Hadley turned on her daughter when she presently entered the room alone.

The Hadley place and the Kilverts' ran together—and thence on to the next neighbor's and the next in unbroken sweeps of greenness, dotted, but not interrupted, here and there by a purple beech, a clump of maples or a conifer, which served as a kind of communal decoration, without placing anything between house and house to cut off a view or intercept the wandering eye or foot.

This was obedient to the sectional ideal of neighborliness and the brotherhood of man—the same ideal which conscientiously practiced leaving some of the windowshades up at night, that the homeless wanderer might be cheered by the sight of what he was missing. Just why the idea had not been carried to a logical conclusion and a common neighborhood house set in the common park of their open grounds is not known—probably they simply had never thought of it. But so far as they had carried the idea it had worked out to an inevitable result—you did not shut out your neighbor in M—— and ergo you were not yourself shut in.

Followed as a corollary, the grounds being everybody's—yet not quite—nobody lived in them. A little youthful tennis, a few timid vine-screened and sewing sitters on porches—this comprised the al-fresco life of M——. There were no careless groups on lawns, no seats and tables under spreading trees—and, of course, no afternoon teapots on

those non-existent tables.

Once in a while some one had the painful idea of giving a lawn party—a thing that had to be made before it could be given, made at a great amount of fuss and trouble, and to which every one came uncomfortably in best clothes. These were the few occasions when the ornate arbors and pergolas came into use; otherwise the community lived chastely within doors—going out with definite decision to take air and exercise, chiefly in the shape of sport.

An athletic age had its grip on M—— as well as on all America besides; everybody in M—— was constantly in a state of going out of set purpose—

or, at least, for motoring; but of any conception of outdoors as a state of being instead of a state of going it was innocent, together with most of America.

Except, of course, the Garnetts. One was always excepting the Garnetts; and this exception was variously attributed to them—by the uncharitable for pride and perversity; by the charitable as the inevitable taint contracted in years of European living.

But then, nobody ever argued from the Garnetts to anything—nothing but Professor Garnett's eminent standing and a certain frank charm in the entire family exempted them from criticism; they were usually spoken of in an

indulgently apologetic tone.

When the Garnetts came to M—— their initial act had been to put up a tall wire screen of vines round their entire place, and behind this they had planted the swiftest-growing thing in hedges known to that climate. Tall trees, too, and thick, they had imported with a recklessness of cost; and, once having got themselves fully shut in and everybody else shut out, they had proceeded to treat the inclosed space as an extension of their house; indeed, they lived in it much more than in the house itself.

There was a tea-table—a used tea-table—under the large cherry tree; there was a shadowed pergola, with both a table and chairs, where the professor, hatless and even coatless, wrote his most eminent books, and his gifted wife illustrated them.

They had a little stone terrace built—with a complete disregard of architectural conventions—to overlook the sunsets; and they are out, sat out, worked out, rested out, and only did not sleep out, it was held, because that would have been being too much like their neighbors. Just when all M—— took to its outdoor sleeping rooms and screened porches, the Garnett household retired to its stronghold of a house.

"'Foxes have holes; birds of the air have nests," the professor had been heard to quote. "Every living thing seeks a shelter for repose. It was even accounted a hardship that the Son of Man had not where to lay His head—but that was before the present-day fresh-air mania broke out."

Both for His Joy and His Solace He Had to Take Refuge in This Gift of His

"And besides," added Pierre cheerfully, "what's a house good for anyway—except privacy, and to keep warm and dry, and to stay in when you can't see anything pretty outside?"

All up and down and over this pagan domain the flute notes, or the violin notes, or the piano notes of Pierre floated eternally. Pierre owed his name, as well as his lustrous eyes and something oddly un-American in his whole carriage and manner, to his mother, whose half-Frenchness seemed only in her to accentuate the other and larger American half of her.

The foreign strain was held to have come out in her boy. He was the Garnetts' only child. Also, he was lame from birth. This single bitter drop had Fate distilled into a cup of happiness otherwise inordinately sweet. One leg was shorter than the other and Pierre walked through life with a limp.

He might have been much as other boys but for this; the limp colored his whole life, excluding him from the games and contests of his fellows and throwing him back perforce on the other side of his nature. From his father he inherited scholarship, from his mother music; the combination had made of him a musician who composed, and the handicap had made of him a concentrated student of his art from his early years. Both for his joy and his solace he had to take refuge in this gift of his.

When other boys were playing ball he was playing Bach fugues, and by the time they were off to climb mountains and row matches he was off to Germany, to England, to Bayreuth, Munich, Vienna or Italy, for holidays of music—until the time came when he went off for study in earnest. All this and his birth made him foreign enough to be regarded as a little dangerous by prudent mammas, even though quite charming and—as the son of Doctor Garnett—wholly unimpeachable.

As if desirous to point a moral and mark a contrast, destiny had set, on the other side of this exotic household, the most authentically native of homes. It was not possible to be more lineally descended of local traditions than were the Hadleys. Mr. Hadley was of a fine old Colonial and Unitarian family; having been born near Boston in the sixties this was inevitable.

Back of him were the bluest of Colonial traittions; and what was true of Mr. Hadley was it possible a little truer of Mrs. Hadley.

The marriage of these two had been predestised, determinate, from the moment their respective ancestors set their simultaneous feet on Plymouth Rock; and it had received its ultimate sanction in one of those paragraphs of announcement the press accords only to the elect, beginning with "There took place——" and concluding with a good part of the contents of the telephone book, sorted something after this manner:

"The bride's grandfather on her mother's side was the distinguished Admiral Wigglesby, whose sons were the eminent Dr. Walter Wigglesby and the Honorable Samuel Wigglesby, late chief justice. On her father's side she is descended from five of our most distinguished Colonial families. Her mother was the beautiful Mary Allyn, whose younger sister married the nephew of the late Governor Enderby. The bride's sister is Mrs. James

Walcott, whose husband is a descendant of the famous historian, Stephen Hodgson; while on his mother's side ——"

I am sorry I have not space to give it all. However it may be said that the list of collaterals included the Beadley Massés, "whose," and so on; the Mason-Tomlins, "whose," and so on; and

Either on account of, or in spite of, this they were very fine people—finely educated, too, in the national sense, and in the cult of one of the few American cities that does really mean education when it says so, and not merely instruction. From their cradles up they had been reared

on bedrock principles, to which they had been taught to sacrifice everything—except another principle.

Social service, the higher thought, the new morality, all the modern forms of those abstractions for which their Revolutionary and Abolitionary ancestry had fought and bled and died, they had received in their turn, handed down—as the devout communicant receives the Eucharist—with faith, with conviction, with an inner consecration. They possessed and were possessed by every good and saving thing on earth, except the saving sense of humor: not having which, they lacked, of course, also a saving sense of proportion.

The outward and visible sign of this was the stress laid on the unimportant, the immense seriousness of little things. They knew no way to differentiate unerringly between the major and the minor. They were socialists, of course; liberals by necessity; suffragists by birth; eugenists inevitably; and they were also Fletcherites. Ibsenites, and savers of matches and pieces of string, just as hard and thoroughly as they were any of the other things.

They were, in short, the very kind of people it is least permissible to laugh at or hold up to scorn; and they were the people, of all the world, whom it was impossible for any person of imagination, philosophy or sane humor to look on without an immediate desire to smile, albeit tenderly.

The Hadleys had four children—no more, no less. This was neither luck nor blind destiny; it was the number to which they had conscientiously decided they could do justice. They had not arrived at this decision lightly. Had they been their own forefathers, they would have taken it to the Lord in prayer; and Mrs. Hadley would have borne at least thirteen—one of them very likely a genius, by reaction.

Being what they were, they did the modern equivalent took it to the family doctor and lawyer; that is, they ascertained that they were, humanly speaking, sound physically, mentally and financially; of their morals there was never any question. Four, it was decided, was the number to which she could reasonably hope to promise an equipment of vital force, and he competently to guarantee

their dues of school, dancing school, college and postgraduate training, not forgetting the dentist and the doctor; not, of course, that they expressed it thus, even to themselves—it went lumped under the generic term of the advantages to which as human beings they were entitled.

The children were born according to schedule, decently and in order, and not too near together; this made them always just a little too far apart to be interesting to one another. Mrs. Hadley herself, in thoughtfully reviewing her life, felt that if she had it to live over she would have chosen to produce them, as it were, by pairs. For what use, in fact, has an active child of three for a baby-a mettlesome lad of six for a toddler of three—or an ambitious nine-and-going-on-ten-year-older for a little fellow of six, short of leg and vision?

This remoteness, with its lack of the kindling attrition of mind on mind, may have had something to do with their being what they were; for, broadly speaking, a more unimaginative, stolid, unexceptionable and-except to their parents-uninteresting flock of four never was. They were perfectly well and perfectly, almost too perfectly. well bred. There were no limpers among her children-Mrs. Hadley, watching little Pierre at play among them, gave silent thanks for it; a child like that she would have accounted a personal disgrace.

True, Pierre shone starrily in their midst, for the Hadley children were not beautiful; even their parents did not think them so. They were just solid, straight, clean, honest and sturdy-all good, all well, all sufficiently intelligent, and one just as good, well and intelligent as the other, so far as could be discerned. They quietly absorbed

and digested the family traditions just as they absorbed and digested the family oatmeal, their minds giving them no more trouble than their stomachs.

Ellen, as the eldest, was the compendium of the family teachingthe protagonist, so to speak, of the family idea. She was a calm, faxen-haired girl, with imperturbable eyes under a broad brow, and a very straight back, which looked capable of carrying things without bending. The only doubtful thing about Ellen was her smile—as if she were a little uncertain about smiling, as indeed she was. This was family again. Life being the fremendously serious affair it was, a certain pervasive gravity became inevitably its dominant note.

Those quips, quirks and conceits-often a mere matter between the eye and lip-which permeated the family atmosphere of the Garnetts like benignant summer lightning relieving superbested conditions, were unknown and unthinkable in the mild, constant climate of the Hadley home. Conscious rectitude, sacrifice, one's duty to society-those were the things that weighed; and they often weighed heavily.

From the day of their birtheven from the day on which it was decided they should be permitted a day of birth-Mrs. Hadley had planned her children's lives until they should be grown up. And the program had been carried out ≢ith rigid exactness. Twice a year to the dentist, once a year to the dector; two pieces of candy after dinner; the best school, the best dancing school, the best playmates; cold baths - taken with a thermometer: Nature study, hygiene, in early introduction to the serious spects of life; so many duties a day, so many pleasures a week; so many hours of study, of sleep, of exercise, of free play; a touch of the higher thought and a touch the Montessori method; light applications of mental therapeuties and Fletcherism; simplicity of fare, of clothing and speech; a fine courtesy of manner and life; the loftiest ideals-in short, the sacred New England altar fire kindled on the ancient rock. Onlywhich made all the difference-it was a modern and scientifically fed flame, an altar fire de luze, electrical, non-combustible, and automatically time-buttoned.

In their impregnable ancestral conscience of parenthood there were no lengths the Hadleys were not prepared to go; they did actually go the fearful length of guessing at their offspring's brain processes. Mrs. Hadley did not blench from choosing their reading for them. The mysterious workings of their awful minds held nothing awful for her; she made up hers and dealt out a regimen accordinglytwo scientific, historic or biographic volumes to every one of fiction, and the fiction chosen. The former they called, the Searcher of the dark and inscrutable mysteries of the human heart alone knows why, serious reading, as opposed to the mere drama of life and the passions of the human soul; though, to be sure, they did look out as to what passions the children got hold of, assorting them as Omnipotence has never yet been able to do.

They did not stop at books, however. To teach them to think for the less fortunate, Mrs. Hadley denied herself the pleasure of making gifts to her own children on birthdays and at Christmas. Others, she knew, would give to them in abundance; they should remember her as giving

to the motherless and the poor.

To teach them self-denial, she dressed them with an all but conspicuous plainness. And all and everything she did seemed good in their eyes.

At eleven years Ellen was a convinced suffragist, passing the hat at conventions and perfectly happy to pass it. If now and again she wished Fate had elected she might pass it in a prettier hat of her own—that was the first sign that Ellen was growing up. Not that she desired to deck herself in the spoils of shricking mother birds-not she; of conscience she had renounced both fur and feathers; but

one permitted curling plume of that vain bird, the ostrich. would, she felt, have given a fantastic value to life. Pierre, in particular, admired plumes.

By fourteen she was a staunch and active partisan of all good causes.

By eighteen she was a quiet power in the youthful part of the community and Mrs. Hadley began to draw the breath of relief. The dear woman deserved to. She had piloted her flock safely past the perils of adenoids-inscrutably just as prone to lie in wait for the scientific as the unscientific-and now had her conscientious eye on their appendixes. These, too, were sent alike on the just and unjust; and her three eldest already knew as much about sex and the dangers of it, in theory, as Mrs. Hadleyor, for that matter, anybody else-knew or could tell

In all this there was nothing of morbidity; the Hadleys were profoundly sane and healthy. Merely they desired to play fair and to give their children every advantage, just as they had planned to do, and just as at present these happened to be the things that differentiated the wellcared-for child from the neglected. The thought of their day centered about these things.

Conscientious parents knew a regular progression, beginning with disinfecting the baby, up through vaccination, antitoxining on the faintest suspicion, straightening the jaw, and so on, up to the removal of adenoids and any other loose-lying portions of anatomy, appendixes included. It aged Mrs. Hadley, and other mothers, with anxiety, and grayed Mr. Hadley's, and other fathers', hair prematurely, paying the bills; but both would rather have fallen

in their tracks than below the level of the standardized parent of their

That all these things were advantages had been drilled into the children; I am afraid there were moments when Mrs. Hadley could not help feeling that a Divine Providence had selected her neighbors for her, setting them on each hand—the one for an example, the other for a warning.

Nothing known to science had been left undone to Henry Kilvert to improve him; and nothing whatever had been done to Pierre. He had not undergone so much as one little operation; it is doubtful whether his parents had even thought of such a thing. Well, you could look at Henry Kilvert and you could look at Pierre!

Ellen looked at both; if she looked oftener at Pierre it was doubtless because there was more that was novel to look at. Henry Kilvert might have been born a Hadley; but the Garnett household, from her childhood, had presented to Ellen enthralling dreams of the impossible. Her glimpses of Pierre's home and home life were equally capturing and terrifying. The gay elders, working as others played; the starry child, with his pervasive music, which seemed to be somehow the collective family voice; even the family hedge encircling that house of mystery, fascinated her gradual mind.

On venturing one day to wish for such a hedge of her own, it had been gently pointed out to her how much kinder was the neighborhood way; how selfish, by implication the Hadleys were far too well-bred to use, even to their children, such a phrase as applied to an esteemed neighbor-it must be to shut in trees and flowers and green grass. Ellen accepted the statement, not being subtle enough to retort that if she found the nodding tops of trees and glimpsed beauty prettier than plain lawns and naked shrubs so might others; but she remained unconvinced.

Nothing but the highest courtesies passed between the two households, which yet were never intimate. The children alone achieved that footing. If the vague objection that formed a barrier between the elders could have been put into a phrase it would probably have taken the form—on the Hadleys' side—of the Garnetts not

"What - er - Does Henry Kilvert Think of It?"

taking life seriously enough, oddly incompatible as that seemed with the professor's extremely serious studies and his wife's diligent collaboration.

When it came to Pierre the matter was simpler. Music in this suburb of the modern Athens could hardly be accepted in good faith as a gentleman's profession. One expected to pay great sums to foreigners to make it for one, and to take it very seriously when made, score in hand; but nobody would willingly have seen his son following it as a profession. It was a thing for geniuses, but hardly for gentlemen.

Not that any one found fault with Pierre himself; to see Pierre, indeed, was to be fond of him, and his infirmity curiously softened hearts, though it awoke condescension. Pierre was privileged to sit on front steps, to lie in hammocks; he had even been known to smoke there-which was anathema-unrebuked, though unapproved. Pierre took licenses as gently as he gathered flowers.

By one of those perverse attractions of opposites Henry Kilvert and Pierre were close friends, and they united in considering Ellen nearly as good a fellow as themselves. The three were of an age and inseparable. Mrs. Hadley, watchful but wise, silently approved this—she had always held that sex could be held in abeyance by free association; here was the beautiful evidence. Ellen and Henry did their lessons together, played tennis and skated together, while Pierre sketched them both or played on his violin.

Just at the moment when the theory might have been more sharply tested, the two young men went off to college, and then to Europe for their graduation summer. Henry came back in the fall, bringing with him a splendid set of carbon photographs for Ellen; but Pierre stayed on to study languages and music. Thus the trio became a duo; and in her heart Mrs. Hadley thought this another evidence of nice feeling on the part of Providence.

By the time Ellen was quite grown up, out of college herself, specializing in social service, and Henry Kilvert was paying her serious attentions, Pierre came home.

And thus it was that the trio were once more walking up the front path; and Mrs. Hadley, eying them, was mentally giving thanks for Henry Kilvert's and Ellen's upbringing. For Pierre was outrageously handsome-and the limp more pronounced than ever. He looked, decided Mrs. Hadley vaguely, like a poet or a foreigner; and again she gave thanks for Henry Kilvert. Henry was what the

disrespectful called a highbrow; graduated with honors, he was already an instructor in chemistry, with a professorship in full view. Also, he was public-spirited and high-minded; and he looked what he was-a gentleman.

One could not imagine Pierre as anything but a gentleman, yet you would never have thought of describing him as one-he was visibly so much else besides; and who was to know what that else meant? Whether it was genius, or that foreign strain which came out in him, there was a suggestion of ancienne noblesse about Pierre—and these are not ancienne-noblesse days. Altogetherthanks once more for Henry Kilvert.

When Ellen came into the room she was alone, and she carried a moderate, square package in her hand. Her cheeks wore the healthful rose a girl's cheeks should when she has walked home between two delightful companions.

Mrs. Hadley suspended her computations to welcome her daughter with a smile.

They didn't come in?" she inquired, following the inane human habit of asking what one already knows.

"No," said Ellen. "Pierre carried Henry off to supper; they are coming over to spend the evening with us, afterwards.

Mentally Mrs. Hadley remarked that this was just like Pierre—the Garnetts were alone in in that odd fashion of haling people in at a moment's notice to whatever fare might happen to be waiting. Others who practiced the virtue of hospitality invited a guest with the formality due the exercise of a serious duty, and spent a hard afternoon preparing for him.

Ellen unwrapped her package, disclosing a small, vivid painting in a chased and inlaid frame, like the richly dull setting of a gem. She placed it triumphantly on the table.

"It's Pierre's. Isn't it beautiful?"

Mrs. Hadley adjusted her glasses for a better view. "How very odd! Isn't it?"

She dropped her glasses and looked at her daughter. Ellen was no more beautiful now than she had been as a child, but she had kept that early uprightness which now meant distinction. She had the same straight, capable back, and the same honest gray eyes and clear skin and beautifully smooth hair—all as serenely finished as a gravely modeled cameo, cut by some unerring hand, which had attempted little, but that little admirable of its kind. She was still a girl in a

woman-calm, sensible, good. She held her head up and the rose of her cheek deepened easily, as now with pleasure. "I think it's beautiful!" she repeated defiantly.

"What-er-does Henry Kilvert think of it?" asked Mr. Hadley, who had just come into the room and now adjusted his glasses.

"He says it's a corker!" replied Ellen promptly.

"Well"-Mr. Hadley smiled; it was Henry's term, and so might pass—"he knows more than we do about such matters; I'll take his word for it. To me it looks-unfinished." He let his glasses fall.

"Yes," assented Ellen; "Henry knows a whole lot. Pierre himself says so," she added as she walked from the

"He is a young man of very varied culture," Mr. Hadley cheerfully subscribed as a parting sentiment.

Then he turned to his wife, who was looking doubtfully from the picture to him.

"The question is," said she, "whether Ellen should accept it.

Mr. Hadley bent nearer the picture to give an air of judicial procedure and coughed to hide an indecision; he really knew very little about frames.

"I should say it cannot have cost a great deal."

"It is antique"-Mrs. Hadley's tone was firm-"and sometimes those things do, you know."

"H'm!" said Mr. Hadley. "It's a bit awkward; but, after all, he could hardly have given it to her quite unframed, I suppose; and it would be a pity to make too much of it." 'Oh! That would be worst of all!'

Mrs. Hadley considered the picture gravely-both of them would have sat there cheerfully all night to arrive at a just decision - and she thought of the carbon photographs and how they had presented no problem at all, they had been so exactly the thing to offer a young girl. She had a momentary impulse to desert Divine Providence and thank God-just plain God-outright for Henry Kilvert.

"I suppose"—she dismissed the subject instead—"it is best to let the matter slide."

"So it seems to me," said Mr. Hadley.

Once you begin letting things slide, however, there is no end to the sliding. Mrs. Hadley realized this as soon as Pierre appeared after dinner. He had brought over armfuls of gifts for everybody-they overflowed to Henry Kilvert's arms-quaint, lovely things; chosen, even Mrs. Hadley

admitted, with an uncanny aptness. And, just when every one was saying so, he produced an extraordinarily and extravagantly barbaric but beautiful jacket, embroidment in gold and rainbows, for Ellen.
"My dear Pierre!" remonstrated Mrs. Hadley, agast

"Ellen could never wear it!"

"Do you think so? Now I think it's just Ellen's style." said Pierre, with half-shut eyes of consideration.

Ellen's style! Her mother looked at the calm Celerial maiden and at Pierre.

"My dear Pierre!" was all she could say again and again. "She could never possibly wear it!"

"But," said Pierre, opening his eyes widely enug. "I want her to wear it! That's what I got it for; Ellen has such a perfect figure."

"My dear Pierre!" exclaimed Mrs. Hadley for the third time, this time with such an acute note of displeasure that Pierre woke up.

He looked at her, and a disarming smile, starting in his eyes, overflowed his lips; he seemed to smile all over.

"Ah!" said he. "Excuse me!"

Mrs. Hadley with a swift glance had assured beself that Ellen was out of hearing—she was wrong, but never mind-but she remained secretly displeased. She had an inherited distaste for people who thought in terms of figures-not arithmetical; she did not think any nice young man-Henry Kilvert, for instance-would be aware of a nice girl as having a figure at all—she was wrong again; and again she reverently acknowledged a debt for the existence of Henry.

It was, therefore, a shock when Ellen, coming into her room the next morning with the loveliest roses yet, said to her quite simply:

"Mamma, I think I ought to tell you that I am going to marry Pierre."

The book Mrs. Hadley was holding dropped from her fingers. Ellen stooped to pick it up, dutifully smoothing the crumpled pages before she handed it to her mother. By that time Mrs. Hadley had herself in hand.

"Thank you!" she said gravely. "Marry Pierre! My dear Ellen, I don't think you can have considered! I don't think you can realize what you are doing-or saying," she wound up with a return of helpless dismay.

The strange flush in Ellen's cheek deepened; she was remarkably near being beautiful.
"I certainly do realize it," she said:

"and as for considering, mammadon't need to; I have always loved Pierre. "Always!" repeated her mother

"He has been away for years and you have hardly corresponded!" "But he has written to Henry every

day," said Ellen serenely.
"Henry!" The emphasis was ele-

quent of many things.

Yes, Henry," repeated Ellen; she looked at her mother. "Why, what on earth did you suppose Henry and I found to talk about all the timeexcept Pierre?"

It was a question Mrs. Hadley did not care to answer. Nor was it for her to suggest to her own daughter that Henry-well, never mind. She called on every ancestor she had and was able to reply in her usual gentle, even tone.

"Sit down, my dear child." Eller did so obediently. "Of course, began her mother, "you must love the man you

marry; but " inquired Ellen firmly.

"You have been brought up to know that love is not all—to realize the seriousness of marriage. Ellen assented with a nod. "There are so many things to think of. My dear!" She broke of with a gesture of such naturalness that it tok Ellen more than volumes. "You cannot! It—is quite out of the question—simply impossible!" "But I am going to!" There was a spark is

Ellen's eye.

"And have crippled children?" The spark blazed out; Ellen stood up. Nov

she was altogether beautiful.

"They won't be! And even if they were -Ellen

"Well, I was only going to say they'd better be crippled that way than some others. Have you ever thought, mother"-she looked keenly # her-"that we are crippled too-that all of @ are crippled some way? Pierre"-how her voice changed with that name!—"gets more out of life than all of us put together!"

"It isn't what you get out of life ---"

"And he puts more into it too," finished Eller indignantly. "There's nothing disgraceful or shameful about his lameness; he's just-lame.

(Continued on Page 89)

# VANILLA BY HENRY KITCHELL WEBSTER

ONE t' St. Joe," she said.
"Excursion?" asked the
man inside the window.
"What do you mean—excursion?" she wanted to know.

"Round trip?" he asked. "Comin' back tonight?"

"Uh-huh!" she said; and she added after she had shifted her gum to the other side of her jaw: "Surest thing you know!"

He peered at her a bit curiously through the grille. "All right, kiddo," he said

as he handed her the change. "There you are!"

It seemed as though she brightened up a little at kiddo—looked for an instant distinctly pleased. Then, as an afterthought, she turned haughty and adjured him as she left the window, not to get fresh with a lady.

The man inside, without turning his head, addressed his colleague out of the corner of his mouth.

"Did you lamp that?" he wanted to know.

"The Floss with the red hat?" questioned the other. "Sure!"

"Where'd she come from?"
"Kokomo," said the other;
"all dressed up for the big
city."

But the first ticket seller looked dubious.

"Some make-up!" he observed, closing the subject.

Some make-up was right. The girl began at the top with a turban of crimson straw. Under that, puffed out in an obsolescent pompadour, was her own red hair. Divorced from the hat you might have found some less uncompromising adjective for the hair—Titian, or Venetian, or golden anburn; but underneath that hat and above the traces of rouge—which did not altogether match her natural complexion—you called it red, and let it go at that.

Her next theme in the symphony was an orange-andwhite blazer. And her finale—a spirited coda, as a musical critic would say—was furnished by a pair of red suède pumps from which a pair of silk stockings to match disappeared at some distance into a white crash skirt, which represented economy—at least of materials.

The total effect of her as she came out into the smoky sunlight of the upper deck was simply blinding. One color swam into another and reflected itself on something else, and you turned away after a moment's scrutiny a little giddy. You would want a pair of smoked glasses for a close study of details.

She glanced about her brightly—a little adventurously—as she emerged from the deckhouse. Here she was! the look seemed to say. Now things could begin to happen. You might have gathered from the look that if some bulletheaded youth in heavily cuffed trousers, a striped sweater and a diamond pin had hailed her breezily with "Hello, Jane! What'd you say?" she would have been ready with an answer that matched her clothes.

No such roving, roaring blade was visible in the offing, however, and nothing happened—except a few furtive stares from the rigid, prearranged little groups that spotted the deck.

For an excursion steamer to St. Joe, on which rattleheaded young couples ran off to get married, sometimes becoming engaged from a standing start on the way over if one believes all one hears, it looked distinctly tame.

With the first sign of self-consciousness she had shown, a little flush under the rouge, she made her way to a stack of folding chairs, selected one, opened it up and sat down—not at the rail, where, looking over, you could command a view of new arrivals coming across the gangplank, but out in the m'idle of things, where you could survey your fellow travelers.

She looked about cautiously from group to group. They all seemed very self-contained, somehow—family parties with a good deal of impedimenta in the way of boxes full of lunch; paper bags of bananas; occasionally a straw suit-case—fortified apparently for a stay in that particular spot until the voyage was done. There were little girls arrayed in their very best clothes and their starchiest manners;

"Art Has it All Over Nature When You Come Right Down to Cases, Hasn't It?"

little boys chasing each other round the capstan and colliding heavily with laden voyagers who had just arrived. There was a group of half-grown youths, self-consciously making themselves at home, with loud jokes and violent nudges and very ostentatious cigarettes.

They, indeed, were more actively aware of her than were the rest. But, as they showed it by walking in front of her every now and then and engaging in an impromptu roughhouse, laughing rather emptily and pushing each other, apparently with the idea of toppling somebody into her lap, telling each other "Aw, go on!" and then withdrawing in violent confusion when somebody did almost stumble over her—well, it was not the sort of adventure she had paid her money for.

There was still a quarter of an hour before sailing time, however, and perhaps some of those who were catching the boat by a narrower margin might look more promising. She hunched her chair over to the rail, leaned her elbows on it, remembered her gum, and began chewing vigorously. Certainly it was much too soon to give up hope.

I have made it clear that she was an adventuress, have I not? And none of the casual, impulsive sort, either! The excursion, the day, the costume—all had been chosen as the result of a carefully matured plan. She had spent hours buying that hat and almost as long experimenting on her hair to get a "do" that suited her. Every detail, down to the chewing gum, had been thoughtfully attended to.

And she had a name that fitted in perfectly with the rest of the outfit. She had been a little disappointed that they did not ask her for it when she bought her ticket. She had had an idea that they did on steamers. Her name was Miss Vanilla Jerome.

I fancy I hear you protest at that—exclaim that I have crowded credulity too hard; that nobody, not even a chorus girl, ever had such a name.

Well, you are right about it—right, that is, about everything except the fact. There actually was a Miss Vanilla Jerome once, and there was a story about her too; but I am not going to tell it here. It was not the real name of the young lady who sat conscientiously chewing her gum by the rail of the excursion steamer. That young lady, having heard of her incredible original, had appropriated it; it was, in fact, a part of her make-up. And, like all the other items I have listed between her two crimson extremities, it was phony.

The hat was not her real hat or the pompadour her real way of doing her hair; and the rouge, the blazer and the red shoes and stockings were hers only in the fortuitous sense that she had bought them and put them on. They did not belong to her by habit any more than the chewing gum did. As for her real name, it was Eunice Leaventritt, and she was — But I find it embarrassing to tell you what she was, because if I say it right out you will be as badly misled about her as the ticket seller was. Words are treacherous, refractory things to deal with. Sometimes they convey more than you mean them to and sometimes less, and there is seldom a better way to deceive than to state plain facts baldly.

For instance, if you are told that a certain person is a professor's daughter, what do you see?—especially if one adds that she herself is a Master of Arts. Why, you see some one with a bulgy forehead and wispy hair; a thin, forward-thrusting neck, and spectacles—somebody who was born thirty years old.

And yet, even without her make-up and her phony name, and her chewing gum, even in her proper person and her proper sphere of life, Eunice Leaventritt did not look like that at all.

There! I have managed to break it to you gently. She was Eunice Leaventritt, M.A., and she was the daughter of Karl Leaventritt, the great empirical psychologist. Also she was a day less than twenty-one years old, she was quite extravagantly pretty,

and, though it might be hard to believe that she was a Master of some Arts, no one after talking to her ten minutes could doubt that she was the mistress of many.

Still, I am afraid you have gone off on the wrong tack.

"Oh," you say, "we see it all now. She is the one ray of artless sunshine that penetrates into the musty library where her father lives his musty life. We have read stories about girls like that, whose only associations were with old, old men and older knowledge. She prattled childishly in Greek and did not know there was anything queer about it; and the roar of the great world never penetrated at all into the cloistral silences where she helped her old father with his magnum opus. And then one day a stranger—
Oh, yes; we know how that sort of story comes out."

But I protest it is not like that at all. To begin with, her father was not hoary and musty and pathetic—not so you would notice it. He was forty-five years old and did not look it. He was witty, he was gregarious, he had been a widower for twenty years, and he was uncannily wary. When you landed him for a dinner party you patted yourself on the back, and you gave him to the most attractive woman in the company, unless you were stingy and kept him for yourself. And they told of him that, when the president of the university jocularly threatened him once with an eight-o'clock-in-the-morning lecture, he had exclaimed in horror:

"Good gracious! I don't stay up so late as that!"

His daughter was rather more serious in her amusements, to be sure, as befitted her greater immaturity. There was a Tuesday Club, which she went to on first and third Tuesdays, and there was a Thursday Club up on the North Side, which she went to on second and fourth Thursdays. And, of course, there were the concerts every Friday afternoon. Then there were multitudes of dinners, luncheons and teas, and a pretty fair sprinkling of dances, at which latter form of entertainment Eunice Leaventritt, M. A., was distinctly adept. She not only knew all the regular steps but dozens of those queer, fancy, complicated ones you have to get off into a corner to do.

She ought, of course, to have considered herself a very lucky girl, with such an interesting life to lead, such lots of interesting people to know. She had hardly known anybody in her whole life who was not interesting or might not be supposed to be. Her father had brought her up by hand, with the result that at fourteen she regarded the average university undergraduate as somebody too callow and immature for her to feel at home with.

By the time she was twenty the people she played about with were, the youngest of them, half again as old. They knew how to play fast enough—ever so much better really than the kids who were her actual coevals. They could talk and dance and flirt; they could play tennis; they could be properly amusing at dinner and properly appreciative at the opera; and when they wanted to marry her, as two or three times a season some one of them did, she was always, in her own mind, a little at a loss to account for her refusal.

She got a clew one night, pretty late, as she was coming home on the elevated from a party. It had been a very gay little party, at which everybody had set out to be as foolish and irresponsible as possible; and the result had been very pleasant, indeed, because there was no denying they had done it well. And they had enjoyed doing it so much that they had stayed until nearly one o'clock.

Now, as I say, she was going home on the elevated, and the man who was taking her home was going to be, she suspected, the next person to ask her to marry him.

He was an accomplished Doctor of Philosophy—young, from an academic point of view—five whole years younger than her own father, who was regarded as the enfant terrible of the faculty; one of the strong men, too, in the department of biology—which was saying something when you considered who the others were. And in the larking and clowning at the party he had perfectly well held his own.

Now that the party was over, however, and they were safely seated on the elevated, his mind relaxed into its more natural attitude, and he began telling her of a new system of blood diagnosis that had just been discovered in Germany. Rather complicated for an ordinary young lady of twenty-one—all about enzymes and albuminous colloids; but perfectly intelligible—oh, yes, and interesting, too, to Eunice.

However, they could not talk very well, because the car was invaded right in the midst of things by a group of young rowdies—male and female—going home from one of the big public dance-halls. There were half a dozen couples of them, and as they could not all sit together they shouted their heavy pleasantries back and forth at each other up and down the car. Those that felt spoony spooned despite the fact that this inclination made them the target for those who felt merely mischievous or jocular. One of the favorite jokes was to knock somebody's hat down over his eyes, or to let something cold, like a keyring at the end of a chain, down a girl's back.

Eunice let her interest in blood diagnosis wander as she watched them, and her Doctor of Philosophy soon became aware of the fact.

"Art has it all over Nature when you come right down to cases, hasn't it?" he observed. "That's the sort of thing essentially that we've been doing all the evening, and see how much better we did it! It's Nature with them. We've made an art of it."

The girl looked round at him with a little frown of surprise.

"It's odd you should have said just that just then," she told him; but she refused to explain—wanted to think something out, she said.

As a matter of fact that remark of his had given her the clew. She had been watching the antics of the invaders and wondering why she liked it. Preposterously, she did. Telling herself it was cheap and vulgar and primitive did not do any good. It was that, of course; but there was something

about it she had consciously missed in the well-bred fooling at their own party.

Now, thanks to her Doctor of Philosophy, she knew whatit was. All the evening they had played being young; but here were some people who were young and never bothered their heads about it.

Well, and she was young too! That was her discovery. She had forgotten that. She would not be twenty-one until the nineteenth of next June. And why, for once, couldn't she

That is where it began.

Some day—some one day—she did not think she should care about it for longer than that she was going to cut loose; was going to run out and play with people who could not have told why they liked it and did not care to try—people who did not greet a juvenile impulse with the joy of discoverers and slice it up thin, and mount it on a slide for microscopic examination. Back to Nature! That was the idea. Just for once!

The spring was just flushing up through the trees and the thickets in the park. Perhaps that had something to do with it.

The project unfortunately needed some thinking over. It could not be put into execution all in a minute, as such projects should be. To go out and play involved finding somebody to play with.

There were plenty of light-hearted young animals, of course, among the undergraduates in the university, but they would not play with her. They knew who she was and they would fight shy. No, she would have to get clean outside her own world—and that was not so easy to do, especially for

a girl. And it must be done circumspectly too, because her father must never, never know about it. One more condition—it must be done before the nineteenth of June, because on that day she would be twenty-one years old and the law would no longer back her up in the assertion that she was still a child.

And then, one day, as she was crossing the Rush Street Bridge in a friend's automobile, on her way to a meeting of the Thursday Club, where a particularly dull young woman was going to read a frantically stupid paper on Pre-Raphaelite Principles of Art—as she was crossing the Rush Street Bridge, I say—she heard the wild screams of a steam calliope and saw a big white excursion steamer getting ready to start on one of the earliest of the summer's voyages.

The fires of spring went racing through her veins. If she had been alone in the car she would have stopped it then and there, and bought her ticket and gone to St. Joe just as she was.

The girl who owned the car, however, was busily telling her all about the paper she was going to read next time. The Inner Sense of Nonsense was the title of it and it was going to be full of quotations from Alice in Wonderland, and to show what profound criticisms of life they really were. And, though Eunice might turn and twist her neck to see the last there was to be seen of the excursion steamer, she had to stay and listen.

She was in a state of active rebellion by the time that day's paper began. The young lady in the taupe-colored frock, with black satin roses on it, was perfectly accurate about the Pre-Raphaelites—as accurate as an encyclopedia; and for a while Eunice could think of nothing better than to mutter Mr. Gilbert to herself:

I am not fond of dirty greens by any means.

I am not fond of utlering platitudes in stained-glass attitudes.

When this amusement palled she took to dressing up the young lady in the taupe-colored frock. A red hat, an orange-and-white blazer — The costume swam up complete before her mind's eye. And then, with a rapturous

little wriggle, she realized

that it was hers. Now on the morning of the eighteenth of June, as she sat out in the bright sunshine and looked about the deck, she realized that under the influence of Mr. D. G. Rossetti she had gone rather too far. She was dressed the way St. Joe excursionists ought to dress, to be sure, if they were going to express in their clothes the feelings they ought to have on such an occasion, but either it seemed their feelings were wrong or else they had never cultivated outward expression.

Surely there must be somebody-one would do perfectly well if it came to that—somebody who was out for a day's play and had nobody to play with, who had adventured forth that morning with a roving eye and an ear alert for the rustle of the wings of Chance-somebody who did not carry the impedimenta of a loaded lunch basket and five or six female relatives with him on his holiday. But the minutes were getting few, and she leaned over the rail and watched the gangplank.

The Total Effect of Her Was Simply Blinding

Well, the captain went up on the bridge and out to the end of it, where he looked down over the side; and then be pulled a bell handle that looked like a bicycle pump and made a remark that caused a couple of roustabouts on the wharf to grab hold of the gangplank railing.

At that extreme instant they hesitated, however, and Vanilla Jerome, hanging breathless over the rail, looked up and saw why. Some one was coming—not at all in a hurry, though the seconds were getting few—his hands in his trousers pockets; his shaggy green hat pulled forward over his eyes so that all she could see from up on deck was the round, good-natured lower end of his face. His suit of clothes was of a sort of pastel blue—dark enough, but curiously bright. She could not be sure there was not in invisible stripe of green in it.

His tie, anyway, was green enough for St. Patrick's Day, and she thought—though she could not be sure—she caught a glimpse of a green sock. Of course it was his lemon-colored shoes that really made you jump, but the effect of the rest was bright and—well—vernal enough to satisfy even Vanilla.

Oh, if he would only hurry! They were tugging at the plank already! What if he missed it after all? But he did not. She saw him safely aboard, then settled back contentedly to await his appearance on deck.

He did not appear, however; and after making a false start or two she got up and went to look for him. It was a little disconcerting; the thing would have worked out so nicely—if he had only come up! He would certainly have seen her sitting there—and certainly she looked more inviting than any one else on the deck; and probably he would have come across and begged her pardon for something, and she would have asked him what time the boat got to St. Joe, and things would have started on a proper basis at once. Now that she had to hunt him out it was harder to tell what would happen.

She made a tour of the saloon. There seemed to be nobody there but infants being fed out of bottles or otherwise, and fat men in their shirtsleeves, asleep; but when she had completed the circuit and paused at the head of the main companionway the sounds coming up from below gave promise that something was happening at last.

Two separate and distinct raffles had been started simultaneously by two vociferous young men—one of whom was selling tickets that gave you a practical certainty of getting a sixty-cent box of candy for ten cents, while the other urged you to invest a quarter with the bright hope of getting a two-dollar teddy bear—scrawny, malformed beasts made up in colors appropriate to the way one should feel if the voyage happened to be rough.

A third young man, equally energetic, was playing—let us hope, at least, that it was play, not malice—the piano. The odor that came up the companionway was not quite so inviting as the sounds—a mixture of coffee, scent and bananas, on a foundation of plain crowd.

Still, you could not afford to be squeamish about a little point like that. Eunice Leaventritt might, but Miss Vanilla Jerome could not. And it was the latter young lady who started down the stairs, with a dauntless tread, to meet her adventure, and with a bright eye for the young man in the green hat.

However, it was her ear rather than her eye that led her to him. Halfway down the stairs she heard a woman's voice say in a high-pitched drawl: "O-o-oh, gir-ruls!"

"Excuse Me, But Isn't This Yours?"

It was an affected drawl, and venom simply dripped from every one of the extra vowels that went into it.

Vanilla turned round to see where it came from. Over there, by the teddy-bear wheel, stood her young manglorious, infinitely desirable in his green hat, his blue suit and his yellow shoes. And beside him stood a young woman-not really young, of course-a faded, retouched, false-demure Vampire, one of those who provoke other women to wonder-I do not know how sincerely-whatever in the world it is that men see in such creatures and who will make almost any pair of men exchange glances.

There she stood beside the desirable young man in the green hat, watching Vanilla come down the stairs; and the look in her face exactly matched the hardened derision of the voice that had said "O-o-oh, gir-ruls!" There were no girls about for the remark to be addressed to; it was simply a bucket to hold about two gallons of cold contempt that were poured over Miss Vanilla Jerome.

Her own dress affected the warmer end of the spectrumwhat Vanilla could see of it being a cerise satin blouse, with a lot of machine lace on it and a number of gilt buttons not

quite so large as doorknobs.

Vanilla's soul-and you will do well to think of it as Vanilla's rather than as Eunice's-glowed incandescent with the fires of a very primitive emotion indeed. If she had done exactly what the impulse of that moment prompted she would have marched straight over to that

case-hardened Vampire and slapped her-pulled out some of her hairbeaten her up with one of her own brass doorknobs; but this sudden fiame of wrath contracted and hardened into an adamantine resolution. That nice, verdant young man should be snatched from the gorgon's brazen dutches and the gorgon might tear ber own hair in humiliation.

She met the gorgon's gaze full. It was enough to stop a clock, but it had no effect on Vanilla. She knew the nice boy was looking at her, but she did not look back at him.

She would wait a little. There was lots of time.

The man at the piano had begun playing Too Much Mustard and expectantly the crowd cleared a space in the middle of the floor. Then, for a while, everybody waited for somebody else to begin to dance. By and by two young girls in white blouses and black skirts ventured out—blushing but resolute—and began dancing a demure little twostep to the tune.

Presently out of the corner of her eye Vanilla saw that the nice young man was asking the Vampire to dance with him.

Vanilla watched the preliminaries eagerly; when they were over she gave a little sigh of satisfaction.

The Vampire had no more sense of rhythm than a sheep. Evidently she had put in more or less time in learning to dance, but all dancing meant to her was going woodenly through a prearranged repertory of steps. Vanilla observed with delight that that was not the nice young man's notion of dancing at all. The Vampire bumped and stumbled as he lugged her about.

And Vanilla, fascinated, edged nearer and nearer, never missing a detail and yet never taking a direct look-at least, not at the boy. She knew he looked at her once or twice as he went dancing by, but her gaze was always fixed somewhere else.

Is it, after all, the feathers that make the bird? Eunice Leaventritt had never looked sidelong at any one in her life. The stolen glance and the false preoccupation with something entirely different from what she interested in were part of a technic

about which she knew nothing. And yet here was Vanilla,

one day old, doing the whole thing as a matter of instinct! Pretty soon the Vampire wanted to stop dancing. Probably she realized that it was not her best method of capti-

vating her prospective prey.

As it happened-perhaps there was a little management in it—the place where the couple stopped was just next to where Vanilla was standing, and this did not seem to please the Vampire. She looked Vanilla up and down as though following out the instructions of a moving-picture director to register contempt; then, with a magnificent sweep of her cerise shoulder, turned her back and began an unnaturally vivacious conversation with her partner. It was not the best of tactics, because it brought the boy round where he could quite plainly see Vanilla over the Vampire's shoulder.

As for Vanilla, she concentrated the gaze of a very demure face on one of the decorative doorknobs on the cerise blouse, and when she was sure she felt his eyes on her she raised her own and met them-for only about a quarter of a second; but in that brief period of time she allowed just a flicker of a smile to show at one corner of her mouth, and equally slightly she moved her very expressive eyebrows, indicating by these simple means a good-humored derision of the Vampire and a sympathetic commiseration for her partner.
"Isn't she funny?" the look seemed to say, and "Isn't

it a pity she's got hold of you?"

Rather a large order for one brief glance, are you thinking? I assure you it was nothing for Vanilla. Then she bit down her smile, flattened her eyebrows, and walked straight across the clear space toward the water cooler.

"Excuse me," she heard him say as he came up behind her, "but isn't this yours?"

She turned round. He was holding out a handkerchief. "Gee! I guess it is," she said, searching herself to make "Has it got a wad of gum in it? I'd chewed all the taste out of it and I didn't have any place to put it."

"Feels like gum, all right," he said experimentally.
"Say, do you want a drink?"

Vanilla allowed herself a glance in the direction of the

"I'm kind of scared," she said.

"Aw, quit yer kiddin'!" said the young man. "Come on and dance.

"Of course," said Vanilla, "we ain't been introduced."
"My name," he said, "is Mike McKeough."

"And mine," she said, trying not to do it proudly, "mine is Miss Vanilla Jerome."

He did gasp at that—she saw him—but he managed to recover his self-possession almost instantly.

"P-pleased to mee'cha," he stammered; then he held out his arms to her and they began to dance.

In a minute everybody on that deck knew that something worth seeing was going on. The two little girls abandoned their twostep and withdrew in awe to the sidelines; the two young men who were running the raffles forgot to sell their tickets. The crowd pressed closer in a tight ring, while Mike and Vanilla danced-just the regular old stuff at first-the lame-duck turn, the lost-a-quarter, the spin, the rocking-horse, the double twinkle, and a nifty little dip on the reverse as he straightened her out after a

"Gee, but you're some dancer, kiddo!" he observed.
"Same to you, and then some!" she replied graciously.

And, to prove that they were right about each other, they went on and pulled some stuff that was really fancy.

When they brought up breathless there was a burst of applause.

"Gee, kid," said Mike McKeough, "you certainly are the class-reg'lar little old cabaret canary!"

Secure now in her triumph, Vanilla led her captive straight past the Vampire on her way to the water cooler.

"Did you know," she said to her partner, with a fleeting glance at the big buttons on the cerise blouse, "did you know they was wearin' brass doorknobs now? Sure! Sewed on in rows. What are you laughin' at?"

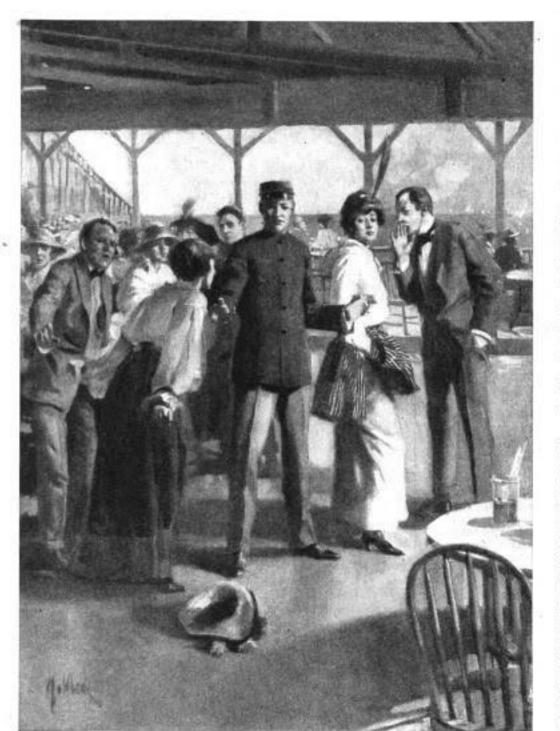

Well, it was a wonderful day! Up to a quarter past five in the afternoon so exactly the sort of day Eunice Leaventritt had dreamed about and planned for the last one of her childhood that, if her speculative faculties had not been partially anesthetized, the very completeness and perfectness of it-up, as I say, to a quarter past five in the afternoon-would have awakened misgivings. She would have caught a glimpse of the pursuing Nemesis, intent on compensating the balance of things again, at least as early as five-ten. As it was, the fatal moment I refer to took little Vanilla Jerome completely and disastrously by surprise.

She had found Mike McKeough satisfactory beyond any of Eunice's dreams; and he, it seemed, had reciprocated this feeling utterly. It was pleasant to Eunice, in the background, that he discovered nothing phony about her-took her confidently and entirely for granted. Evidently an extensive course of stories about chorus girls in the current magazines made a better preparation for this sort of masquerade than she had feared it would.

They danced themselves breathless, consumed soft drinks at the luncheon bar-Eunice herself would have preferred beer, but was afraid of its seeming a little out of character for Vanilla; they wandered about the decks, found a couple of chairs quite up in the bow, and watched the sanddunes and cliffs of Michigan come up over the horizon. It was at that time that Vanilla told him the story of her life—a story to which he listened with absorbed attention.

If Mike McKeough had been a practiced sociologist this story would have given him grounds for suspicion. Just as a skillful diagnostician lifts his eyebrows a little over a tale of symptoms too perfectly normal and characteristic of a given disease and whispers "Hysteria" under his breath, so Mike would have discerned in Vanilla's story something so typical, so redolent of the reports of Commissions of Inquiry into the Status of the Working Girl, as to waken doubts; but Mike was not a calloused sociologist, and he swallowed all she told him and sympathetically enticed her to tell him more.

(Continued on Page 77)

"Help yourself," said Vanilla. "I should think you'd need it. I'm not thirsty. I ain't been dancing!'

Their eyes met again over that-his, questioning; hers, at first quite innocently demure. Pretty soon a smile began coming up through it and kept on coming until it had expanded into a grin. Apparently he was trying to avoid understanding the commentary the grin carried on his former partner—he was a nice boy, sure enough—but this was beyond his powers and rather guiltily he grinned back.

"You do dance, don't you?" he asked.

"Sure!" said Vanilla.

"Come on, then!" said the young man.

# STAGING THE STYLES

Presentation of Greek Fashions. Spring of 1914

Presentation of Directoire Fashions. Spring of 1914

BUT the pantalets don't show!" grieved the buyer of gowns and wraps to the store decorator, as together they inspected a short girl trying out an 1830 model of blue taffeta, the flaring bell skirt of which disclosed a glimpse of clapperlike white ankles. "Let's get a taller model; we can't miss the loud pedal on those pantalets!"

model; we can't miss the loud pedal on those pantalets!"

"All right," replied the store decorator. "How about Benita? Nobody but an aviator ever saw the top of her head." Beckoning then to a beautiful Olympian in the row of waiting mannequins who sat just beyond the open door he cried jocosely: "Hey, there, Benita! We want you to see what you can do at showing off the great-great-aunty stuff. To your dressing room and into it!"

It was three days before the great spring fashion play of a certain New York department store; and here in a room on the eighth floor, to which a very definite professional thrill was communicated by twenty-five thousand dollars' worth of imported models hanging there in a row, by a Directoire bonnet perched on a peg, by a tableful of nosegays, walking sticks and other properties, the store decorator, the woman advertisement writer and the buyer of women's wear were engaged in the difficult task of casting the parts. Beyond this area, seated before a row of improvised dressing rooms, were about sixty mannequins, who had been selected from two hundred original applicants for the job of showing off the new spring gowns just brought from Paris.

They were mostly pretty, these models, each with a coaxing little curl appliquéd to her rosy cheek, and a further challenge of eyes or lips or figure. Prettiness is not, however, the final test of the actresses in the department-store fashion play, and you might borrow in vain all the graces of the Cyprian goddess. In order to be an accepted candidate for the fashion opening your style must be adapted to some certain gowns. Above all, however, you must know how to show off a model; how to walk, and—when all is said and done—how to act.

#### Trying Out the Mannequins

PRICKLY, indeed, was the path of the sixty would-be mannequins who presented themselves behind the scenes that day; and before the final thirty had been selected the feelings of the other thirty had been lacerated and then treated with vinegar and a Turkish towel.

"Figure like a birdcage!" whispered loudly the store

"Figure like a birdcage!" whispered loudly the store decorator as, immediately after the tall girl had gone to try her fortune with the 1830 pantalets, there emerged from one of the dressing rooms a many-faceted mannequin in a Poiret evening gown. "Face's pretty enough, but for pity's sake warm her up in a basque and a high collar. Why not have her try out that Premet coat model?"

Not a whit discomfited, the girl with the bony neck disappeared for a more discreet revelation and was immediately succeeded by an even less prosperous applicant.

"Well, this is amateur night for certain!" cried the harried buyer of women's wear as he glanced at this new candidate in her Callot gown of ruffled taffeta. "Looks like something the cat brought in. I just wish you had seen the girl who wore that in Paris—a perfect peacherino! She could walk. This girl slumps along like a country doctor's buggy. Won't do! Can her, I say!"

# By Corinne Lowe

This painstaking selection of models is only one of the many details that go to make the success of the semi-annual fashion opening of the great department store. These details are carried out in the establishment where this scene was laid at an expense quoted by the advertising department as not less than twenty-five thousand dollars. They resulted in a spectacle that during its two weeks' run was witnessed by eighty thousand people, and which has set a hot pace for future pageantry of merchandise.

Of all the spectacular features of the modern department store, which have made us liken it to crafty old Lorenzo de' Medici handing out festas and pageants to please his fickle Florentines, the semi-annual fashion show is certainly the most assertive. In the last ten years we have seen these

In Order to be an Accepted Candidate Your Style
Must be Adapted to Jome Certain Gowns

events emerge from a purely local interest into the position of a drama. As against our former content with the exhibition of Paris styles on living models, we now spice up the occasion with music, appropriate settings and incidental features. Above all, we string the beads of fashion on the period or country from which we conceive them to be derived, and virtually dramatize Athenian, Directors, Louis-Quinze and Oriental influence.

In such romantic merchandising America has no per. That, indeed, there is no such elaborate christening of style in the land from which one might justly expect it is brought out by conversations with all those who have attended the formal openings of the great Parisian dressmakers.

"Such a disappointment as they were!" said one buyer of women's clothes back from his first visit to the Parisian ateliers. "No palms; no twittering dickey birds; no bands; no stage setting! Everything as quiet as a Sunday in Eduburgh. Actually the only decorations I saw were some old faded artificial flowers, which M. W —— had stuck up on his mantel. Take it from me, the French may understand how to make a style, but we Americans are hep to the gentle art of breaking it."

#### A Persian Garden in a Shop

THE passion for a feature, for some sensational per or which to hang the fabric of news so closely identified with our national life, is doubtless responsible for much of the dramatic flavor of the department-store openings. In order to have a fine, bouncing fashion show we must first locate our style in classic Athens or in Directoire Paris or in Persian Bagdad. Almost as soon, therefore, as the American buyer gets his first peep at the latest modes he is on the wire with some such message home as: "Grecian influence felt!" or: "The play So-and-So dominates spring styles." And immediately thereupon the management decides on the character of its show.

Last autumn things were very simple for the buyer. All styles sat meekly under the shadow of M. Poiret's minare tunic, and the American fashion seeker had no more chare for speculation than the man who takes in tickets at a Subway station.

Logically enough, therefore, the producers of the department-store plays were responsible for as many Oriental plays as have recently appeared on Broadway.

In spite, however, of the fact that all the style drams of last fall were devoted to this theme, we shall probably never again see anything more effective than the American staring of M. Poiret's Oriental fashions. One great New York store in particular gave a presentation that may well be considered a supreme example in merchandise dynamics. The stage of its big auditorium was set as a Persian garden: and against the darkness of the mosque's key-like door there glided, one after another, figures wakened from the Arabian Nights. Headdresses fit for Shahs, trembling with brilliants; wide tunics flaring gorgeously above sinusus silken skirts; the play of Eastern light and color against the background of Eastern gloom. Here was a speciacle that took away all the belittling aspects of dress and swell you with the sense that costuming is one of the world's great arts.

Contrary to the usual habit of regarding music as a mere garnish, this part of the program entered very intimately into the interpretation of the mode. Instead of the casual one-step and the sentimental waltz, the music here was Lehmann's In a Persian Garden, sung by four voices and accompanied by the gigantic organ of the auditorium.

Ah, that Love should perish with the rose— That Youth's sweet-scented manuscript should close!

As these words rang out above the deep thrilling chords of the organ, the dark-eyed Eastern girl threw out her arms and stood there like some beautiful butterfly halted for a moment by a strange sense of its ephemeral life. It was all so poignant that the beholder got a little trembly feeling down in her knees.

She forgot, indeed, that this was a presentation of that frivolous thing, the mode; and for a little while, with the key of mere modern fashion, she unlocked the door of great human truths.

Remember, if you please, that M. Poiret himself gave no such presentation of his Persian styles. On the contrary these garments were displayed in his own Persian atelier in a comparatively haphazard way. For this inartistic land it remained to give these Eastern gowns a setting worthy of their conception, to kindle style into romance, and to invest clothes with a real human interest.

Far different from the clearly defined modes of last fall is the distributed interest of this present spring's creations. To the Roland of 1830 hoops and flaring skirts, we have the Oliver of Directoire lines; and against the panniers and hats of Louis Quinze are played the classical draperies of Pericles' Athens. Which one of these modes formed the deep underlying influence? Which period should we stage? It was in an attempt to answer these questions that gloom touched the brow of the buyer with as many wrinkles as are found in an up-to-date evening skirt. And it was due to his individual solution of the problem that in one week during this spring the women of New York witnessed at three different department stores a Greek and a Directoire and an 1830 fashion play.

#### Getting Up a Directoire Show

THE buyer of the department store, behind whose scenes we have already peeped, decided that the prevailing influence of this spring was Directoire. As soon as he had finished his round of the Parisian openings he cabled back to his organization: "Operetta Les Merveilleuses influenced the modes. Sound Directoire note."

Ten days after this the advertising department was in receipt of a lengthy description of the Directoire gowns and suits the buyer had bought, together with various French magazines showing scenes from the stage success, Les Merveilleuses.

There is Some Trick of Manner, Gesture, Even Facial Expression, Necessary to "Putting Over" a Gown

"Fine!" cried the advertising manager as he looked over one of these imported magazines. "We'll give a Directoire shew. And, say, why not just take for our setting the third act of this Mervie House show?"

The person of whom he asked this was the decorator, in these days a very important member of the departmentstore organization.

"H'm!" murmured this gentleman, scanning the photograph with a practical eye. "Garden of the Palais Royal! Sure! We can put that up, all right."

But what if some other store should decide on a Directoire setting?

Apprehensive of any diminished novelty of their particular show, the manager and his assistant prepared an advance notice of their play; and on March second, just two weeks before the date assigned for the opening, there appeared a big newspaper announcement of the coming Directoire play.

The publicity campaign of the fashion show costs the department store, according to one advertising manager, at least five thousand dollars. This expense, including extra newspaper space, drawings, programs and photographs, commences very properly at the big colored poster which announces the opening. Like his rival, the professional producer, the advertising manager lays great stress on this

The Fashion-Play Actress Who Showed Off

item and allows that a lady with three lisping fingers and a drench of mauve-colored draperies will get the attention of the most detached patron of subway and elevator.

At present it is the custom of several of the big stores to have these posters done in Paris. Immediately, therefore, on the decision to give a Directoire fashion show, the head of the Paris office of the organization ordered from a wellknown artist the figure of a girl of this period. This pokebonneted and dashing young lady was drawn at a cost of one hundred and fifty dollars and appeared in America on the next six-day steamer. Here the charming immigrant was at once placed in the hands of the lithographer, who made several hundred copies of her at a charge of over two hundred dollars. This sum, expanded by the necessity for renting space, brought the cost of the poster alone to five hundred dollars.

In the production of the fashion show the Paris office works hand in hand with the home organization, and on it devolves the arrangement of many of the spectacular details. Just as soon, for instance, as the department store decided on giving a setting from the operetta Les Merveilleuses, the foreign office ordered from one of the most famous milliners in Paris six Directoire bonnets that were exact duplicates of the high-feathered pokes worn in the operetta. These accessories alone cost the store two hundred and fifty dollars.

The main object of every American fashion show is to give the original source of a mode side by side with the

The Buyer of the Department Store Decided That the Prevailing Influence Was Directoire

modern adaptation; to correlate modern with ancient by means of costumes absolutely authentic in detail. In order to do this for the Directoire play the Paris office ordered from a famous French artist and designer six costumes of the period of 1789. These historic garments were equally divided between the slashed, narrow skirts and lace headdresses of les merveilleuses and the striped coats and high-rolling collars of their masculine complements.

#### The Palais Royal Reproduced

MEANTIME the home organization was engaged on as stiff a course of research work as is generally undertaken by a professional producer. In order to write its advertisements, instruct its artists, and produce a truly atmospheric clothes play, the advertising department had to be familiar with the fact that les merveilleuses were the women of the Directoire period whose scanty attire shocked all Europe, and that les incroyables were the men of the same age whose dandified coats and lisping speech, with its inevitable ma pa'ole d'honneur, c'est inc'oyable, have given them a very definite niche in history. On the trail of these butterflies of a former age the woman advertisement writer burrowed deep into books on historical costumes, into old prints, and even into volumes on Directoire furniture.

As a result of the reflection of this knowledge in advertisements, programs, and the play itself, the American fashion opening has an undoubted educational value. By the end of the two weeks' fashion play this spring, for instance, men and women who had never heard of les incroyables and les merveilleuses were organizing in groups for the successful pronunciation of these names.

About four or five days before the date of the opening the store decorator began work on the setting. Guided by the photograph of the third act of Les Merveilleuses, he took his carpenters in hand, and in a few days there sprang from the vast spaces of the eighth floor a platform nearly a city block in length. Arched with green and pressed on each side by real boxwood hedges, carpeted with a design that imitated a pavement, interpolated by several fountains bidden there by electricity, and showing at its far end a scenic painting of the grim old French palace, this setting was surrounded by two thousand chairs and roped off from the rest of the floor.

Nor did the carpenters' work rest at this juncture. In order to put on a fashion play there must, of course, be dressing rooms; and thirty of these temporary retreats, each curtained off with white muslin and fitted up with cosmetics and mirrors, were set up immediately in the rear of the garden of the Palais Royal. When, indeed, one considers this item, together with the additional expense incurred by decorating the whole floor with potted plants, it is easy to believe the management's assertion that its scenic display costs close in the neighborhood of one thousand dollars.

(Continued on Page 69)

# A STUDY IN CREDITORS

## Strange Contradictions Shown by Bankruptcy Courts

SEEN through the trained eyes of the professional receiver in bankruptcy, the typical creditor is as perverse, whimsical and coy a creature as the most capricious and inconstant village belle who ever played

the game of hearts. As an exponent of reliable inconsistency the average creditor is ranked as a jewel by those officers of the court who are charged with the responsibility of standing between the creditors and the bankrupt for protection of the interests of both.

This opinion may appear a bit pessimistic to the uninitiated layman who has never made a first-hand study of the curiosities of bankruptcy proceedings; but the men who are making a lifework of handling the grist that is ground in the bankruptcy mill stoutly insist that the ways of creditors are more unstable than Illinois weather, and that the mind of womankind is a fixed and unalterable thing by comparison.

These specialists, however, freely admit that there is often a large element of method in the seeming madness of the average commercial creditor. Frequently the creditor who appears as coy and self-depreciating as the accomplished flirt is the one who will bear the most watching.

To the inexperienced outsider it would seem inevitable that, when once a debtor has

been thrown into the bankruptcy mill, the desire of all creditors would be to get as much out of the assets of the scrapped enterprise as possible.

There are two devices in bankruptcy practice, however, that often provoke strange contradictions to this apparently plain and simple principle. The composition and the waiver are elements in bankruptcy that cover a multitude of subtleties. The very atmosphere of the bankruptcy composition seems to be prolific of contradictions. It often appears to turn creditors who would naturally be contending for their full share of the assets into benign philanthropists bent on leaving as much of the wreckage as possible in the hands of the unfortunate bankrupt. And the way of the waiver is even more mysterious to the uninitiated.

First, the composition. In bankruptcy a composition is an agreement on the part of creditors to accept a certain percentage of their claims as a full settlement. When a composition is effected and ratified by the court, and the bankrupt makes a settlement in accordance with its terms, he is discharged and is free to begin business life again with a clean slate.

#### An Unusual Case

WHERE the terms of the composition represent all that could be reasonably expected as a net return for the aggregate assets, or even approximately this, the composition serves its legitimate purpose; but when creditors are eager to settle for a fraction of what a responsible bidder, backed by an adequate bond, binds himself to realize from the assets, one of the curious contradictions of common bankruptcy experience is ushered into court.

Some two years ago a retail merchandizing concern in Chicago was thrown into involuntary bankruptcy through a petition. The young men behind this enterprise were hustlers; but they had more push than capital and they were abler salesmen than financiers. As a consequence their trade expanded far faster than their resources. They were believers in big volume and small profit.

In their eagerness to keep the stock turning over nimbly, like a trick dog, they overlooked the most important part of the performance in providing that each turn should yield them a real net profit—no matter how small—instead of a guesswork profit that failed to take into account every element of cost.

The receiver who was appointed to take charge of their affairs was an expert in his line—ambitious, experienced

The Composition and the Waiver are Elements in Bankruptcy That Cover a Multitude of Jubileties

and jealous of his reputation for making the assets that came into his care yield to the creditors every possible dollar. He knew the tricks of the trade, and was alert and watchful to see that neither creditors nor bankrupt secured

The list of liabilities showed that the burden of indebtedness was centered in a few large manufacturing and jobbing concerns, and the remainder rather widely scattered among comparatively small claimants. It was also apparent to this keen-eyed receiver that the business was in far better shape—as to convertible assets—than most of the business wrecks that were thrown into his hands.

Here was a chance to make a record that would, he thought, come so near to one hundred per cent that he was inspired to give it unstinted energy and attention. If he could make the wrecked business pay out dollar for dollar that would certainly make a hit with the court which had

In one of the early hearings, however, this ambition was given a decided setback in the shape of a petition for a composition, the acceptance of which was practically unanimous on the part of the creditors. And the figure at which the creditors were willing to settle made the receiver gasp—twenty-five per cent! The chief creditor solemnly declared that he did not believe more than this could be realized from the assets after deducting all expenses, and that he and the other creditors represented in the petition would be well satisfied to get that percentage.

Then the receiver presented to the court a terse review of the assets, and concluded with the intimation that the proceedings had very much the look of an attempt to treat the assets as a booby prize by letting them go to the lowest instead of the highest bidder.

Apparently the court took somewhat the same view of the case, for the receiver was ordered to continue the business as a going concern—at least temporarily. Some four months later the creditors again appeared in court and once more urged their assent to a composition—this time at fifty per cent.

Under pressure the spokesman for the creditors was forced to admit that the first estimate of what the assets would yield was perhaps a little too low.

At this stage of the proceedings an important figure in bankruptcy matters made his appearance. This was the bankruptcy auctioneer—in some Federal districts, but not in this, an official appointed by the court. This specialist in scrapped enterprises often makes the ordinary speculator appear like a piker. He bears the same relation to the merchant that the Wall Street plunger bears to the timid buyer of baby bonds. He bids on the entire assets of the bankrupt concern. This bid is in the form of a guaranty to realize a certain minimum amount. It is a

stiff gambling game, played under hard handicaps.

If the subsequent auction sale does not realize the amount of his guaranty he must make up the deficit; if it brings more than ten per cent above his guaranty he must forfeit the surplus margin. In other words he is permitted to lose without limit, but his profits are not allowed to exceed ten per cent of his sales. And his guaranty must be covered by a bond as good as gold. The big bankruptcy auctioneer is looked on by the conscientious receiver as his one best bet and as the reliable specific for the bankruptcy disease known as the soft composition.

When the auctioneer entered the courtroom where the spokesman for the creditors' committee was making a second attempt to secure the acceptance of a soft composition, the bidding suddenly became lively. To the evident astonishment of the court the auctioneer led the way from one figure to another until the composition offer closed at eighty-five per cent and was topped by a raise that guaranteed ninety per cent. The sum

involved was close to one hundred thousand dollars. After all the assets had passed under the hammer the plucky receiver was able to disburse a dividend that paid the creditors a trifle more than ninety per cent.

#### The Motives of the Creditors

WHY had these creditors been so eager to sacrifice their proceeds from this failure? Why had they fought so hard to secure permission from the court to receive twentyfive per cent in full settlement of their claims instead of ninety per cent? Here was the situation as the receiver saw it after careful investigation:

There were three creditors whose claims were much larger than those of any other house or individual. One of these, a big manufacturing and jobbing concern, had found the bankrupt house a peculiarly desirable customer. The insolvent retail concern had happened to build up a growing trade for certain lines of goods that this manufacturing concern was in position to furnish to peculiar advantage—it might almost be said to the exclusion of competition. Not only this, but these goods were not especially easy to market in large volume. Again, these articles yielded 1 high percentage of profit to the manufacturer.

The shrewd credit man who represented this manufacturing concern in the negotiations of the bankrupt for a composition settlement saw his opportunity neatly to serve the future interests of his house by letting the bankrupt down easy. He knew that, if he played the leading rôle in securing the acceptance of a soft composition for the bankrupt, his good offices could carefully be explained later with an effective diagram, if necessary, and that this would cement the trade of the bankrupt establishment to his own house for all time to come—for it was inevitable that new life would be taken on by the insolvent retail concern as soon as it received a discharge in bankruptcy.

As the receiver put it: "For all practical purposes here is an organization of hustlers that has been working without profit on the job of selling a big volume of stuff for this

manufacturing concern at a fancy margin.

"Very likely, if the entire claim of the manufacturing house against this bankrupt estate had been charged off, it would still have had a profit on the total business already done in the course of their relationship. Anyhow the net cost to the manufacturing company of building up this big and dependable outlet for the large volume of goods on which they made a wide margin of profit was little or nothing. Probably it had paid them handsomely."

No wonder the keen credit man saw the advantage of letting that bankrupt concern down easy and getting the credit for engineering so soft a settlement. He needed that output in his business for years to come; and it would be easy for him to dominate the organization of the down-and-out concern so that an able man of his own choosing would be in charge of its finances and steer it safely. Again, no man passes through bankruptcy without learning some mighty valuable lessons that are bound to stick with him for the rest of his business life.

Of course it does not render him immune from financial disaster; but if he is thoroughly honest it is sure to make him more careful and conservative and to give him a knowledge and a wholesome dread of certain traps and pitfalls into which he is not likely again to tumble. Bankruptcy is something like mumps or measles—a light case early in life is not such a bad thing to have; there are hundreds of men in business today who would be far abler and sounder administrators of their affairs if they could have had a reasonably light touch of bankruptcy at the beginning of their careers.

The point in this experience that should not be lost sight of for a moment, however, is the fact that this particular creditor who played such a generous, not to say philanthropic, rôle was practically using the hands of the other creditors as a means of pulling his own chestnuts out of the fire. Perhaps he did not think of it in this way—give him the benefit of the doubt and say that he did not—but the receiver had to look at it in that light, for it was up to him to protect the interests of all creditors alike. That is his job—or, at least, part of it.

#### The Bellwether of the Creditor Flock

In THIS particular case it is true that two and perhaps three other large creditors were in about the same situation; the concern that went into bankruptcy was a large and profitable distributer of their goods—goods on which they made a big margin of profit. But how about the rest of the creditors—the little fellows?

The conscientious receiver must never forget that the loss of a hundred dollars on a claim means more to some men than the loss of ten thousand dollars to a big concern—especially if that concern is in position to take the amount of the loss back again, and much more with it, provided the bankrupt can be let down easy. The smaller the claim, as a rule, the less interest has its holder in the future of the bankrupt.

Of course the concerns which held the big claims in this case would naturally argue that they would sacrifice the largest amount of money if the bankrupt were let down easy. True! But that would be small consolation to the really poor man, who had a claim of a hundred dollars and had no reasonable expectation of ever getting another cent beyond what that claim netted him.

"The Guy That Showed You the Way Made a Mistake"

This experience, like thousands of others in the bankruptcy courts, teaches the lesson that creditors are very much like sheep, and that there is generally a shrewd and resourceful beliwether which leads the flock at will; the little fellows follow the big ones, and there is always a master mind among the big ones. Every experienced receiver and trustee recognizes this principle and plays his hand accordingly.

One receiver who has been long in the game declares that almost any creditor with a little initiative can prepare the way for a soft composition, so far as its preliminary stages are concerned, before the other claimants have any realization of what is being done.

Many commercial houses, according to this authority, follow the practice of refusing to waste time in filing or pressing any claims against a bankrupt estate unless they are reasonably large ones. More generally, however, this indifference to the possibilities of realizing on such claims takes the form of giving a power of attorney to the first person who happens to ask for it in signing or assenting to any petition for composition or settlement a leading creditor chances to favor.

Broadly speaking, when the private individual receives notice that a debtor has been thrown into bankruptcy he promptly despairs of realizing anything on the claim and—mentally at least—charges it off to the profit-and-loss account. Unless he happens to be a business man of experience and affairs he feels that recovery is hopeless.

If the amount involved is large enough to make its loss vital to him he becomes confused, perhaps terror stricken, and ready to grasp at the first straw that floats his way. Almost invariably this straw is an appeal, either from a creditors' committee or a lawyer representing some or all of the creditors, asking for his cooperation and power of attorney, to the end of prosecuting "the plan that has been agreed on by the leading creditors to protect their interests."

Of course it must be recognized that this sometimes, perhaps often, proves to be the wisest course the individual creditor, wholly inexperienced in bankruptcy affairs, could pursue; but, by the same token, it is invariably the principle on which the designing bellwether among the creditors plays to manipulate affairs to suit his own purposes. And it is also the means by which the professional bankruptcy attorney increases, by the easy correspondence method, his volume of business.

If the attorney to whom the credulous creditor so readily intrusts his claim happens to be able and honest, well and good—there are many attorneys of the highest standing who have a large bankruptcy practice; but the fact remains that the almost universal attitude of helplessness, hopelessness, indifference and confusion of creditors, in respect to the possibilities and methods of getting their money from a bankrupt estate, renders them an easy prey

to a certain undesirable class of attorneys in bankruptcy practice—especially in the larger cities.

In large commercial houses having a legal staff in connection with their collection department, bankruptcy claims are supposed to be as carefully and as systematically looked after as is the selling of the goods in the first place; but even here the policy of not wasting time on small bankruptcy claims prevails to an astonishing extent. Some really large houses actually follow the practice of letting bankruptcy claims slide unless they amount to several hundred dollars.

"There seems to be something," declares one receiver, "in the very word bankruptcy that sprouts the wool over the eyes of the ordinary creditor and sends his wits and common sense scattering for the time being. I can hardly account for this attitude except on the score that most men feel a sort of squeamishness in this connection—an instinctive aversion to having anything to do with a business post-mortem. Perhaps this gives them credit for too much temperament; anyhow very many creditors seem to lose their perspective and their natural self-interest when called on to deal with a bankruptcy claim."

Creditors, however, are not dependably indifferent, even in the matter of small claims. According to most receivers they are not dependable in any particular; and the man who makes up his mind that he knows just what the creditors in a certain case are going to do has a choice line of jolts in store for himself.

"Looking over a professional experience of several years," says one receiver who often acts as trustee, "I have come to feel that when I get a really good estate the creditors are more than likely to make every attempt to fritter it away. On the other

"I'll Bet He Pulls Down a Jalary Equal to That of the Third Vice-President of Our Bank"

hand experience has taught me that when I am handed an estate which from the creditors' viewpoint is little more than a dry bone the creditors are likely to take an uncommonly keen interest in it, to nag and pester the receiver at every turn, and finally to blame him and the auctioneer for not getting a good, fat series of dividends out of it.

"I am never surprised when a bunch of creditors are inclined to let a crooked bankrupt down easy or when they subject an honest bankrupt to suspicion and hardship. I know this sounds extreme and pessimistic, but you cannot find an experienced receiver who will not say Amen! to this statement. The perversity of creditors is the standing miracle of bankruptcy practice. A large proportion of them—particularly the holders of smaller claims—are mere Babes in the Wood—and I can assure you that the Bankruptcy Wood is no place for small children!

"There are lots of creditors, of course, who are by no means innocents at large, but are fully able to take care of themselves and all the strays they happen to meet. These are the experts in compositions and the wizards in waivers.

"Then there are the creditors who know their way about, have no fish to fry, no pet schemes to put over on the hankrupt or on other creditors, and who are neither confused nor unscrupulous. These creditors look after their bankruptcy claims as sanely, as systematically and as intelligently as they look after any other features of their business. They want all that the estate will pay on their claims, without any advantage over any other creditor."

#### Responsibility for Bankruptcies

"THEY are very likely to be represented by able lawyers of their own choosing; and if they enter into any composition it is because they have first been shown that it is the best thing for all creditors concerned. These creditors generally get a fairly close line on the personality of everybody involved in the case, from the lawyers up to the court itself.

"Every honest receiver or trustee wishes to see this class of creditors greatly increased; but it will only increase as the credit men of business houses generally—and particularly of the smaller houses—come to have a more familiar understanding of bankruptcy matters and practice."

A referee in bankruptcy, whose knowledge of the subject is keen and far reaching, recently expressed the rather astonishing opinion that in very many cases—perhaps in most—the responsibility for the bankruptcy of a debtor lies to a very large extent with the creditors. According to a group of professional receivers who were engaged in a discussion of this opinion, the bankruptcy courts abound in cases that clearly support this view. Here is one that is fairly typical:

A large trust company was appointed receiver for a cloak company doing business in a cheap section of Chicago; in fact the rooms occupied by the bankrupt concern were over a saloon in a street the name of which should promptly identify in the mind of any wideawake credit man the cheap character of the location.

The young man sent by the trust company to take charge of the stock was a live wire. Sitting beside a rusty stove was a man in seedy clothes. On the dilapidated desk he found four letters from Eastern manufacturers urging the bankrupts to send in their orders at once. One of the most fervent appeals for orders was from a house to which the bankrupts owed more than twelve thousand dollarsan account that had been dragging by the ears for months.

"The sales manager of that concern," commented the young man, "is a high-priced ginger artist who believes in delivering the goods-into the other fellow's hands! I'll bet he pulls down a salary equal to that of the third vicepresident of our bank; but if he and the head credit man of his establishment could just walk in this door and take a look at this rat's nest of a joint, they would begin to revise their methods of dumping goods in a hurry. Why, if I can scrape up two thousand dollars worth of junk here I'll eat it!"

He thought he was expressing his poor opinion of sales managers and credit men to the shriveled little man who was sitting by the stove when he had entered; but as he put down his letters and glanced about the room he saw that his audience had vanished. A hurried survey of the stock showed him that it would invoice not more than a few hundred dollars. And this concern had failed for about thirty-five thousand dollars-and here was a letter from each of the four principal creditors urging another order

by return mail from the advance style sheets!
"I'd like to send the head of each one of those houses a photograph of this dump, just as it looks when I am taking possession. I wonder whether they'd still keep on whooping it up for further orders after seeing a picture of this old

shell! Probably -

His grumblings were suddenly interrupted by the fact that he noticed a large quantity of heavy express paper lying on the floor. Evidently it had just been removed from a large bundle of goods. He picked it up, turned it over, and grinned as he saw that the sticker on the face of it bore the name of the New York house which the bankrupts had stuck for twelve thousand dollars, and which was still appealing for more orders.

On the floor of the next room he found quantities more of the same heavy paper, its creases showing that it had lately been removed from packages of goods. His practiced eye told him that the goods which had arrived in those wrappings were evidently not then in the place.

#### Sleuthing Down Vanished Assets

FOR a moment he sat on the corner of the desk, swung his feet, stared at the express paper and did a little lively thinking. Then his face lighted up suddenly. Hurriedly he looked at the dates penciled on the express labels. There was no doubt about it-every package which had arrived in those wrappings had been received that very day! He dashed down the stairs and then crossed the street to where three express wagons and their drivers were waiting for business.

"Which one of you boys hauled that stuff for us this morning?" he inquired. And then added: "I am with the suit company up there, you know."

"I did," promptly responded the oldest driver..

"Got another load, sir?"

"Nope," responded the young custodian; "but the guy that showed you the way made a mistake. Those goods were to go to another place, and we've got to go and get them right away."

With this he handed the driver a cigar, lighted one himself, and climbed to the seat of the wagon. The expressman asked no questions, but drove to the place where he had delivered the goods in the morning. Their trip ended at a vacant store building with whitened windows some three miles away.

During that ride the receiver's agent had been busy figuring on how he could gain an entrance to the building after they reached it. Finally he reached the shrewd conclusion that the best way was to "Let George do it"; consequently he took a chance on the remark: "You know where the key is; I'll wait here in the wagon."

'Sure!" answered the expressman as he disappeared in the corner saloon; and a few minutes later he came out with the key, remarking:

"I had some job to get that Polack bartender to give it up; but I finally got it into his head that as I had brought the key there myself this morning, and as the boss was waiting outside for it, he wasn't taking any particular chances in giving it up."

They hustled the goods into the wagon, returned the key and drove back to the headquarters of the cloak company, over the corner saloon. Then the custodian took a careful invoice of the recovered goods. His clever and prompt action netted the cred-

itors a little more than eleven hundred dollars.
"What sticks in my crop," he meditated, "is the fact that, though I'm sharp enough to turn this kind of trick, I'm probably drawing about one-fifth the salary of the sales manager and the credit man who shoved these goods on to crooked bankrupts and followed the shipment up with a pressing invitation to be allowed to hand them more.

"It's a wonder some of those jumbo general managers don't get wise to themselves and pick a couple of receiver's agents to help out a little! I'll bet that if they tried the experiment the sales department wouldn't be shoving goods on to a man already in the bankruptcy court a day or two after the credit department received notice of the appointment of a receiver."

Only a few months later this same receiver's agent found himself assigned to the handling of the affairs of four bankrupt retail drygoods stores located a little outside the central part of the city. They were separate concerns, having no connection with each other so far as their ownership was concerned; but they handled about the same class of goods. In these cases the trust company was acting as trustee instead of receiver.

One morning, as he opened the mail, he found four letters from the same wholesale house in New York—one for each of the bankrupt drygoods stores. Each letter was from the head of the sales department, pressing his valued customer to favor him with further and immediate orders. He promptly sent for the liability schedules of the four bankrupts and was not greatly surprised to find that the big wholesale house with the energetic sales manager and correspondence force was a creditor in each case, and had filed its claims in due form.

He was hot; and for once he forgot he was an employee of a conservative and dignified trust company that always conducted its correspondence according to the most formal code. Before he cooled off he wrote a letter to the president of the big wholesale house in the East; and after calling his attention to the fact that these four bankruptcy estates had already passed through the receivership stage and had become trusteeships, he called attention to the inclosed copies of claims filed and to the letters just received from the sales manager. He ended his letter with the tart remark:

"If I wanted to go into the goldbrick business I should

certainly hunt up your house."

A little later he received an answer to his letter. It was not only grateful but humble in tone. After indicating that in the future there would be a much closer coordination between the credit and the sales departments of his house, the president closed his letter with the words:

"Your cut across my face will continue to sting for a long time to come."

Start a receiver talking on the subject of compositions and he will not suffer himself to be shaken loose from it. Next to the waiver, the composition appears to be the sorest feature of bankruptcy practice so far as the feelings of the professional receiver are concerned.

If the receiver is honest and conscientious-and it can scarcely be assumed that the judge of the United States court would repeatedly place such responsibility in the

hands of a person not possessing those qualifications—he is as much interested in preventing the proceeds of the estate from being eaten up by lawyers' costs and other expenses as he is in preventing one creditor from obtaining an advantage over another. His standing with the court depends on his ability to get the most money out of the assets intrusted to his administration.

The composition in bankruptcy is not only a handy tool for the creditor who wishes to play the bankrupt as a personal favorite and let him down easy, but it is perhaps quite as frequently employed by the unscrupulous attorney as a means of obtaining delay, increasing his appearances in court and in conference, and piling up fees. The lawyer or bankrupt who wishes to delay settlement and multiply contentions finds the composition quite as convenient as

does the designing creditor.

Shrewdly handled, the negotiations for a composition may be made quite helpful and nourishing to the lawyer who is looking for an enlargement of his fees. Of course the reputable attorney who has the interests of his clients at heart scorns any subterfuge of this kind; but unfortunately bankruptcy practice appears to have an attraction for a certain contingent of lawyers of instincts, who are mainly interested in doing a neat and tidy job of bonepicking—not that this order of legal talent finds its only activity in the bankruptcy courts, or that it is not in a decided minority there; but it is undeniable that the palpable presence of a business corpse makes a most tantalizing appeal to its predatory instincts.

#### How to Avoid Soft Compositions

THE indifference and comparative helplessness of the A average creditor emphasize the appeal of bankruptcy practice to attorneys of this type. It is perhaps strange that they are not more numerous instead of fewer. Certainly their presence should not be construed as a reflection on the many reputable attorneys who make a specialty of bankruptcy practice.

The principal point of this consideration, so far as the creditor or the bankrupt is concerned, is that he should pick his lawyer with uncommon care and with particular reference to his integrity and personal character. And it is scarcely straining the courtesies to suggest that the bankruptcy lawyer who gives evidence of having acquired the composition habit will bear at least a little watching.

A passion for compositions is not generally regarded by the courts, referees or receivers as a wholesome symptom. This is not because many—perhaps most—compositions are not wholly justifiable, but because the composition lends itself too pliantly to manipulation and abuse.

A professional receiver who has a high standing with the courts has this to say on the score of the composition:

"Generally speaking I am against compositions There are many cases in which the composition is the best thing for all concerned; but it is so highly susceptible of abuse that it should be used as little as possible. There are ways, however, by which the soft composition may be discouraged. For instance:

"I follow the practice of sending to all creditorsas soon as I have thoroughly examined the assets-a statement that the estate, properly administered, should pay a certain amount or a certain percentage of the liabilities. I fully realize that in one way this is a dangerous thing for a receiver to do; but I am willing to take this responsibility on myself for the reason that it is a very effective means of forewarning the creditors against having a soft composition put over

When this is done at the start and before the creditors-particularly the smaller and individual ones-have been whipped into line by scheming lawyers or led through the gaps by some big creditor acting as a bellwether, it carries weight with the majority of creditors, who recognize that the receiver is an officer appointed by the court and responsible to the court.

"I believe that if receivers generally could see their way to follow this practice, the soft composition and the composition negotiation brought for the purpose of fattening lawyers' fees would become fewer.'

Another indictment brought against the composition by conscientious receivers, trustees and other officials connected with bankruptcy proceedings is that it has a tendency to produce repeaters in bankruptcy. Undoubtedly the majority of first bankrupts are honestly insolvent and have not caused their enterprises to be thrown on the business scrapheap for the purpose of defrauding creditors; but after once finding that their fall has been broken by the cushion of a soft composition, providentially interposed by the hands of the very men supposed to be the heaviest losers by the failure, it is impossible for them again to feel the same fear of bankruptcy that gripped them when they took the first plunge.

If the bankrupt is a man of strong moral fiber his future business course will not be changed by the mere

(Continued on Page 73)

## MY ROOMY By RING W. LARDNER

O-I AIN'T signed for next year; but there won't be no trouble about that. The dough part of it is all fixed up. John and me talked it over and I'll sign as soon as they send me a contract. All I told him was that he'd have to let me pick my own roommate after this and not sick no wild man on to me.

You know I didn't hit much the last two months o' the season. Some o' the boys, I notice, wrote some stuff about me gettin' old and losin' my battin' eye. That's all bunk! The reason I didn't hit was because I wasn't gettin' enough sleep. And the reason for that was Mr. Elliott.

He wasn't with us after the last part o' May, but I roomed with him long enough to get the insomny. I was the only guy in the club game enough to stand for him; but I was sorry afterward that I done it, because it sure did put a crimp in my little old average.

And do you know where he is now? I got a letter today and I'll read it to you. No-I guess I better tell you somethin' about him first. You fellers never got acquainted with him and you ought to hear the dope to understand the letter. I'll make it as short as I can.

He didn't play in no league last year. He was with some semi-pros over in Michigan and somebody writes John about him. So John sends Needham over to look at him. Tom stayed there Saturday and Sunday, and seen him work twice. He was playin' the outfield, but as luck would have it they wasn't a fly ball hit in his direction in both games. A base hit was made out his way and he booted it, and that's the only report Tom could get on his fieldin'. But he wallops two over the wall in one day and they catch two line drives off him. The next day he gets four blows and two o' them is triples.

So Tom comes back and tells John the guy is a whale of a hitter and fast as Cobb, but he don't know nothin' about his fieldin'. Then John signs him to a contract—twelve hundred

or somethin' like that. We'd been in Tampa a week before he showed up. Then he comes to the hotel and just sits round all day, without tellin' nobody who he was. Finally the bellhops was going to chase him out and he says he's one o' the ballplayers. Then the clerk gets John to go over and talk to him. He tells John his name and says he hasn't had nothin' to eat for three days, because he was broke. John told me afterward that he'd drew about three hundred in advance—last winter sometime. Well, they took him in the dinin' room and they tell me he inhaled about four meals at once. That night they roomed him with Heine.

Next mornin' Heine and me walks out to the grounds together and Heine tells me about him. He says:
"Don't never call me a bug again. They got me roomin'
with the champion o' the world."

"Who is he?" I says. "I don't know and I don't want to know," says Heine; "but if they stick him in there with me again I'll jump to the Federals. To start with, he ain't got no baggage. I ast him where his trunk was and he says he didn't have none. Then I ast him if he didn't have no suitcase, and he says: 'No. What do you care?' I was goin' to lend him some pajsmas, but he put on the shirt o' the uniform John give him last night and slept in that. He was asleep when I got up this mornin'. I seen his collar layin' on the dresser and it looked like he had wore it in Pittsburgh every day for a year. So I throwed it out the window and he comes down to breakfast with no collar. I ast him what size collar he wore and he says he didn't want none, because he wasn't goin' out nowheres. After breakfast he beat it up to the room again and put on his uniform. When I got up there he was lookin' in the glass at himself, and he done it all the time I was dressin'."

When we got out to the park I got my first look at him. Pretty good-lookin' guy, too, in his unie-big shoulders and well put together; built somethin' like Heine himself. He was talkin' to John when I come up.

"What position do you play?" John was askin' him.
"I play anywheres," says Elliott.

"You're the kind I'm lookin' for," says John. Then he says: "You was an outfielder up there in Michigan, wasn't you?"

"I don't care where I play," says Elliott.

John sends him to the outfield and forgets all about him for a while. Pretty soon Miller comes in and says:

"I ain't goin' to shag for no bush outfielder! John ast him what was the matter, and Miller tells him that Elliott ain't doin' nothin' but just standin' out there;

I Knowed Somethin' Was Goin' to Happen Before He Finished — and Somethin' Did

that he ain't makin' no attemp' to catch the fungoes, and that he won't even chase 'em. Then John starts watchin' him, and it was just like Miller said. Larry hit one pretty near in his lap and he stepped out o' the way. John calls him in and ast him:

"Why don't you go after them fly balls?"
"Because I don't want 'em," says Elliott.

John gets sarcastic and says:

"What do you want? Of course we'll see that you get anythin' you want!"

"Give me a ticket back home," says Elliott.

"Don't you want to stick with the club?" says John, and the busher tells him, No, he certainly did not. Then John tells him he'll have to pay his own fare home and Elliott don't get sore at all. He just says:

"Well, I'll have to stick, then-because I'm broke." We was havin' battin' practice and John tells him to go

up and hit a few. And you ought to of seen him bust 'em! Lavender was in there workin' and he'd been pitchin' a little all winter, so he was in pretty good shape. He lobbed one up to Elliott, and he hit it 'way up in some trees outside the fence—about a mile, I guess. Then John tells Jimmy to put somethin' on the ball. Jim comes through

with one of his fast ones and the kid slams it agin the rightfield wall on a line.

"Give him your spitter!" yells John, and Jim handed him one. He pulled it over first base so fast that Bert, who was standin' down there, couldn't hardly duck in time. If it'd hit him it'd killed him.

Well, he kep' on hittin' everythin' Jim give him-and Jim had somethin' too. Finally John gets Pierce warmed up and sends him out to pitch, tellin' him to hand Elliott a flock o' curve balls. He wanted to see if lefthanders was goin' to bother him. But he slammed 'em right along, and don't b'lieve he hit more'n two the whole mornin' that wouldn't of been base hits in a game.

They sent him out to the outfield again in the afternoon, and after a lot o' coaxin' Leach got him to go after fly balls; but that's all he did do-just go after 'em. One hit him on the bean and another on the shoulder. He run back after the short ones and 'way in after the ones that went over his head. He catched just one-a line drive that he couldn't get out o' the way of; and then he acted like it hurt his hands.

I come back to the hotel with John. He ast me what I thought of Elliott.

"Well," I says, "he'd be the greatest ballplayer in the world if he could just play ball. He sure can bust 'em."

John says he was afraid he couldn't never make an outfielder out o' him. He says:

"I'll try him on the infield tomorrow. They must be some place he can play. I never seen a lefthand hitter that looked so good agin lefthand pitchin'-and he's got a great arm; but he acts like he'd never saw a fly ball."

Well, he was just as bad on the infield. They put him at short and he was like a sieve. You could of drove a hearse between him and second base without him gettin' near it. He'd stoop over for a ground ball about the time it was bouncin' up agin the fence; and when he'd try to cover the bag on a peg he'd trip over it.

They tried him at first base and sometimes he'd run 'way over in the coachers' box and sometimes out in right field lookin' for the bag. Once Heine shot one acrost at him on a line and he never touched it with his hands. It went bam! right in the pit of his stomach-and the lunch he'd ate didn't do him no good.

Finally John just give up and says he'd have to keep him on the bench and let him earn his pay by bustin' 'em a couple o' times a week or so. We all agreed with John that this bird would be a whale of a pinch hitter—and we was right too. He was hittin' 'way over five hundred when the blowoff come, along about the last o' May.

BEFORE the trainin' trip was over, Elliott had roomed with pretty near everybody in the club. Heine raised an awful holler after the second night down there and John put the bug in with Needham. Tom stood him for three nights. Then he doubled up with Archer, and Schulte, and Miller, and Leach, and Saierand the whole bunch in turn, averagin' about two nights with each one before they put up a kick. Then John tried him with some o' the youngsters, but they wouldn't stand for him no more'n the others. They all said he was crazy and they was afraid he'd get violent some night and stick a knife in 'em.

He always insisted on havin' the water run in the bathtub all night, because he said it reminded him of the sound of the dam near his home. The fellers might get up four or five times a night and shut off the faucet, but he'd get right up after 'em and turn it on again. Carter, a big bush pitcher from Georgia, started a fight with him about it one night, and Elliott pretty near killed him. So the rest o' the bunch, when they'd saw Carter's map next mornin', didn't have the nerve to do nothin' when it come their turn.

Another o' his habits was the thing that scared 'em though. He'd brought a razor with him-in his pocket, I guess-and he used to do his shavin' in the middle o' the night. Instead o' doin' it in the bathroom he'd lather his face and then came out and stand in front o' the lookin'glass on the dresser. Of course he'd have all the lights turned on, and that was bad enough when a feller wanted to sleep; but the worst of it was that he'd stop shavin' every little while and turn round and stare at the guy who was makin' a failure o' tryin' to sleep. Then he'd wave his razor round in the air and laugh, and begin shavin' agin. You can imagine how comf'table his roomies felt!

John had bought him a suitcase and some clothes and things, and charged 'em up to him. He'd drew so much dough in advance that he didn't have nothin' comin' till about June. He never thanked John and he'd wear one shirt and one collar till some one throwed 'em away.

Well, we finally gets to Indianapolis, and we was goin' from there to Cincy to open. The last day in Indianapolis John come and ast me how I'd like to change roomies. I says I was perfectly satisfied with Larry. Then John says:
"I wisht you'd try Elliott. The other boys all kicks on

him, but he seems to hang round you a lot and I b'lieve you could get along all right."

"Why don't you room him alone?" I ast,

"The boss or the hotels won't stand for us roomin" alone," says John. "You go ahead and try it, and see how you make out. If he's too much for you let me know; but he likes you and I think he'll be diff'rent with a guy who can talk to him like you can."

So I says I'd tackle it, because I didn't want to throw John down. When we got to Cincy they stuck Elliott and me in one room, and we was together till he quit us.

WENT to the room early that night, because we was goin' to open next day and I wanted to feel like somethin'. First thing I done when I got undressed was turn on both faucets in the bathtub. They was makin' an awful

racket when Elliott finally come in about midnight. I was layin' awake and I opened right up on him. I says:

"Don't shut off that water, because I like to hear it run." Then I turned over and pretended to be asleep. The bug got his clothes off, and then what did he do but go in the bathroom and shut off the water! Then he come back in the room and says:

"I guess no one's goin' to tell me what to do in here."

But I kep' right on pretendin' to sleep and didn't pay no attention. When he'd got into his bed I jumped out o' mine and turned on all the lights and begun stroppin' my razor. He says:

"What's comin' off?"

"Some o' my whiskers," I says. "I always shave along about this time."

"No, you don't!" he says. "I was in your room one mornin' down in Louisville and I seen you shavin' then.'

"Well," I says, "the boys tell me you shave in the middle o' the night; and I thought if I done all the things you do mebbe I'd get so's I could hit like you.'

"You must be superstitious!" he says. And I told him I was. "I'm a good hitter," he says, "and I'd be a good hitter if I never shaved at all. That don't make no diff'rence."

"Yes, it does," I says. "You prob'ly hit good because you shave at night; but you'd be a better fielder if you shaved in the mornin'.'

You see, I was tryin' to be just as crazy as himthough that wasn't hardly possible.

'If that's right," says he, "I'll do my shavin' in the mornin'-because I seen in the papers where the boys says that if I could play the outfield like I can hit I'd be as good as Cobb. They tell me Cobb gets twenty thousand a year."

"No," I says; "he don't get that much—but he gets about ten times as much as you do."

"Well," he says, "I'm goin' to be as good as him, because I need the money.

"What do you want with money?" I says.

He just laughed and didn't say nothin'; but from that time on the water didn't run in the bathtub nights and he done his shavin' after breakfast. I didn't notice, though, that he looked any better in fieldin' practice.

T RAINED one day in Cincy and they trimmed us two out o' the other three; but it wasn't Elliott's fault.

They had Larry beat four to one in the ninth innin' o' the first game. Archer gets on with two out, and John sends my roomy up to hit—though Benton, a lefthander, is workin' for them. The first thing Benton serves up there Elliott cracks it a mile over Hobby's head. It would of been good for three easy-only Archer-playin' safe, o' coursepulls up at third base. Tommy couldn't do nothin' and we was licked.

The next day he hits one out o' the park off the Indian; but we was 'way behind and they was nobody on at the time. We copped the last one without usin' no pinch hitters.

I didn't have no trouble with him nights durin' the whole series. He come to bed pretty late while we was there and I told him he'd better not let John catch him at it.

"What would he do?" he says. "Fine you fifty," I says.

"He can't fine me a dime," he says, "because I ain't

got it." Then I told him he'd be fined all he had comin' if he didn't get in the hotel before midnight; but he just laughed and says he didn't think John had a kick comin' so long as he kep' bustin' the ball.

"Some day you'll go up there and you won't bust it," I says.

"That'll be an accident," he says. That stopped me and I didn't say nothin'. What could you say to a guy who hated himself like that?

The "accident" happened in St. Louis the first day. We needed two runs in the eighth and Saier and Brid was on, with two out. John tells Elliott to go up in Pierce's place. The bug goes up and Griner gives him two bad balls— 'way outside. I thought they was goin' to walk him-and it looked like good judgment, because they'd heard what he done in Cincy. But no! Griner comes back with a fast one right over and Elliott pulls it down the right foul line, about two foot foul. He hit it so hard you'd of thought they'd sure walk him then; but Griner gives him another fast one. He slammed it again just as hard, but foul. Then Griner gives hin one 'way outside and it's two and three. John says, on the bench:

"If they don't walk him now he'll bust that fence down." I thought the same and I was sure Griner wouldn't give him nothin' to hit; but he come with a curve and Rigler calls Elliott out. From where we sat the last one looked low, and I thought Elliott'd make a kick. He come back to the bench smilin'.

John starts for his position, but stopped and ast the bug what was the matter with that one. Any busher I ever knowed would of said, "It was too low," or "It was outside," or "It was inside." Elliott says:

"Nothin' at all. It was right over the middle." "Why didn't you bust it, then?" says John.

"I was afraid I'd kill somebody," says Elliott, and laughed like a big boob.

John was pretty near chokin'.

"What are you laughin' at?" he says.

"I was thinkin' of a nickel show I seen in Cincinnati,"

says the bug.
"Well," says John, so mad he couldn't hardly see, "that show and that laugh'll cost you fifty."

We got beat, and I wouldn't of blamed John if he'd fined him his whole season's pay.

Up 'n the room that night I told him he'd better cut out that laughin' stuff when we was gettin' trimmed or he never would have no payday. Then he got confidential.

"Payday wouldn't do me no good," he says. "When I'm all squared up with the club and begin to have a

Don't Never Ask Me How Many Times We Went Up and Down!

payday I'll only get a hundred bucks at a time, and I'll owe that to some o' you fellers. I wisht we could win the pennant and get in on that World's Series dough. Then I'd get a bunch at once."

What would you do with a bunch o' dough?" I ast him. "Don't tell nobody, sport," he says; "but if I ever get five hundred at once I'm goin' to get married."

"Oh!" I says. "And who's the lucky girl?"

"She's a girl up in Muskegon," says Elliott; "and you're right when you call her lucky."

"You don't like yourself much, do you?" I says.
"I got reason to like myself," says he. "You'd like yourself, too, if you could hit 'en. like me."

"Well," I says, "you didn't show me no hittin' today." "I couldn't hit because I was laughin' too hard," says

"What was it you was laughin' at?" I says.

"I was laughin' at that pitcher," he says. "He thought he had somethin' and he didn't have nothin'."

"He had enough to whiff you with," I says.

"He didn't have nothin'!" says he again. "I was afraid if I busted one off him they'd can him, and then I couldn't never hit agin him no more."

Naturally I didn't have no comeback to that. I just sort o' gasped and got ready to go to sleep; but he wasn't through.

"I wisht you could see this bird!" he says.

"What bird?" I says.

"This dame that's nuts about me," he says.

"Good-looker?" I ast.

"No," he says; "she ain't no bear for looks. They ain't nothin' about her for a guy to rave over till you hear her sing. She sure can holler some."

What kind o' voice has she got?" I ast.

"A bear," says he.

"No," I says; "I mean is she a barytone or an air?"

"I don't know," he says; "but she's got the loudest voice I ever hear on a woman. She's pretty near got me beat.

"Can you sing?" I says; and I was sorry right afterward that I ast him that question.

I guess it must of been bad enough to have the water runnin' night after night and to have him wavin' that razor round; but that couldn't of been nothin' to his singin'. Just as soon as I'd pulled that boner he says, "Listen to me!" and starts in on Silver Threads Among the Gold. Mind you, it was after midnight and they was guests all round us tryin' to sleep!

They used to be noise enough in our club when we had Hofman and Sheckard and Richie harmonizin'; but this bug's voice was louder'n all o' theirn combined. We once had a pitcher named Martin Walsh—brother o' Big Ed's and I thought he could drownd out the Subway; but this guy made a boiler factory sound like Dummy Taylor. If the whole hotel wasn't awake when he'd howled the first

line it's a pipe they was when he cut loose, which he done when he come to "Always young and fair to me." Them words could of been heard easy in East St. Louis.

He didn't get no encore from me, but he goes right through it again—or starts to. I knowed somethin' was goin' to happen before he finished-and somethin' did. The night clerk and the house detective come bangin' at the door. I let 'em in and they had plenty to say. If we made another sound the whole club'd be canned out o' the hotel. I tried to salve 'em, and I says:

"He won't sing no more."

But Elliott swelled up like a poisoned pup.

"Won't I?" he says. "I'll sing all I want to." "You won't sing in here," says the clerk.

"They ain't room for my voice in here anyways," he says. "I'll go outdoors and sing."

And he puts his clothes on and ducks out. I didn't make no attemp' to stop him. I heard him bellowin' Silver Threads down the corridor and down the stairs, with the clerk and the dick chasin' him all the way and tellin' him to shut up.

Well, the guests make a holler the next mornin'; and the hotel people tells Charlie Williams that he'll either have to let Elliott stay somewheres else or the whole club'll have to move. Charlie tells John, and John was thinkin' o' settlin' the question by releasin' Elliott.

I guess he'd about made up his mind to do it; but that afternoon they had us three to one in the ninth, and we got the bases full, with two down and Larry's turn to hit. Elliott had been sittin' on the bench sayin' nothin'.

"Do you think you can hit one today?" says John.

"I can hit one any day," says Elliott.
"Go up and hit that lefthander, then," says John, "and remember there's nothin' to laugh at."

Sallee was workin'-and workin' good; but that didn't bother the bug. He cut into one, and it went between Oakes and Whitted like a shot. He come into third standin' up and we was a run to the

good. Sallee was so sore he kind o' forgot himself and took pretty near his full wind-up pitchin' to Tommy. And what did Elliott do but steal home and get away with it clean! Well, you couldn't can him after that, could you?

Charlie gets him a room somewheres and I was relieved of his company that night. The next evenin' we beat it for Chi to play about two weeks at home. He didn't tell nobody where he roomed there and I didn't see nothin' of him, 'cep' out to the park. I ast him what he did with himself nights and he says:

"Same as I do on the road-borrow some dough some place and go to the nickel shows."

"You must be stuck on 'em," I says.

"Yes," he says; "I like the ones where they kill peoplebecause I want to learn how to do it. I may have that job some day."

"Don't pick on me," I says.

"Oh," says the bug, "you never can tell who I'll pick on." It seemed as if he just couldn't learn nothin' about fieldin', and finally John told him to keep out o' the practice. "A ball might hit him in the temple and croak him,"

says John. But he busted up a couple o' games for us at home,

beatin' Pittsburgh once and Cincy once.

THEY give me a great big room at the hotel in Pittsburgh; so the fellers picked it out for the poker game. We was playin' along about ten o'clock one night when in come Elliott—the earliest he'd showed up since we'd been roomin' together. They was only five of us playin' and Tom ast him to sit in.

"I'm busted," he says,

"Can you play poker?" I ast him.
"They's nothin' I can't do!" he says. "Slip me a couple o' bucks and I'll show you."

So I slipped him a couple o' bucks and honestly hoped he'd win, because I knowed he never had no dough. Well, Tom dealt him a hand and he picks it up and says:

"I only got five cards."

"How many do you want?" I says.

"Oh," he says, "if that's all I get I'll try to make 'em do." The pot was cracked and raised, and he stood the raise, I says to myself: "There goes my two bucks!" But nohe comes out with three queens and won the dough. It was only about seven bucks; but you'd of thought it was a million to see him grab it. He laughed like a kid.

"Guess I can't play this game!" he says; and he had me fooled for a minute-I thought he must of been kiddin'

when he complained of only havin' five cards.

He copped another pot right afterward and was sittin' there with about eleven bucks in front of him when Jim opens a roodle pot for a buck. I stays and so does Elliott. Him and Jim both drawed one card and I took three. I had kings or queens-I forget which. I didn't help 'em none; so when Jim bets a buck I throws my hand away.

"How much can I bet?" says the bug.

"You can raise Jim a buck if you want to," I says.

So he bets two dollars. Jim comes back at him. He comes right back at Jim. Jim raises him again and he tilts Jim right back. Well, when he'd boosted Jim with the last buck he had, Jim says:

"I'm ready to call. I guess you got me beat. What

have you got?' "I know what I've got, all right," says Elliott. "I've got straight." And he throws his hand down. Sure enough, it was a straight, eight high. Jim pretty near fainted and

The bug had started pullin' in the dough when Jim stops him.

"Here! Wait a minute!" says Jim. "I thought you had somethin'. I filled up." Then Jim lays down his nine full. "You beat me, I guess," says Elliott, and he looked like he'd lost his last friend.

"Beat you?" says Jim. "Of course I beat you! What did you think I had?"

"Well," says the bug, "I thought you might have a small fush or somethin'."

When I regained consciousness he was beggin' for two more bucks.

"What for?" I says. "To play poker with? You're barred from the game for life!"

"Well," he says, "if I can't play no more I want to go to sleep, and you fellers will have to get out o' this room.

Did you ever hear o' nerve like that? This was the first night he'd came in before twelve and he orders the bunch sat so's he can sleep! We politely suggested to him to go o Brooklyn.

Without sayin' a word he starts in on his Silver Threads; and it wasn't two minutes till the game was busted up and he bunch-all but me-was out o' there. I'd of beat it zo, only he stopped yellin' as soon as they'd went.

"You're some buster!" I says, "You bust up ball games

n the afternoon and poker games at night."

"Yes," he says; "that's my business-bustin' things." And before I knowed what he was about he picked up the itcher of ice-water that was on the floor and throwed it out he window—through the glass and all.

Right then I give him a plain talkin' to. I tells him how near he come to gettin' canned down in St. Louis because he raised so much Cain singin' in the hotel.

"But I had to keep my voice in shape," he says. "If I ever get dough enough to get married the girl and me'll go out singin' together.'

"Out where?" I ast.

"Out on the vaudeville circuit," says Elliott.

"Well," I says, "if her voice is like yours you'll be wastin' money if you travel round. Just stay up in Muskegon and we'll hear you, all right!"

I told him he wouldn't never get no dough if he didn't behave himself. That, even if we got in the World's Series, he wouldn't be with us—unless he cut out the foolishness.

'We ain't goin' to get in no World's Series," he says, "and I won't never get a bunch o' money at once; so it looks like I couldn't get married this fall."

Then I told him we played a city series every fall. He'd never thought o' that and it tickled him to death. I told him the losers always got about five hundred apiece and that we were about due to win it and get about eight hundred. "But," I

says, "we still got a good chance for the old pennant; and if I was you I wouldn't give up hope o' that yet-not where John can hear you anyway."

"No," he says, "we won't win no pennant, because he won't let me play reg'lar; but I don't care so long as we're sure o' that city-series dough."

You ain't sure of it if you don't behave," I says. "Well," says he, very serious, "I guess I'll behave." And he did-till we made our first Eastern trip.

WE WENT to Boston first, and that crazy bunch goes out and piles up a three-run lead on us in seven innin's the first day. It was the pitcher's turn to lead off in the eighth, so up goes Elliott to bat for him. He kisses the first thing they hands him for three bases; and we says, on the bench: "Now we'll get 'em!"-because, you know, a three-run lead wasn't nothin' in Boston.

"Stay right on that bag!" John hollers to Elliott.

Mebbe if John hadn't said nothin' to him everythin' rould of been all right; but when Perdue starts to pitch the first ball to Tommy, Elliott starts to steal home. He's out as far as from here to Seattle.

If I'd been carryin' a gun I'd of shot him right through the heart. As it was, I thought John'd kill him with a bat, because he was standin' there with a couple of 'em, waitin' for his turn; but I guess John was too stunned to move. He didn't even seem to see Elliott when he went to the bench. After I'd cooled off a little I says:

"Best it and get into your clothes before John comes in. Then go to the hotel and keep out o' sight,"

When I got up in the room afterward, there was Elliott, lookin' as innocent and happy as though he'd won fifty bucks with a pair o' treys.

"I thought you might of killed yourself," I says.
"What for?" he says.

"For that swell play you made," says I.

"What was the matter with the play?" ast Elliott, surprised. "It was all right when I done it in St. Louis."

"Yes," I says; "but they was two out in St. Louis and we wasn't no three runs behind." "Well," he says, "if

it was all right in St. Louis I don't see why it was wrong here."

"It's a diff'rent climate here," I says, too disgusted to argue with him.

"I wonder if they'd let me sing in this cli-

mate?" says Elliott.
"No," I says. "Don't sing in this hotel, because we don't want to get fired out o' here—the eats is too good."

All right," he says. "I won't sing." But when I starts down to supper he says: li'ble to do somethin' worse'n sing."

He didn't show up in the dinin' room and John went to the boxin' show aftersupper; so it looked like him and Elliott wouldn't run into each other till the murder had left John's heart. I was glad o' that-because a Mass'chusetts jury might

Him No Good

not consider it justifiable hommercide if one guy croaked another for givin' the Boston club a game.

I went down to the corner and had a couple o' beers; and then I come straight back, intendin' to hit the hay. The elevator boy had went for a drink or somethin', and they was two old ladies already waitin' in the car when I stepped in. Right along after me comes Elliott.

"Where's the boy that's supposed to run this car?" he says. I told him the boy'd be right back; but he says: "I can't wait. I'm much too sleepy."

And before I could stop him he'd slammed the door and him and I and the poor old ladies was shootin' up.

"Let us off at the third floor, please!" says one o' the ladies, her voice kind o' shakin'.

"Sorry, madam," says the bug; "but this is a express and we don't stop at no third floor."

I grabbed his arm and tried to get him away from the machinery; but he was as strong as a ox and he throwed me agin the side o' the car like I was a baby. We went to the top faster'n I ever rode in an elevator before. And then we shot down to the bottom, hittin' the bumper down there so hard I thought we'd be smashed to splinters.

The ladies was too scared to make a sound durin' the first trip; but while we was goin' up and down the second timeeven faster'n the first-they begun to scream. I was hollerin' my head off at him to quit and he was makin' more noise than the three of us-pretendin' he was the locomotive and the whole crew o' the train.

Don't never ask me how many times we went up and down! The women fainted on the third trip and I guess I was about as near it as I'll ever get. The elevator boy and the bellhops and the waiters and the night clerk and everybody was jumpin' round the lobby screamin'; but no one seemed to know how to stop us.

Finally-on about the tenth trip, I guess-he slowed down and stopped at the fifth floor, where we was roomin'. He opened the door and beat it for the room, while I, though was tremblin' like a leaf, run the car down to the bottom.

The night clerk knowed me pretty well and knowed I wouldn't do nothin' like that; so him and I didn't argue, but just got to work together to bring the old women to. While we was doin' that Elliott must of run down the stairs and slipped out o' the hotel, because when they sent the officers up to the room after him he'd blowed,

They was goin' to fire the club out; but Charlie had a good stand-in with Amos, the proprietor, and he fixed it up to let us stay-providin' Elliott kep' away. The bug didn't show up at the ball park next day and we didn't see no more of him till we got on the rattler for New York. Charlie and John both bawled him, but they give him a berth-an upper-and we pulled into the Grand Central Station without him havin' made no effort to wreck the train.

'D STUDIED the thing pretty careful, but hadn't come to no conclusion. I was sure he wasn't no stew, because none o' the boys had ever saw him even take a glass o' beer, and I couldn't never detect the odor o' booze on him. And if he'd been a dope I'd of knew about it-roomin' with him.

There wouldn't of been no mystery about it if he'd been a lefthand pitcher-but he wasn't. He wasn't nothin' but a whale of a hitter and he throwed with his right arm. He hit lefthanded, o' course; but so did Saier and Brid and Schulte and me, and John himself; and none of us was violent. I guessed he must of been just a plain nut and li'ble to break out any time.

They was a letter waitin' for him at New York, and I took it, intendin' to give it to him at the park, because I didn't think they'd let him room at the hotel; but after breakfast he come up to the room, with his suitcase. It seems he'd promised John and Charlie to be good, and made it so strong they b'lieved him.

I give him his letter, which was addressed in a girl's

writin' and come from Muskegon. "From the girl?" I says.

# AN AMERICAN VANDAL

# Night Life, With the Life Part Missing—By Irvin S. Cobb

English. They have none. Passing along to the next subject under the same heading, which is the night life of Paris, we find here so much night life, of such a delightfully transparent and counterfeit char-

acter; so much of made-to-measure deviltry; so many members of the Madcaps' Union engaged on piece-work; so much of delicious, hoydenish derring-do, all carefully stage-managed and expertly timed for the benefit of North and South American spenders, to the end that the deliriousness shall abate automatically in exact proportion as the spenders

quit spending-in short, so much of what is typically Parisian that really Paris, on its merits in this regard, is entitled to a chapter of its own.

All of which naturally brings us to the two remaining great cities of Mid-Europe—Berlin and Vienna—and leads us to the inevitable conclusion that the Europeans, in common with all other peoples on the earth, only succeedwhen they try to be desperately wicked-in being desperately dull; whereas when they are seeking their pleasures in a natural manner they begin to present racial slants and angles that are very interesting to observe and very pleasant to have a hand in.

Take the Germans now: No less astute a world traveler than Sam Blythe is sponsor for the assertion that the Berliners follow the night-life route because the Kaiser found his capital did not attract the tourist types to the extent he had hoped, and so decreed that his faithful and devoted subjects, leaving their cozy hearths and inglenooks, should go forth at the hour when graveyards yawn-and who could blame them?-to spend the dragging time until dawn in being merry and bright. So saying His Majesty went to bed, leaving them to work while he slept.

After viewing the situation at first hand the present writer is of the opinion that Mr. Blythe is right in his statements. Certainly nothing is more soothing to the eye of the onlooker, nothing more restful to his soul, than to behold a group of Germans enjoying themselves in a normal manner. And absolutely nothing is quite so ghastly sad as the sight of those same well-flushed, wellfleshed Germans cavorting about between the hours of two and four-thirty A. M., trying, with all the pachydermic

ponderosity of Barnum's Elephant Quadrille, to be professionally gay and cutuppish. These Prussians must love their Kaiser dearly. We sit up with our friends when they are dead; they stay up for him until they are ready to die of sleepiness

#### Vaudeville on Skates

AS IS well known Berlin abounds in pleasure palaces, so called. Enormous places these are, where under one widespreading roof are three or four separate restaurants of augmented size, not to mention winecellars and beer-caves belowand a dancehall or so, a Turkish bath, and a bar, and a skating rink, and a concert halland any number of private dining rooms. The German mind invariably associates size with enjoyment.

To these establishments, after his regular dinner, the Berliner repairs with his family, his friend or his guest. There is one especially popular resort, a combination of restaurant and vaudeville theater, at which one eats an excellent dinner

excellently served, and between courses witnesses the turns of a first-rate variety bill, always with the inevitable team of American coon shouters, either in fast colors or of the burntcork variety, sandwiched into the program somewhere.

In the Friedrichstrusse there is another place, called the Admiralspalast, which is even more attractive. Here, inclosing a big, oval-shaped ice arena, balcony after balcony rises circling to the roof. On one of these balconies you sit, and while you dine and after you have dined you look down on a most marvelous series of skating stunts. In rapid and bewildering succession there are ballets on skates, solo skating numbers, skating carnivals and skating

Finally scenery is slid in on runners and the whole company, in costumes grotesque and beautiful, go through a burlesque that keeps you laughing when you are not applauding, and admiring when you are doing neither; while alternating lightwaves from overhead electric devices flood the picture with shifting, shimmering tides of color. It is like seeing a Christmas pantomime under an aurora borealis. In America we could not do these things-at least we never have done them. Either the performance would be poor or the provender would be highly expensive, or both. But here the show is wonderful, and the victuals are good and not extravagantly priced, and everybody has a bully time.

At eleven-thirty or thereabout the show at the ice palace is over-concluding with a pushball match between teams of husky maidens who were apparently born on skates and raised on skates, and would not feel natural unless they were curveting about on skates. Their skates seem as much a part of them as tails to mermaids. It is bedtime

Inasmuch as the Palais du Danse is an institution berrowed outright from the French they have adopted the French custom there. As the visitor enters-if he be a stranger-a flunky in gorgeous livery intercepts him and demands an entrance fee amounting to about a dollar and a quarter in our money, as I recall. This tariff the American or the Englishman pays, but the practiced Berliner merely suggests to the doorkeeper the expediency of his taking a long running start and jumping off into space, and stalks defiantly in without forking over a single pfennig to any person

#### A Learned Lecture on the Tango

THE Palais du Danse is incomparably the most beautiful A ballroom in the world—so people who have been all over the world agree—and it is spotlessly clean and free from brackish smells, which is more than can be said of any French establishment of similar character I have seen. At the Palais du Danse the patron sits at a table—a table with something on it besides a cloth being an essential adjunct to complete enjoyment of an evening of German revelry; and as he sits and drinks he listens to the playing of a splendid band and looks on the dancing.

Nothing is drunk except wine-and by wine I mainly mean champagne of the most sweetish and sickish brand obtainable. Elsewhere, for one-twentieth the cost, the German could have the best and purest beer that is made; but he is out now for the big night. Accordingly he saturates his tissues with the sugary bubble-water of France. He does not join in the dancing himself. The men dancers are nearly all paid dancers, I think, and the beautifully chic women who dance are either professionals, too, or els belong to a profession that is older even than dancing is They all dance with a profound German gravity and precision. Here is music to set a wooden leg a-jigging

but these couples circle and glid and dip with an incomprehensible decorum and slowness.

Of course they are dancing the tango or one of its manifold varia tions. All Europe, like all America is at the moment tango mad. I was so when we were there and i one may judge by the cable dis patches it is still so. While we wer in Paris, M. Jean Richepin lecture before the Forty Immortals of th Five Academies assembled it solemn conclave at the Institute of France. They are called the Fort Immortals because nobody car remember the names of more that five of them. He took for his sub ect the tango—his motto, in shor being one borrowed from the conductors in the New York subway-"Mind your step!" While he spoke, which was for

an hour or more, the behadged and beribboned bosoms of his illustriou compatriots heaved with emotion their faces-or such parts of their faces as were visible above the whiskerline-flushed with enthu siasm, and most vociferously the applauded his masterly phrasis

and his tracing-out of the evolution of the tango, all the way from its Genesis, as it were, to its Revelation. I judge the revelation particularly appealed to them-that part of it appeals to so many.

After that the tango seemed literally to trail us. We could not escape it. While we were in Berlin the emperor saw fit officially to forbid the dancing of the tango by officers of his navy and army; and when we reached England the vogue for tango teas had started.

Naturally we went to one of these affairs. It took place at a theater. Such is the English way of interpreting the poetry of motion-to hire some one else to do it for you, and-in order to get the worth of your money-sit and swizzle tea while the paid performer is doing it. At the tango tea we patronized the tea was up to standard, but the dancing of the box-ankled professionals was a disappointment. Beforehand I had been told that the scene on the stage would be a veritable picture. And so it was-Rosa Bonheur's Horse Fair.

As a matter of fact the best dancer I saw in Europe was a performing trick pony in a winter circus in Berlin. I also remember with distinctness of detail a chorusman who took part in a new Lehár opera, there in Berlin. I do not remember him for his dancing, because he was no clumsier of foot than his compatriots in the chorus rank and file; or for his singing, since I could not pick his voice out from the combined voices of the others. I remember him because he wore spectacles-not a monocle nor yet a pair of noseglasses, but heavy-rimmed, double-lensed German spectacles with gold bows extending up behind his ears like the roots of an old-fashioned wisdom tooth.

Come to think about it I know of no reason why a chorusman should not wear spectacles if he needs them in his business or if he thinks they will add to his native beauty; but the spectacle of that bolster-built youth, dressed now as a Spanish cavalier and now as a Venetian gondolier, prancing about, with his spectacles goggling owlishly out at the audience, and once in a while, when a gleam from the footlights caught on them, turning to two red-hot disks set in the middle of his face, was a thing that is going to linger in my memory when a lot of more important matters are entirely forgotten.

Not even in Paris did the tango experts compare with the tango experts one sees in America. At this juncture I pause a moment, giving opportunity for some carping critic to rise and call my attention to the fact that perhaps the most distinguished of the early school of turkey-trotters bears a French name and came to us from Paris.

#### New York to New York Via Montmartre

To WHICH I reply that so he does and so he did; but I add then the counter-argument that he came to us by way of Paris, at the conclusion of a round trip that started in the old Fourth Ward of the Borough of Manhattan, city of Greater New York; for he was born and bred on the East Side-and, moreover, was born bearing the name of a race of kings famous in the south of Ireland and along the Bowery. And he learned his art—not only the rudiments of it but the final finished polish of it-in the dancehalls of

Third Avenue, where the best slow-time dancers on earth come from. It was after he had acquired a French accent and had Gallicized his name, thereby causing a general turning-over of old settlers in the graveyards of the County Clare, that he returned to us, a conspicuous figure in the world of art and fashion, and was able to get twenty-five dollars an hour for teaching the sons and daughters of our richest families to trip the light tanfastic go.

At the same time, be it understood, I am not here to muckrake the past of one so prominent and affluent in the most honored and lucrative of modern professions; but facts are facts, and these particular facts are quoted here to bind and buttress my claim that the best dancers are the American dancers.

After this digression let us hurry right back to that loyal Berliner whom we left seated in the Palais du Danse on the Behrenstrasse, waiting for the hour of two in the morning to come. The hour of two in the morning does come; the lights die down; the dancers pick up their heavy feet-it takes an effort to pick up those Continental feet—and quit the waxen floor; the Oberkellner comes round with his gold chain of office dangling on his breast and collects for the wine, and our German

friend, politely inhaling his yawns, gets up and goes elsewhere to finish his good time. And, goldarn it, how he does dread it! Yet he goes, faithful soul that he is.

He goes, let us say, to the Pavillon Mascotte-no dancing, but plenty of drinking and music and foodwhich opens at two and stays open until four, when it shuts up shop in order that another place in the nature of a cabaret may open. And so, between five and six o'clock

in the morning of the new day, when the lady garbagemen and the gentlemen chambermaids of the German capital are abroad on their several duties, he journeys homeward, and so, as Mr. Pepys says, to bed, with nothing disagreeable to look forward to except repeating the same dose all over again the coming night. This sort of thing would kill anybody except a Prussian-for, mark you, between intervals of drinking he has been eating all night; but then a

> Prussian has no digestion. He merely has a capacity in the place where his digestive apparatus ought to be.

> The time to see a German enjoying himself is when he is following his own bent and not obeying the implied edict of his gracious sovereign. I had a most excellent opportunity of observing him while engaged in his own private pursuits of pleasure when by chance one evening, in the course of a solitary prowl, I bumped into a sort of Berlinesque version of Coney Island, with the island part missing. It was not out in the suburbs where one would naturally expect to find such a resort. It was in the very middle of the city, just round the corner from the café district, not more than half a mile, as the Blutwurst flies, from Unter den Linden, that I happened on this little, noisy park.

Must Love Their Kaiser; They Stay Up for Him Until They are Ready to Die of Steepinger

Even at this distance and after a considerable lapse of time I can still appreciate that place, though I cannot pronounce it; for it had a name consisting of one of those long German compound words that run all the way round a fellow's face and lap over at the back, like a clergyman's collar, and it had also a subname that no living person could hope to utter unless he had a thorough German education and throat trouble. You meet such nouns frequently

in Germany. They are not meant to be spoken; you gargle them.

To speak the full name of this park would require two able-bodied persons—one to start it off and carry it along until his larynx gave out, and the other to take it up at that point and finish it.

#### Sunday at the Zoo

FOR all the nine-jointed impressiveness of its title this park was a live, brisk little park full of sideshow tents sheltering mildly amusing, faked-up attractions, with painted banners flapping in the air and barkers spieling before the entrances and all the ballyhoos going at full blast-altogether a creditable imitation of a street fair as witnessed in any American town that has a good live Elks' Lodge in it.

Plainly the place was popular. Germans of all conditions and all ages and all sizes-but mainly the broader lasts—were winding about in thick streams in the narrow, crooked alleys formed by the various tents. They packed themselves in front of each booth where a free exhibition was going on, and when the free part was over and the regular performance began each struggled good-naturedly to be the first to pay the admission fee and enter in at the door.

And, for a price, there were freaks to be seen who properly belonged on our side of the water, it seemed to me. I had always supposed them to be exclusively domestic articles until I encountered them here. There was a regular Boscoe-a genuine Herr He Alive Them Eatssitting in his canvas den entirely surrounded by a choice and tasty selection of eating snakes. The orthodox tattooed man was there, too, first standing up to display the text and accompanying illustrations on his front cover, and then turning round so the crowd might read what he said on the other side. And there was many another familiar freak introduced to our fathers by Old Dan Rice and to us, their children, through the good offices of Daniel's long and noble line of successors.

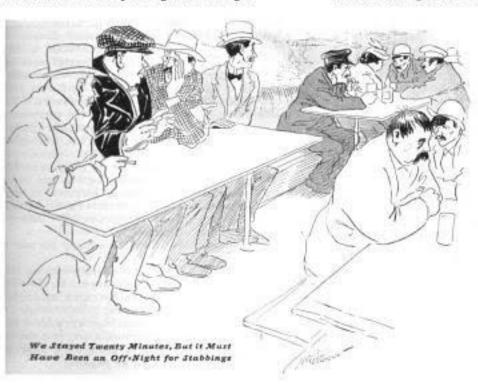

A seasonable Sunday is a fine time; and the big Zoölogical Garden, which is a favorite outdoor resort in fair weather, is a fine place for studying the Berlin populace at the diversions they prefer when left to their own devices, At one table will be a cluster of students, with their queer little pill-box caps of all colors, their close-cropped heads and well-shaved necks, and their saber-scarred faces,

At the next table half a dozen spectacled, long-coated en, who look as though they might be university professors, are confabbing earnestly. And at the next table and the next and the next—and so on, until the aggregate runs into big figures—are family groups—grandsires, fathers, mothers, aunts, uncles and children, on down to the babies in arms.

By the uncountable thousands they spend the afternoon here, munching sausages and sipping lager, and enjoying the excellent music that is invariably provided. At each plate there is a beer mug, for everybody is forever drinking and nobody is ever drunk.

You see a lot of this sort of thing, not only in the parks and gardens so numerous in and near any German city but everywhere on the Continent. Seeing it helps an American

to understand a main difference between the American Sabbath and the European Sunday. We keep it and they spend it.

I am given to understand that Vienna night life is the most alluring, the most abandoned, the most wicked and the wildest of all night life. Probably this is so—certainly it is the most cloistered and the most inaccessible. The Viennese does not deliberately exploit his night life to prove to all the world that he is a gay dog and will not go home until morning though it kill him—as the German does. Neither does he maintain it for the sake of the coin to be extracted from the pockets of the tourist, as do the Parisians. With him his night life is a thing he has created and which he supports for his own enjoyment.

And so it goes on—not out in the open; not pressagented; not advertised; but behind closed doors. He does not care for the stranger's presence, nor does he suffer it either—unless the stranger is properly vouched for. The best theaters in Vienna are small, exclusive affairs, privately supported, and with seating capacity for a few chosen patrons.

Once he has quit the public café with its fine music and its bad waiters the uninitiated traveler has a pretty lonesome time of it in Vienna. Until all hours he may roam the principal streets seeking that fillip of wickedness which will give zest to life and provide him with something to brag about when he gets back among the homefolks again. He does not find it. Charades would provide a much more exciting means of spending the long winter evening; and, in comparison with the sights he witnesses, anagrams and acrostics are positively thrilling.

He is tantalized by the knowledge that all about him there are big doings, but, so far as he is concerned, he might just as well be attending a Sunday-school cantata. Unless he be suitably introduced he will have never a chance to shake a foot with anybody or buy a drink for somebody in the inner circles of Viennese night life. He is emphatically on the outside, denied even the poor satisfaction of looking in. At that I have a suspicion, born of casual observation among other races, that the Viennese really has a better time when he is not trying than when he is trying.

No taste of the night life in Paris is regarded as complete without a visit to an Apache resort at the fag-end of it. For orderly and law-abiding people the disorderly and lawbreaking people always have an immense fascination anyhow. The average person, though inclined to blink at whatever prevalence of the criminal classes may exist in his own community, desires above all things to know at firsthand about the criminals of other communities. In these matters charity begins at home.

#### In the Cave of the Innocents

EVERY New Yorker who journeys to the West wants to see a few roadagents; conversely the Westerner so journing in New York pesters his New York friends to lead him to the haunts of the gangsters. It makes no difference that in a Western town the prize hold-up man is more apt than not to be a real-estate dealer; that in New York the average run of citizens know no more of the gangs than they know of the Metropolitan Museum of Art—which is to say, nothing at all. Human nature comes to the surface just the same,

In Paris they order this thing differently; they exhibit the same spirit of enterprise that in a lesser degree characterized certain promoters of rubberneck tours who some years ago fitted up make-believe opium dens in New York's Chinatown for the awed delectation of out-of-town spectators. Knowing from experience that every other American who lands in Paris will crave to observe the Apache while the Apache is in the act of Apaching round regardless, the canny Parisians have provided a line of up-to-date Apache dens within easy walking distance of Montmartre; and thither the guides lead the round-eved tourist and there introduce him to well-drilled, carefully made-up Apaches and Apachesses engaged in their customary sports and pastimes as long as he is willing to pay out money for the privilege.

Being forewarned of this I naturally desired to see the genuine article. I took steps to achieve that end. Suitably chaperoned by a trio of transplanted Americans who knew a good bit about the Paris underworld I rode over miles of bumpy cobblestones until, along about four o'clock in the morning, our taxicab turned into a dim back street opening off one of the big public markets and drew up in front of a grimy establishment rejoicing in the happy and well-chosen name of the Cave of the Innocents.

Alighting we passed through a small boozing ken, where a frowzy woman presided over a bar, serving drinks to smocked marketmen, and at the rear descended a steep flight of stone steps. At the foot of the stairs we came on two gendarmes who sat side by side on a wooden bench, having apparently nothing else to do except to caress their goatees and finger their swords. Whether the gendarmes were stationed here to keep the Apaches from preying on the marketmen or the marketmen from preying on the Apaches I know not; but having subsequently purchased some fresh fruit in that selfsame market I should say now that if anybody about the premises needed police protection it was the Apaches. My money would be on the marketmen every time.

Beyond the couchant gendarmes we traversed a low, winding passage cut out of stone and so came at length to what seemingly had originally been a winevault, hollowed out far down beneath the foundations of the building. The ceiling was so low that a tall man must stoop to avoid knocking his head off. The place was full of smells that had crawled in a couple of hundred years before and had died without benefit of clergy—and had remained there ever since. For its chief item of furniture the cavern had a wicked old piano, with its lid missing, so that its yellowed teeth showed in a perpetual snarl. I judged some of its most important vital organs were missing too—after I heard it played.

On the walls were scored such words as naughty little boys write on schoolhouse fences in this country, and more examples of this pleasing brand of literature were carved on the whittled oak benches and the rickety wooden stools. So much for the physical furbishings.

By rights—by all the hallowed rules and precedents of the American vaudeville stage!—the denizens of this cozy retreat in the bowels of the earth should have been wearing high-waisted, baggy velvet trousers and drinking absinthe out of large flagons, and stabbing one another between the shoulderblades, and ever and anon, in the mystic mazes of the dance, playing crack-the-whip with the necks and heels of their adoring lady friends; but such was not found to be the case. In all these essential and traditional regards the assembled Innocents were as poignantly disappointing as the costers of London had proved themselves.

According to all the printed information on the subject the London coster should have been wearing clothes covered up with pearl buttons and swapping ready repartee with his Donah or his Dinah. The costers I saw were barren of pearl buttons and silent of speech; and almost invariably they had left their Donahs at home. Similarly these gentlemen habitués of the Cave of the Innocents wore few or no velvet pants, and guzzled little or none of the absinthe. Their favorite tipple appeared to be beer; and their female companions snuggled closely beside them. We stayed among them fully twenty minutes, but not a single person was stabbed while we were there. It must have been an off-night for stabbings.

Still, I judged them to have been genuine exhibits because here, for the first, last and only time in Paris, I found a shop where a stranger ready to spend a little money was not welcomed with vociferous enthusiasm. The paired-off cavedwellers merely scowled on us as we scrouged past them to a vacant bench in a far corner. The waiter, though, bowed before us—a shockheaded personage in the ruins of a dress suit, he was—at the same time saying words which I took to be complimentary until one of my friends explained that he had called us something that might be freely translated as a certain kind of female lobster.

Circumscribed by our own inflexible and unyielding language we in America must content ourselves with calling a guage we in America

seems somehow or other to make it more binding.

However, I do not really think the waiter meant to be deliberately offensive; for presently, having first served us with beer which for obvious reasons we did not drink, he stationed himself alongside the infirm piano and rendered a little ballad to the effect that all men were spiders and all women were snakes, and all the world was a green poison; so, right off, I knew what his trouble was, for I had seen many persons just as morbidly affected as himself down in the malaria belt of the United States, where everybody has liver for breakfast every morning. The waiter was bilious—that was what ailed him.

For the sake of the conventions I tried to feel apprehensive of grave peril. It was no go. I felt safe—not exactly comfortable, but perfectly safe. I could not even muster up a spasm of the spine when a member of our party leaned over and whispered in my ear that any one of these gentry roundabout us would cheerfully cut a man's throat for twenty-five cents.

I was surprised, though, at the moderation of the cost; this was the only cheap thing I had struck in Paris. It was cheaper even than the same job is supposed to be in the district round Chatham Square, on the East Side of New York, where the credulous stranger is so frequently told that he can have a plain murder done for five dollars—or a fancy murder, with trimmings, for ten; rate card covering other jobs on application.

In America, however, it has ever been my misfortune that I did not have the right amount handy; and here in Paris I was handicapped by my inability to make change correctly. By now I would not have trusted any one in Paris to make change for me—not even an Apache. I was sorry for this, for at a quarter a head I should have been very glad to engage Apaches to kill me about two dollars worth of cabdrivers and waiters. For one of the waiters at our hotel I would have been willing to pay as much as fifty cents, provided they killed him very slowly. Because of the reasons named, however, I had to come away without making any deal—and I have always regretted it.

#### **Evening Sport in European Capitals**

AT THE outset of this article I said the English had no night life. This was a slight but a pardonable misstatement of the actual facts. The Englishman has not so much night life as the Parisian, the Berliner, the Viennese or the Buda Pest; but he has more night life in his town of London than the Roman has in his town of Rome.

In Rome night life for the foreigner consists of going indoors at eventide and until bedtime figuring up how much money he has been skinned out of during the course of the day just done—and for the native in going indoors and counting up how much money he has skinned the foreigner out of during the day aforesaid. London has its night life, but it ends early—in the very shank of the evening, so to speak.

This is due in a measure to the operation of the earlyclosing law, which, however, does not apply if you are a

bona-fide traveler stopping at your own inn. There the ancient tavern law protects you. You may sit at ease and, if so minded, may drink and eat until daylight doth appear or doth not appear, as is generally the case in the foggy season. There is another law, of newer origin, to prohibit the taking of children under a certain age into a public house.

On the passage of this act there at once sprang up a congenial and lucrative employment for those horrible old-women drunkards who are so distressingly numerous in the poorer quarters of the town. Regardless of the weather one of these bedrabbled creatures stations herself just outside the door of a pub. Along comes a mother with a thirst and a child. Surrendering her offspring to the temporary care of the hag the mother goes within and has her refreshment at the bar. When, wiping her mouth on the back of her hand, she comes forth to reclaim the youngster she gives the other woman a ha'penny for her trouble, and eventually the other woman harvests enouge ha'penny bits to buy a dram of gin for berself. On a rainy day I have seen a draggled, Sairey-Gamp-looking female caring for as many as four damp infants under the drippy portico of an East End groggery. It is to the cafés that the early-closing law

chiefly applies. The cafés are due to close for business within half an hour after midnight. When the time for shutting up draws nigh the managers do not put their lingering patrons out physically. The individual's body is a sacred thing, personal liberty being most dear to

(Continued on Page 65)

#### By Edwin Lefevre CHEAP AT A MILLION BY WILL GREFE

HE telephone operator in E. H. Merriwether's office manipulated the plugs in the switchboard and answered in advance:

"Mr. Merriwether's office!"

From the other end of the wire came:

"This is the Rivulet Club. Mr. Waters wishes to speak to Mr. E. H. Merriwether. Personal matter."

"He's engaged just now. Will any one else do?"

"No. Say it is Mr. Waters-about Mr. Tom Merriwether."

People resorted to all manner of tricks and subterfuges to speak to Mr. E. H. Merriwetherdeluded people who thought they could get what they wished if only they could speak to Mr. Merriwether himself.

They never succeeded. He was too well guarded by highly paid experts who prevented the waste of his precious time. But the telephone operator knew her business. She switched the would-be conversationalist on to the private secretary's line, saying:

"Mr. Waters, Rivulet Club, wishes to speak to Mr. E. H. in regard to Mr. Tom Merriwether."

'I'll talk to him," hastily said the private secretary. "Hello, Mr. Waters! This is McWayne, Mr. Merriwether's private secretary. Has anything happened to Tom that - Oh! Yes-of course! At once, Mr. Waters."

McWayne then had the operator put Mr. Waters on Mr. E. H.'s wire.

"Who?" said the czar of the Pacific & Southwestern. "Waters? Oh, yes. Go ahead!" And Mr. E. H. Merri-

wether heard, in a young man's voice: "Say, Mr. Merriwether, some of the fellows here thought I'd better speak to you about Tom. He's been acting kind of queer; of course I don't mean crazy or-er-alarming; but-don't you know?-unusual. . . . Yes, sir! A little unusual for him, Mr. Merriwether. Today it was about the opera. Says he's got to get a certain seat, no

matter what it costs. Of course it isn't our business. Oh, no; he never drinks too much. No; never! We don't think we are called on to follow him to the Metropolitan, where he has just gone; but we thought you ought to know it. Please don't bring us into any- You know we are very fond of Tom; and we were a little worried, he's been so unlike himself lately. We teased him about being in love, and he-er-he seemed to get quite angry. . Yes, Mr. Merriwether; we'll keep you posted; and please don't give me away. It was a very delicate matter - Don't mention it, Mr. Merriwether. We'd all do anything for Tom, sir. Good by.'

E. H. Merriwether, the greatest little cuss in the world. as his admirers called him, hung up the telephone. His face, that impassive gambler's face which never told anything, now showed as plainly as could be that he was

wounded in a vital spot.

His son Tom was all this great millionaire had! His railroad became so much junk and his vast plans just so much waste paper as he thought of Tom. Was the boy going insane? Was it drugs? Was it one of those mysterious maladies that break millionaires' hearts by baffling the greatest physicians of the entire world and being beyond the reach of gold? Or was it a joke? Young Evert Waters was a friend of Tom's; but might not he exaggerate? He rang the bell for his private secretary.

"McWayne, send somebody with brains to the Metropolitan Opera House to find out whether my son Tom has been up there-box office-and what he is up to. I want to know how he acts. I want to know where the boy goes and what he does, whom he sees and where. Get some specialist on-er"-he could not bring himself to say mental diseases-"on nervous troubles, and make an appointment with him to come to my house tomorrow morning. He will have breakfast with us-say, at eightthirty. I don't want Tom to know.

"Be ready to notify the papers to suppress any and all stories about Tom. I fear nothing and expect nothing,

because I know nothing. Drop everything else and attend to these matters at once. I have heard that Tom is acting a little queer. It may be a lie or a joke-or a trick. I want to find out-that's all."

Six Millions a Year

He would learn before he acted decisively. He stared at a pigeonhole in his desk marked T. T. M. There he kept all letters Tom had written him from boarding school and from college. Presently he raised his head and drew a deep breath. There was no need to worry until he knew. It would be a waste of energy and of time; and, for all his millions, he could not afford the waste. He rang a bell; and when a clerk appeared he said in his calm voice:

"I'll see Governor Bolton the moment he comes in."

There was a big battle on between capital and labor. He was in the thick of it. He put Tom out of his mind for the time being. He could do that at will; but he could not put Tom out of his heart-this little chap that people called ruthless.

OM MERRIWETHER went to the box office at the Metropolitan and said pleasantly, as men do when they ask for what they know will be given to them:

"I want the seat just back of G 77-orchestra-for tonight. I suppose it will be H 77."

The clerk, who knew the heir of the Merriwether millions, said:

"I'll see whether we have it, Mr. Merriwether." He saw. Then he said, with sincere regret: "I'm very sorry. It's gone."

"I must have it," said Tom determinedly.

"I don't quite see how I can help you, Mr. Merriwether. I can give you another just as -

"I don't want any other seat. Who bought it?"

"I don't know. It may be a subscription seat, sold months ago."

"It's the double seven on the seventh row that I am concerned about. I want the seat just back of it."

"I'll call up the ticket agencies. There's a bare chance they may have it." After a few minutes he said: "I'm very sorry, Mr. Merriwether, but they haven't it."
"I'm willing to pay any price for H 77. I'll give you a

hundred dollars if you -

"Mr. Merriwether, I couldn't do it if you offered me a thousand! If I could do it at all I'd be only too glad to do it for you-for nothing," the clerk said, and blushed. Everybody liked Tom.

The sincerity in the clerk's voice impressed young Mr. Merriwether, who thanked him warmly and withdrew. The baffled feeling that he took away with him from the ticket window grew in intensity until he was ready to fight.

It was a natural-enough impulse that led him back to 777 Blank Avenue: but he was not quite sure whether he was angry at the man for telling him to do what was obviously impossible or at himself for determining to find her!

He rang the bell of the house of mystery. The footman that answered was one of the intelligent four; but his face was impassive, as though he had never before seen Tom.

"Your master?" asked Tom abruptly.

"Your card, please," said the footman impassively, Tom gave it to him. The man disappeared, presently to return. "This way, sir." And at the door in the rear he paused and announced: Mr. Merriwether!'

The master of the house was in his usual place. He bowed his head gravely and waited.

"I couldn't get the seat," said Tom with a frown.

"It is written: Vain are man's efforts!"

"That's all very well, my friend. But the next time -

"Fate deals with time-not with next time! There is no certainty of any time but one. If you can do nothing I can do nothing. I still say: The seat back of G 77 tonight."

Tom Merriwether looked searchingly into the calm eyes before him. The baffled feeling

returned; also, a great curiosity. What would the end be? At length he said: "Good day, sir." He half hoped the man would volunteer some helpful remark. "Good day, sir," said the man with cold politeness.

Tom went back to the opera house and asked for somebody in authority to whom he might talk. They ushered him into Mr. Kirsch's presence. Mr. Kirsch, amiable by birth, temperament and training, listened to him with much gravity; also, with a concern he tried to conceal, for it was too sad—a bright, clean-living, intensely likable chap like Tom, only heir to the Merriwether millions!

Fearing a scene he told Tom that he would speak to the ticket-takers in the lobby to be on the lookout for ticket H 77. Then he conferred with the emissary McWayne had sent, who thereupon was able to send in a most alarming

The private secretary softened it as much as he could and even dared to suggest to the chief that it might be a bet; but the little czar of the Pacific & Southwestern, who had never flinched under any strain or stress, grew visibly older as he heard that his son was offering thousands for an opera seat-for the seat back of the double seven, seventh row. It could mean but one thing!

Tom was so fortunate as to be standing beside the ticketcollector at the middle door of the main entrance when the owner of H 77 appeared. He was a fat man with a pink and shiny face, a close-cropped mustache and huge pearl studs. The fat man was fortunately alone.

"Sir," said Tom, "I should like to speak with you."

The man looked apprehensive. Then he said:

"What is it about?"

"For very strong personal reasons I should like to exchange tickets with you. I can give you G 120-every bit as good—on the other side of the aisle."

"Why should I change?" queried the shiny-faced man suspiciously.

'To oblige a very nice young lady and myself. Of course if you prefer to be paid -

"I don't need money."

"Well, I'll pay you a hundred dollars for your ticket," said Tom coldly.

The man shook his head from force of habit, in order that Tom might see he was offering too little. Then he said recklessly:

"It's yours, my friend. I have a pet charity. I'll give your money to it. Where's the hundred?"

Tom took out a small roll of yellow bills, pulled off one and handed it to the man with the pet charity, who took it, looked at it, nodded, put it in his pocket, gave the coupon to Tom, and then held out his right hand.

"Where is the ticket for G 120 that you'll give me in place of mine?"

Tom gave it to him and walked into the house, not knowing that McWayne's emissary had listened and reported. He sat in H 77 and tried to laugh at his own absurd behavior; but somewhere within him-away in, very deepsomething was thrillingly alert, tantalizingly expectant.

The seat before him was empty. It remained empty during the first act. It angered Tom that the climax should be so long in coming. The three seats in front of him remained vacant until just before the curtain went up on the last act. Somebody came in just as the lights were lowered and occupied seat G 77.

Tom sat up and braced himself. He leaned over, vaguely desiring to be near her. Unconscious that he was under a strain, he nevertheless drew a deep breath.

Nothing Had Happened - Except That He Again Had Made an Ass of Himself!

Instantly there came to him the odor of sweet peas, and with it thoughts of summer, of a beautiful girl, of a soul mate, of a wife. Love filled his being. He wished to love and be loved. He wished to be somebody's husband, so that he might begin to live the life he was to live until the day of his death!

He leaned back in his chair and again inhaled the fragrance of sweet peas-the odor that must mean kisses in the open; the inarticulate lovemaking of breezes and blossoms; the multitudinous whispers of midsummer nights heard by love-hungry ears. And then the music! There came the breaking of a heart about to cease beating and the sobbing crash of the brasses in the finale. It was almost more than Tom could bear.

Then the curtain fell and light flooded the house. People streamed out. Tom twisted and turned to see the face of the lady who made him think of the sweet peas, which made him think of love and marriage and children-but she was wrapped to the cheeks in a fur-edged opera cloak and her head was covered with a black lace wrap. He could not see her face; and after rivulets of people reached the main stream in the middle aisle he found himself hopelessly separated from her. He tried to jostle his way through. McWayne, his father's private secretary, suddenly happened to be there.

"Hello, Tom!" he said. "What's your rush?" Tom saw that it was useless to pursue the phantom of sweet peas and dreams of love unless he vaulted over the stalls. McWayne's presence made him realize how his friends would be shocked by such actions.

"No hurry at all," said Tom, who, after all, was a Merriwether. "Just wanted to see whether I knew that girl."

"I'll bet she's a pippin!" said McWayne with a friendly smile. It irritated Tom.

"I don't know any of your friends," said Tom coldly; "lady friends and pippins, fellows like you call them, I

That was what convinced McWayne that the worst was to be feared about poor Tom, who was so considerate and amiable when normal. Poor Tom! McWayne telephoned to the waiting E. H. Merriwether, whose only reply was to ask the private secretary to arrange to have Doctor Frauenthal, the great specialist, at breakfast in the Merriwether house the next morning, without fail.

It was quite a common occurrence for Doctor Frauenthal to meet-under false pretenses, as it were-persons whose sanity was suspected by fond relatives who dared not openly acknowledge their suspicions. He was a man whose eyes had been compared to psychic corkscrews, with which he brought the patient's secret thoughts to the light of day. Some one said of him that, by inducing a feeling of guilt and detection among the predatory rich, he was able to exact colossal fees from them. He was the man who had made Ordway Blake give up making six millions a year in Wall Street by quitting. Mr. Blake was still alive.

Frauenthal was introduced to Tom as a gentleman whose advice "E. H." desired. The men conversed on various topics apparently haphazard; but in reality Tom, without knowing it, was answering test questions. The answers could not conclusively prove insanity, but they would certainly show whether a more thorough examination was necessary.

Mr. Merriwether and Frauenthal left the house together. They entered the waiting brougham. The great little railroad magnate gave the address of the doctor's office to the footman; then turned to Frauenthal and said calmly: "Well, what do you think of him?"

His voice was steady and cold, his face imperturbable; his eyes were fixed with intelligent scrutiny on the specialist's, but his fingers tightly clutched a rolled morning newspaper.

Frauenthal turned his clinical stare on E. H. Merriwether, as though the financier were really the patient. He swept the little man's face—the eyes, the mouth and the poise-and then let his eyes linger on the clenched fingers about the newspaper.

The iron-nerved, glacial-blooded, flint-hearted Merriwether could not control himself after forty-five seconds of this. He flung the newspaper on the floor violently.

"Go ahead!" he said harshly.

The doctor did not smile outwardly; but you felt that within himself he had found an answer to one of his own unspoken questions about the father of the suspect.

There are, Mr. E. H. Merriwether," he began in the measured tones and overcareful enunciation of a lecturer at a clinic, "various forms of—let us say—madness; and your son Tom, a fine young man of twenty-eight, is quite unmistakably suffering from -

He paused to give the fine young man's emotionless father an opportunity to show human feelings. Frauenthal was always interested in the struggle between the emotional and the physical in his millionaire patients.

"Go on!" said E. H. Merriwether, so very coldly as to

His eyes never left the alienist's own secret-draggers; but he was drumming on his thigh with the tips of his uncontrollable fingers. Ordinarily his desk would have screened from sight this betrayal of human feeling.

"Your son, sir, is suffering, beyond any question, from the oldest madness of all-Love!"

"What?"

"Your son Tom is in love. That is what ails him."

"Are you serious?" Mr. Merriwether was frowning fiercely now.

"You'll think so," retorted Frauenthal coldly, "when you get my bill."

"My boy Tom in love?" repeated the czar blankly.

"Yes."

"With whom?"

"I don't know. I'm a neurologist-not a soothsayer."

"Well, suppose he is in love-what of it?"

"Nothing—to me."
"Then what is serious about it?"

"I can't tell you, for its seriousness to you depends on rour point of view toward society at large. There are, of course, the obvious disquieting circumstances."

"For instance?"

"He is a fine chap-healthy, bright, honest. What is the reason he has said nothing to you? Is he ashamed or

afraid? If he is ashamed it is very serious to both of you. If he is afraid—well, then the seriousness depends on how intelligent a father you have been to him.'

"Don't talk like a fool! I've been a good father to him; of course

"Wait! Wait! First tell me why you do what you ask me not to do?" In the specialist's eyes was a professional curiosity.

"What do you mean?" said E. H. Merriwether impatiently. It exasperated him to be puzzled.

'Why do you talk like a fool?"

said Frauenthal. Nobody ever talked that way

to Mr. E. H. Merriwether, overlord of the greatest railroad empire in history. He flushed and was about to retort angrily, but controlled himself in time. The brougham had reached

Frauenthal's office. Mr. Merriwether spoke too calmly-you could feel the tense restraint:

"Doctor Frauenthal, I've heard a great deal of your wonderful ability."

He paused. It came hard to him to be ingratiating. This difficulty is the revenge which Nature takes on people who acquire the habit of paying money for everything in this world. Such men cannot talk except with a checkbook, and the checkbook loses the power of speech before happiness-and before death.

"What very difficult thing is it you wish me to do for you?" asked Frauenthal coldly. "You are sure Tom is not --- " He hesitated.

"Crazy?" prompted the specialist.

"Yes."

"Yes; I'm sure he is not. Therefore he is saner than you."

Mr. Merriwether let this remark pass. He was anxious to save Tom. This man was uncannily sharp. He said:

"And can't you do something, so that Tom will not -

"I am not God!" interrupted Frauenthal.

"Then, what can I do? What do you suggest might be

"As a neurologist?"
"Yes."

"Nothing." "Then as a man of the world—as one who knows human nature. You see, this-this-er-sort of thing is not in my line. What shall I do?" It was a terrible thing for the great Merriwether to confess inefficiency in anything.

"Pray!" The little magnate flushed.

"Doctor Frauenthal," he began with chilling dignity, "I asked

"And I answered. Have your millions deafened you? Pray! Pray to whatever other God you may have that the lady prove to be neither a prima donna nor a novelist. A temperamental daughter-in-law is really worse than you deserve, for all the money they say you have made. There are checkbook gods and stock-ticker gods; and there is also God. I'd pray to Him if I were you. Good day, sir!"

The footman had opened the door, and the great specialist, without another look at the railroad man, got out and walked into his house.

"Where to, sir?" asked the footman.

Mr. Merriwether, however, was vexed to think that in relieving his anxiety over Tom's sanity Frauenthal had replaced it with a dread question-Why had not Tom told his father about her? The boy must be either crazy or in love. If he was not crazy, who in blazes was she? What was she? Why was she? All this angered him. He muttered aloud:

"Hell!"

"Yes, sir-very good, sir," said the footman from force of habit. Then he trembled; but his master had not heard him. The footman breathed deeply and said tremulously: "B-beg p-pardon, sir?"

"Nearest Subway station!" said E. H. Merriwether.

He was in a hurry to reach his office, not because he had important business to transact there, but because somehow he always thought best in his own chair before his own desk in his own office. There he was an autocrat, and there he could think autocratically and issue commands that were obeyed. He had much thinking to do-Tom was concerned, his son Tom; and Tom's future. And it was now clear that T. T. Merriwether's future was also the future of E. H. Merriwether!

Why had this thing come on him? Talk about your thunderbolts out of a clear sky-this love affair was a million times worse! It was mysterious-and it is well known in Wall Street that a mystery is worse than

> nitroglycerin - infinitely more dangerous. Ignorance is always fatal.

What was this love affair? How far had it gone? Just where was the dynamite stored? Whowasshe? Why did not Tom say something? Why could not Tom have fallen in love safely? Why could he not have married a good girl who would help him and help E. H. Merriwether; help both by minding her own business-to wit, a few little male Merriwethers?

It was time Tom became his father's successor-to-be. E. H. Merriwether had loved to do his own work his own way all his life. It was his pleasure. But the work suddenly took on an aspect of far greater importance than the worker. The work was the work of the Merriwethers-not of one Merriwether: not even of the great E. H., but of all the Merriwethers, living and to be. Tom must be

trained to be not only the son of a

"Mr. Merriwether, I Couldn't Do it if You

Offered Me a Thousand!"

Merriwether, but to be himself a Merriwether. And therefore E. H. must cease to be a railroad expert toward Tom; he must become Tom's father, the trainer of a successor fiesh and blood the same; the fortune the same.

And, as a sense of impending loss always heightens values, E. H. Merriwether suddenly realized how important to him and to his happiness Tom was. He loved Tom, who was not only his only son but the only Merriwether. That told everything: He loved Tom.

AFTER his father and Doctor Frauenthal left the house Tom tried to feel that he had finished his breakfast that is to say, he attempted to read the newspapers. But the printed letters failed to combine themselves into intelligible forms, and even when he read a word here and there his mind did not record it. Obeying an unexplained impulse

Then he sat down merely because he had been standing. Then he tried to reason why he was sitting and what sitting there thinking of himself in that particular position meant. But the sky was too blue! It called to him in an

azure voice that made him long for the sunshine and the open air, and the rooflessness of outdoors that permits ten million fancies to soar unchecked.

Also, he longed for something; and, though he knew that he longed, he did not know exactly what it was he longed for, because it was not his mind that desired it, but all of him; and all of him did not think with precision. Young men are apt to feel like that in the springtime-also young women. Also, widowers and canaries and heifers and burros-and even bankers!

Therefore Tom swore at that nothing which is always something and gave up trying to make himself think that he wanted to read the morning papers. His nervous system coined a proverb for him: "When in doubt, walk out!" So he walked out of the house

and crossed the avenue. He found himself in Central Park-the remedy which the very rich do not and the very poor cannot use to cure the spring in the blood. And as he walked the soul-fidgets left him, so that after a mile or two he quite cold-bloodedly began to think of his

most pressing duties. He went about them systematically. The first thing he had to do was some shopping: shopping on Blank Avenue—on Blank Avenue where the jewelry shops were; in the jewelry shops where the wedding presents were. There! He was off again. Everybody was getting married! What business had people to make people think of wives; yes, wives-plural; lots of wives; all beautiful, all desirable and worthy; all lovely and loving and lovable; and all fit to be rolled into one-Tom's?

It was not polygamy. It was merely composite photography. The one he desired had a little of each of the girls he admired. She was the amorous crazy-quilt that youth is so apt to dazzle itself with in the springtimea nose from a friend; two lips from a stranger; a complexion from a distant relative; a pair of eyes from the sky; a heart from the heart of the sun—and lo! the wife-to-be!

And so the wedding presents—a silver service, to be used by two sitting on opposite sides of a table, looking into each other's eyes; a glittering string, to be admired on a wonderful throat—were heavy enough to keep Tom's soul from soaring. And because his feet were on the pavement he soon found himself—of course!—before 777 Blank Avenue.

Why should he not go to that house? And why should he not ring the bell? Why not?

His intentions were above suspicion, though marriage is a serious thing; but, really, now was the time for the adventure to appear-even if the adventure turned out to be merely the adventuress.

Therefore, with the inexorable logic of the most illogical state of mind known, he rang the bell and waited with an eagerness-half hope, half curiosity-most unusual among people who, like Tom, early acquire the habit of asking, checkbook in hand, for whatever they wish.

The footman who answered was one of the men with the

over-intelligent faces.

"I am Mr. Merriwether. I wish to see your master." Tom's voice rang a trifle more commandingly than the occasion appeared to call for. There was a physiological reason for it. The man hesitated so that Tom wondered; but presently all expression vanished from the nonmenial face and the footman said:

"This way, if you please, sir."

He preceded Tom to the door of his master's library. He rapped twice smartly and waited in an attitude of listening. Tom also listened intently; he could not have told why he did it—though it was, of course, inevitable.

Not a sound was heard. The over-intelligent footman's lips moved for all the world as though he were counting, and presently he opened the door and announced: "Mr. Thomas Thorne Merriwether - 7-7-77."

"Do You Feel That You Must Meet Her Joon or Die?"

Tom entered. The master of this strange house was seated at the over-elaborate library table, writing. He looked up; but before Tom could speak the man said

"I cannot do anything for you, sir."

It was so much like a refusal to give alms to a beggar that Tom flushed angrily. He managed to check a sharp retort on the very brink and, instead, began in a mildly

"Of course you know what I -

"Of course!" interrupted the man rudely; and he began impatiently to drum on the edge of the table with his penholder. "Do you imagine for a minute that you are the only mateless male in New York looking for his destined bride? And do you really think that the fruitlessness—until now—of your search is a world-tragedy? Because your name happens to be Thomas—which is a descriptive title when applied to marriageable felines of your own sex-do you fancy I am concerned with your affairs? Young man, you are the only son and heir of a very rich man; but there are some things that money cannot buy. Love is one of them."

He frowned at Tom, but something in the young millionaire's face made him relent. He went on, more kindly, more encouragingly:

"My boy, she is seeking you, even as you are seeking her. She is very beautiful! You will meet her at the appointed hour-have no doubt of it. After your perfectly stupid

failure at the opera ---- Wait!" He held up a hand as Tom was about to speak in self-defense. futility of your maneuvers shows that youth, brains, money, persistence and desire are all powerless to hurry fate. As you, who have never seen her, love her, she loves you though she has never seen you. She will know you as you will know her; but she is gone!"
"Where?" Tom spoke before he knew it.

"Be patient! After you meet her you will live with her until death parts you."

He said this, without theatrical emphasis, in a most matter-of-fact way. Tom's suspicions, always present in this house of mystification rather than of mystery, were not made livelier by the man's words; but neither were they allayed by the tone of his voice. He hesitated and then, adventure whispering, he said:

"To be perfectly frank, I am interested in this -

"Young man, I told you before that I ask nothing of you—no favor, no money, no service; not even your interest. When I asked you to do a certain thing you did it. I am not particularly grateful. You could not have refused! Possibly you can explain to your own satisfaction your own

inexplicable acquies-

cence; you doubtless have evolved a dozen most ingenious theories to account for your doings and mine. The shortest and easiest explanation is the true one-fate. After you marry you will compare notes with her-and yet you will not understand why I concerned myself with your lives. You will perplex yourselves so unnecessarily: all because of your unwillingness to say: fate!

"Men hate fate as a hypothesis. It is not flattering to admit that we are but puppetsthe strongest of us no stronger than an autumn leaf in the wind. And because you do not see fate you do not believe in it. And, for fear of being considered an ass by a lot of asses who also do not believe in fate, you will never tell any one your romanticstory. And yet, of the scores you call friends, there are only seven men who are happily married. And those seven I helped, as I have helped you and as I shall help those I am ordered to help. Even now the Dispeller of Darkness is out, making one heart send a message in the dark to another heart waiting for it!"

"Do you mean to say you cannot or will not arrange for my meeting the mysterious person you tell me I am going to marry?"
"I mean to say that your coming to this house with

such a hope merely means a waste of your time, young sir, and of mine. You will meet your love, but you cannot find her. No man finds happiness by means of a systematic search. It comes or it does not come—as God wills."

The man rose. Tom also rose and said:

"But at least tell me where this-this alleged fate of mine is.

The man shook his head with a smile that was in the nature of a mild sneer.

"Doubting Thomas! He won't admit it, but he can't deny it! Ah, so wise! So clever in his suspicions! So intelligently skeptical! Ah, yes!

Still nodding in ironical admiration he approached the

filing cabinet.

"Let me see-you are 7-7-77." He pulled out Drawer Seven in Section Seven and took out an envelope from which he drew a lot of papers. He read a typewritten sheet. He replaced the papers, turned and stared doubtfully at Tom, muttering half to himself: "I don't know! I don't know!"

"What?" asked Tom.

"Do you really want her? Do you feel that you must meet her soon or die?"

#### Dimming a Bright Record

THE Interstate Commerce Commission should have decided the application for higher freight rates some months ago, and the decision should have been in favor of the railroads.

Time out of mind the unconscionable dilatoriness of our courts has been condemned by the legal profession, as well as by laymen, on the sound ground that justice delayed is often justice denied. Any judicial body that cannot act with reasonable promptness is quite likely to do as much harm as good, however pure its intentions and righteous its tardy judgments may be.

Reasonable dispatch is peculiarly important in a body like the Interstate Commerce Commission, the jurisdiction of which over common carriers is constantly increasing. Submitting all future issues of railroad securities, for example, to a tribunal constitutionally unable to make up its mind, except by a sort of glacial movement, would be rather appalling.

Heretofore the commission, on the whole, has acted with reasonable promptness. Its unreasonable delay in this case is all the more regrettable because it gives ground for suspicion that the commission is afraid to act. The commission is perhaps our best governmental agency. Its responsibilities are great and it has discharged them with high credit, which is precisely why we protest against its comparative failure in this case.

#### The Mexican Problem

PROBABLY a majority of the inhabitants of Mexico are of pure, or mixed, Indian blood. An English traveler reports that in going over the country some years ago he frequently remarked on the poor estate and bad treatment of the Indian or near-Indian natives; and his remark often brought the half-impatient response: "They are animals, señor; they are not people."

That is the real problem in Mexico. That the United States, by intervention or otherwise, can solve it or contribute very materially to its solution seems improbable. A large part of the population of Cuba is still pretty frankly treated on the animalistic theory.

-- - - -

#### The Banner Dependency

ENGLAND'S rule in India is often pointed to as the world's most successful example of the government of a people of inferior culture by an alien race far advanced in civilization. From an article on the state of India in a most respectable and responsible British journal—The Statist—we condense the following:

In size the dependency is about equal to Europe outside of Russia. Its population is between one-sixth and onefifth that of the entire globe. It is so dependent on agriculture that its twenty-seven largest cities contain only two per cent of the country's inhabitants. The state of agriculture is so low that going wages are only eight cents a day. The monsoon rains, on which crops depend, are so uncertain that there is an extensive crop failure every few years, while interior transportation is so imperfectly developed—the railway mileage being little over one-tenth that of the United States, though India has three times that country's population—that crop failure in one district means hunger there, though there may be grain to spare in another district. The ignorance and superstition of the people are so extreme that the chief difficulty of British officers in fighting plague arises from the opposition of the natives, who think the foreigners are trying to poison them.

Undoubtedly England has done much in India; but the state of the great mass of the people of that country is still probably somewhat inferior to the state of the inhabitants of France when the first Capet was crowned. The white man's burden contains very few Christmas presents for the colored brother.

#### Poor Business

THE nine largest American cities contain over twelve and a half million people, or one out of eight of the entire population. The small land area which they occupy, together with the buildings on it, is assessed for taxation at nearly fourteen billion dollars, which is probably somewhere from seventy-five to ninety per cent of its market value. More than half of this value attaches to the land alone.

The gross revenue receipts of these cities amount to four hundred and forty millions, two-thirds of which is derived from the general property tax, mostly a tax on real estate. They undertake the education of all children of school age within their borders, and a little more than a million and a half children daily attend their public schools. Ninetenths of these children are in the elementary schools, and on the education of each elementary pupil the cities spend forty-two and a half dollars a year. All these cities taken together have only one hundred thousand pupils in the secondary public schools.

We do not consider that a creditable showing. That the nine largest communities in the country, containing an eighth of the population and actually much more than an eighth of the total wealth, spend only seventy million dollars a year on public education strikes us, on the whole, as discreditable.

They are undoubtedly creating land values at the rate of three or four hundred million dollars a year. They grant many special and monopolistic privileges from which they ought to get more revenue. They are capacious mines of wealth for certain individuals. We should like to see them mine some of the wealth for the public schools.

#### Government and Business

ENGLAND and Germany are the commercial rivals with whom this country has seriously to reckon. Both those nations have adopted many so-called radical policies. In both the government is constantly intervening in private business affairs, by way of exacting rather stiff taxes, of requiring safeguards to life and limb in factories and sanitary conditions generally wherever a large number of people are employed. England fixes a minimum wage for certain trades and makes employers contribute to a fund for old-age pensions. Both nations enforce a system of compensation to employees who are hurt in industrial accidents.

In this country, however, we have something quite different from all that. We have a Government at war with business, not merely taxing and regulating but enforcing its own ideas as to how business should be organized. These ideas are mostly mere theory and are diametrically opposed to the tendency in business organization that springs from experience. The records of the Department of Justice show the extent of the Government's war on business during the last six years and the antitrust bills now before Congress will provide new and sharper weapons.

True, the Government says the business it is fighting is bad business; but when two great German steamship lines proposed to set up competitive rates the German Government said that was bad business and stopped it. In fine, it has never been proved that restraint of competition is necessarily bad in any other sense than that it conflicts with our Government's theory; and the records above referred to show how considerable a part of the actual business organization of the country comes under the Government's ban.

Every civilized government taxes and regulates; but the attempt to change the very structure of business is practically confined to the United States.

Under the new antitrust laws the attempt promises to be more far-reaching and drastic than ever. The fact strikes us as of considerable importance.

#### First Aid for Anarchy

THE police in the United States perform the same beneficial function for anarchy that the press agent performs for musical comedy, and they do it gratis. Without the extensive advertising and the implication of importance that the police so generously supply, anarchy in this country would be in the position of a variety show without a poster,

an electric sign or a line of reading matter. Whatever harm it did would be done merely to itself, and no one else would know of it.

If the police wished to discourage anarchy and acted with the intelligence that ought to characterize a corner peanut stand, they would exert themselves to get the largest possible crowd at every anarchist meeting and see that the acoustic arrangements were perfect.

For complete insurance against the spread of anarchy nothing could be better than a copious dose of anarchist oratory; in fact nothing else could be so good. Every suppression of an anarchist speaker amounts to an official and monstrously false statement that the speakers had something important to say. Every police raid is worth more to the cause than all its literature.

The right way to deal with anarchy is to get it out in the open and let it have its say. An almost universal sense of humor will do the rest. Any man who ever listened for an hour to anarchistic rhetoric, and thereafter took anarchy seriously, ought to be appointed a police censor of speaking for life, on the ground that he is a hopeless blockhead.

#### Easy Arguing

In the pages of the Congressional Record we find this and, with some variation of details, much the same stuff is repeated there several times:

The railroads of the United States are capitalized at twenty billion dollars, on which they earn five per cent a year; but they are capitalized at twice their true value. The Government can buy them at their true value, borrowing the money for that purpose at three per cent, and make a sure, immediate profit of the difference between twenty billions at five per cent and ten billions at three per cent, which would come to seven hundred million dollars a year, or nearly enough to pay its running expenses.

Except that the railroads do not earn five per cent on twenty billions, are not capitalized at twice their value, and the United States could not borrow ten billions, or anything like that sum, at three per cent interest, this argument is unanswerable.

#### What Washington Can Do

SAID President Wilson a little while ago: "When I think of the number of men who are looking to me, as the representative of a party, with hopes for all varieties of salvation from the things in the midst of which they are struggling, it makes me tremble."

A conscientious man in the President's position can hardly avoid that feeling, yet it is partly mistaken. The capital is always aswarm with men who think or pretend that the fate of the nation hangs on the particular project in which they are interested. The editorial office of every big publication is showered with appeals to benefit mankind by commending or condemning this or that bill; but of only about one measure out of a hundred can it be said, with anything like certainty, that in terms of concrete human experience it would do any particular good or any particular harm.

Even of so great a measure as the Tariff Act a candid man might well hesitate to affirm that any human life would be freer or happier or more open to opportunity on account of it. He thinks it will help, but his eye cannot follow the curve of its benefits.

To protect a man from dangerous machinery, to give him a dwelling free from tubercular germs, to tax him only ten dollars instead of twenty—in some humble matters of that kind, we can say positively: This makes life easier.

That is why the Mexican affair is probably the most important with which this Administration will have to deal. Getting men shot in that connection positively does not make people freer or happier, or more open to opportunity.

#### Our Lily-Robed Martyr

WHEN Walter Bagehot was editor of the leading financial journal of England be wrote a rather famous book called Lombard Street, the chief purpose of which was to demonstrate that the banking situation in London, from the Bank of England down, was tolerably rotten. To this day the sharpest criticisms of British finance are found where they ought to be—in the leading financial journals.

We need more of that over here. With few exceptions our financial journals devote their editorial energies to utterly futile attacks on the Government; a sheer wasted white paper and black ink, since the criticisms are never read outside a limited circle that is already of the editor's opinion. More free, pointed, intelligent criticism from the inside would be the best thing that could happen to Wall Street.

There is no lack of outside criticism, usually prejudied and often grossly misinformed. It carries no weight among people who know, because it is prejudiced and misinformed. Criticism by a man who knows is what counts. Financial journals ought to supply it, but seldom do. With the very few exceptions referred to, they regard American finance as a lily-robed and meek-eyed martyr at the stake.

# WHO'S WHO-AND WHY

### Serious and Frivolous Facts About the Great and the Near Great

A Successful Specialist in Being Hated

SUPPOSE," said Henry Clay Hall when he retired as mayor of Colorado Springs, "that I have left office the worsthated mayor who ever lived."

Probably Henry Clay Hall was too egotistic about it. One of the inevitable little drawbacks about being mayor anywhere is the retirement accompanied by a large consignment of hate delivered f. o. b. by former admiring constituents for whom nothing was done or to whom something was done. When Henry Clay Hall said he quit in closer personal conjunction with more hatred. detestation, abhorrence, not to say, aversion and dislike, it was quite likely he was pinning a bigger medal on himself than he really deserved.

I do not mean, of course, that Henry Clay Hall was not exceedingly well supplied with the antipathy of his neigh-

bors when he returned to the more peaceful paths of private life, for my advices are to that general effect; but a great many mayors have retired, one way and another, since we began to have those adjuncts to our boasted civilization.

Henry Clay was boasting a bit. He was too personal, too much impressed with the ego of his execration. Well hated we admit; but worst hated—oh, fie! fie! Did he ever hear of—but why call the roll of mayors when discussing the latest addition to the Interstate Commerce Commission?

Mr. Hall has been placed on the Interstate Commerce Commission. The President picked him and he meandered past those stern censors in the Senate. So now he is sitting in on the rate cases and by this time has undoubtedly come to the conclusion that the only thing of importance in this universe is "per ton per mile." On the one hand, there are the railroads. On the other hand, there are the railroads. Also, on the neck, the midriff, the chest, the feet and the diaphragm. In short, there are the railroads.

But where are they? That, dear children, is what the railroads, the railroaded would like to know. So, along with the other gentlemen who are endeavoring to discover this, Mr. Hall has begun

his explorations. Life being short and time being fleeting, they impose limitations; but it may be predicted safely that by the time he has finished his term Mr. Hall will be adequately seized of the information concerning the difference between a preferential and a differential—and that will help some.

To return to the distressed period when he considered himself hated to such an extreme degree. They rather put that mayoralty over on Hall. He was away somewhere on a trip. Colorado Springs was in need of a mayor. The Henry Clay Hall set decided that, inasmuch as Colorado Springs felt it necessary to have a mayor, Henry Clay Hall would be the exact sort of a mayor Colorado Springs felt it necessary to have. They did not go to the trouble of asking Hall anything about his desires in the matter. Instead they elected him to the job and wired him: "Come back and begin mayoring immediately!"

He came back and began. The first thing that happened to him was the usual first thing that happens to mayors everywhere. He had a row over the chief of police. It is a well-known fact, proved by tons of municipal research and investigation, that almost any man could be successful as mayor if it were not for the police question, and that very few mayors are successful because of the questionable police. Eliminate the police problem and mayoring would be one grand, sweet song.

#### A Roundabout Route to the I. C. C.

AS THEY tell the story in Colorado Springs, a powerful person who was a client of Hall's law firm was interested in the chief of police then pertaining to Colorado Springs. As powerful persons who are clients will, he considered the new mayor an asset of his; so he strolled round one day and demanded—not requested, but demanded—that the new mayor reappoint the old chief of police. To make it good he brought along Hall's law partner, who proffered the same demand.

"Now, Hank," they chanted in close harmony, "get busy and reappoint our man."

Whereupon Henry Clay Hall, rising, said:

"When Pike's Peak, towering majestical yonder, becomes a hole in the ground, then, and not until then, shall I do this thing."

"You refuse us?"

began to have those adjuncts to our boasted civilization. "I refuse you, I confuse you, I diffuse you, I suffuse you!

And, looking at the matter judicially, it must be said that There is positively nothing doing along those lines."

Well, that was where Henry Clay Hall began to get the idea he would leave office rather well hated, as such things go; for the chief of police he did appoint was not much of a success, and H. C. Hall woke up to the fact that it takes more than a straight mayor to run a straight city—as, indeed, it takes less than a crooked one to run a crooked city. Hall had his hands abundantly full.

He is a serene person. Aside from his tidy accumulation of hate he has a large assortment of aplomb. Few persons exist who can fuss H. Clay Hall. He is an exact, painstaking and correct citizen. He is neat and particular and precise. When he makes a statement he makes said statement with a full supply of reënforcements in the way of authority, with abutments of references, pergolas of fact and cupolas of information. He has a habit of knowing what he is talking about. Moreover he is a good speaker, an orator, a fine campaigner. He is as fastidious with his attire as he is with his facts; and it can be said without fear of successful contradiction that he is the best dresser on the commission, and somewhat exclusive.

He was born in the city of New York and was graduated from Amherst and the Columbia Law School. He practiced in the metropolis for a time and then went to Paris, where he remained from 1885 to 1892, acting as counsel to the American legation part of the time and engaging in the law in that gay capital also. His health failed and he returned to this country. His idea was to go to California, but he dropped off at Colorado Springs to see a brother who lived there and decided to remain. This was late in 1892.

Likewise he announced himself as a Democrat. Now in those days Democrats were not good form among the social leaders in Colorado Springs, but Henry Clay Hall got away with it. He and Representative Seldomridge were about the only members of the select circles who had the temerity to stand by the varying principles of the Democracy, and both have their rewards. Hall did not become a politician. He was not so insensible to his social obligations as all that; but he preserved his Democracy, and was of party service as an orator and an adviser.

So there came vacancies on the Interstate Commerce Commission and the name of Hall was presented to the President by the Colorado contingent at Washington, including Senator Thomas. Naturally and immediately there was opposition. No person can be presented for office to the president without opposition arising from some point. If there was an office for every man in the United States, and every man were presented for office, you would

see a lot of folks scooting in from Porto Rico and Guam to oppose them.

"He's a dude!" said one.
"Well," replied the
President, glancing admiringly at a new gray suit,
"I've a rather advanced
taste in dress myself."

And so it went until an opponent came to the White House, eager with the news, and exclaimed: "Why, Mr. President,

this man is a theorist!"
"How about that, senator?" said the President to Senator Thomas, "They tell me Mr. Hall is

a theorist."
"No more than you are,
Mr. President," replied

the ever-ready Thomas.

And, as I have remarked, Henry Clay Hall is now a member of the Interstate Commerce Commission, which may give proponents of other candidates for other offices a line of procedure—or may not.

Suffice it to say, however, that Commissioner Hall's mustache is always in proper alignment, his language ever precise, and his manner always punctilious. If those railroad lawyers try any of their rough stuff on him he will rebuke them fittingly.

# THE CONTRACT By Josephine Daskam Bacon

'N ABOUT two minutes," said Dicky Varnham resolutely, "there'll be one more dead dago; this concrete's setting already."

"For heaven's sake!" Peter replied helpfully, "can't we yell at 'em or some-thing?"

"You can yell," his host agreed, with some bitterness; "but unless you can yell in Sicilian there's nothing doing. Hi, there, Angelo! Get busy, can't you? This damned stuff's gettin' hard!

A swarthy group midway down the hill waved, bowed and smiled; their teeth flashed in the sun. Dicky beckoned furiously.

"Come on! Come on!" he called.

The laborers smiled again and bent to their mysterious mixing; they appeared to be stirring and flavoring a huge witches' brew.

"There! What'd I tell you?" Dick snorted. "It would take Caruso to budge

'em! By George, I believe I'll hire some of that opera squad for the summer! Nancy, for the love of Mike, hop down and kick 'em up here, will you?"

Nancy Varnham unfolded her long legs aminbly and

dropped her book.

"If my hair was down I would kick them, pater," she said seriously; "but you don't kick men with your hair done up. In songs you say: 'O viêni! Viêni!'"

"Well, try it on, then-only hurry! What's hurry in

Allegretto, I suppose," she answered thoughtfully. "Oh, Andy! Andy!

"Hello!" came back in a rich barytone, and all the laborers lifted their caps politely.

"Vieni! Vieni!"

They laughed delightedly.
"Si! si!" they called, and started up the hill.

"And do it allegretto, please!" she shrilled excitedly, dropping the singing voice of a young lady for the frank yell of a sixteen-year-old tomboy. "Allegretto! Allegretto!"
"That's the stuff! Allegretto! Allegretto!" her father

bellowed; and Peter joined in happily, with a bass that had made his college glee club famous: "Allegretto!

"Sounds like some kind of candy to me," said Dick, mopping his dripping forehead, "but it seems to do the job. Know any more, Nance? You'll pay for your board yet."

The Italians fell on a pile of great cobblestones and began to fit them deftly into the stiffening concrete. Dick regarded them critically, fanning himself with a linen tennis hat.

"It's a queer thing," he observed, "but when they slam those rocks in they look as if they'd grown there; when I try it you'd think it was a German aquarium! I wonder why?

"Used to it, I s'pose," said Peter, lighting his pipe and

stretching himself lazily under a big box clump.
"Romans always had baths," Nancy suggested instrucvely: "so I suppose Italians know how to make swimming pools. Shall you really make it deep enough for a dive,

"Twelve feet," said Dick. "You can dive in that if you can dive in anything."

"This'll be bigger than the Girards', won't it, Dick?" Peter inquired idly.

"Gracious, yes! Won't it, father? Theirs is only forty feet-ours is sixty. But theirs is more even and square, and they have a sort of marble wall all round it and bay

trees for every corner. Can't we have bay trees, father? "Oh, Lord, no! This is a different style altogethermore rustic. It's a full third bigger and I'll bet you it costs

She Wavered, Dared Not Believe What She Read There

a third less. That's a regular molded edge of theirs. Betty offered me the molds, but I refused 'em.

"Aren't they spending a lot this season? Girard said something about a shower—off the tennis court."
"She's spending a lot," Dick corrected.

"Aunt Bet made that pool," said Nancy promptly. "Lucia Stanchon says it's her alimony pool."

"For heaven's sake, what do you-are you crazy, Pussy? Don't talk that way!"

"I am only repeating what Lucia remarked," said Nancy icily. "Well don't, then," her father returned very shortly.

"Hop along to the house and ask when is lunch-time-I want a bath before. Clear out, now!"

"I was going anyway," she assured him, "and luncheon is always at half-past one, as you know.'

What does the child mean-alimony pool?" "I tell you what, Peter Forsythe," his host returned, with some heat, "if you expect me to explain to you what a filly of that age means every time she opens her silly mouth you'll have to raise my salary!"

"I suppose so," Peter grunted; "ours is only nine, you see. Lord, how the time goes! To think she was only six when Mat and I had her in the cave! That was a great old summer, Dicky!"

"It certainly worked out all right for you; but you couldn't do it with all of 'em-Betty Girard, for instance.

"I didn't marry Betty," said Peter simply.
"She's a clever woman, all right—Betty."
"None cleverer, I imagine," Peter agreed promptly. "And, of course, you have to give 'em their head."

Peter stuffed his pipe busily.

"Hang it all, Peter, you never liked Betty; but you must admit that you can't treat a woman like that as if

she were the ordinary sort—you simply can't!"
"I don't see why you have decided suddenly that I don't like her-don't be an ass, Dicky!"

"Oh, well, all right; but alimony pool, you know, aunds like a game, don't it? Like coon-can. Say, Forsythe, that's one thing Betty can do well: she certainly can play auction!"

"She does everything well," said Peter Forsythe placidly—"that I ever saw her do, anyhow. Among other things she's brought up her son well," and he glanced significantly at his host's boy, who was just then engaged in teasing the Italian workmen by kicking out the stones from the farther end of the swimming pool as fast as they could put them in.

Dicky grinned.

"Hi, there, Stafford! Get out of that!" he called. "Go up for your luncheon. His mother spoils him, you know,

in vacations," he added. "You can't be as strict as Celestine is and not fall down somewhere."

Dicky whistled cheerily under his shower; but Peter, waiting patiently in his third-floor bath for a sufficient head of water, pursed his lips

as he mused.
"Alimony pool!" he pondered, testing the water with his toe. "Now what does Lucia Stanchon mean by that?"

The trickle of stream collapsed, gurgled, blew a few bubbles and suspended operations entirely.

"I always told Dicky that reservoir was three feet too low!"

Dicky's blithe ragtime melody ceased abruptly and a stream of cold water struck his guest's tub.

"Thank the Lord! There's the luncheon gong now."

Peter Forsythe dashed at his toilet, for his hostess had paid the penalty that lurks for every worshiper of

efficiency; and though the guests might delay in her house, the entrées never did. "Oh! Glad to see you, Betty!" Peter steered his course

to her side. "Walter with you? Hello! It's the doctor. How are you, Stanchon?"

"Timeclock's on the wall by the door," Dicky hailed him genially. "Punch your time, old man! You're docked your grapefruit anyhow."

They chattered through the Varnhams' broilers and praised the Varnhams' incubator; they laughed through the Varnhams' coldframe lettuce hearts and teased Celestine for failing to grow the salad oil; they devoured the Varnhams' rhubarb tart, dripping in Varnham cream, in appreciative silence.

Nancy, her braids bound demurely about her sleek head, whispered momentous confidences to Cynthia Girard, who had signally failed to inherit her gifted mother's brains or good looks, but presented at fifteen a very charming reflection of her father's quiet tact and good nature.

Betty's eyes, unlike her hostess', scarcely rested on her daughter. Celestine's quick, nervous glance fluttered from the clock to Nancy's table manners-to the service of the luncheon—to the gardener, eternally mowing the rich green outside-to the silver tablets by her plate; but Betty Girard, though she had personally administered a country estate from the day when Celestine lay under the heel of a tyrannous superintendent, listened to her friend's economic pronouncements with the polite detachment of a Washington Square cockney.

Though her daughter's training had been the pattern for many a mother with less excuse than a busy artist might claim for neglecting such domestic ties, she seemed as far from Celestine's adolescent problems as any slightly bored maiden aunt. Perfectly dressed, in the latest mode of French Revolution collars, Turkish seraglio skirts, a hat that subtly hinted at the latest European war shadow, and buckled shoes of marquise flavor, her charm of personality and ripe physical beauty actually made of this sartorial mixture an esthetic whole.

"Artists almost always wear kimono sort of clothes and do strange things with their hair," said Marie Fitch, of the sharp tongue and kindly deed; "but Betty pays her corsetière more than I will!"

She was forty-one; but only in his chisel, as he softened and dulled the padding surfaces of her cheeks, had the remorseless sculptor, Time, betrayed a fellow artist. The long line from cheekbone to chin had blurred and sunken here and there; and from her fine nostrils to the upturning corners of her flexible mouth a fold of flesh that had once been intermittent had come perilously near to settling-But her throat was the envy of her friends; and in a season of bizarre jewels and imitation pearls the melting curves of

her shoulder and upper arm, bare as any débutante's and incalculably more alluring, turned her neighbors' gems to

"Betty makes a bank president's wife look as if she had strings of coupons round her neck," said Marie.

And the bank president to whom the mot had been repeated had bitten his lips and replied:

"And little Fitch is right—dash it!"

Her eyes, which were large and heavy-lidded, were always expected-because her hair and skin were richly brown—to follow their natural type; and her husband has been quoted as admitting that he supposed them to be brown when he married her. But as a matter of fact they were grayish hazel, with a golden-flecked iris, though most of her sitters will deny this and assure you that they stared straight at her for hours, while she was painting them.

Her extraordinary detachment from people and things that might be supposed to hold her interest was the continual marvel of her friends, who had become convinced, after many years of skepticism, that it was not a pose.

"If Betty poses at all," said Marie Fitch, "which I'm beginning to doubt, it's when she practices the ordinary relationships-not when she forgets them!"

Today she seemed to have forgotten most of them. Even for her favorite, Doctor Stanchon, she had only a perfunctory smile; and the flippant replies she vouchsafed to the adoring young art student by her side, who had been awake half the right with the excitement of meeting her today, reduced the poor young man to dumb confusion.

"And she did the Girl With the Green Parrot," thought Bobby Du Long in amazement, "and the Portrait of Little Miss Abercrombie!"

"Mrs. Girard doesn't look well today," said Peter to

Doctor Stanchon. "You've noticed it? I doubt if the rest do. She's working too hard, I'm afraid."

"Oh-women!" said Peter.

"That's it. Still, she has a magnificent physique." "Nice-looking girl she has-growing up, aren't they?"

"Wait until you marry 'em off, my young friend," returned the doctor ruefully; "then you begin to get some idea! Yes, Cynthia's a nice child. She's no more like her mother than as if they'd picked each other up on the street, though."

He walked over to Betty, coffee cup in hand. She stood by the piano, one elbow on a blue Chinese robe that covered it, her eyes drifting over its lovely surface, lifting occasionally to meet the tall boy's, which never left her mobile face.

"How could I have thought her flippant? She's wonderful!" shone in his adoring glance; and her own face lighted as she basked in him.

"Now go and play with the children!" she told him as Stanchon approached. With a little shrug, he obeyed her, and she faced her physician defiantly. "Well?" she said.

"Not very well, I'm afraid, my dear—

"Only tired-that's all."

"You haven't been to see me of late,

"No time—and, anyway, there must be a limit to even your patience!"

"None, my dear child, where you are concerned."
"You're sweet," she said gratefully,

but she did not meet his eyes "You've been working hard?" he

asked. "On the contrary, I haven't touched

a canvas for two months."

Any plans for the summer?"

"Oh, no; we'll stay in this country, I suppose. Walter has the whole Leydendecker estate to settle and expects to work all summer at it, I believe.' "Ah—he's very busy these days, isn't

She shrugged one shoulder-a curious

wonderfully. "That's the Law, isn't it? Either you're worried because you haven't enough to do or because you have too much!"

"It's any profession, my dear girl. As a young man, I used to shudder if my office bell didn't ring, and now I shudder if it does."

"I suppose so." Her voice dropped wearily. "But then, Doctor Stanchon, how very much all over it will all be in a hundred years, won't it? I wonder what one would most want to do then!"

"Do it now!" he said promptly.

She started violently.

"What a thing to say!"

"I repeat it: Do it now!" he said gravely.

"You're like those mottoes they frame in mission oak and hang over desks," she began, a little unsteadily; but he refused to smile.

"Look at me, Betty!" said he, and she raised her eyes simply to his and met them through a bright film of tears.

"Take a year, my dear, and then come back!" he said quietly. "I'll see you through."

"Are you mad, Dick Stanchon?" She spoke through closed teeth and laid one hand on his arm. With him, as with the boy just now, the years between them faded out and they were of one age, though he was nearly sixty. "What are you advising me to do, exactly?" she asked,

waving her hand lightly to Nancy, who adored her.
"I am advising you to go abroad," he replied. "Go to France and paint; go to Italy for the summer, after the tourists have left; go to—oh, wherever you went ten years ago; it doesn't matter."

"Alone?"

"Not unless you wish. Take the children and drop them in Switzerland for languages. Send the boy with Max Fettauer: he'll put him with his father in Neustadt, and Lutie will bring him home when they come. It's a wedding trip, to show Lucia to his father and all the other German in-laws, you know."

"Lucia's very daring, isn't she?"

"To marry a foreigner, you mean? I don't know; as a matter of fact the international marriages that I know about personally have all turned out very well. About duchesses-I don't pretend to say; but Max is of my own trade, and Lutie hasn't enough to tempt a fortune hunter."

"I know. Still

"You think she's daring? For that matter-"Yes, of course. Any marriage is daring, Dick."

"Either You're Worried Because You Haven't Enough to Do or Because You Have Too Much!"

Why it was that she, of all the women of her age and social circle, called him-when alone with him-by his first name, neither of them knew; it was one of the many things that set her apart from others.

"You're making it daring, Betty-you self-supporting

ladies!" "Do you think that's it? Really, Dick?" Her light

voice and her troubled eyes touched him strangely. "I'm beginning to think so," he said slowly. "The old

rules are breaking up and we haven't the new ones formulated yet."

"And yet there have always been self-supporting ladies." "Yes, my dear; but with a difference—with a difference. There have always been actresses and dancers and operasingers, for instance. If they are at all successful it has always paid their husbands to become their business managers—or is it that their business managers always become their husbands? They are frankly meteoric. They go out to dinner these days more than they used to; but that's not because they've changed so much—the change is in

their hosts and hostesses! "I believe that's so," she agreed.

"Then there are the ladies whose husbands are ill or lazy or vicious or absent; they've always been self-supporting—they've always had to be."

"Of course."

"Then there is the working wife of the laboring class; she's always worked and her children have always workedthere's nothing new about her. And she's always-or almost always-the actual head of the house. So is the lady with the sickly or neglectful husband I mentioned before; but does either of them admit it? Never! Their dearest fiction is that he is the real lord of the manor, though temporarily obscured by circumstances-that is to say, their attitude would satisfy the caveman himself and there's no trouble.

"As to the opera singer, either her agent-husband is proud of her temperament and follows meekly in her wake, or he has a temperament of his own and it becomes a

simple endurance test. The working woman and the stage woman have existed practically since the Floodand probably before. And neither of them is of the class that makes history, though one underlies it and the other shoots across it."

"She certainly shoots across," said Betty. "You've heard about Ranny

Fitch, I suppose?" "He's an ass!" returned the doctor briefly. "And yet, my dear, Ranny-as you call him-is a perfectly typical male to this extent: If you should say to him, 'Look! There goes the woman that dug the Panama Canal!' he'd only grunt. But if you said, 'Look! There's

Sarah Bernhardt!' he'd turn round on the Subway steps to see her! "Oh, dear!" she cried, half laughing, half angry. "How can you all be so silly?—for I suppose you'd turn round

too.' "I suppose I should," he admitted. "But why? In heaven's name, why?"

"The glamour, my dear," he said; "only the glamour of the footlights. So long as man has a foot and the stage has lights, you will find us gaping at them as birds beat against a lighthouse.

"But you don't feel so about the other arts."

"Not at all. They are gulfs apart. A writing woman or a painting woman is no more like an acting woman than she is like a school-teacher or a housekeeper. That is the mistake most people make. The actress has no more influence now than she ever had; in fact Melba and Caruso together will probably bulk lighter than Patti fifty years from now. But you professional women-who have gained a public without becoming public property, who are at once independent and domestic, ho can send your works to repr you-you come nearer to eating your cake and having it, too, than any class of women has ever come. And you are growing every day-you are growing more conscious of it every day; but"he paused and looked meaningly at her-"no one in this world, my dear-or in any other, I believe-ever quite ate his cake and had it too!"

'Or her cake, either?"

"Or her cake, most assuredly. More assuredly, if that were possible!"

# For Your Child's Sake Get This Book

MOST of the suffering in this world comes from not knowing how to take care of one's self.

"Bent Bones Make Frantic Feet" is a booklet that tells how to preventyourchildren from having foot suffering. Tells how you may get relief or freedom from your corns, bunions, ingrowing nails, flat feet, tired feet. Tells how the U. S. Army discovered that shoes can waste 20% of a man's energy.

Two New York orthopædic surgeons furnished the information for this book, and it is written in simple, entertaining language.

For your child's sake and for your own send for a free copy-

Get your family out of the achemaking pointed shoes, and get them into the roomy, good-looking Educators today. \$1.35 to \$5.50

See that EDUCATOR is branded on the sole. That name guarantees you the correct orthopardic shape which allows your feet to grow as nature intended.

Smart shoe stores exerywhere sell Educators. If you have any trouble finding them, write us.

"So it seems," said Betty Girard slowly; "so it seems, philosopher and friend!" They looked at each other and then away. To the curious roomful, watching them more or less covertly, their relationship was unguessable.

"Is Betty consulting him or enchanting him?" said Celestine Varnham imperti-nently. "I wonder!" "Both, maybe," suggested her husband interestedly; "she's up to anything—

Betty."
"Doctor Stanchon's crazy about Betty,"
remarked Nancy; "always was."
"Hush your nonsense, Nance!" Dicky
cried impatiently. "You talk like a phonograph!"
"We're going for a tramp," said Betty

"We're going for a tramp," said Betty shortly; "you stare at us so it makes us nervous. Wait for me, Doctor Stanchon, until I change these things." Stanchon smiled good-humoredly at them and punched Dicky as he passed by

them and punched Dicky as he passed by him.

"How does it feel when they begin to grow up, Dicky? Wait until she begins to march in parades, and writes to the papers, and tells you she's a Socialist!"

"Yes, I'll wait, all right," Dicky assured him grimly. "You watch me!"

"Or it may be worse yet," the doctor pursued instructively. "The daughter of one of my patients insisted on doing barefoot dances all last winter for charity in all the hotel ballrooms of New York; and just as her father decided that he'd lock her in her room if she did it any more, she took to room if she did it any more, she took to Anglican Catholic lectures and early serv-ices—masses, she called 'em—and founded a sisterhood where they all promised never to marry!

"For the love of Mike!" Dick gasped, glancing involuntarily and fearfully at his glancing involuntarily and fearfully at his daughter, pacing, entwined and giggling, with the sedate Cynthia along the tiled veranda. "Aren't there any asylums you can put 'em in while they're growing?"

"There are," Doctor Stanchon answered promptly; "there are, indeed, Dicky, my boy; plenty of them."

"Could you give a poor devil the addresses of a few?"

"With pleasure. But one will do your job pretty thoroughly; write it down."

Dicky stared at him quite seriously.

"It's called Hawkfield, situated on a fine, healthful ridge in the heart of Westchester

healthful ridge in the heart of Westchester County," Doctor Stanchon went on easily; "the country residence of Richard D. Varn-ham, Esquire. I recommend it heartily for your daughter, Mr. Varnham, and I assure you that there are as many asylums for the rising generation today as there are— homes. Precisely."

With this last sentence his eyes met Betty

Girard's, who stood silently in the door, staring at him fixedly. "Got you there, Dicky! Old Doctor Stanchon got you there!" cried Peter Forsythe, who admired the doctor beyond

They all laughed, but Betty still stood staring. She looked even younger than be-fore in her trim tailored skirt, high-laced boots and jaunty open-throated blouse, with a flowing scarlet scarf, knotted loosely. A little rough cloth hat, with a scarlet quill thrust through the side, framed her dark

thrust through the side, framed her dark hair with a charmingly school-girlish effect; a big collie thrust his heavy jowl under her hand, where the sapphire-and-emerald ring shot peacock flames.

She addressed him across the room, utterly unconscious of the others.

"My dear man, that's a beautiful idea, but will it really bear analysis? I got a hundred day-old chicks—incubator-bred of course—last month; and from the day they came to us they've outclassed those we raise ourselves—born the same day—in weight, height and strength! And as for cleverness—there's no comparison. After cleverness—there's no comparison. After a week of training they tumble into their boxes and cuddle down among the old newspapers and burlap, and are off to sleep before the old mother hen in the corner of the chicken yard has got her dozen together under the maternal wing!"

"There you are! Go it, Betty!" Dicky cried delightedly. "Hand him another! What've you got to say to that, Stanchon?"
"Merely that it's very interesting and I

"Merely that it's very interesting and I don't doubt it for a minute; I don't know anything about chickens," said the doctor.

"Ah, that's a scientist!" Betty complained scornfully. "Every time! Tell them anything about yourself and they begin to explain that it can't be so, because they did something to a guinea-pig! But take a leaf our of their book, and confide to take a leaf out of their book, and confide to

them your own discoveries in the chicken

them your own discoveries in the chicken yard, and they tell you scornfully that they're not interested in animals! Pooh!"
"That's it," Dicky agreed, rubbing his hands; "that's it exactly. Pooh! That's just what I say: pooh!"
"You're an idiot," said Stanchon, laughing, "if there ever was one! Don't let me keep you, Madam Betty." And he joined her at the door.
"To think that she's forty years old!" Nancy breathed adoringly. She had followed her divinity across the broad hall, eying her scarlet tie in ecstasies that Betty patiently endured. patiently endured.

"By George! She certainly gets away with it!" Dicky agreed. "Come back here, Nance, will you? You're not asked to that party, you little monkey!"

"Father! She said I might walk to the cottage with them; truly she did!"

"Well, you won't, that's all. Now trot along"

along."
"She told me herself she was forty-one."
Bobby Du Long murmured. "It doesn't

seem possible, does it?"
"Oh, nobody looks forty-one nowadays,"
said Celestine carelessly. "It isn't done.
And dark women always look well in sporting things, if they have any figure at all.
Are you driving down for Martha, Peter, or shall I send? It's the three-forty-six."

"I'll drive, thanks. Is Girard to be on

that?"
"Walter? I doubt if he's coming at all.
Betty hardly expects him. He says if he's to go into the country at all he'd rather be on his own place. You know what Walter is! You can't do a thing with him; he just wants to fuss round by himself nowadays. It's terribly hard for Betty. He'll walk out if he decides to come."

if he decides to come."
"I see." And Peter took out his watch. "I see." And Peter took out his watch.
"I thought we were going to get in some golf, Peter," said Dicky a little discontentedly. "Couldn't somebody else go for your missis?"
"They could, but they won't, thanks, Dicky," Peter replied placidly. "I'll get over to the club later, all right. I told her I'd meet her."

I'd meet her.

I know; but -

"I know; but ——"
"You're worse than Stafford Varnham,
Dicky," Celestine interposed, turning disgusted eyes on her husband. "Let Peter
alone, can't you? You'd better get after
those Italians and then go over to the club
together. There'll be plenty of time—we
won't dine until eight."
Dicky retired, murmuring something indistinguishable about honeymoons and tin
weddings, and Peter strolled imperturbably
to the stable. His hostess, relieved at once

to the stable. His hostess, relieved at once of her guests and family, bustled into the famous office of Hawkfield Farm, and applied herself to a mysterious system of spindles and vouchers, understood by no-body but herself—but reverentially ad-mired by all. Nancy Varnham and Cynthia Girard started a desultory game of tennis with young Du Long, which soon relapsed into a comfortable pretense of activity in training a collie puppy to retrieve tennis balls.

Later, the puppy having pursued his course of instruction not wisely but too well, which method led him through some weil, which method ted him through some very undesirable heaps of fertilizing ma-terial, his young mistress decided it was high time all the dogs had a good wash and that they had better get at it directly. An unsuspecting and correspondingly indig-nant young stable hand was routed out of the harness room, a tin of strong-smelling soap procured, the unhappy animal tied to

a tree and lathered violently.

After Cynthia and Bobby Du Long had been more or less thoroughly soused with rinsing water and the stable boy well smeared with the liquid soap, the harassed east, smarting from the thorough washing of his eyes, earnestly recommended by Miss Varnham, slipped his glistening head out of the collar and, with a convulsive shudder that sprayed her from head to foot, dashed furiously for the woods, dripping like a seal. They pursued him, shricking, for a mo-

ment, but, on the advice of the soapy stable boy, returned and lay panting in the sun to

dry.
"He's gone after his mother, I'll bet you,"
said the boy sulkily. "You'd never ketch
him in a week! She went off over that way with the lady and gen'l'man.

And he was quite right; for the insulted puppy, damp and determined, cannoned into Betty and the doctor, and all but knocked them over, to his mother's polite regret, as she paced gravely at the lady's

JEARLY every dish prepared for your table can be improved by the clever use of Cox's Gelatine. It enriches soups, is almost indispensable in gravies, sauces, savories and mayonnaise. It helps you to make up all sorts of left-over foods into delightful and appetizing dishes.

Recipes which make these uses of gelatine easy will be found in

Ask to see the "\$5 Special"-a most unusual

"Mother's Ring"-designed by u set in various sizes of beautiful hand-engraved coral cameo. Plain or fancy mounting, as desired.

All can share in this gift for mother.

Send for free book on rings, which you will find most interesting.

WHITE, WILE & WARNER

"Ugh! You're wet! Get out!" Betty cried, laughing. "See, doctor, they've been washing him and he escaped! Fricks, teach

your son better manners, why don't you?"
"That's odd," said Stanchon reflectively.
"Do you know, I was just thinking of dog washing, child?"

washing, child?"

"Thought transference," she returned lightly. "Why were you? What dog?"

"Yours," he said. "The first time I ever saw you, Betty, you were washing your dogs; do you remember?"

"No. Really? How amusing!"

"When was it?" he went on thoughtfully. "Fifteen years ago? About that, I imagine. You were Miss Naldreth then. You were just engaged. Peter Forsythe was just married, and he and Mattie had dropped in to take me off in their motor—motors were new toys then, you know, and it was a treat to get off in one.

"Let's go up to Miss Naldreth's farm—wouldn't you like to meet her, doctor?" Mattie said. 'She's the most interesting girl I ever met. You know who she is, don't you?"

girl I ever met. You know who she is, don't you?'

"The girl who does those clever double-page things in Life?' said I. 'Yes, I'd like to. She has tremendous talent. Draws like a man. Cleverer than Gibson, I think.'

"She's engaged to Walter Girard, you know,' says Mattie, 'a sort of second cousin of mine; though what she sees in him I don't know, I'm sure. He's the last person I should suppose a girl like that would marry.'"

"I know. Everybody thought that," said Betty quietly.
They walked on a soft, pine-needled path, close and friendly, and all alone in the world but for the two dogs.

"And so we got to that little farmhouse up among the Connecticut hills," he went on, musing. "I fell in love with it on sight. I can see it now—long and low and latticed; all rag rugs and quaint old furniture, and blue china and camel's-hair shawls. And your garden—sweet peas and cabbages all jumbled together! You used to say that you thought pink and purple was the most beautiful combination in Nature. Do you remember?"

"Yes," she said briefly. "I remember, Dick."

Dick."

"I thought you'd have been more what we call artistic," he said, smiling—"queer clothes, you know, and lanky. A 'greenery-yallery Grosvenor Gallery' young woman. And when we saw you—I wish I'd had a camera with me, Betty. I shall never forget you as you were that day—never!"

She laughed now.

"Oh, yes; I remember," she said, "how you all roared at me!"

you all roared at me!"
"And why shouldn't we?" he demanded. "If you saw a handsome gypsy of a girl, with a kitchen apron round her waist, a blue-and-white check sunbonnet on her head, silk stockings and high-heeled, buckled, bright red slippers on her feet, washing two

dogs, and singing hymns at the top of her voice—wouldn't you roar?"

"I always sing hymns when I'm busy," she explained defensively; "and high heels are much more comfortable for me, as a matter of fort, at least they need to be matter of fact—at least they used to be. Like everything else, my feet are giving

way with years."

"Nonsense!" said he. "You look younger than you did two years ago."

"Well, go on!" she said hastily. "What happened then?"

"Why, we stayed to luncheon," he replied reflectively; "and you made your famous mixed vegetable salad, and sang Paris street songs to the guitar, and showed Paris street songs to the guitar, and showed us your prize-competition sketches—and were very clever and amusing generally. When we went away dear little Mattie said she'd rather be you than any woman she knew—and Peter and I looked at each other."

"Oh! Peter and you looked at each other, did you? Meaning ——"

"Meaning that we were glad she wasn't you, my dear," he said quietly. "I should think so!"

"Peter meaning that you struck him as a rather dangerous young woman to marry, and I meaning that I had encountered your type of woman before and thought you a little too clever to be happy. Whereas Martha -

"Was a little too happy to be clever, eh?"
"Just so," he answered thoughtfully.
"Just so, my dear. And if you're fond of a woman you want her to be happy—naturally."

"Naturally," she repeated. "And you want me to be happy, don't you, Dick?"

## 10% More for Your Money

Quaker Oats is now put up also in a 25-cent size, nearly three times as large as the 10-cent size. By saving in packing it offers you 10 per cent more for your money. See how long it lasts.

# That Quaker Oats Aroma

The very aroma of Quaker Oats tells its exquisite flavor. You know before you taste it that there's choiceness in this dish.

Only the big grains yield that aroma. And, without the Quaker process, it could never be kept intact.

That's why Quaker Oats is distinctive.

We get that flavor and we preserve it. We discard all the grains which lack it, so the flavor is never diluted.

If you enjoy it, you can always get it by simply saying "Quaker." And without any extra price.

# Juaker Oats

Rolled from the Largest Grains

We get but ten pounds of Quaker Oats from a bushel, because of this selection. But those are the luscious flakes. The others are good enough for horses, but not for boys and girls.

We started to do that 25 years ago, and the fame of this flavor spread. Now a hundred nations send here to get Ouaker Oats. And millions of children of every clime enjoy it every morning.

Quaker Oats, as an energy food, excels anything else you know. It abounds in the elements needed for brains and nerves. It is known as "the food of foods."

But, without that taste which makes it inviting, few children would eat half enough. That's why we supply that flavor,

and why you ought to get it. And to get it is always easy. Quaker is sold in half a million stores.

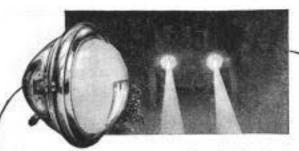

Serve Quaker Oats in large dishes. Small servings are not sufficient to show in full its vim-producing power.

10c and 25c per Package

Except in far West and South

The large 25-cent package gives ten per cent more for the money

The Quaker Oats Company

#### Gives Night Driving Daylight Safety

This lens renders the most powerful headlight NON-BLINDING and at no sacrifice of lighting efficiency.

#### J-M LENS (Non-Blinding)

Makes a perfect headlight. It illuminates the roadway clearly in front of the car, yet does not throw a blinding glare into the eyes of motorists or pedestrians. This is produced by a front glass of pronounced curvature, frosted over its entire surface with the exception of a clear space slightly below the center about 3 x 5 inches. Through this clear area a powerful searching beam is projected, forward and downward, concentrated on the road instead of being diffused through an arc of 180 degrees as in the case of the old-style flat glasses.

The soft glow from the frosted portion of the Lens does away with the necessity of side lights, for it not only adequately illuminates the sides of the road but envelops the radiator, feeder and wheels.

Requires no special attachments and is easily fitted to any lamp in place of the old-style front glasses. Made in sizes to fit all standard lamps.

PRICE-\$5.00 per pair

## Quality in the LINING means Safety in the BRAKE

of Quality when you specify

#### J-M Non-Burn Brake Lining

Contains nothing but pure long-fibred Canadian Asbestos interwoven with high-heat-resisting brass wire and then impregnated with a chemical that renders it impervious to water, oil or gaso-line. It possesses maximum braking power and is absolutely unaffected by intense frictional heat.

ity of thickness and texture, it exerts equal braking force over the entire surface of the drum. It works evenly at all times and with instant effect in case of emergency. It outwears the ordinary lining many times and retains its high braking

Insist upon J-M NON-BURN when you have makes. Put up in original packages of proper length and thickness for all makes of automobiles.

EVERY automobile accessory advertised in connection with this emblem is a proven product, backed by the guarantee of a \$5,000,000 corporation and sold plus the assurance of a reliable Service now in actual operation in every important city of North America.

your brakes relined. It costs no more than other

"So much so, dear Betty," he said, "that I would do anything in my power to bring it about."

The sun struck through the great flat masses of the pines, and the balsam odor sent out puffs and clouds of incense round

sent out puffs and clouds of incense round them.

"Why, Dick Stanchon, I believe you're in love with me?" she cried softly. "Are you, by any chance?"

"I think I am, my dear, in a harmless, friendly way," he said. "Didn't you know it?"

"Sometimes I thought so—and then I decided it was nonsense," she answered, breathing quicker. "Oh, Dick, why weren't you when you came out to the farm that you when you came out to the farm that

day?"
"Perhaps I was," he said, "and didn't quite realize it. You interested me enormously; but I thought it was because you looked like the first woman I ever loved, and because your voice was like hers. We fall victims to the same type, you knowwe men. Blondes, for example, always look like dolls to me."

She stopped and, facing him, put her hand on his arm.

"Why didn't you, Dick? Why didn't you?" she repeated.
"Because I was twenty years older than you, my dear," he answered; "because you were a restless, brilliant young woman, and I was a settled, middle-aged man; because you were engaged to be married to a hand-some, successful lawyer, of your own artistic tastes and interests, and hardly likely to be attracted to a widower with a daughter ten years younger than yourself."

years younger than yourself."

"You always seemed young to me," she said thoughtfully. "I always liked older men, you know. You are younger today than Walter essentially."

"My dear girl!"

"I mean," she explained, "your mind is younger—more flexible. Walter hasn't changed since we were married, and ——"

"Then he's fifteen years younger than the average man of his age, you silly Betty!"

"No—you don't see what I mean. You've changed, I've changed, Mattie's changed—why, even poor old Dicky Varnham's changed; but Walter, never!"

"He looks younger than Dicky by five years," said Stanchon.

"I should hope so," she returned quickly.
"He's a temperate, sensible man, who has always had a steady income; Dicky Varnham's a reformed drunkard and was a plunging stockbroker for years."

Stanchon winced slightly.

"You don't mines your words do you

Stanchon winced slightly.

"You don't mince your words, do you,
Betty?" he asked.

"Why should I?" she said indifferently.
"You know all about all of us. What's the

"Your sex 'speaks out in meeting' more plainly than formerly, I know," he went

on reflectively.

"Bosh, Dick!" she said rudely. "All bosh! My sex has always spoken out—when it has an income of its own! Take your actress, or take that poor working woman you were telling me about: haven't they always spoken out—from Dickens to D'Annunzio?"

Why, yes, I believe they have," he admitted.

"More of them speak out now because more of them can afford to," she added, "that's all."
"You mean women never were really

shy?" she repeated, and stopped and stared at him. "Shy! Heavens above, stared at him. "Shy! Heavens above, Dick Stanchon! You see us bumped first-hand into every reality of life, from birth to death inclusive, and you ask me if we're shy! Disgusted, as we must be; reserved, if we can afford to be; timid, when you want us to be—but shy! And you a doctor!"

He took her hand.

"You're your alongs abild" be

"You're very clever, child," he said sadly. "What is it you want to do? Can I help you?"

"I believe you could have held me," said Betty Girard, "in spite of those twenty years. I believe you could have, Dick, if any one could!"

"Ab, that'sit." be caught ber up quickly.

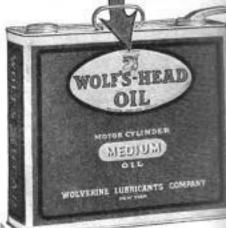

Ah, that's it," he caught her up quickly:

"Ah, that sit," he caught her up quickly:
"if any one could! Don't you see that's
the difficulty, child?"
"I know. I know—that's why I've kept
quiet so long," she said softly. "I suppose
if I wait a few years more it'll be all over
anyway, and I'll be sorry to have made
the fuss?"

She searched his face pathetically.

She searched his face pathetically.
"Betty, dear child," he replied after a
long moment, "I wish I dared tell you so!

## Which Oil? Wolf's-Head Oil -Read Why

If automobile and motor boat manu-facturers have decided Wolf's-Head Oil is the best for their motors you can safely follow their example.

More automobile and motor boat manufacturers have tested and endorsed Wolf's-Head Oil than any other motor oil on the market.

When a manufacturer decides upon an oil for his motor there is no higher judgment. The manufacturer tests in his laboratory, in the shop and on the road every oil, then selects the best, regardless of price—the oil that gets the most efficiency out of the motor.

Note carefully the list of manufacturers who have tested and endorsed

# HNS-MANVILLE CO.

# "Whip" Will Perpetuate the Name of Patterson

My father introduced the mellow Burley Leaf as a pipe tobacco. He was the first man to produce a pipe tobacco with-out "the bite." His entire life was spent in improving smoking tobaccos and he originated many of the leading brands now on the market.

His improvements in smoking tobaccos have increased pipe smokers by the mil-lions. We feel that the comfort and pleasure men derive from his accomplish-ments give his life's work a value of the greatest magnitude.

We later Pattersons—my brother James and myself—continuing our father's work, originated the popular ready-rolled styles of tobaccos.

And now, after 30 years, we have blended "Whip"—a new tobacco which brings ready-rolled tobacco to its highest state of perfection.

This new tobacco we dedicate to our father - who did more than any man or group of men to improve smoking

To merely state that "Whip" is blended of Burley, might suggest that it is similar to other Burley blends. If "Whip" were not distinctively different, and better than any tobacco you ever smoked, we would not consider it worthy to perpet-uate the reputation of the Patterson

"Whip" is the most aromatic and satisfying of all pipe smoking tobaccos—yet it is the mildest tobacco ever blended. You can smoke it all day, pipeful after pipeful, without ill effects.

I blend "Whip" myself—not to guard the secret of its blend, but because I can't teach anyone to blend it to my liking.

Oscar of the Waldorf is generally con-ceded to be one of the world's best chefs, yet I'll find a thousand mammies down here in the vicinity of Richmond who can beat him making com pones or waffles.

These natural cooks could show Oscar how they make their "Co'n pones" or their waffles a hundred times, and yet he could never quite duplicate them.

#### FIVE-CENT CAN FREE

But let me send you a 5c. one-ounce can of "Whip" to prove its own good-ness. I can only tell you the qualities of "Whip" and in doing so I must use words that you have read scores of times in the announcements of other tobacco manu-

After all, your pipe is the real test—and we rest "Whip's" case with your pipe. Just drop me a postcard, naming your dealer, and I will send you an ounce can free of charge by return mail.

"Whip" is sold in one-ounce tins at 5c., 2-ounce tins at 10c, and in pound hu-midors. Ask your dealer.

Pres't.

Patterson Bros. Tobacco Co., Inc. Richmond, Va.

Also makers of "Queed"-the big 21/2 oz. 10c. tin-a little stronger than "Whip."

It's a simple remedy and you have many resources; it isn't 'woman's whole exist-ence' any more, you see—is it?" She smiled with the scorn of forty years;

but her eyes had no age at all and he shook

his head.
"You see you're the sort of woman that never grows old," he said slowly. "The real constructive artist doesn't, in my experience. You're good for any amount of life

"Then, is any amount of life good for me?" She laughed at her mot, but he

barely spared her a smile.
"Now you've hit it!" he cried. "Now we're at the core of the thing, Betty.
Good for you—how? In what capacity? As an artist—as a woman—or as a member of civilized society?"
"Do you mean ——" she began, but he

interrupted her eagerly.
"Because—I'll tell you," he said: "As a productive artist you cannot have too much of life. That seems certain. As a woman it is doubtful whether you can have too much of life, but I think you can. That's modern psychology. As a member of civilized society we all know you can have too much of life. That's history and art and religion and horse-sense, and the Law and the Prophets. Now make up your mind."
"You mean which I'll be?"
"I wan which properly be?"

"You mean which I'll be?"

"I mean which you'll be," he said firmly. "And make it up thoroughly, my girl, for your art and your sex and the society you live in will take it out of you if you wabble! Take either of those lines—and Art will support you, or Nature will support you, or Society will support you. We all understand; we're not so stupid as you think. A price for everything and everything at its price. But alip between the three—and it's thumbs down all round, Betty!"

"I know," she said bitterly. "I know."

"I know," she said bitterly. "I know."
"You've got just so much vitality, my
dear: where will you put it? Which is your best investment? Pick out your bank and deposit—that's all."

But -

"But ——"

"Ah, yes; George Eliot! What has that to do with you, pray? Are you prepared to pay her price? Whenever a woman becomes the property of the public, if she has sufficient genius the public pays her well and gladly; she gives herself to it; it gives her plenty of sugarplums. But the public owns her, you know; and nothing will ever persuade it that it doesn't. It never has owned Strauss or Sargent or Meredith, and never pretended to. There's where you win—and there's where you lose, my dear!"

"You know I can't work any more," she said abruptly.

said abruptly.
"Then don't try."
"But I must try!"
"Why?"

"Because I'm restless and nervous if I go too long without it—and because I need

But surely, Betty -"Oh, that's all very well," she broke in bluntly; "but if I take Walter's money I must do as Walter wants!" "Dear me," he said, "you business women are astonishing! You really feel

"I really feel that—yes."
"Then why doesn't the fact that you practically support yourself leave you free to do as you want?"

She stopped abruptly and met his eyes.

"That's just what I don't know, Dick,"
she said frankly; "but it doesn't. If it did
I'd be in Italy today."

"You wouldn't miss him?"
She smiled gently and shook her head.

She smiled gently and shook her head.
"You miss what you depend on and what
depends on you," she said. "I never depended on Walter and I could never have cared for a man who depended on me. So

when I ceased to care

when I ceased to care

"The average husband, you know," said
Stanchon, "is his wife's oldest child. That
keeps her going when the springs slacken."

"I know. One reads about it," she
answered indifferently. "It always seemed
rather grotesque to me."

"Thet's heaves your grown up."

"That's because you never grow up," he said quickly.

"And yet I shall grow old."

"Ah, yes, that's different, dear."

"A sort of old baby, in short?"

"An artist, Betty."
"See here, Dick, do you really believe that

they oughtn't to marry—that sort—and all the rest of the old stuff?"
"I didn't use to, Betty, so long as you kept above water," he said slowly. "I always said you'd driven a nail into that

# Get the Personal Touch!

Sixes or fours-the Mitchell-Lewis Motor Company makes both. Our idea is to suit the public taste. We are not trying to cram either down your throat. We want you to try them both, sit in the driver's seat, get "the feel of the car," note carefully the action of the engine, the brakes and the steering apparatus. You can get the pulse of any car by doing the driving yourself. And you can't get it any other way.

You ought to know your own car even if you hire a driver. You ought to know it before you buy it. That definite process of acquiring information will often save you a lot of money and worlds of trouble. It eliminates all element of risk. You buy with your eyes open, and you don't buy through the eyes of somebody else who might happen to be prejudiced. We believe that anything which costs as much as an automobile ought to be bought that way-and no other way.

We are asking prospective cus-tomers to buy Mitchells that way. We are asking them to drive the car themselves and get what is known as "the feel of the car." It can't be gotten by sitting in the tonneau or even alongside the driver. The only way to reach the pulse of a car is through the steering wheel. The matter of detail may be learned afterwards if the car behaves well enough to arouse your interest. We think the Mitchell car whether Six or Four is the buy of the year. Try it yourself and see how close we have come to the truth.

#### Here is the Equipment for all the Mitchell Models Which is Included in the List Prices:

Electric self-starter and generator—electric lights—electric horn—electric magnetic exploring lamp—mohair top and dust cover—Tungsten valves—lifty quick-action side curtains—quick-action two-piece rain vision wind-shield—demountable rims with one extra—speedometer—double extra tire carriers—Bair bow holders—license plate bracket—pump, jack and complete set of first-class tools.

#### Specifications of the Three Great Mitchell Models:

The Mitchell Little Six-fifty horse-power-132-inch wheel base- \$1,895 36 x 41/2 inch tires - two or five-passenger . The Mitchell Big Six-sixty horse-power-144-inch wheel base-37 x 5 inch tires -- seven-passenger . . . The Mitchell Four-forty horse-power-four cylinders-120-inch \$1,595 wheel base-36 x 41/2 inch tires-two or five-passenger All Prices F. O. B. Racine.

Eighty Years of Faithful Service to the American Public

Dictating letters is your work. Putting those letters into typewriting is your stenographer's work.

Why take her time for your work when you can dictate alone to far better advantage? You and the

can turn out all of your dictation without delays, interruptions or regard for anyone's convenience but your own. Your stenographer and an Edison can put that dictation into typewriting without errors, without assistance and without wasting a minute of time. You talk and the Edison gets it. The Edison talks and the stenographer gets

it. Not a hitch no lost motion every minute productive. That's efficiency.

Service everywhere, including the principal Canadian cities

theory; but if you haven't—why, it's only one more, that's all."
"Only one more!" she echoed listlessly.
"Let's sit down—will you, Dick?"
She dropped lightly down on a flat, warm rock; he sat crosslegged, like a college boy, beside hav beside her.

"You sit like a girl," he said, "and you look like one for the matter of that. Do

look like one for the matter of that. Do
you really know what you want, my poor
Betty? Of course I know; but do you?"
She met his eyes unflinchingly.
"Of course I do," she said.
"Oh, well, if you know," and his eyes
narrowed thoughtfully, "then that's all."
"I want the old thrill, Dick," she began
suddenly, her your quite soft and colorless.

"I want the old thrill, Dick," she began suddenly, her voice quite soft and colorless. 
"I know—I know," he murmured.
"I don't want to hurt anybody," she went on monotonously. "I don't want to make any great row; but I don't believe it would hurt anybody, Dick. "I despise a bolting woman," she concluded abruptly.

He nedded.

He nodded.

"Of course you would," he agreed.
"I never could see why the whole fabric
of a family—an establishment, land, a position, children, the whole roots of the future
generation—should be torn up and scattered to the winds because the one emotion

that led us into it has died away."

"The trouble is," he corrected gently,
"it doesn't die away; it only dies away in
one direction!"

"Then why doesn't the capacity die,

"Aha! That's the question. A lot of trouble would be saved in this old world if it did, my dear!"

"Then it's badly managed!"

"Very badly, my child, for the individ-ual; but Nature has never been interested in the individual. He conserve already in the individual. He emerges almost in spite of her. What she has terribly on her inexorable old mind is the type, the human species—and, sooner than lose that, she practically overdoes the business. She is the first of the anarchists, that old lady; the first of the anarchists, that old lady; and if she overcharges every bomb, and you complain that less dynamite would have answered her purpose in any specific case, she will only tell you that in her laboratory dynamite is cheap, and that she can't afford to take any chances."

"But that's using a steam hammer to crush an eggshell."

"Precisely; but the old lady works in greatest common denominators, Betty. She is too large to potter about with details, though it is a favorite fiction of scientists

though it is a favorite fiction of scientists that she is always busy with them. She knows that her own big hammer will crush everything; her own big card will win every game; her own big language will pass every frontier; her own big tanguage will pass every frontier; her own big currency will cancel every account. And, with that great tool—the desire to live and create life—she has shaped the race out of the primeval slime and loosed a force so terrible that the greatest work of civilization has been to harness and standardize it." and standardize it."

"But I can't work harnessed, Dick!"
Her lower lip pouted unreasonably, like a child's; her eyes, almost black with resentment and troubled as he had never seen them, met his full and melted into his as

them, met his full and melted into his as only Betty's could.

"My dear," he said unsteadily, "when you married I said that no man on earth could hold you for ten years. Walter has done so much better than that that I began to believe in miracles. You know, of course, that I'm always your friend. If you are one of those who must beat the open sea in order to appreciate the harbor—well! But. order to appreciate the harbor-well! But, Betty, whatever you do, remember the price! You're a grown woman and you know that everything in the world is listed—it's all written down in the book."

"If you mean the children --- " she began stormily; but he patted her against

his shoulder firmly.
"I don't mean the children, stupid," he said. "As a matter of fact, there's no con-nection. I believe you to be quite capable of carrying on your excellent development of your little family, however widely you

might diverge from the conventional domestic code—just as I believe you would allow no such divergence to interfere for a moment with your relations to your chil-dren or your art or your establishment in life generally—if you could help it! Am I right?"

Quite right," she said briefly.

"Just so. Your life is one of many sections, Madam Betty, and no one emotion can flood them all, I believe. Artists and ocean steamers are equipped with watertight compartments, and

"And they don't always work in either use?" she interrupted maliciously.

He laughed in spite of himself.
"But this is what I mean, my child," he said, "and be sure you understand it: The cleverer the juggler, the greater the number of balls he can keep in the air at once, and the greater the crash when his eye relaxes and his wrist slips, and they all come down. He defies gravity and you may defy conventionality—in either case the world watches the feat with interest; but when he fails his audience is more or less indulgent. It is only a matter of picking up the balls and trying again. When you fail——"
"Oh, I know—I know," she finished

wearily.
"You see, dear," he went on, "you made a contract."
heavens and earth! how

"But, great heavens and earth! how did I know? How could I judge? How can anybody promise ——"
"Lie still, child; lie still. I don't speak of your contract with your husband. That seems to have been the best sailing chart we have at present, and insures the least number of obvious shipwrecks in human-ity's queer voyage across space and time." Betty leaned back on his arm and watched

his face closely. He had always interested her intensely; wherever she thought, he

had gone before.

"And here's another thing that's true,"
he said, looking keenly at her: "You made
a certain contract with society, with civilization at its present stage. You agreed to
become one of the body that holds it up—
that attempthens the stockeds between it that strengthens the stockade between it and the howling wilderness outside. You were one of the inside coral-workers to en-large the reef—not one of the waves that beat against it and eat it away from with-And for that the reef protected you

and your children.

"Does the reef—society—care tuppence whom you married? Not a bit of it; that's romance, fate, a sacred bond, a sentimental bait—whichever your special temperament and nationality and generation incline you to. It only cares that you marry. And it cares for stable courts of justice and good roads and adequate sanitation and stand. cares for stable courts of justice and good roads and adequate sanitation and standardized education for youth. These things have always gone with at least a theoretical monogamy. There are many exceptions to every rule; but when the exceptions outnumber the rule, then the rule changes."

"And you think it won't change—ever?"

"Well, this special rule has never changed yet. Though some of the greatest natures in the world have broken it, the world has consistently declared that they were great in spite of their defections, not because of

in spite of their defections, not because of them. And, with women, society has been necessarily superstrict. The race supply, like the water supply, must be beyond suspicion. It isn't what you promised Walter that we care about, my dear; it's what you promised us!"

"But you made me promise too much!"
"Well, well—we did the best we could,
my dear. You were a sort of necessary
luxury—one of those of which Doctor
Holmes said that if we could have enough
we could dispense with the necessities—
and we protected you and paid for you; and without us where and what would you have been? Now you are beginning to deal directly with the world and not necessarily with the world through us; and it is prob-able that we shan't be able to make you promise quite so much or hold you quite so

stiffly to it."

"Ah!" she murmured. "I believe you!"

"But, Betty"—he caught her wrists firmly—"mind that you stand ready to pay! You're a proud woman and you've always met conventional people squarely, though contemptuously. 'I can play your silly Philistine game, and better than most of you!' you've always beasted; so that of you!' you've always boasted; so that you've roused jealousy on every side. Don't expect any grace from either camp, my

"I know—I know!" she whispered.
"You are one of the frankest women I

ever knew; you can't keep your pride and your frankness both—and both are very dear to you, my child!"
"I know," she repeated.
"Intrigue in itself is far from appealing

to you; but such standards as you have set to you; but such standards as you have set up for yourself cannot be upheld without subterfuge somewhere."

"I know," and this time her voice was barely audible.

"I am not speaking sentimentally, my child. God knows I'm not throwing old

(Concluded on Page 37)

## Why the Pro-phy-lac-tic is Known as the World's Standard Tooth Brush

Because the seven features illus trated above were originated by the Pro-phy-lac-tic. And the attempt of imitators to copy them proves that no tooth brush can claim really to clean the teeth unless it appears to be made like the Pro-phy-lac-tic.

to be made like the Pro-phy-lac-tic.

1 The big end tuft—that goes where a tooth brush ought to go—even to the backs of the back teeth.

2 Serrated bristle tufts arranged to fit the shape of the jaw—known as the Pro-phy-inc-tic shape—the big step in advance in tooth brush manufacture.

3 The curved handle with beveled and tapered head which enables the brush to get behind all the teeth.

4 Dependable markings of bristles as hard, medium, soft—so you may absolutely rely on the kind you like.

5 The hole in the handle and the hook on which to hang the brush.

6 The use of symbols to mark individual brushes so that each person may always recognize his own brush.

7 The sanitary yellow box that brings your tooth brush clean, unfonched by any hand since it left our sanitary parters. This big step in advance. Ike

by any hand since it left our sanilary factory. This big step in advance, like the others, was originated by the Pro-phy-lactic Tooth Brush. Send for Free Booklet on the Care of the Teeth

of mood and watching her deft movements as she smoothed her hair and shook her skirts. "It's hard enough, Betty dear, to be a successful woman and a successful member of society; to combine these achievements with those of a successful artist is more than one has a right to expect of any of you—not that you don't manage it now and then, of course."

You think I could?" "I think you could do anything on God's earth, Betty-if you wanted to!

She held out her hands to him.
"Get up," she said, "and come back!
As there's no one here to make me think otherwise, of course I see you're right. If

there were ——"
"Here they are! Here, Fricka! Here,
Fricka!"

Up from the ground, apparently, rose Nancy Varnham and Bobby Du Long, the girl's face all frank pleasure at this success-ful game of hide-and-seek—the young man's eyes half audacious, half timid, as they

met Betty's.

"I—we couldn't get along without you, so we came," he said.

"How perfectly jolly!" A quick flush brightened her eyes and her teeth flashed white. She had a dimple like a girl's.

"Take me home, Bobby—the doctor's been scolding me," she said gayly. "Let's lose him!"

He had seized her offered hand, they were all but away, when a quick glance at Richard Stanchon's strong, convulsed face caught and held Betty. She wavered, dared not believe what she read there—then dared

not doubt.
"Run along, children! Run along!" she said gently; and at the sound of her voice scampered off like two frightened rabbits. She took his clenched hands in her own

and forced them gently to her shoulders, so that she stood like a boy before him. "Dick!" she said softly. "Dear Dick!

You don't mean -

"God knows I do!" he groaned. "I—
I'm jealous, Betty! If—if you're really
going to do it—if you're really going to
make Walter set you free—oh, Betty, take
me! Take me!"

Her face grew steadily crimson, until it seemed that the delicate skin could contain no more of that quick, shamed blood. "You think I'm too old—no man any

younger could manage you, Betty!

younger could manage you, Betty! Do you suppose that boy — I've understood you for fifteen years! Don't you suppose I've always known that no man of Girard's type — "

"Hush!" she said quietly. "Hush, dear Dick—my dear friend, Dick! You make me so ashamed—and so proud! What is that boy to me? And if he were anything, do you think I would spoil his life? He's just beginning—I've had my first love! And do you think I would confuse your life? You have made it so fine and simple! life? You have made it so fine and simple! I should only excite and complicate it. It is quite true that you could manage me; but, Dick, I must manage myself—mustn t

He could not speak. His hands gripped

her shoulders until she winced.

"How strange it is," she went on, still in that quiet, even voice, her cheeks suddenly cool again; "how strange it is, Dick, that all those wise things you said left me so—so unreconciled—and the one foolish

so—so unreconciled—and the one foolish thing made me see how it must be!"

"Do you see?" he asked thickly.

"Oh, yes; I see," she said. "I see now, Dick. Nothing would succeed that was based on such selfishness, would it?" He sighed heavily. His hands relaxed. "But it was only when you were selfish that I saw!" she marveled. "Tell me, Dick, how can a man be so wise—and at the same can a man be so wise—and at the same time so foolish?"

'God knows!" he said bitterly. "You must forget -

"Never!" she cried, and smiled through her quick tears. "Never while I live! When I'm holding the fort in my triangle-trap, Dick, I shall always remember that the man I admire most in the world would have stood between me and that world if I had

Company

## SENSE AND NONSENSE

#### A Rising Temperature

DOWN on the Forked Deer River, in Western Tennessee, the trustees installed a hot-air plant in a small Baptist church. On the Sunday when the new appliance was first used a widow and her yellow-skinned, ague-stricken son came from their home, several miles away, to attend the evening services

attend the evening services.

As luck would have it, the usher escorted this pair to a pew that was directly over a register in the floor. Presently, as the jani-tor fed the furnace in the basement below,

tor fed the furnace in the basement below, the son began to wriggle and twist.

"Ma," he whispered, "I got to go! I ain't feelin' well."

"What's the matter?" inquired his parent. "Air you fixin' to have another spell?"

"Yessum; must be," said the sufferer.
"I kin feel the fever comin' up my laigs."

#### Fanning Cool Air

SIMPLE attachment to an ordinary L electric fan, so that the air it blows will be cool, has been worked out by the en-gineers of an East Indian railroad and in-stalled in the new sleeping cars of the line. It utilizes the old principle of cooling by evaporation of water.

A cloth-curtain arrangement is placed back of the fan and the cloth is kept wet by a small tank. The fan draws the air over the curtain in such a way that the cooling effect of the evaporation of water from the cloth is used to full advantage.

#### Sharing Honors

INTO a blind tiger in the North Carolina
I mountains stalked a tall and truculentlooking stranger. Halting in the middle of
the floor, he addressed the assembled company in threatening tones:

"I kin lick any man in this place!"
A man stepped forward instantly and
accepted the challenge by knocking the
challenger about fifteen feet. The newcomer dropped on his back in a corner. As
he endeavored to rise, the local champion
bowled him over flat again. Three times
this happened. Then, lying on the floor,
the newcomer spoke.

the newcomer spoke.

"Partner," he said, through his battered lips, "you and me both kin lick any man in this place!"

#### Bars and Bars

MR. JUSTICE LETTON, of the Ne-braska Supreme Court, went East one summer and left his house in care of friends. One morning the telephone bell in the Letton house rang and a woman asked for Mr. Letton. She was told the justice was not in town. She refused to believe that and asked where Mr. Letton was.

"He's on his way home now," the lady at the Letton house replied; "but he stopped off at Milwaukee to attend the meeting of the American Bar Association."

off at Milwaukee to attend the meeting of the American Bar Association."
"Evidently," said the woman at the other end of the wire superciliously, "there is some mistake. The Mr. Letton I know and want is not a saloon keeper. He runs a grocery store."

#### Safety Motor Signals

AUTOMATIC flashlight warning signals for bad curves or dangerous crossings on country roads have been suggested as an aid to safe touring in automobiles, and such a light is now being tried in England as an experiment. Such a light needs at-tention only once in three months, being allowed to burn night and day.

Acetylene from a tank at the top of a post by the roadside near the danger spot furnishes the light. Gas is fed to the flame every second or so and at each flow of gas the light flashes.

By regulating the length of the periods when the flame is low, and so making the flash once every second and a half or every two seconds, the lamp could be made to run without attention for a longer time than three months.

An improvement suggested is to attach a device similar to that now used generally for light buoys, which turns the flame down during the daytime and up at night, con-trolled by daylight.

When you go to buy a trunk, keep this one fact before you: that you are buying for now and for the future.

A trunk is the poorest thing in the world on which to try and save money. No trunk can be too good for you—too strong—too serviceable.

Pay enough for your trunk to get rea value, sure service, but see that you get what you pay for. That means, remember the Indestructo name.

Compare the Indestructo with any other trunk made. See it side by side with other trunks in the stores.

You will find that not one of them ha the distinctive features of the Indestructo—that not one of them give you the same solid assurance of rea worth and service-not one of them i so well able to care for itself in the crast and crush of hard baggage handling.

One proving bit of evidence as to the standing of Indestructo Trunks in the business world is the way leading mer chants-the best and wisest merchant have accepted the Indestructo.

Remember that no other trunk can give you the service, satisfaction, the beaut and lasting value, and the special Fiv-Years insurance and Registry feature that are all yours with the Indestruct Trunk. It is worth your while to bu right and be satisfied.

Say to yourself, "The next trunk I buy will be an Indestructo"—then make good on the promise.

Our builds explains that fully - ask for it.

#### THE FLOATING LABORER

(Continued from Page 5)

The boy needed some attention; he was tired and lonely and homesick. When after supper at the ten-cent restaurant under the lodging house Charlie proposed that they should visit Carney's, John accepted. He would have refused probably had he known that Carney's place was a saloon. His early training had taught him that a demon lurks in the glass. His father had warned him—the last thing—to shun strong drink. And Farmer Bill and the other heroes of modern romance always owed half their of modern romance always owed half their success to the fact that they avoided liquor

and evil companions.

It was only the fear of making himself ridiculous that prevented John from pulling back when he entered the swinging doors and found himself face to face with a bar—a bar fringed with workingmen like himself and Charlie, all talking and laugh-ing. He and Charlie found a seat at a table, where Charlie called over two or three men like himself and ordered beer. This proceeding astonished John. Charlie had told him on the way down from the grading camp that he owned in all the world only his blankets and the dollar and a half he had received from the timekeeper; and he must have spent some of that for food in the twenty-four hours since. John said that he would not have anything.

"Aw, come on! It'll make you forget your troubles," said Charlie.
"No; the kid's right. It never done anybody any good," said another man; but he himself ordered whisky.

After Charlie had his first beer, some one else paid; and on this round Charlie changed eise paid; and on this round Charlie changed to whisky. Now Charlie, who had been talking all the evening about his troubles, his wrongs and his black future, brightened up; so did the rest as drink followed drink. They talked for a time as the men had talked in the box car on the way up to the grading camp. John listened to this with less reversance now. Then they touched less repugnance now. Then they touched on politics. And finally they talked over their business in an interval before the fourth drink; after which the conversation became mainly foolishness.

#### After a New Job

John learned, rather to his surprise, that these men had ambitions just like himself. Charlie wanted to make enough money to get to the Klondike, that golden land the name of which was then a fetish in the West. He said he expected to get a steady job that winter and break North in the spring. The man who advised Charlie not to drink whisky expected to take up a farm in Montana—there was lots of unoccupied land in Montana if you knew where to look for it—and he intended to save the money for implements and tools as soon as he got the steady job he had been promised in

Then some one at another table began to sing in a rough voice a home-and-mother song, which affected John so much, what with his homesickness, that he had to turn his head away. This started the men at John's table to singing. They sang off the tune, rolling out the chorus louder and louder, until Charlie began thumping the table with his class and the homest table with his glass and the bartender stopped the noise. Charlie wanted to argue the question with the bartender. The man who did not believe in drink—for John—told John he ought to take his friend home; he had had enough. Presently John found himself outside guiding Charlie, with what tast he could master toward their ledging tact he could master, toward their lodging house. The inexorable clerk demanded his fifteen cents in advance. Charlie turned his trousers pockets inside out. He had just fifteen cents.

"Never mind, kid-steady job in the morning. You stick to me, kid, and we'll get rich in Klondike!" muttered Charlie, and he crawled into bed.

The next morning, of course, John drew on the little hoard in his inside waistcoat pocket for Charlie's breakfast. Charlie was flabby and pessimistic again; but through all his pessimism shone a ray of hope. There was unloading on the docks. A friend of his had given him the tip. He knew a lot of bartenders there. If John would put up for a drink now and then maybe they could get on as extra men.
"You stake me, kid, and I'll fix you right," said Charlie.

# Will you re-finish a chair if we give you the Kyanize?

You haven't any idea how easy it is to "do over" things with Kyanize. It makes furniture, floors and woodwork look like new, and gives them a beautiful, tough, lasting finish, which hard knocks won't crack.

Kyanize flows easily, dries quickly, doesn't showbrush marks and nevergets sticky. It won't scratch white, peel or chip. You can easily keep it clean and sanitary with warm water. Seven popular colors, clear, and white enamel.

We want to send you some Kyanize to try, at our expense. Fill in the coupon below, mail it to us with 10c for a suitable brush to apply the Kyanize, and we will send you a full 15e can (any color), enough to do a chair or border in a small room, absolutely free.

Note this: - If you are not immensely pleased with the result, when you have done one chair, write us and not will immediately return the 10 cents paid for the brush. Here is the coupon-send it in today. Same offer applies to Canada.

All the morning they ranged the docks, interviewing bartenders. It cost John forty cents for drinks. Charlie drank beer; and with every drink the prospect for work looked brighter. John drank soda; and with every interview the prospect looked duller. In the fourth saloon, however, the bartender, who seemed to be an old friend of Charlie's, told them he might be able to fix it. He did a little telephoning and returned to say that if they would report at the Mamie G in the morning Burke would take them on. Charlie ordered another drink and included the bartender. John, of course, paid. He had a feeling that he was being swindled, but at any rate he had a job. Before they left, Charlie waited until the bartender was busy at the other end of the saloon and then jerked his thumb over his shoulder and whispered: "There's your dinner, kid."

They are rapidly, their eyes on the bar-tender. Then Charlie pocketed two sand-wiches, which they finished outside. That kept them until supper-time, when John paid for both.

"I'll pay you back, kid, as soon as my envelope comes, sure!" said Charlie. After supper Charlie borrowed a quarter and went to the saloon again. He wanted John to go along, but this time John refused. He was thinking of Farmer Bill, and remembering that if he was going to do a good day's work and get ahead he must have sleep. He found himself declining the invitation with regret. In two short days his views of saloons had changed. You met pretty good fellows there; they made you feel grown up. After all, you must have a good time once in a while. If you did go to saloons you did not have to drink. Nevertheless he made no mention of saloons in the brief boyish letter he wrote home that night. He felt that there were some things country people did not understand about the city.

The next morning John bought Charlie's breakfast, the quarter having gone for beer.
"It's the last!" said John.
"Oh, sure!" said Charlie. "I've got a
job now, kid."

The work at the docks was harder than scraping, but still not impossibly hard for a youth with a strong, farm-trained back like John's. What with a fine autumn morning and real work to do, John's spirits rose. He had changed his views a little on his own future. Wall Street or State Street attracted him less now than the prospect of working up on the docks to be a great freight contractor and vessel owner.

Only one thing disturbed his dreams. He was working next to Charlie, and as the morning wore away Charlie became some-thing of a burden. When they lifted a box together Charlie's end always sagged. When they rolled their loaded trucks from the pile on the wharf to the box cars there was always a break in the line between Charlie and the next man ahead; and that handicapped and annoyed John, who was trying to show the boss what a good work-man he could be. The boss overlooked John, but he did notice Charlie. Twice he ordered him to get a move on; after which Charlie began reproaching John.

#### The Last of Charlie

"You ain't workin' on a bet, kid," he would mutter as they picked up a box; or, "You'll kill yourself if you keep this up!"

John fell back on a boyish, sullen silence and made no answer; but as the morning grew old he really began to pity Charlie. He was trying his best apparently; but he could not keep up. It was a relief when, just as the twelve-o'clock whistle blew, the oss stepped over, tapped Charlie on the

shoulder, and said:
"Here, you! You're holding back the

job. Go get your time!

Charlie was such a mush of depression as they left the dock that John relaxed his resolve of the morning and gave him ten -Chun half-day's pay until night. Charlie spent the ten cents for beer and dined on the free lunch. As the whistles blew they parted, Charlie promising to pay what he owed John when he got a steady job.

"I guess that fellow's no good," said John to himself, as he laid his hand once more to his truck—"no ambition. I don't see how any fellow with any ambition could get that way." He never saw Charlie

The work on the docks lasted three days. John and Charlie owed the job in the beginto a temporary rush of late-season traffic. That was over now; the extra men and most of the regulars, if there are regulars on the docks, were laid off.

From his headquarters at the lodging house John started anew on the hopeless quest for work. This search lasted a week. at night, after a dreary and discouraging day, leg-weary, soul-weary, and oppressed by the burden of the wealth he saw all about him, homesickness and the longing for companionship would come over him. He went consequently to the only place he knew where he could find companions—the saloon. It was warm and cheerful there. He liked to listen to the talk. He drank no liquor and bought none; though to refrain gave him a slight feeling of asking something

for nothing. However, he was still remembering Farmer Bill and the maxim that thrift is the road to wealth. Besides, another fact was bearing in on him. Day after day he met more and more men in that saloon, all talking of the one problem—how to get through the winter. Day after day he found more applicants waiting in line for the few jobs that fitted his potentialities.

At the end of the week he had a stroke of luck. The same employment office that sent him to the grading camp gave him a chance on a rush job with a telephone line forty miles out of town. Here they set him to digging post holes. It was back-breaking work, but he stayed with it. As he delved and dug he still dreamed, but the tenor of his dreams had changed again. There was a future in the telephone business. He had read in a paper that the telephone was going to supplant the telegraph. He saw himself gang boss, head of con-

struction, general manager, president; then a house with gold dishes and—the broker's

daughter.

#### A New Acquaintance

Some of the men who came with him from Chicago dropped out. The work was too hard on the back, they said. They continually tried to persuade him not to set so hard a pace; but, though he found himself unpopular in the grub tent, he shut his lips and steeled his heart.

"They can't have any ambition!" he

At the end of a week a premature blizzard blew up, covering and freezing the ground. The gang waited for two days; then the boss discharged them all. John went with the rest back to Chicago. When he alighted at the La Salle Street Station he was only four dollars and ten cents ahead on the veek's work.

Pass over the three weeks that followed, during which he went through the same dreary old round of alley doors and employment agencies. Dime by dime he saw the little hoard he had brought to the city dwindling away. In the evenings he loafed in the saloons. At night he slept, packed twenty in a room, in the cheap lodg-ing house. Though he never knew it, those cramped quarters, with the roar of the Loop making sleep only half sleep after all, took toll of his vitality. Though he never knew it, the second-hand, sapless food at the ten-cent restaurant was no nourishment for such muscles as his.

In the third week came another of the tiny incidents that guided him on his way. One evening he went into Carney's, his heart bursting. He had received a letter from home that morning and realized that he dare not write home any more until he could send good news. Carney's had grown more crowded, more dingy and less cheerful during the month in which he had known it. A month before the workmen had been coming in from the logging camps

with money in their pockets.

Now it was late fall and the shoe was beginning to pinch. The human contacts of the place served no more to cheer him up. As he sat alone at the table a hoy of his own age came over and scraped ac-quaintance. His name was Mike. He had just come in from a lake vessel and he offered John a drink.

It was not the fear of ridicule that made John Smith take his first drink; his Sundayschool training had put him on guard against that. It was a longing, deep and indefinable, for something to break this hideous routine of depression—for a new atmosphere. It was a need, just as deep and just as indefinable, for a spur to nerves exhausted by sleep that was not sleep, depleted by food that was not food. drank his beer; he paid for another and

(Continued from Page 42) drank that also. He did not care much for the taste, but he did feel the effect. In spite of a queer feeling of confusion in his

head, the world became brighter. Mike's jokes appealed to him as the funniest things he ever heard. From that time forth he
was Mike's friend. In the morning they
started together on the search for work.
Two days later they fell into luck. The
Christmas rush had begun. In the cellar
of a department store they found a boss

who had been a country boy himself and who had been a country boy imself and therefore favored country boys in giving out work. He took them on. The job lasted a month, clear through the holidays. John had now established a connection with that great mysterious reservoir of wealth known as business. His early struggles, he felt, were over. He would rise from porter to clerk, from clerk to the office, to the management, to finance.

the management, to finance.

He had only six dollars when he went to work in the store. On Mike's advice he invested this money, after he received his first week's pay, in a second-hand suit of clothes. Shoes, shirts and other "chicken fixings" took the rest of his savings. During this period he visited the saloon only once or twice. In the evenings he read. And once one of the store girls, country-bred like himself, asked him out to her home, where the girls tried to teach him to dance. When the worst of the Christmas rush was over this the management, to finance. worst of the Christmas rush was over this same girl took him to a social at her church. Those evenings remained for years bright

spots in his memory.

The end of that Christmas rush and the stock-taking period, though, brought slack times again. John had foreseen that and had worked like a beaver to make himself a permanent place. However, the regulars were working hard to hold their places. On the second Saturday night in January the blow fell. John, Mike and all the other

extra people were laid off.
"I'm sorry too," said the cellar boss,
"and I'll keep you in mind when we need

Over and above obligations, John had at this moment just eight dollars in the world.

I have given so far the detailed incidents in the working life of John Smith. To enu-merate the rest of the jobs he held in his career would be monotonous. I must skim, touching a high spot here and there.

#### Seven Lean Weeks

In the seven weeks that followed his discharge from the department store he worked six days. On five of them he shoveled snow for the Street Department. On the other for the Street Department. On the other day he cleaned up a back yard. These jobs brought him nine dollars and he had eight dollars when he started. How he lived for seven weeks on seventeen dollars I do not pretend to say! There were whole days when he did not eat at all until night; then, driven by his ravenous young hunger, he accepted the charity of bread line or soup litchen or rescate house. He ate at the back kitchen or rescue house. He ate at the back doors of restaurants; he ate on the bounty of a girl of the streets, who penetrated his secret and fed him, with all the decent charity in the world, a good supper; he stole free lunches at Carney's.

He never allowed himself to go quite broke; for then the lodging house might throw him out—and he must have some place to sleep. He dreamed no more in this period of Farmer Bill. His mind was too busy wondering how he could fill that void in his stomach.

In March the department store prepared for the spring opening; that gave him a week of steady work. The first day he nearly fell out from weakness; but he stuck it out and ate well that night, and by the next day elastic, resilient youth bore nim out of his weakness. On the Saturday night when he got his discharge and his pay he visited Carney's again.
There was Mike, very much reduced in

flesh from a hard experience in the Northern woods; and after the second beer he thrust forth an idea. There was work in California all the year round. He produced a Chumber all the year round. He produced a Chamber of Commerce circular to prove it. Mike had six dollars and John almost five. With that they could make it on the underground Pullman. John was learning by now the trade of casual laborer, with its tricks and traditions. He knew about brake beams and surreptitious rides in box cars.

How they got to California would make a story in itself. By luck, more than by any cleverness of their own, they reached the banks of the Sacramento without seeing the

inside of a jail—though once, out in Nebraska, a constable took a shot at them. There was a brief period in Utah when they begged at farmhouse doors. I should like, had I space, to tell you how John felt when he first asked for a meal, how he fought down the memory of those bums on whom his father used to set the dogs.

his father used to set the dogs.

Their pilgrimage landed them at length at a hobo camp on the banks of the Sacramento. I am using the word hobo in the California sense. The technical term elsewhere is, I believe, blanket stiff. They are the laborers who float from farm to farm, camp to camp, following the shifts of industry. John and Mike had not a cent when they joined the camp by the Sacramento; but the laborers were maintaining a community table with what they had and what they could get from neighboring farmers.

they could get from neighboring farmers.

It looked as though Mike were right. Planting was afoot; the pruning season was coming in the fruit belt. By the next week Mike and John were pruning at a dollar a day and board. Another hike when that was finished—and the hay harvest had begun. Two weeks of that; then they walked to San José, near which place they found easy work picking apricots. This was a pleasant interval. A lot of factory girls had come down from the city to cut fruit. At night Mike and John used to join them about their camp fire. On Saturday nights the cutters had a dance in the town hall of the settlement.

Then Mike and John walked into the San Joaquin country, where they piled sacks back of a harvester. When the San Joaquin country needed them no more, two weeks more of trudging the roads, of camping beside creeks, with other blanket stiffs, and the prune crop was on. They picked prunes for a fortnight, when the harvest was done. All summer John had received good pay at intervals. In the periods between jobs to live the prune for the present.

All summer John had received good pay at intervals. In the periods between jobs he lived, of course, from his reserve. When, at the end of the prune season, he drifted with the rest into San Francisco he had a little more than forty dollars.

little more than forty dollars.

In San Francisco John and the gang with which he had come up from San José spent a day or so playing, after their ewn fashion, about the Barbary Coast. Then he saw in a newspaper the advertisement of an employment bureau for miners in Nevada. He had never tried mining; the association of mining with gold revived in him his half-forgotten ambition to duplicate the career of Farmer Bill.

#### Wintering in California

"Transportation furnished," said the advertisement. John reported at the employment bureau and got his working card with suspicious ease. His train reached the camp at night. A squad of men met them; John noticed that they carried arms. The guards escorted the gang to a shed, where the men rolled up in their blankets for the night. The situation began to dawn on him.

on him.
"This ain't a strike-breaking job, is it?"
he seled the man next him.

he asked the man next him.
"Sure, or how'd we get the job so easy?"

replied the other.

That settled it for John. Member of an unorganized trade though he was, he had absorbed the ethics of labor. Next morning, while the guards were assembling the men for breakfast, he slipped away, wandered round town until he found the strike headquarters and joined the strikers. They made much of him and offered him a share in the strike-benefit fund; but he had nearly forty dollars, and young as he was he had kindness enough not to take the bread out of their mouths. They promised to take him into the union when the strike collapsed; but the companies, after a vain attempt to work with non-union laborers, closed mine after mine.

John saw the signs in the heavens. One night he found a freight car, gave the brakeman a dollar to let him crawl in among a load of sacks and got to Sacramento. There the new brakeman ran him out with a coupling pin. He bought his fare to San Francisco, arriving there with less than twenty-five dollars.

That winter, allowing for differences in climate and environment, was a repetition of his first winter in Chicago. There had been a dry year—those were the days when Northern California stood at the mercy of the rain—and times were a little hard. At the very time when he was tramping the streets looking for any job the orange harvest was on in the South, giving work to

(Continued on Page 48)

# Holphoint Week May 11~16

This is the fourth annual International Hofficint Sale—the fourth year that Lighting Companies, Dealers and Factory have co-operated to show why it is to your advantage to use electrical household appliances.

Several thousand distributers are prepared to demonstrate all the **Holpoint** "El" appliances (Look for the checkerboard signs.) and to explain how to make electricity your servant.

But why do they sell El Glostovo at half price next week?

Because we want you to use one in your home—we want you to see that **now** you can afford to cook with electricity. El Glostovo uses one-third less current than former types and you use your regular utensils. Think what this means to you.

## Your dealer will gladly show you how this electric stove works. You'll like it—and you can buy it at half—Hotpoint Week only.

In El Glostovo for the first time the reflector principle is applied to electric cooking. This conserves the heat and concentrates it on the cooking surface. It takes less current to do the work.

It is like removing the lid and doing the cooking directly over the glowing fire instead of on top of the stove.

Use your regular cooking vessels directly over the glowing coils. That means quick results and economy. Note cost of doing operations shown at bottom of page.

El Glostovo is instantly available anywhere there is an electric light socket. You can use it on the dining table or sideboard. But it is so efficient for all cooking operations that it is entitled to a place in your kitchen. It reaches full cooking temperature 15 seconds after curren is on. Former types require as many minutes.

Vessels 7 inches in diameter (granite or metal) just fit E Glostovo but smaller or larger vessels can be used. The top can be easily removed for cleaning.

El Glostovo is made in a pleasing design, heavily nickeled with mirror-like finish and ebonite handle. Equipped with cool grip switch plug and cord which fits other **Holpoint** appliances

The heating element is guaranteed for 5 years. If it burn out within that period a new one will be sent free.

Regular price \$5.00 (Canada \$6.50). Special price Hotpoir Week \$2.50 (Canada \$3.25). Monday, May 18th, the special price will be withdrawn and the regular price will prevail.

Boiling On El Glostovo Costs one cent to boil water for six cups of tea.

Dealers sell Hotpoint appliance
Look for the checkerboard wi
dow and Hotpoint sign.

If you do not find it, we will she direct from our nearest office as prepay charges.

Let electricity transform the drudgery of ironing into a light, interesting operation for you.

Let a **Holpoint** iron save you half the time and most of the fatigue that follows older methods-and do it cheaper. Yes, you can iron in comfort.

The Holpoint iron possesses many distinct advantages.

The point of any iron cools below working temperature mless extra heat is provided. We do this with the Hotpoint ion and the point is always hot enough to iron with.

Hopoint construction also insures a cool handle-no lolder needed. The heat is held in the working face of the ron. Hence its high economy.

New instead of lifting a Holpoint onto a separate stand every few seconds,

uply tip it onto the attached stand. There it stands, ready to your and. When on the stand it will not scorch the most delicate fabric.

On ordinary ironing the switch plug will be removed about half time, while you use the stored heat. So at ordinary rates you use only three or four cents' worth of current to do an hour's ironing.

Attach it to any electric light socket—use it on the porch if you want to. Eight feet of flexible cord is provided. The **Nothint** plug interchangeable on nearly all of the "El" appliances.

Heating element is guaranteed for ten years. If it burns out in that ine we supply a new one free. Anyone can put it in place.

The six pound weight is most used for general household use - \$3.50. Canada \$4.50. We also furnish a five pound iron at the same price.

ALUMINUM

Gho Holfwint Electric Percolator

Here is a percolator which brews perfect coffee quickly and economically.

Made entirely of aluminum and German silver, which metals do not affect the flavor of the coffee.

It is light, with a never-wear-off finish.

Aluminum El Perco commences percolation in less than 30 seconds - simply put the ground coffee in the basket and cold water in the pot and slip in the switch plug.

The hot water drips thru the ground coffee, making a clear amber infusion with all aroma and flavor of the coffee. And it costs one cent or less to brew six cups of coffee.

The heating element is on the inside of the pot, which conserves the heat and makes it quick and economical. There are no floats, valves, or traps. It is guaranteed for five years.

Attaches to any lamp socket. Six cup size, price including eight foot flexible cord and interchangeable switch plug. \$7.50. Canada, \$9.75.

#### A few other Hospoint Appliances

### ACCORDING TO GIRARD

This side-light upon the size of some of Philadelphia's industries is from Girard's entertaining daily column in the Public Ledger:

"What Philadelphia has done or could do if it wanted to:

"Weave in a year a nice strip of carpet a yard wide to encircle the globe.

"If all the regular soldiers of the world were to march to Philadelphia on that carpet, one factory here could during the year make a hat for every soldier.

"Our mills could knit stockings for every soldier to have a pair on his feet and another in his knapsack.

"Between 6 o'clock p. m. and midnight, all these soldiers could bathe in Philadelphia bathtubs, each taking half an hour for his ablutions,

"On their way over the ocean on that strip of carpet the world's armies would see that 70 out of every 100 ships bearing the American flag had been built in Philadelphia.

"After they landed here these same fighters would learn that over half of all the locomotives used in America had been built at a Philadelphia plant.

"But if Philadelphia didn't wish this stupendous conglomerate army to stop here, it is the only American city that could fire upon it from a home-made, fully-equipped battleship."

A city which can and does do this is a city of considerable moment to the national advertiser. It answers the question, "Why Philadelphia?" The medium in Philadelphia which includes the best of all this possible market is called the

(Continued from Page 45)

all applicants. He did not know that. Once he got a fortnight's work in a lumber mill up in the Northern woods. He lost that job because the mill shut down. Times were

hard and people were not ordering lumber.
But the farming season opened and by
March he was at work again.

He had now been an industrial factor for
a year and a half. He was settled for life in
his trade. He was an average man, as I
have said before; he had comparatively
little initiative and no power to originate.
The moment when the average boy leaves The moment when the average boy leaves school or home, and goes out to look for a job, is the great moment of his life. And at that moment the average man is

a pawn of chance. He sees in a newspaper an advertisement for laborers in a box factory; a friend of his father tells him of an opening with a bricklayer; his teacher knows a merchant who wants an office boy. So the boy becomes a boxworker, a brick-layer or a clerk for life. Because at the moment when he was ready to enter industry John Smith saw in a newspaper an adver-tisement for common laborers of the casual class, he had become a common casual la-borer for life. Only an uncommon run of luck would ever change the current of his life. That luck might have taken the form

of a steady job.

That steady job was now the web and woof of his dreams. The vision of Farmer Bill had grown dim and remote. Like most of us when we encounter cold actuality, he had taken the materials of his castle in the air and started to build a cottage with them; but when the season opened he en-listed with two hundred other laborers to work on an irrigating ditch. That job lasted three weeks. And the rest of his second summer in California was a repetition of

summer in California was a repetition of his first—work, tramp, camp, work, tramp, work—stampeding with his fellows from one job to another at the summons of a rumor. Only, just before work closed in the fall, the one greater than himself touched his life and nearly changed his fate. On the prune ranch where he finished the season he met the girl, a factory worker in the city of winter, a prune dipper at the drier in the summer and fall. They fell in love as young people do; he adored dumbly, as young men of his kind do; she egged him on to a declaration, as young women of all kinds declaration, as young women of all kinds do. Before they parted his flagging ambi-tion had revived in him.

#### From Romance to Jail

I must not linger on their romance; this I must not linger on their romance; this is a business story. When they took stock together he decided not to stay in California. The one dry year had been succeeded by another, a combination that Californians will remember for a generation. The city was very dull; already it was filling up with the unemployed. He did not know that the rains would come again the next winter; that for a few years building in California would provide, both summer and winter, work for all.

California would provide, both summer and winter, work for all.

John and Hattie decided that he had better make his trial in the East. He followed her to San Francisco; he spent most of his summer's savings for clothes to make himself presentable before her. When he was nearly broke he packed his blankets and started East. She saw him off at the station. He did not show her his ticket. She did not know that it read: "San Francisco to Sacramento." At Sacramento he left the train; a day later he was stealing a ride in a freight car.

At Ogden a railroad detective caught him

ride in a freight car.

At Ogden a railroad detective caught him red-handed stealing a ride from the railroad company. Fresh from his romance, he spent five days in jail.

Two years more in the life of John Smith. He has not found that steady job. He had

worked by snatches at many things. His longest job and his hardest lasted him three months. It was lumbering in the North Woods; but the lumber market fell off and the mill shut down. He has dug trenches, plowed, pitched hay, sunk telegraph poles, laid ties, piled scantlings; in the intervals

between steady employment he has done such small work as washing windows, clean-ing up back yards, shoveling snow. There were steady jobs in his world if he had only found them; but remember always that he was an average man and, as such, a prey to environment. He heard of work through his associates, all casual la-borers, or through the employment agencies, which were mainly interested in their turnover, and which got little profit from placing one man in one job for life.

He and Hattie, out in California, corresponded, she assuring him of enduring faith, he assuring her that the steady job was still in sight; but that romance rubbed against the hard realities of life until it wore pretty thin.

There was another thing that dimmed romance. A man must go with a woman. In every normal man dwells the craving for association, on some terms or other, with women. The best times of our lives, if we look at the thing honestly, are not our stag parties, or our man talks across bars, or our college reunions, but those occasions where

men and women meet.

Where could John Smith meet women?
In the back rooms of those saloons that
were his places of social contact, or in the worse places loosely attached to those saloons. He met such women—came to know them and imagine that he liked them. And

every such meeting made him a poorer lover for little Hattie out in California. It was late autumn, and he had crowded into Chicago with the rest, when he got a letter from Hattie, which hinted that she was tired of waiting. It was midwinter, and he had twice undergone periods of eating in soup kitchens, when she took the ex-cuse of something he had written in one of his letters to break with him. It was spring, and he was packing off to a construction camp, when she let the ax fall.

#### A Job Thrown Away

She wrote that she wished him well, but that she was going to marry a clerk in the factory. When, at the end of the week, he got his pay envelope he went on the first debauch of his life—and lost his job. At that, it was more injured pride and the memory of unfulfilled ambition that ailed him than the pangs of despised love.

Three years more, which differed only in detail from the years I have sketched before, and the casual, thoughtless observer of John Smith would have said that liquor was his curse, or soon would be. Often the class of a job was for him the heginning of a was no curse, or soon would be. Often the
close of a job was for him the beginning of a
debauch of greater or less intensity. Yet
the real physical craving, that hot demon
which demands stimulant and yet more
stimulant, did not as yet trouble him.

Had he been a human clod, a man with a

hoe, drink would not have tempted him at all. His trouble was the defect of his good qualities. Being an American, he was ambitious; and at times the old dream of Farmer Bill rose up to reproach him. The one thing that got him back to an atmosphere of hope—the false light of hope which alcohol throws on the world—was been and more been and finally whicky. beer and more beer, and finally whisky.

Three years more in the working life of John Smith. To detail the story of these years would again be a useless repetition. In them he traveled, by means of brake beams, surreptitious rides on freight cars and the bounty of railroad companies, from Albany in the Fast to Oranka in the West: Albany in the East to Omaha in the West; from Michigan in the North to Kentucky in the South. Then, had he only known it, he got the steady job for which he went looking when he parted with Hattie at San Francisco.

They were starting a new steel mill in Minnesota. Steelwork, with its automatic processes, comes more and more to demand common labor, less and less skilled labor. This company was destined to grow; and from the first it adopted the policy of re-taining its old capable men. Some of the younger laborers who went to work with John Smith are there yet. He worked and drew pay for two months. At the end of that time he developed a fierce, surly dis-satisfaction with the job. He quarreled with his mates; he growled at the foreman. And one day, when the shoveling was espe-cially hard, he suddenly threw down his shovel and quit.

The foreman attributed it to bad temper. self by this act naturally incompetent. Not at all. He was an average man-average in character and disposition and in everything else. This would not have happened in the first year of his industrial life or even the fifth; but habit gripped him now. Since he left his father's farm he had scarcely ever worked in one stretch so long as two months. The successive periods of work and loafing had become the rhythm of his life. So he threw away the luck for which he had been looking and passed on down the highroad.

It was late summer; and another blanket stiff, whom he met on the highway, told him a marvelous story. New automobile

## AT LARGE! \$500.00 Cash REWARD

A nameless blond young man, always smiling, likely to be seen anywhere. He will arrest you with his pleasant smile and invite you to have a drink. Once you see his face you will never forget it. His picture can be seen in the windows and on the soda fountains of drug stores and confectioners, and at grocers', fruit stands, etc., everywhere.

The Charles E. Hires Co., makers of "Hires" for Thirst, will pay \$500 in cash for a snappy name for this young man.

In case the name selected is submitted by more than one person preference will not be given to the first one received, but, in the event of a tie, \$500 will be paid to each of the persons who may submit the

Look for his picture and ask the man inside the store for details. No letters answered unless accompanied with stamped, self-addressed envelope. This \$500 is going to be pretty soft for someone. Why not you?

#### To All Soft Drink Dispensers:

There is something big for YOU in this year's Hires' proposition. Hires' salesmen are now out placing this before as many dealers as possible. Some of the smaller towns are not on their routes. Any dealer in soft drinks who is not a Hires dealer now can have the details of this contest and facts about Hires 1914 special deals that mean big profits by sending us the attached coupon properly filled in.

## "Oh! I always use plenty of oil!" Does that insure correct lubrication?

A low-quality or wrong-bodied oil, no matter how freely it is used, can never do the work of the correct lubricant.

"Plenty" of too-light oil often leads to loss of compression and escape of explosion. This means loss of power and unnecessary consumption of gasoline.

"Plenty" of too-heavy oil will often fail to distribute properly through your feed system. Excessive friction, burnt bearings and carbon trouble will result.

"Plenty" of low-quality oil simply means plenty of imperfect protection for the moving parts.

The absolute necessity for oil whose "body" is correct for his motor and whose quality will show maximum lubricating efficiency is entirely overlooked by the motorist who says:

#### "Oh! I always use plenty of oil."

By guess-work and luck you may sometimes get oil for your motor which is correct in "body," and effi-cient in "quality." You should be using such oil continuously.

You can be sure of it by using the grade of Gargoyle Mobiloils specified for your car in the Lubricating Chart on the right.

Make a note of the grade specified for your car. Then make sure that you get it. If your car is not mentioned, send for our complete Lubricating Chart.

This standard guide to correct lubrication was prepared after a careful analysis of every make and model of car. It represents the professional advice of the world-leaders in scientific Inbrication-the Vacuum Oil Company.

On request we will mail a pamphlet on the Construction, Operation and Lubrication of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

The various grades of Gargoyle Mobiloils purified to remove free carbon, are:

> Gargovie Mobileil "V" Gargovie Mobileil "B" Gargovie Mobileil "E" Gargoyle Mosticil "Arctic"

They can be secured from reliable garages. automobile supply houses, hardware stores and others who supply labor

It is safest to buy in original burrels, halfburrels and sealed five and one gallon care See that the red Gargovie, our mark of manufacture, is on the container.

For I are the kindly address any in-- Fac. The city address

#### Correct Lubrication

Explantion: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Are," means "Gargoyle Mobiloil A." The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

So illica Vet

factories were starting over in Michigan. The company needed workmen—short hours and big money—not mechanics, but workmen. They joined forces; being in funds they paid their fare to Michigan. They found the town crowded with workmen who besieged the doors of the new factories. At those doors hung the sign: No help wanted!

Ten thousand idle men poured into town before the Chamber of Commerce, which had started the rumor, grew frightened and sent out the news that the labor market was swamped. John moved over to De-troit; there he settled down to a winter of

charity and odd jobs.

Five years more. Now any one could say with truth and certainty that liquor had John Smith. No longer was it a vicari-ous satisfaction of his ambitions, a means to revive the ambitions of his youth; it was a real need. After a week of his desultory work he felt depleted; he needed a jolt to give him the strength to feel like a man again. Back of this was the life he had led. All through there had been periods of starvation and half starvation. The resiliency of youth for years gave him the strength to rally from these periods; but when the first flush of youth was gone that reservoir ran dry. The liquor, with its overstimulation, drew still further on his strength the more so because it was drugged.

In the summer of 1913, having flopped down on the East and lacking the enterdown on the East and lacking the enter-prise to travel far, he held and lost more than twenty jobs. He did not have to wait now for the work to run out. He was nearly always discharged, or at least he was in the first gang to be laid off. When the late autumn departed he made for New York. Times were dull. The unemployed filled the city. By means of the Municipal Lodg-ing House, the Salvation Army Home, Charity Woodyards, occasional odd jobs and out-and-out begging, he filled in the time until the blizzard gave work to all. He lasted until the afternoon of the

He lasted until the afternoon of the second day. Snow shoveling is hard work; he had done no hard work since November and he had no reserve power. From the industrial point of view he was an old,

worn-out man.

#### The Army of Casual Workers

And yet the years of his life were only thirty-four. At that age the professional man has but begun to build his career; at that age the well-nourished workman may look forward to nearly twenty years of increasing powers. But John Smith had finished his course! Six months or a year of good food, of light, steady work with hope at the end, would bring him back. And he might as well have wished for a million dollars as for that!

And one conservative said of all those cases parallel to John Smith's: "You see, they don't want work!" And another said: "They're merely the degenerate fringe of humanity!" John Smith said nothing. He was inarticulate; and besides, none of his critics took the trouble to ask him.

This depressing story of John Smith would not be worth telling if his case were not typical or if the type were not common. But it is typical; in fact, I have here only constructed a composite story from hundreds of life histories gathered for the new Bureau of Industrial Relations by one Peter Alexander Speek. Of Speek and his work I shall have more to say another time.

And the type is common. gators who have set out very late in the day to study the casual, floating laborers stand appalled at their number. The census is appared at their number. The census is silent on this point; no one can do more than guess. "Two millions." says the most conservative guesser. "It's according to what you mean by casual." says Speek. "I say five millions." "Heaven knows—but millions!" says Commissioner Walsh, of the Bureau of Industrial Relations.

Not all of from turn out as budly as John

Not all of them turn out so badly as John Smith. Though his is not exactly an extreme case, it leans toward the extreme; but the tendency of them all is downward from ambition to hopelessness: from the efficient man to the unemployed man. the unemployable man. Years before the workman of normal, regular life begins to find his powers flagging, the average casual laborer has become useless.

What can we do about John Smith, both for his sake and for our own?

Editor's Note. This is the first of a series of articles by Williams. The second will appear in an \$47. y 159.48.

#### You Can't Dodge the Income Tax-The Decay Tax, Yes!

The decay tax is high. A worn out paint coat results in rot, repair bills, run-down, hard-to-sell houses and a bad neighborhood spirit. That's a heavy tax, but you candodge it. Paint in time and paint right.

### **Dutch Boy White Lead**

and Dutch Boy linseed oil preserve and beautify houses enduringly. Lead and oil make a waterproof elastic coat which expands with the wood and won't crack. Dutch Boy made-to-order paint saves dollars. Your painter will mix it to your house's needs and tint it any color.

# A Talk to 40-year-old Youngsters

It's a funny thing—how at the very time in life when we should be most careful of our looks, we seem to care the least about them.

When the prancing fervor of youth tangoes in our veins, and we are handsome devils anyway we are precious particular to keep perked-up in toppiest regalia.

But as we near the forties and begin to widen at the front, we likewise begin to bag at the knees, wear tobacco cologne on our coat fronts and carry over last winter's overcoat until it's as thread-bare as an ancient meal-sack.

We treat our looks, in fact, a good deal as a man treats an automobile; when it's new and fresh, every brass screw-top on it must shine like a Tiffany setting. But when it's old, he doesn't care how it looks so long as the "old boat" keeps going.

Now the queer part of it is that we middle-aged fellows who dress passé are the very ones most sensitive about being considered passé. We expect the world to regard us as up-to-date even though we don't dress the part. Can you beat that for shrewd, masculine logic?

Many a man who bewails the fact that he's considered a back-number has nothing in the world to blame but his back-number clothes. His looks are advertising and emphasizing the very impression he doesn't want to give.

So let's look at the facts, fellows! We're just as live and young in our ideas today at 40 as we were at 20. But the point is—if we want to get credit for the youth that is in us still—we must look it.

## "Prime of Life" Week May 16, inclusive

A Special Week for 40-year-old Youngsters, to be held in 10,000 Royal Dealers' Stores

PALLOW youths have held the center of the stage in clothes pertisements long enough.

When you men of age and discernet set out to do it, you can give se lashion-plate infants cards and ides any day at showing off good the to advantage. Not one of them prompete with good old middle-aged hn Drew.

And so, beginning May 9th, ten busing Royal dealers-most of them middle-agers themselves-will ld a special week in honor of you me-of-life boys-

A week to demonstrate again the Juvenating wonders of custom Boring-

A week to show once more the ith of the world's oldest axiomtich is, that a man is just as old as feels and dresses-and not one

## THE LAME DUCK

#### Views of an Innocent Bystander

WASHINGTON, D. C.

DEAR JIM: Did you ever stop to think DEAR JIM: Did you ever stop to think how sacred a thing may become when its sanctity, newly acquired or newly alleged—to put it straight—helps you to maintain your own high honor in the consecrated circumstances? Oftentimes we go along for years, taking no heed of the intimate relation a common and familiar article may have to the very highest motives, impulses and convictions of our lives, suddenly to be brought to a realizing sense of the direct bearing, not only on our morals of the direct bearing, not only on our morals but on our moralities, that object exerts. Then we find that this intimate, unconsidered and habituated object really is of the most inviolable and hallowed character, because we personally need the newly discovered sanctity for purposes of our own. This line of thought was developed by a

consideration of the vast and vociferous howl of a certain set of congressional and other patriots concerning the violation of the Democratic platform of 1912, as pro-posed by the President's plan to repeal the Panama Canal free-tolls law. To listen to them one would think that the repeal of this law, which was indorsed in that platform—the law, not the repeal—not only
stultifies a document on which are based all
the hopes of the Democracy for continued
approval by the people, but is party disloyalty and treason, and many other political high crimes and misdemeanors.

Shocked and indignant these patriots
protest against the repeal of the tolls law
and shudderingly point to the fact that
there is a plank in that platform advocating
free tolls for American coastwise ships.

"Is it possible," they ask, "that any man
or any body of men can be sunk so far in
party dishonor as to say that one plank this law, which was indorsed in that plat-

party dishonor as to say that one plank of this holy pronouncement shall be dis-regarded? Can it be that any legislator owing allegiance to the Democratic party— much more a president elected by the same—can so far forget obligations to this Magna Charta of the Democracy as to say that even a word of it shall not have the force of law?

force of law?

"What is the country coming to, and what especially is the Democracy coming to, when it is proposed to lay violent hands on this sainted language, to consider it as unsaid, to ignore it, to pay no heed to it? Oh, the shame and the sorrow of it; the deg-radation and the profanation of it; the unutterable treason and treachery of it! We are amazed and we protest, and we shall fight to the last ditch to preserve the immaculateness of this bill of party partic-ulars, this sacred platform, this grand and historic document!"

#### The Worst Excuse of All

And, knowing a few things about plat-forms, wouldn't that make you burst into laughter? Wouldn't that cause you to rise up and say: "Prunes, prisms and piffle; guff, gargoyles and gumboils; rigma-role, rubbish and rot, rot, rot!"? It would, Jim, if you have a sense of humor. It would if you haven't a sense of humor. It would if you are any person other than a would if you haven't a sense of humor. It
would if you are any person other than a
member of this band of howlers who are
howling: "Woodrow, spare that platform!
Touch not a single plank!"
To think that in the spring of the year,
with the crocuses all up and the hedges
gay with Forsythia, and the magnolias in

bloom, and the trees newly green, and the blackbirds on the White House lawn, and the hyacinths fragrantly adding color to the circles, and the shad coming up the Po-tomac, and the dome of the library gleamng in the sunlight, a set of persons who have attained the right to sit in either branch of the Congress of the United States would deliberately spout that sort of stuff us an excuse and a justification for opposing the repeal of a law—no matter what law— any law at any time—or for any other reason whatsoever!

The gentleman who originally enunci-ated the doctrine that a poor excuse is better than none never heard of so poor an excuse as this, or he would have put on a footnote to the effect that when he designated poor excuses as being better than none he drew the line at violation-of-theplatform excuses, because they are entirely

too meager to excuse anything. Furthermore, no person whatsoever knows this better than the very persons who are making so great a point of the sacredness of the Baltimore platform.

Laying aside the merits of the contention, and making no argument as to whether tolls for a certain class of American ships should be free or not free, what do you think of a bunch who, actuated in their opposition to a repeal of the law by per-sonal and political considerations, seek to cloak their opposition with protestations that this thing must not be done because

it is a violation of a party platform?

The two most insincere things in this world, Jim, are the politics that dictate party platforms and the platforms that are the outcome of that dictation. For some reason there has grown up in this country a custom that demands, purely for advertising purposes, a declaration of political principles by a party that seeks to have its candidates put into office. Now the truth is that party principles change with popular demand. The truth

change with popular demand. The truth also is that each party, seeking to win its election, adopts all the principles it can find lying about loose and makes up a few new ones if it hasn't enough to complete a resounding declaration. It never is a ques-tion of what principles shall be adopted. It is always a question of what principles will be popular.

#### Who Wrote the Platform?

A platform has no binding power on any-body. It is a recital of what seems expedient at the moment for political purposes. It is a compendium of the political fads of the day, thrown together because the custom is to have such a pronouncement as an adjunct to a political campaign.

The only time a politician takes a plat-form seriously is when he needs it as a

bogie to scare a timid candidate or a timid official into doing something he wants done; or when an officeholder falls back on it as a reason or a justification for some action

of his own. Otherwise platforms are glued together and considered as part of the ephemera of the campaign, except, as in the present in-stance, when it becomes necessary to drag them out and wave them in the air as hallowed harbingers, potential precursors, pious promises and sacred sentiments, on which victory was won because the people believed what was said and the candidates

bound themselves to obey the provisions

A presidential platform is a joke played on the people once in four years, dictated by expediency and supposed to be demanded by custom. It is always written so as to have the largest popular appeal, and there-fore touches on all subjects, and strad-dles on most. It must offend nobody and please everybody. It must be fish, flesh, good red herring and vegetarian besides— and always is. and always is.

Have a look at the platforms for the past sixteen years, say. Who wrote them? In every instance save one the candidate wrote them or the men who made the candidate. Forgetting various vainglorious claims that are as bogus as they are vain, who put the gold standard into the Republican plat-form of 1896? Hanna. Who viséed the platform of 1900 for McKinley? Hanna. Who wrote the Republican platform of 1904? Roosevelt. And of 1908? Roosevelt for Taft. Who fixed up the Republican platform of 1912? Taft.

Similarly, with the Democrats Mr. Bryan forced his free-silver declaration into

Bryan forced his free-silver declaration into the platform of 1896, and he put it back and made imperialism the paramount issue besides in 1900. Parker and his managers fixed the platform of 1904, and Mr. Bryan

dictated it again in 1904, and Mr. Bryan dictated it again in 1908.

Now then, what happened in 1912 to the Democrats? Mr. Wilson didn't write the platform, because Mr. Wilson wasn't sure he would be nominated. Champ Clark didn't write the platform, because he was in the same case. Who did write it? A combination of politicians who were not at all certain who would be nominated and who certain who would be nominated, and who constructed a platform on which any per-son selected—Wilson, Clark, Underwood,

#### Tired of Buying "Cheap" Plugs?

THIS plug is made for the man who is tired of buying supposedly "cheap" plugs and finding them extremely expensive in the long run-to say nothing of the constant bother and frouble that such plugs cause.

It is a quality plug all through—and guaranteed to give quality service.

Not built to compete with ordinary plugs in price -but to eclipse them in efficiency and durability.

Only the finest materials used, regard-less of cost. Skilled workmen perform every detail of construction.

Extremely heavy insulating core withstands severest strain. Wide, well cushioned

Wide, well mushioned seat for insulator allows ample room for contraction and expansion.

Enaily taken spart, cleaned and re-assembled. Absolutely gas tight.

If your dealer cannot supply you, send \$4.00 for set of four prepaid.

Guarantee After using Master Spark Plugs for 3rdays, it you are not entirely satisfied with your purchase, money will be referreded, it required, on return of plugs where purchased.

HARTFORD MACHINE SCREWCO. 66 Capitol Ave., Hartford, Coon. Fat. 1871 Bryan, or anybody else who might be named—could stand. To meet this de-mand, they went a bit further than the definite platform-makers of former years, and they put in about everything they could think of and some things they didn't think about.

It was a broad and comprehensive plat-form, fitted for a radical candidate, a con-servative candidate, a middle-of-the-road candidate, and for about any other kind of candidate except a female one. It was a catch-all platform and a carry-all platform. And now these outraged patriots of the Democracy stand up and wail over treason to party precepts, because they have rea-sons of their own for demanding that the tolls provision shall not be repealed, using as their wail-inciter the plank somebody stuck in that Baltimore platform, which

said free tolls are the right thing.

A person might respect a politician who would cite for his opposition to the repeal of the tolls provision any one of half a dozen reasons; but no respect is due to those injured souls who insist that there shall be no repeal because the Baltimore shall be no repeal because the Baltimore platform says tolls ought to be free. That shout is as bogus as a basketful of china

eggs.

Let us not despair, however. Right in the middle of the tolls row came a ray of hope for the salvation of the Republic—a ray of hope that was elegantly attired and had its whiskers curled to a tonsorial triumph. I refer to Colonel James Hamilton Lewis, who, after a period of incubation slightly more than a year in duration, hatched out and presented to a gratified world three several solutions of all the problems now pressing us down to disaster

and disruption.

Aside from daily visits to the White House, where he kept things in order for the President, and his arduous labors as whip on the Democratic side, which, of course, on the Democratic side, which, of course, demanded that he keep things in order for the majority, and his oratorical efforts whereby he kept his polysyllables in order for himself, the colonel was not in evidence more than sixteen hours a day. We wondered what he was doing; and suddenly and effulgently he emerged from this seclusion—for him—and laid before us the fruits of his sequestration, his study and his spats.

#### A Panacea With Whiskers

Briefly, the colonel, referring to his product as "the trinity of my labors while in the Senate," proposed three bills that, in his opinion, will cure all ills, industrial, economic and otherwise, from which we suffer at the present moment. These bills pro-vide, in the first instance, that the Govern-ment shall build a large fleet of merchant vessels, to be leased to individuals in order vessels, to be leased to individuals in order to promote the shipping trade. The second bill is for "A national commission of com-merce and industry, to consolidate the regulation and supervision in a single body of transportation, banking, finance and manufacturing"—and, of course, for the abolishment of all other bodies in conflict therewith. The third contemplates the ab-sorption by the Government of all common carriers and the highways over which they run, and the leasing of these by the Governrun, and the leasing of these by the Government to private operators, under strict regulations.

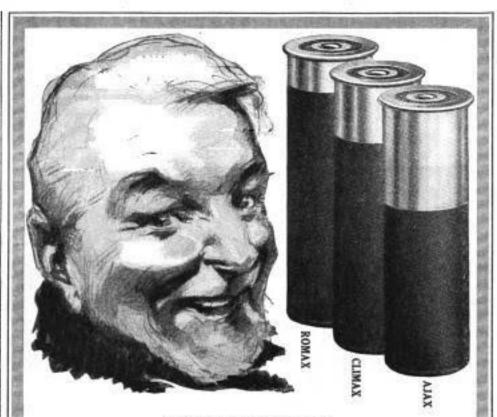

Apparently the colonel felt the need of a little publicity. Things were getting dull with him. Acutely conscious of the well-known law of physics that the bigger the rock, the greater the splash when it falls into the water, he thought that while he had it in mind to regulate things he might as well regulate them. He knew an ordi-nary little Government-control bill would create only a ripple; so he pushed in a rock. He decided he would have not only Government ownership but Government construction of what it owns, and, to control these properties, a commission of twenty-one members—which in effect, of course, means commission government as well.

The colonel, if he were running a news-

paper, would have no headline in it less than seven columns in width. He believes in big display. When he sets out to cure ills he offers no palliative. His is a panacea.

No remedy of such scopes as these bills has been proposed since the days of the late Senator Peffer. Peffer was long on stuff of this kind, just as he was long on whiskers. J. Ham's whiskers are not so ample as were Peffer's; but it would seem that they have

the same general effect.
Yours for a commission to regulate whiskerandoed legislation.
BILL.

I WANT SOME OF

## THE BLACK SHELLS

A lightning primer and a double-size flash pas-sage in The Black Shells are what do the business.

There are two reasons why The Black Shells primer is not made of heavy fulminate of mercury and light ground glass. Heavy and light are hard to combine in a perfectly uniform mixture. Also, glass absorbs heat and cools the flame. Our priming materials, being combustible, actually increase the heat.

The Black Shells primer flame has a doubly wide flash passage through which to reach the main charge. All of its terrific heat is applied to the powder, which, under such ignition, develops much more power than with slow ignition.

The shot drive out in a close pattern and sweep the air in front of the sights with a killing velocity and astonishing penetration. There's no need to "lead" your bird to any extent, because The Black Shells pop quick.

The solid brass head of The Black Shells gives the gases of explosion no chance to leak back through "battery-cup" crevices. Again, as mercury eats brass, all mercury primers use a copper cap. We use caps of the stronger metal, brass - which assures against the danger from a punctured cap.

The Black Shells are really waterproof. Days of exposure in wet, muggy, murky, foggy weather won't affect them. They will load and eject without a hitch-never swelling-never sticking in the barrel.

The uniformity of The Black Shells, the smoothness with which they "feed" in a pump or automatic-these are texts for interesting talks in a free book you will enjoy reading. Just ask for it on a post card.

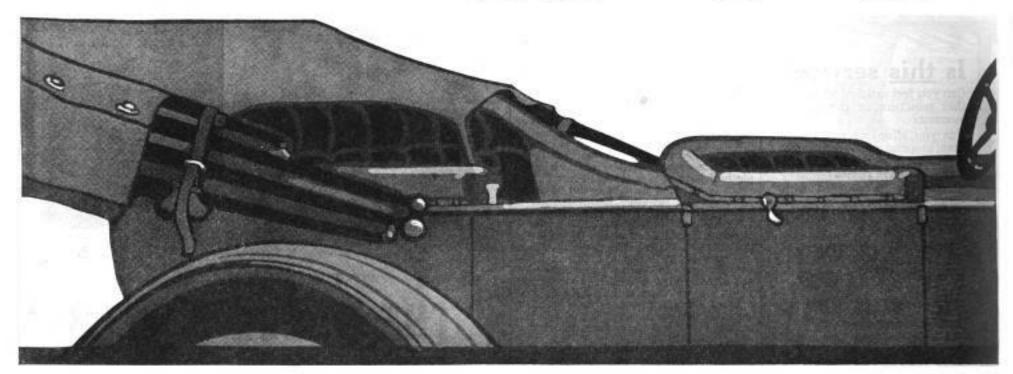

There are three Black Shells: Romax for black powder, Climax and Ajax for smokeless powder.

## Mark This:

It is a matter of common knowledge that a Hupmobile sold at "second hand" commands a price above the market average.

It always has commanded a higher price—ever since the first Hupmobiles were built.

Why do you suppose this is?

The best measure of value for any product is what a second man is willing to pay for it, after the first man has used it.

What the second man pays for the Hupmobile represents what he and thousands of others think about the value of the car.

## "Used" Hups 25% to 40% More

Every extra dollar he is willing to pay testifies that he thinks the Hupmobile is just that much better than some other car. Now, American buyers don't go on fooling themselves, year after year.

If thousands of people think the Hupmobile is worth more, you can bank upon it—it is worth more, first hand and second hand. It's worth more at second hand because it hasn't deteriorated.

And it hasn't deteriorated because of what's in it and the way it is built.

And the stuff that's in it "stands up" because it's the best money can buy—the best steel, the best aluminum, the best bearings, the best rear axle, and so on.

When you buy this new Hupmobile you're not indulging in an extravagance, but making an investment.

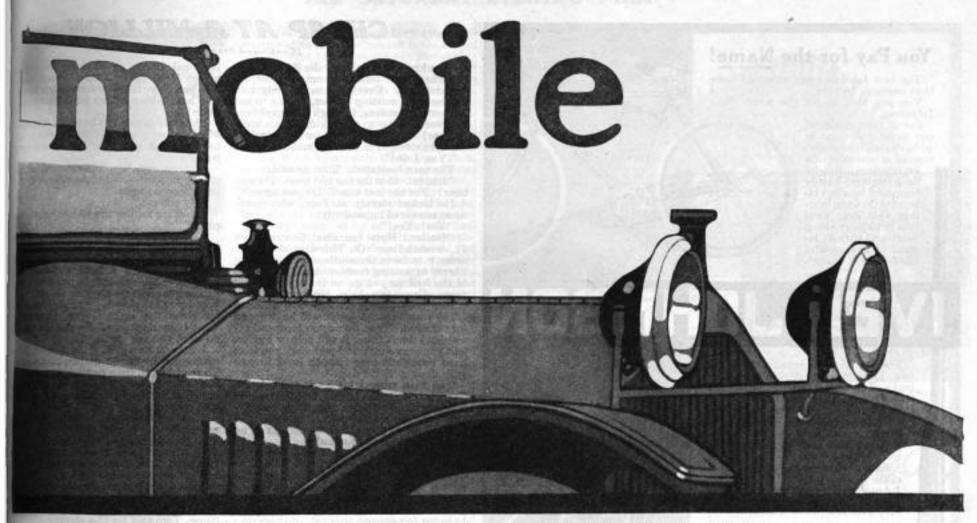

After you've had a world of pleasure and service out of it, the value will still be there - a real, monetary, cashable value.

And, incidentally, while you're enjoying the Hupmobile - it will cost you less to run.

Go to your Hupmobile dealer and let him tell you a host of things we can only hint at here.

#### CHEAP AT A MILLION

(Continued from Page 25)

Tom knew he would not die if he did not meet her soon; but as for wanting her, he certainly did. Every cell in his body was on the alert, waiting for her, hoping to see her; and adventure, through a megaphone, was vociferating in the middle of his soul: "Come! Come!" Therefore Tom looked the man straight in the eyes and answered:
"Yes, I do!"

The man hesitated. Then he said:

"Listen! It is for the last time. Do you hear? For the last time! Do you agree?"
He looked sternly at Tom, who there-

upon answered impatiently:
"Yes! Yes!"

"Boston! Hotel Lorraine! Secure Room 77, seventh floor. On Thursday at exactly seven P. M. be in the southeast corner of the library or reading room, which is on the left norary or reading room, which is on the left of the hall as you go to the main dining room. Green armchair. Hold your hat be-tween your knees—bottom side upward. Close your eyes. A letter will be dropped into the hat. Then do as you please. Per-sonally I don't think it will help or hinder. But you are young: and perhaps if you wish

sonally I don't think it will help or hinder.
But you are young; and perhaps if you wish
hard enough it may happen according to
your desire. Good day!"

The man turned his back squarely on
Tom, leaving to the heir of the Merriwether
millions no alternative but to go out dissatisfied, excited, skeptical, hopeful, and
determined to go to Boston—danger or no
danger, swindle or no swindle.

The mysterious man, too mysterious to

danger, swindle or no swindle.

The mysterious man, too mysterious to be anything but a charlatan, who said he did not wish Tom's money and, for that reason, probably did—this man promised Tom he should meet a girl; a beautiful girl, the girl he would marry. If there was to be no compulsion about it; if they—the man and his accomplices—counted on her charms to capture Tom's heart and hand, why, the sooner she began the attack the better.

Also, it was one of those things that only an ass would talk about—since the telling would put an end to all doubts as to the teller's asininity.

Therefore, without saying a word to anybody. Tom went to Boston, not knowing that McWayne's detectives had orders to follow Tom wherever he went and to report in detail what he was seen to do and what he was heard to say and to whom.

Tom arrived in Boston, went to the Hotel Lorraine, registered, and asked the polite room clerk for Room 77 on the seventh floor. The clerk smiled pleasantly, as he always did whenever a guest-to-be asked for rooms that did not end in thirteen, disappeared to look at the index and

returned.
"I'm sorry, sir; but that room is taken.

I can give you ——"
"Taken!" said Tom, in such a disappointed tone that the clerk deigned to explain sympathetically:

"Engaged by telegraph."
"Who engaged it?"
Tom asked this so peremptorily that the clerk looked at him telly with raised eye-brows, turned his back on the New Yorker, made a pretense of once more looking at the index of rooms and guests, and said to him with a cold determination in his voice:

"I made a mistake. I thought we had a vacant room on the eighth floor. I find we have no vacant room anywhere. I'm sorry, sir. Nothing left!"

He marked something after Tom's name

on the register and turned away. He evidently considered the incident closed.

Tom was too surprised to be angry. Then he recovered himself. His business in Boston was to get a certain room in this hotel. He was a son of his father; so he said with a quiet determination that disturbed

the clerk:
"I must have Room 77 on the seventh floor! The price is of no consequence. I am Mr. Merriwether." "I told you it was engaged."

"And I told you I must have it. Don't you understand English?" "Don't you?" said the clerk, trying to

disguise his growing uneasiness with a

This made Tom calm. He said quietly:
"Will you be good enough to send my
card to Mr. Starrett, the owner of this
hotel? He knows who I am and who my
father is: but if he should have forgotten

y that he is to call up Major Wilkinson, ree, Wilkinson & Company, the bank-τ Mr. Blandy, of the Moontucket

National Bank, or anybody who knows where New York is on the map. Good heavens, there must be somebody in Boston who hasn't been asleep for the last twenty years!"

The clerk decided to be polite. The name Merriwether had a familiar sound, but he could not associate it. He said more politely:

"I am sorry, Mr. Merriwether, but the room you want—and three others with it— have been engaged."
"By whom?"
"You are asking me to break one of our

rules."
"Well, can you tell me whether it has been engaged since yesterday?"
"Oh, longer than that!" He disappeared, consulted a book and came back with the triumphant expression human beings put on when they do not wish to say
I told you so! aloud. "Engaged and pad
for since the eighth, Mr. Merriwether.
That's nine days ago. So, you see, we can't
do what you ask us to. Sorry!"
Wherever he went, Tom thought, he was

confronted by crude attempts at mystery. To send him to this particular room, 77 on the seventh floor, was merely the same as an effort to impress children by using the

magical number seven.

Who had engaged the room? Was it w

who had engaged the room? Was it as accomplice or some stranger guiltless of participation in the rather juvenile joke? Still, Tom was in Boston to do a particular thing; and, though much of the spring restlessness had gone from his veins, there remained the desire to see the affair through to the end, whether the end should be smile or a mild oath. Therefore, after a pause, Tom said to the clerk:

"Can you give me the room exactly

"Can you give me the room exactly opposite 77 on the seventh floor?"

The clerk hesitated, then said:
"Just a minute, please."
He consulted one of the bookkeeper from whom he must have learned whose so from whom he must have learned whose sor Tom was. And, though Boston is not New York, money is money, even in Massa chusetts; and the heir of fifty or a hundre million dollars is something, whether or no he is somebody.

"Certainly," said the clerk, and hande the key to a young man called in New Yor a bellboy. The young man now precede Tom to the seventh floor and ushered th New Yorker into Room 78.

Tom gave the studious youth a dollared the bill with a mixture of suspicion an alarm, put it gingerly into his pocket an

alarm, put it gingerly into his pocket an left the room, closing the door. To opened the door. The boy thought it has opened itself and returned to close it. To waved him away. The boy hastily r treated. He did not, however, throw awa the dollar. He had discovered it was n

The bellboy found the room clerk engage in conversation with two men. He, divi-ing that the talk concerned the genero-lunatic, flung at the room clerk that lo-of exaggerated perplexity which will cau-any normal human being inevitably to as "What is it?" "What is it?"

The room clerk saw the look and st kept on talking with the man; whereup the bellboy walked up to the desk, frown fiercely and muttered;

"He is in his room!"
"What's that, boy?"
"I said," retorted the studious you glacially, "he was in his room—78. I gave me a dollar and left the door open tried to close it, but he opened it again after he gave me the dollar."

The close area in his face, turned to be

The clerk, awe in his face, turned to t men and nodded confirmatively.
"Your man!" he said. "Of course

don't want any fuss -"We'll telephone Mr. McWayne, t private secretary. The young fellow is violent, you know."

The hotel clerk said the inevitable this

"Only son too—isn't he?"

"Yes. Over a hundred million dolls be heard." The detective, induced then by the invitation in the clerk's voice, h

vouchsafed inside information.
"Too bad!" murmured the clerk, this
ing of the hundred millions and Tom. "I
damned bad!" he almost whimpered, this ing of the hundred millions and hims To show that he was unimpressed by v wealth he added sternly: "No trouble, y understand!"

rican Thermo Ware Co., 16 Warren St., Dept. P., New York

One of the men whom McWayne had instructed to shadow Tom sat in the lobby just in front of the elevator. The other, with the clerk's permission, went up to the seventh floor and sat down by the floor telephone operator. From there he could keep a ten-dollar-a-day eye on Room 78. Meantime Tom's impatience had reached such a point that he could not sit still.

Through his open door he could see the closed door of Room 77. The thought came to him to see who was in that room. Then it struck him that perhaps the mysterious man in New York had reckoned precisely on rousing the Merriwether curiosity. Perhaps an unpleasant surprise awaited the man who should enter Room 77. Perhaps the room was occupied by some one who had nothing to do with her—and therefore noth-ing to do with him. Perhaps he should put himself in a ridiculous predicament. Perhaps a million disagreeable things might happen, making it obviously the unwise thing to

do to go into Room 77.

All these reflections, however, weighed no more than a shadow with him. The more he thought of why he should not go into Room 77 the more difficult it became to resist the call of adventure. He walked across the hall and knocked sharply on the door. No answer came. He knocked again. A hotel maid approached him.

"I beg your pardon, sir—are you in the party?"

party?"
"What party?"
"In Room 77." "No. I am in 78."

"I am very sorry—but it is against the rules of the house, sir."

Tom had nothing to say to the maid; so he closed the door of his own room, con-scious that his actions must appear erratic, but not much concerned over it. Presently he went out for a walk and did not go to either of his Boston clubs. This omis-sion was duly noted by the clever Mr. McWayne's star sleuths.

Tom returned to the hotel feeling almost cured. He realized that he had come on a fool's errand; and yet there was something that told him it was not a fool's errand. It was too elaborate for a practical joke. So long as no motive was apparent the mys-tery remained a mystery; and no mystery

is laughable. So he decided for the tenth time to go through with his part, absurd or not. He walked about the lobby utterly unconscious that he was a marked man. He could not see that the clerks and the bellboys and the two men from the New York agency followed his movements, not only with the liveliest curiosity but with deep pity.

All he was doing was to wait more or less impatiently for seven o'clock; but im-patience is so natural a feeling, and comes so easily to most human beings, that it always rouses suspicion. Tom did not act right to the watchers. Any perfectly sane and intelligent man, accused of being mad, will confirm the accusation if he is watched for five minutes. People who never think and never imagine are never taken for lunatics. That nowadays is about the only

compensation for being an ass.

At six-fifty-six P. M. he walked into the hotel library and found that the green plush armchair in the corner by the window was occupied by an elderly woman. It annoyed him because he desired to sit in that chair at exactly seven o'clock. Absurd or not, the problem became how to get rid of the old woman quickly and without disturbing the peace or alarming the office.

His mind worked logically enough for a man under observation for insanity, and his sense of humor acted as a safety valve for his inventiveness. He merely drew his chair very close to the startled old lady and opened a magazine. He found a poem and began to read it in the exasperating undertone used by the demons who have the next seats to yours at the opera.

Presently he began to drum on his thigh ith the tips of his fingers, and at regular intervals of ten seconds he thumped it with his clenched fist bassdrumwise. Every twenty-five seconds he pulled out his watch, looked at it, exclaimed: "Gracious!"—and

blew his nose loudly and determinedly.

Within two and three-quarter minutes
the old lady glared at him, rose, looked at
the clock, glared again at him to make
sure and left the room. In the hall she stopped and spoke to the young lady who checked hats and coats near the entrance of the main dining room:

"I had to leave the reading room. perfectly horrible person came in! He simply drove me out."

Scottonurus rosmod the earth seven million years a le could not adapt himself to changed condition vature scrapped him. Evolution and the

Talks about MAZDA No. 4

Not the na of a thing but the mark of a Service."

BOUT seven million years ago, more or less, a stupid, slow-moving lizard known to science as brontosaurus roamed the earth. He stood thirty feet high on his hind feet and

was seventy feet long. He weighed over thirty tons. As he lumbered along, each of his pon-derous feet left a track that occupied one square yard. No one knows why he became extinct. Perhaps the earth shrugged her shoulders one day, as it were; in other words, a cataclysm occurred. Dry land became water and oceans became dry land. Brontoiaurus could not adapt himself to the change. Nature scrapped him.

This process of scrapping is what Darwin meant by "evolution", "natural selection", and the "survival of the fittest". It is a process that finds its counterpart in the scrap heap of human industry. There are mechanical fossils as well as fossil lizards. Look in the scrap heap of any industry and you will find them. The bigger that scrap heap is, the more marked has been the evolution which

it represents, the more perfect is the product of the industry. If an in-dustry has no scrap heap it is standing still; it is not evolving.

Next to agriculture and architecture the oldest of human industries is the art of lighting-Hence the scrap heap of light producers ought to be large. And it is. Think of the hairy, lowbrowed savage who rubbed two sticks to-gether, built a fire and thus made the first artificial light thousands and

thousands of years ago. Then think of the incandescent electric lamp. What an evolu-tion! What a scrap heap has been piled up of beacons, rush lights, candles and oil lamps, each with a little subsidiary scrap heap of its own, representing the evolution of its particular type of light-producer!

When the incandescent electric lamp was invented the height of the scrap heap was more than doubled. In a few years lamps which represented the illuminating methods of centuries were discarded. And the end is not yet. The height of the scrap heap is growing more rapidly than ever.

All the science of our time is epitomized in the incandescent lamp of today—the MAZDA lamp. If you knew its history you would know the history of modern science. Study its scrap beap and you learn how far the art of lighting has evolved, even in your

At the very bottom of the heap you will find a lamp with a strip of graphite in a poor vacuum, Farther up are hundreds of lamps with platinum filaments; still farther up lamps with filaments composed of the oxides of zirconium and titanium; and very near the present top, lamps with filaments of carbon, osmium, silicon compounds and tantalum. Then come many types of the metal filament lamp, including types of tungsten lamps.

All of them are as extinct as brontosaurus,

Let it not be supposed that the lamps of today marked MAZDA are the last word in incandescent electric lighting. Some day there will be other lamps, more efficient but still marked MAZDA.

They will be so marked because they evolved from the same unceasing systematic study and selection that gave us the MAZDA of today- a study and selection centered in

the Research Laboratories of the General Electric Company at Schenectady and supplemented by learning from the leading experi-mental lamp laboratories of the world what progress they have made in the same direction.

The results thus obtained are communicated to the General Electric Company's manufacturing centers at Cleveland and Harrison, and also to the other lamp manufacturing companies entitled to receive them. This scientific investigation and the communication of

stitute MAZDA Service. All the lamps made by the companies in accordance with this service are marked MAZDA.

A lamp marked MAZDA is always the product of a scientific evolution; whether you buy it today, tomorrow, or at any future time, it is selected from types devised after months and even years of research; it is the one that has survived all tests, because it has been proved the fittest; it is a lamp that represents the latest commercial advance in illumination of its time.

Comparing the spectra of two lights. MAZDA Service means the making of many such comparisons.

tests, experiments and se lections in order constant

to evolve better lamps. The aim is that MAZDA shall always be the mark of the furthest advance in

## Motorists Who Drove Haynes Cars in the Early Days Still Drive the Haynes

Twenty-one years ago, Elwood Haynes built the "horseless carriage"-the little machine that gave birth to the American automobile industry. Ever since then, Haynes cars have been built, year in, year out, without interruption.

And during these twenty-one years, Haynes owners have been demonstrating in "road races," "reliability runs," in "hill climbs" of every description, under all conditions, in this country and abroad with themselves the only "competitors," that the

is a good car, and that given ordinary care and attention, the Haynes remains a good car, a mighty good car-indefinitely.

That's why these owners, after years of service, again purchase a Haynes. That's why such a large percentage of the Haynes annual production is sold every season to owners of old Haynes cars. That's why you should investigate the Haynes before you buy any car.

Elwood Haynes was ahead of the times when he built the first Haynes, back in '93. He is ahead of the times now in adopting the greatest automobile refinement in recent years—the Vulcan Electric Gear Shift. This device eliminates the hand-shift lever entirely, and so simplifies the control of the Haynes that anyone may readily drive it. With it, the Haynes is electrically controlled throughout, inasmuch as gear-shifting, starting, lighting and ignition are accomplished by electricity.

The Haynes "Four"—118 inch wheelbase . \$1785 and \$1985 The Haynes "Six"—130 inch wheelbase . . 2500 and 2700 The Haynes "Six"—136 inch wheelbase . . 2585 and 2785

"The Complete Motorist" by Elwood Haynes, Father of the American Automobile Industry, fully describing the Vulcan Electric Gear Shift, will be mailed upon receipt of ten cents in stamps. Write to

THE SALES DIVISION, BOX 294

THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PENNA.

"Yes, madam. The young gentleman is insane. It is a very sad case."
"Goodness! What a narrow ——"

"Oh, you needn't fear; he is quite harm-

less, madam."
"It's a wonder a first-class hotel, such as

this claims to be, allows ——"
"You are right!" agreed the wise young woman, whose business it was to encourage

generosity.

The old lady went away muttering.
Thomas Thorne Merriwether sat down in the vacated chair, put his hat between his knees and waited. The mahogany clock on the mantel presently began to chime the hour and Tom felt a pang of angry dis-appointment. Nothing had happened— except that he again had made an ass of

A tall, strongly built man at that moment entered the room, looked at Tom, saw the hat held between the knees, and turned away as if the last person in the world he wished to see was young Mr. Merriwether.

Tom saw him stretch his hand toward a panel in the wall. Instantly the room was in darkness. It occurred to Tom that this would be a good way to attack him; but there instantly followed the reflection that it

was not a good place in which to do any robbing or murdering.

Therefore young Merriwether sat on quietly. He felt something drop into his hat. A faint odor of sweet peas came to his nostrils-the odor he had associated with his youth until he began to associate it with her, and therefore with love.

This evanescent perfume that made vague memories stir within him; that made him desire to see the woman who was to be his wife; that made him thrill obediently at the call of adventure-made him feel that the mysterious man of 777 Blank Avenue was not a cheap charlatan.

Suddenly the light was turned on again. Tom saw a slip of paper within his hat, fished it out, and, without stopping to see what it was or what it said, rushed from the room into the corridor.

He saw men and women coming and going. He could not tell whether she was among them or whether the man who had entered the library—who probably was the man that put out the light—was among the crowd. But the sleuths and the bellhoy and the coatgirl watched him. What doubt could remain? In their minds there was

Tom abandoned the chase. The key to the mystery eluded him, as usual. He was not clever enough to catch the mystery-manipulator in the act, as it were. He looked at the paper. It was an envelope. On it was written in a woman's hand:

For T. M.

He opened the envelope and pulled out a sheet of the hotel notepaper, on which he read, in the same handwriting:

He walked to the desk and spoke to the room clerk.

"I must ——" he began, but stopped.
"Yes, sir, Mr. Merriwether!" The clerk used the voice and manner of a man saying nice things to a child in order to propitiate its mother.

About Room 77 on the seventh floor," said Tom.

"We can give it to you now, if you wish.

What? Has she -- is it vacant?

"Given up this very minute. If you'll wait until we send up and see whether it is ready to be occupied, I'll ——"
"I'll take it; but I'd like to go up at

He wished to see whether there was any clew left by the previous occupants.
"Certainly. Front!"

Tom followed the bellboy. The room was empty and undisturbed. He thought he smelled sweet peas, and sat down in an armchair to think; but the odor, which made her recognizable in his dreams of her, prevented him from thinking as you would

expect a healthy young man to think. There was no sharpness of outline in the visions of her seen through the mist of dreams and longings.

He knew there was a girl somewhere whom he would marry. Indeed he often had wondered what his wife would be like. Every man, when he endeavors to look ahead, thinks that some day he shall have a wife—the mother of his children—the woman whose mere existence will influence his life more than anything else in the

world; whose love will make him a different man; whose necessities will give to him an utterly different point of view

Our lives depend on our point of view; and Tom knew that his point of view would be utterly changed by this girl he had never seen. Would she be the girl the man in 777 Blank Avenue said she would be? Was she the mysterious person with whom, of course, he was not in love, but with whom he might fall in love—adventuress or not? His love of love had not yet changed into love of somebody; but he was keen to enter into a definite love affair with a concrete being, and he rather suspected that this affair was being stage-managed for his benefit.

He would forgive everything so long as in the end something happened—something in which there was a girl, whether or not she was the girl. What most irritated him was the indefiniteness of the mystery so far. The spice of danger; the tragical possibili-ties; the lure of adventure; the call of the unusual; the attraction of the unknown and therefore of the interesting—were no longer quite enough. The glimpse of a face— of a living face—and a hand to shake, a waist to clasp and lips to kiss: these things

he now desired.

His irritability over his failure to develop an adventure in Boston grew keener until it became anger. He would have it out once for all with the mysterious man at 777

Blank Avenue. He went downstairs, paid his bill and took the midnight train for New York.

(TO BE CONTINUED)

#### Cold Comfort

THERE is a certain hotel up in British L Columbia that has a reputation for being reasonably cold. It is a frame structure and the walls are thin and shaky. One morning during a blizzard two guests who had been there the night before came out of their rooms, on opposite sides of the hall. The first man said:

hall. The first man said:
"Whew! I'm nearly frozen! I never
was so cold in my life. I slept with all my
was so cold on me,

clothes on and everything else piled on me, and I'm frosted through!"
"Same here," said the other. "I was on the windward side of this hut. I put on my buffalo coat over my clothes, and I don't

think I'll ever get warm!"

They went down to the hotel office.

There, huddled over the stove, was a stage driver who had lost his way and been out all night. His hair and whiskers were lumps of ice. His fur hat was frozen to his head. He shivered and shook with the cold, though he was practically sitting on the stove. The two guests looked at him for a minute. Then one of them asked:

"Which room did you have, partner?"

### Where the Money Was

THE Reverend J. Ashby Jones, of Augusta, the best after-dinner speaker in Georgia—always barring Colonel John Temple Graves, who does not live in Georgia any more—says that a negro woman in his town was a bride of only two weeks when a switch engine ran over her husband as he loafed about the railroad yards.

With the desire—so characteristic of

some of the legal profession—to do justice speedily, the claim agent rounded up the widow before any other lawyer could get at her, towed her to his office, and there spread before her dazzled vision five hundred vis dred dollars in new shiny bills.

The sorrowing one took one look at all that wealth, then grabbed for it with her left hand while with her right she signed on the dotted line A of the quitclaim. This done, she plucked a fragrant yellow twenty off the top of the pile of currency and after inhaling its aroma fanned herself daintily with it.

Clarissa." said a woman friend who had accompanied her, "whut you reckin you goin' do now sence you come into all dis

The widow exhaled a long and happy

sigh.
"Well," she said, "havin' dis yere streak

(Continued from Page 19)

"Yes," he says; and, without openin' it,

"Yes," he says; and, without openin' it, he tore it up and throwed it out the window. 
"Had a quarrel?" I ast.
"No, no," he says; "but she can't tell me nothin' I don't know already. Girls always writes the same junk. I got one from her in Pittsburgh, but I didn't read it."
"I guess you ain't so stuck on her," I

says.

He swells up and says:

"Of course I'm stuck on her! If I wasn't, do you think I'd be goin' round with this bunch and gettin' insulted all the time? I'm stickin' here because o' that series dough, so's I can get hooked."

"Do you think you'd settle down if you was married?" I ast him.

"Settle down?" he says. "Sure, I'd settle down. I'd be so happy that I wouldn't have to look for no excitement."

have to look for no excitement."

Nothin' special happened that night 'cep' that he come in the room about one o'clock and woke me up by pickin' up the foot o' the bed and droppin' it on the floor, sudden-like.

"Give me a key to the room," he says.
"You must of had a key," I says, "or
you couldn't of got in."
"That's right!" he says, and beat it to

One o' the reporters must of told Elliott that John had ast for waivers on him and New York had refused to waive, because

New York had refused to waive, because next mornin' he come to me with that dope.

"New York's goin' to win this pennant!" he says.

"Well," I says, "they will if some one else don't. But what of it?"

"I'm goin' to play with New York," he says, "so's I can get the World's Series dough."

"How you goin' to get away from this club?" I ast.

"Just watch me!" he says "I'll he

"Just watch me!" he says. "I'll be with New York before this series is over."

Well, the way he goes after the job was original anyway. Rube'd had one of his good days the day before and we'd got a trimmin'; but this second day the score was tied up at two runs apiece in the tenth, and Big Jeff'd been wabblin' for two or

Well, he walks Saier and me, with one out, and Mac sends for Matty, who was warmed up and ready. John sticks Elliott in in Brid's place and the bug pulls one into the rightfield stand.

It's a cinch McGraw thinks well of him.

It's a cinch McGraw thinks well of him then, and might of went after him if he hadn't went crazy the next afternoon. We're tied up in the ninth and Matty's workin'. John sends Elliott up with the bases choked; but he doesn't go right up to the plate. He walks over to their bench and calls McGraw out. Mac tells us about it afterward.

"I can bust up this game right here!"

says Elliott.

"Go ahead," says Mac; "but be careful he don't whiff you."

Then the bug pulls it.

"If I whiff," he says, "will you get me on your slub?"

your club?"
"Sure!" says Mac, just as anybody would.

By this time Bill Klem was hollerin' about the delay; so up goes Elliott and gives the worst burlesque on tryin' to hit that you ever see. Matty throws one a mile outside and high, and the bug swings like it was right over the heart. Then Matty throws one at him and he ducks out o' the way—but swings just the same. Matty must of been wise by this time, for he pitches one so far outside that the Chief almost has to go to the coachers' box after it. Elliott takes his third healthy and runs through the field down to the clubhouse.

We got beat in the eleventh; and when we went in to dress he has his street clothes on. Soon as he seen John comin' he says: ot to see McGraw!

John was goin' to the fights that night; but before he leaves the hotel he had waivers on Elliott from everybody and had sold him to Atlanta.
"And," says John, "I don't care if they

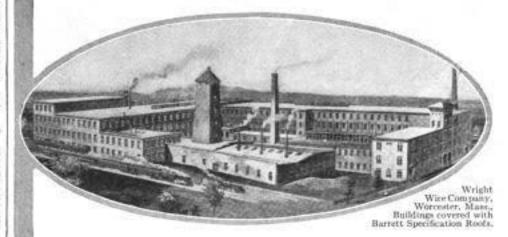

"And," says John pay for him or not."

My roomy blows in about nine and got the letter from John out of his box. He was goin' to tear it up, but I told him they was news in it. He opens it and reads where he's sold. I was still sore at him; so

I says:
"Thought you was goin' to get on the
New York club?"

Why you should be interested in Roofing

FREQUENTLY the build-ing of a roof on a factory or warehouse, or any building, is regarded as merely incidental to the whole proposition.

Great care and thought are spent in deciding whether to use stone or concrete for the foundation. Even the choice of materials for the fence about the place gets its share of attention.

But with many owners of buildings the roof is only a roof, and they take it as a matter of course that they must repair leaks every now and then.

Do you realize that this is the wrong viewpoint?

The roof is a most important part of the structure. If properly specified, you will be free from leaks and trouble and expense.

The Barrett Specification is the scientific standardization of an old established theory of roofing-one that has stood for years as the best in roofs-namely, a combination of coal tar pitch, tarred felt and gravel or slag.

If you want a really waterproof, fire-retardant roof covering that will last 20 years or more, see that you get a Barrett Specification

> The Turks Head Building Providence, R. I. Architecta, Howells & Stokes Builders, Thompson-Starrett Co., New York Barrett Specification Roof.

#### Special Note

We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding.

If any abbreviated form is desired, however, the following is suggested:

ROOFING-Shall be a Barrett Specification Roof, laid as directed in printed Specifica-tion, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

A copy of The Barrett Specification in full sent free on request. Every owner, builder and engineer should have it.

Your spare time can be converted into money. Let us tell you about it. Agency Division, The Curtis Publishing Company, Philadelphia, Pa.

"No," he says. "I got turned down cold.
McGraw says he wouldn't have me in his
club. He says he'd had Charlie Faust—
and that was enough for him."
He had a bind of proper look in his cases.

He had a kind o' crazy look in his eyes; so when he starts up to the room I follows

so when he starts up to the room I follows him.

"What are you goin' to do now?" I says.

"I'm goin' to sell this ticket to Atlanta," he says, "and go back to Muskegon, where I belong."

"I'll help you pack," I says.

"No," says the bug. "I come into this league with this suit o' clothes and a collar. They can have the rest of it." Then he sits down on the bed and begins to cry like sits down on the bed and begins to cry like a baby. "No series dough for me," he blubbers, "and no weddin' bells! My girl'll die when she hears about it!"

Of course that made me feel kind o' rotten, and I says:

"Brace up, boy! The best thing you can do is go to Atlanta and try hard. You'll be up here again next year."

"You can't tell me where to go!" he says, and he wasn't cryin' no more. "I'll go where I please—and I'm li'ble to take you with me."

I didn't want no argument, so I kep' still. Pretty soon he goes up to the lookin'-glass and stares at himself for five minutes. Then, all of a sudden, he hauls off and takes a wallop at his reflection in the glass. Natu-rally he smashed the glass all to pieces and he cut his hand somethin' awful.

Without lookin' at it he come over to me and says: "Well, good-by, sport!"— and holds out his other hand to shake. When I starts to shake with him he smears his bloody hand all over my map. Then he laughed like a wild man and run out o' the room and out o' the hotel.

WELL, boys, my sleep was broke up for the rest o' the season. It might of been because I was used to sleepin' in all kinds o' racket and excitement, and couldn't stand for the quiet after he'd went—or it

might of been because I kep' thinkin' about him and feelin' sorry for him.

I of'en wondered if he'd settle down and be somethin' if he could get married; and finally I got to b'lievin' he would. So when we was dividin' the city-series dough I was thinkin' of him and the sid Our I was thinkin' of him and the girl. Our share o' the money—the losers', as usual— was twelve thousand seven hundred sixty bucks or somethin' like that. They was twenty-one of us and that meant six hundred seven bucks spiece. We was just goin' to cut it up that way when I says: "Why not give a divvy to poor old Elliott?"

Elliott?

About fifteen of 'em at once told me that I was crazy. You see, when he got canned he owed everybody in the club. I guess he'd stuck me for the most—about seventy bucks—but I didn't care nothin' about that. I knowed he hadn't never reported to Atlanta, and I thought he was prob'ly busted and a hunch of money wight make busted and a bunch o' money might make things all right for him and the other songbird.

I made quite a speech to the fellers, tellin' 'em how he'd cried when he left us and how his heart'd been set on gettin' married on the series dough. I made it so strong that they finally fell for it. Our shares was cut to five hundred eighty apiece, and John sent him a check for a

For a while I was kind o' worried about what I'd did. I didn't know if I was doin' right by the girl to give him the chance to marry her.

marry her.

He'd told me she was stuck on him, and that's the only excuse I had for tryin' to fix it up between 'em; but, b'lieve me, if she was my sister or a friend o' mine I'd just as soon of had her manage the Cincinnati Club as marry that bird. I thought to

myself:
"If she's all right she'll take acid in a
month—and it'll be my fault; but if she's
really stuck on him they must be somethin' wrong with her too, so what's the diff'rence?"

Then along comes this letter that I told you about. It's from some friend of hisn up there—and they's a note from him. I'll read 'em to you and then I got to beat it for the station:

"Dear Sir: They have got poor Elliott locked up and they are goin to take him to the asylum at Kalamazoo. He thanks you for the check, and we will use the money to see that he is made comf'table.

#### Concluded from Page 62)

"When the poor boy come back here he found that his girl was married to Joe Sohop, who runs a soda fountain. She had wrote to him about it, but he did not read he letters. The news drove him crazy poor boy—and he went to the place where they was livin' with a baseball but and very pear killed 'em both. Then he marched down the street singin' Silver Threads Among the Gold at the top of his voice. They was goin' to send him to prison for assult with intent to kill, but the jury decided he was crazy.
"He wants to thank you again for the

money.

"Yours truly, JIM ---"

I can't make out his last name-but it don't make no diff'rence. Now I'll read you his note:

"Old Roomy: I was at bat twice and made two hits; but I guess I did not meet 'em square. They tell me they are both alive yet, which I did not mean 'em to be. I hope they got good curve-ball pitchers where I am goin'. I sure can bust them curves—can't I, sport?
"Yours, B. ELLIOTT.

"P. S .- The B stands for Buster."

That's all of it, fellers; and you can see I had some excuse for not hittin'. You can also see why I ain't never goin' to room with no bug again—not for John or nobody else!

#### AN AMERICAN VANDAL

(Continued from Page 22)

m Englishman. It will be made most dear to you too-in the law courts-if you infringe mit by violence or otherwise. No; they have gentler system than that—one free from rese, excitement and all mussy work.

Along toward twelve-thirty o'clock the saiters begin going about, turning out the ights. The average London restaurant is some too brightly illuminated to start with, being a dim and dingy ill-kept place commend with the glary, shiny lobster palace that we know; so instantly you are made asset of a thickening of the prevalent

The waiters start in at the far end of the tom and turn out a few lights. Drawing ware and nearer to you they turn out more lets; and finally, by way of strengthening the hint, they turn out the lights imme-tately above your head, which leaves you the stilly dark with no means of seeing your food even; unless you have taken the recaution to spread phosphorus on your andwich instead of mustard—which, howreer, is seldom done. A better method is to order a portion of one of the more

Aminous varieties of imported cheese.

The best thing of all, however, is to take you hat and stick and go away from there. And then, unless you belong to a regular dtb or carry a card of admission to one if the chartered all-night clubs that have srung up so abundantly in London, and which are uniformly stuffy, stupid places where the members take their roistering snously—or as a last resort, unless you care wait for a tiresome hour or two in the grill of your hotel—you might as well be toddling sway to bed; that is to say, you might as well go to bed unless you find the scenes in the street as worth while as I found them.

he street as worth while as I found them. At this hour London's droning voice has stated to a deep, hoarse snore; London has become a great, broody giant taking rest that is troubled by snatches of wakefulness; London's grimy, lined face shows new wrinkles of shadow; and new and mexpected clumping of colors in monotone and halftone appear. From the massed-up tak of things small detached bits stand windly out: a flower girl whose flowers and whose girlhood are alike in the sere the pellow leaf; a soldier swaggering by, his ned coat lighting up the grayish mass about him like a livecoal in an ashheap; a policeman escorting a drunk to quarters for the man escorting a drunk to quarters for the hight-not, mind you, escorting him in s danging, rushing patrol wagon, which sould serve to attract public attention to the distressing state of the overcome one, but conveying him quietly, unostentationally, surreptitiously almost, in a small-wheeled vehicle partaking somewhat of the inture of a baby carriage and somewhat of the nature of a pushcart.

#### Tenderness to Drunkards

The policeman shoves this along the mad jailward and the drunk lies at rest in a stretched out full length, with a neat trate form to screen him from drafts and save his face from the gaze of the vulgar. Drunkards are treated with the tenderest

esideration in London; for, as you know, Britons never will be slaves—though some of them in the presence of a title give such mitations of being slaves as might fool even so experienced a judge as the late Simon Legree; and—as perchance you may also have heard—an Englishman's souse is his tastle. So in due state they ride him and his turreted souse to the station house in a Perambulator.

from midnight to daylight the taxicabs If the countless swarm will be charging

about in every direction-charging, more over, at the rate of eight pence a mile. Think that over, ye taxitaxed wretches of New York, and rend your garments, with lamentations loud! There is this also to be said of the London taxi service-and to an American it is one of the abiding mar-vels of the place—that, no matter where you go, no matter how late the hour or how outlying and obscure the district, there is always a trim taxicab just round the next corner waiting to come instantly at your whistle, and with it a beggar, with a bleak, hopeless face, to open the cab door for you and stand, hat in hand, for the

penny you toss him.
In the main centers, such as Oxford Circus and Piccadilly Circus and Charing Cross, and along the Embankment, the Strand and Pall Mall, they are thick as fleas on the Missouri houn' dawg famous in song and story— the taxis, I mean, though the beggars are reasonably thick also—and they hop like fleas, bearing you swiftly and surely and cheaply on your way. The meters are honest, openfaced meters; and the drivers ask no more than their legal fares and are satisfied with tips within reason. Here in America we have the kindred arts of taxidermy and taxicabbery; one of these is the art of skin-ning animals and the other is the art of skinning people. The ruthless taxirobber of New York would not last an hour in London; for him the jail doors would yawn.

#### The Rules of the Road

Oldtime Londoners deplored the coming of the taxicab and the motorbus, for their coming meant the entire extinction of the driver of the horse-drawn bus, who was an institution, and the practical extinction of the hansom cabby, who was a type and very frequently a humorist too. But an

American finds no fault with the present arrangement; he is amply satisfied with it.

Personally I can think of no more exciting phase of the night life of the two greatest cities of Europe than the stunt of dodging taxicabs. In London the peril that lurks for you at every turning is not the result of carelessness on the part of the

the result of carelessness on the part of the drivers; it is due to the rules of the road. Afoot an Englishman meeting you on the sidewalk turns, as we do, to the right hand; but mounted he turns to the left. The foot passenger's prerogative of turning to the right was one of the priceless heri-tages wrested from King John by the barons at Runnymede; but when William the Conqueror rode into the Battle of Hastings he rode a left-handed horse-and so, very naturally and very properly, everything on hoof or wheel in England has consistently turned to the left ever since. I took some pains to look up the original precedents for these facts and to establish them histor-

The system suits the English mind, but it is highly confusing to an American who gets into the swirl of traffic at a crossing— and every London crossing is a swirl of traffic most of the time-and looks left when he should look right, and looks right when he should be looking left until the very best he can expect, if he survive at all, is cross-eyes and nervous prostration.

I lost count of the number of close calls from utter and mussy destruction I had while in London. Sometimes a policeman took pity on me and saved me, and again, by quick and frenzied leaping, I saved myself; but then the London cabmen were poor marksmen at best.

In front of the Savoy one night the same cabman in rapid succession had two beautiful shots at me and each time missed the

Concrete Floors laid by Master Builders Method for D. Auerbach & Sons, Candy Makers, New York

#### Here's A Concrete Floor That Won't Wear Out

You can have one like it—a concrete floor that won't grind and crumble away—that will need no painting or patching—that will stand the heaviest trucking without damage—and that will keep your plant and product free from gritty concrete dust.

#### The Day of Ordinary Concrete Floors is Past

Master Builders Concrete Hardner is a finely-divided, chemically-treated material, harder than either sand or cement. It is mixed with the sand and cement for the topping. It prevents porosity. It binds, hardens and strengthens the floor — makes it dense, dustproof, dura-ble. It is used according to exact specifications known to architects and contractors as Master Builders Method, (patented in United States, Canada and foreign countries). Millions of square feet of better concrete floors laid by Master Builders Method are giving satisfactory service.

Building Supply Dealers in all important cities carry Master Builders Concrete Hardner. Your contractor can use it according to our "Standard Specifications," Before you lay another floor, send for "The Master Builders Primer," full of facts vitally important to every builder.

The Master Builders Company Department A-Cleveland, Ohio

Rapid, Accurate Adding Machine Service

An Ohio metal roofing company adopted a new efficiency system, in the development of which cost information was of vital importance.

It was soon found that the expense of getting this information in the usual way was prohibitive-but they had to know where they stood. Finally the

#### Adding and Calculating Machine

was called upon to do for the cost work what the efficiency man was doing in the factory—cut out waste effort and let machines do the machine work. How well the Comptometer fulfilled its mission is best told in their own words:

'Our output has been doubled and the business is correspondingly bigger. Still, thanks to the Comptometer, we do all the clerical work with the same sized force we had two years ago.

This concern is now using Comptometers on all of their bookkeeping and accounting work-balancing ledgers, footing trial balance, billing, estimating, payroll, costs, auditing, etc.

Such results are not exceptional. They have been repeated over and over again in the experience of Comptometer users-thousands of them. They all had to be shown, of course. They were shown-let us show you.

A thorough demonstration of the Controlled-Key Comptometer involves no obligation or expense—a word from you is all that is necessary-and it may lead to some startling economies in your own business.

#### Write For Valuable Information

You will find an interesting story in "Leading the Bookkeepers out of Bondage"—and some mighty helpful ideas for the bookkeeper in "Daily Ledger Control." Write for either one or both of these booklets. They're free for the asking.

## Queen Margherita's Limousine

IS UPHOLSTERED WITH

WILMINGTON, DELAWARE

bull's-eye by a disqualifying margin of inches. A New York chauffeur who had failed to splatter me all over the vicinage at the first chance would have been ashamed to go home afterward and look his innocent little ones in the face.

Even now I cannot decide in my own mind which is the more fearsome and perilous thing—to be afoot in Paris at the mercy of all the maniacs who drive French motor cars or to be in one of the motor cars at the mercy of one of the maniacs. Motoring in Paris is the most dangerous

sport known—just as dueling is the safest.

There are some arguments to be advanced in favor of dueling. It provides copy for the papers and harmless excitement for the participants—and it certainly keeps them out in the open air; but with motoring it is different. In Paris there are no rules of the road except just these twothe pedestrian who gets run over is liable to prosecution, and all motor cars must travel at top speed.

#### A Hair-Graying Ride

If I live to be a million I shall never get over shuddering as I think back to a taxi-cab ride I had in the rush hour one afternoon over a route that extended from away down near the site of the Bastille to a hotel away up near the Place Vendôme. The driver was a congenital madman—the same as all Parisian taxicab drivers are; and in addition he was on this occasion acquir-ing special merit by being quite drunk. This last, however, was a detail that did not dawn on my perceptions until too late to cancel the contract. Once he had got me safely fastened inside his rickety, creaky devil-wagon he pulled all the stops all the way out and went tearing up the crowded boulevard like a comet with a can tied to

I hammered on the glass and begged him to slow down—that is, I hammered on the glass and tried to beg him to slow down. For just such emergencies I had previously stocked up with two French words— Doucement! and Vite! I knew that one of those words meant speed and the other meant less speed, but in the turmoil of the meant less speed, but in the turmoil of the moment I may have confused them slightly. Anyhow, to be on the safe side, I yelled "Vite!" a while and then "Doucement!" a while; and then "Doucement!" and "Vite!" alternately—mixing in a few short, simple Anglo-Saxon cusswords and prayers for dressing. But nothing I said seemed to have the least effect on that demoniac scoundrel. Without turning his head he merely shouted back something unintelligible and threw on more juice.

On and on we tore, slicing against the sidewalk, curving and jibbing, clattering

and careening—now going on two wheels and now on four—while the lunatic shrieked curses of disappointment at the pedestrians who scuttled away to safety from our charging onslaughts; and I held both hands over my mouth to keep my heart from jumping out into my lap.

I saw, with instantaneous but photo-graphic distinctness, a lady, with a dog tucked under her arm, who hesitated a moment in our very path. She was one of the largest ladies I ever saw and the dog under her arm was certainly the smallest

dog I ever saw.
You might say the lady was practically out of dog. I thought we had her for sure and probably her dog too; but she fell back and was saved by a matter of half an inch or so. I think, though, we got two buttons off her shirtwaist and the back trimming of her hat.

Then there was a rending, tearing crash as we took a fender off a machine just emerging from a cross street; but my lunatic never checked up at all—just flung

a curling ribbon of profanity over his shoulder at the other driver and bounded onward like a bat out of the Bad Place. That was the hour when my hair began to turn perceptibly grayer. And yet, when by a succession of miracles we had landed intact at my destination, the fiend seemed to think he had done a praiseworthy and creditable thing. I only wish he had been able to understand the things I called him—

that is all I wish!

It is by a succession of miracles that the members of his maniacal craft usually do dodge death and destruction. The providence that watches over the mentally deficient has them in its care, I guess; and the same beneficent influence frequently avails to save those who ride behind them and, to a lesser extent, those who walk

Once in a while a Paris cabman does have a lucky stroke and garner in a foot traveler. In an instant a vast and surging crowd convenes. In another instant the road is impassably blocked. Up rushes a gendarme and worms his way through the press to the center. He has a notebook in his hand. In this book he enters the gloating cabman's name, his age, his ad-dress, and his wife's maiden name, if any and gets his views on the Dreyfus case, and finds out what he thinks about the separation of church and state; and tells him that if he keeps on the way he is headed he will be getting the cross of the Legion of Honor pretty soon. Then they shake hands and embrace, and the cabman cuts another notch in his mudguard, and gets back on the seat and drives on. Then if, by any chance, the victim of the accident still breathes, the gendarme arrests him for interfering with the traffic. It is a lovely system and sweetly

#### Cows and Cuttlefish

Under the general classification of thrill-ing moments in the night life of Europe I should like to list a carriage trip through the outskirts of Naples after dark. In the first place the carriage driver is an Italian driver—which is a shorter way of saying he is the worst driver living. His idea of getting service out of a horse is, first to snatch him to a standstill by yanking on the bit and then to force the poor brute into a gallop by lashing at him with a whip having a partic ularly loud and vixenish cracker on it; and at every occasion to whoop at the top o his voice.

In the second place the street is as nar row as a narrow alley, feebly lighted, am has no sidewalks. And the rutty paving stones which stretch from housefront t housefront are crawling with people an goats, and dogs and children.

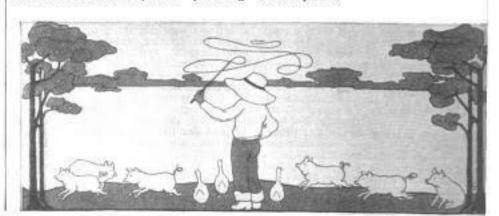

Finally, to add zest to the affair, ther are lots of loose cows mooning about—fo at this hour the cowherd brings his stock t the doors of his patrons. In an Italian cit the people get their milk from a cow, instea of from a milkman as with us. The milk delivered on the hoof, so to speak.

The grown-ups refuse to make way for you to pass and the swarming young on repay you for not killing them by peltin pebbles and less pleasant things into you

Beggars in all degrees of filth and d formity and repulsiveness run alongsic the carriage in imminent danger from the wheels, begging for alms. If you give the something they curse you for not givin them more, and if you give them nothin

they spit at you for a base dog of a hereti But then, what could you natural expect from a population that thinks a fri-cuttlefish is edible and a beefsteak is no

#### STAGING THE STYLES

(Continued from Page 13)

It is seldom that the producers of the fashion play forego that professional event, the retearsal. The reason for this is obvious. Negadays each type of gown must literally be acted out. The girl who wears a saucy little bolero suit is taught to stick her hands in her pockets and swagger forth like an impish young urchin; the tall mannequin draped in the lissome folds of an evening given must, on the contrary, walk with a ortain majesty of carriage, and each movement of her arms must echo something of classic grace. In order, therefore, to in-struct their thirty mannequins, the store decorator and the buyer of gowns and wraps superintended, on the day before the openng a regular dress rehearsal.

The processional started with the three neroyables and three merecillenses whose resumes, ordered from the famous French designer, were meant to show the audience how intimately the prevailing modes de-pended on the Directoire style. The six girls who wore these costumes passed off without citicism, but before the succeeding figure pit well under way toward the Palais Royal the store decorator held up his hand in frantic

"Lolita! Lolita!" he called to the tall namequin in the black-and-white evening govn. "For goodness' sake don't walk with your arms humped out in front, like you were wheeling a baby carriage! Walk with a lit: move your arms—so!" and he accompanied his words with a soaring motion

of his own pinions.

Nor did that tall wearer of the 1830 pantairts walking farther down the line escape vithout her meed of advice.

"Don't be ashamed to show 'em!" called the buyer of gowns and wraps. "Nothing to be prissy about—this is a gown any lady would wear. Every now and then you want to hold up your skirt a little—do a bit of

the coquettish, you know."

Meantime the figures in the Directoire restumes had been making for the end of the walk with anything but Directoire digthy of step. And, revived from his session with the 1830 garments, the director called out to them:

"Hey there! Do you people think you're being driven to market, huddling together like a herd of sheep? Keep apart; walk showly. You'll be sure to spoil the effect if you don't."

Frought back to a consideration of the frues immediately in front of them, the suce decorator and the buyer continued the instructions regarding the display of each costume. The Early Victorian mannequinin the white taffeta evening gown, with its skirt encircled by garlands of rosebuds, which looked as though they had been towed aside by the spiral billows of taffeta, was told that every now and then she must was told that every now and then she must briefly slowly—not like a top; no, no—but gracefully, just as the model in Paris had done. The girl in the Directoire suit was shown how she should step forth with her hands in the side pockets of her skirt. The mannequin cast for a beautiful velvet me was told with just what dramatic mo-tion the garment might be held out so as to reveal its sumptuous lining. There was a lick of gesture, walk and even facial ex-ression needed for each one of those imported garments, and the coaches saw to it that their actresses got it over.

#### Almost a Stock Company

In a great many instances the actresses them for the fashion play have trod the professional boards and have learned finesse movement from their duties in the first

"We like girls like this," remarked the "are decorator, who, by the way, has the reputation of knowing a good model if he s her on Broadway from the top of the Metropolitan Tower; and he pointed to a paceful blonde, who had just confided the act that she was taking two weeks off from the musical comedy in which she was then A girl who has been in the chorus knows how to walk, how to smile, how to move her time. Why, when this girl stops and tells some one in the audience, 'Yes, madam; his is a Premet gown,' she can do it so gracouly that the woman wants to buy it from her then and there.

Next to the chorus lady, the motion-ture actress and the artist's model are the most acceptable candidates for showing off a four-hundred-dollar gown or wrap, and as one stands there behind the scenes one hears such illuminating snatches as this:

"Jones isn't here this year, is she?" "No, I saw her picture in the Filmflam Review. She told me that last time she got five dollars for just clapping her hands in an act for the movies."

"Oh, there's Yama-Yama! I'm glad she's here. Hello there, old girl! Saw your

"Oh, yes! I've been sitting a good deal for Palit lately. Going to stop, though. He swears so much he makes me uncom-fortable."

From such conversations as this it is apparent that many of the same mannequins are employed at this store season after season. So institutional is their character, in fact, that the decorator has difficulty in cleaving some old links of sentiment. One model, for instance, refuses to wear anything but Premet gowns. Another has a sentiment for Beer, because she "always has worn his things." And all of them naturally enough claim, as recognition of their long association with the fashion openings, the association with the fashion openings, the most stunning importation of the season. The expense connected with employing these thirty models for a two weeks enter-

tainment is not an inconsiderable item in the total sum necessary to put on the fash-ions. Each model at the Directoire show was paid five dollars a day, and the entire thirteen days—including, of course, the rehearsal—cost the management nineteen hundred and fifty dollars. This sum does not include the minor expenses connected with equipping each model.

#### What Fashion Shows Cost

Of such incidental expenses there are very many. This year, for example, each manne-quin were bronze cothurnes and flesh-colored silk stockings, all of which were provided by the store at a total expense of three hundred dollars. Gloves, too, increased the cost of the equipment by a hun-dred dollars; and the daily dressing of each mannequin's hair in the style most becom-ing to her beauty is undertaken at a further cost of several hundred dollars.

In putting on the fashion show almost every department of the store is levied on for some supply; and if you had slipped into that room back of the garden of the Palais Royal you would have found something that looked like Ali Baba's Cave before the visit of the intruder. Bins of rhinestone pins, sheaves of walking sticks and parasols, tables crested with beautiful French hats, scarfs and collars—all these contributed to the triumphant finish of each imported gown; and in computing the expense of the entire fashion opening the wear-and-tear of these accessories must not be overlooked.

A dance without music would be no more conspicuous than a modern fashion play lacking that element; and during the prom-Royal three bands, concealed at intervals along the way, kept up a constant ferment of maxixe, waltz and operatic airs. To the hundreds of dollars paid out to musicians must be added also the expense of the twenty-five ushers necessary to handle the

two thousand people who attended nearly every morning and afternoon performance. The item, however, which swells the cost of the semi-annual fashion opening into real turbulence is the matter of the gowns themselves. Does the department-store buyer select practical models, which may be read-ily sold and aptly copied by the American manufacturer? Not at all. Unlike other fashion scouts—the dressmaking establish-ment and the manufacturing house—the department-store buyer selects at least half of his imported gowns with a view to the ctacular, and the twenty-five thousand dollars' worth of gowns represents a loss of perhaps half that amount. At the end of the season he is often glad to take fifty dollars for a gown in which he invested three bundred dollars.

It does not annoy him at all, in fact, to overhear a woman in the front row whisper to her husband: "Isn't that dress perfectly terrible? All right perhaps if you expect to do nothing but walk round to the sobbing notes of Pagliacci; but imagine going to market in that citron skirt and hussar's coat!"

It is not at all his purpose to provide suggestions for going to market. He wants

Mr. Bracker's ideal has prosperity in his pocket and brains in his head. He seems to be musing "I am glad I discovered these

The flavor is as good as I ever tasted, and I certainly feel better than I used to when I smoked strong, heavy fellows."

## America's Telephones Lead the World Service Best-Cost Lowest

from Electrical Industries from London Daily Mail HERE is a certain amount of satisfaction in Why is it that Government ownership the fact that Mr. Winston Churchill got so ansary over the french of the churchill got so and management of the telephones is Why is it that Government the telephones is an anagement of the telephones is an anagement of the telephones is other day that he fine freeks of the freeks of the telephone the gractically always a failure?

Why is it that throughout the anagement which telephone of the Government which telephone the flength and breath hardly a single efficient Office working can inflict. But the torture that post that form that post is it that it is raise. practically always a failure?

From "Le Petit Phare de Nantes," Paris

"But today I found I had to talk with Saint-Malo, and, wishing to be put through quickly, I had my name inscribed on the waiting list first thing in the morning; the operator told me—though very amiably, I must confess—that I would have to wait thirteen hours and ten minutes (you are reading it right) in order to be put through."

Herr Wendel, in the German Diet

"I refer here to Freiberg. There the entire telephone service is interrupted at 9 o'clock p. m. Five minutes after 9 o'clock it is impossible to obtain a telephone conHerr Haberland, Deputy, in the Reichstag

"The average time required to get a connection with Berlin is now 11/2 hours. Our business life and trade suffer considerably on account of this lack of telephone facilities, which exists not only between Düsseldorf and Berlin and between Berlin and the West, but also between other towns, such as Strassburg, Antwerp, etc.

Dr. R. Luther, in the Dresdner Anzeiger

"In the year 1913, 36 years after the discovery of the electro-magnetic telephone, in the age of the beginning of wireless telegraphy, one of the largest cities of Ger-many, Dresden, with half a million inhabitants, is without adequate telephone facili-

something to amuse, to thrill, even to shock his mixed audience of men and women; and anything that gets people to talking is con-

sidered an excellent feature of his show.
Right here it may be explained, also, that
the models shown do not all conform to the
period selected as the prevailing influence. In this Directoire play, for instance, it was obviously impossible to exclude the 1830 and the Louis Quinze notes sounded in many of the new spring costumes, and the stage setting represented only the management's dogma that Directoire was the dominant inspiration of the season.

The establishment whose Directoire play has been described has the reputation of giving exceedingly lavish fashion shows. Such fame is based not only on the number of imported models and the great number of mannequins employed in its production but on the character of the stage setting itself. This point brings us at once to a consideration of the two kinds of fashion

show now being run in America.

One, of which the Directoire pageant is an excellent example, is the promenade system now being used, not only in New York but in Chicago and Boston. From the nature of such entertainments the setting cannot be dismissed with the painting of a bay or the throwing on of a spotlight. And to bestow proper atmosphere on such a long stretch demands not only diplomacy of workmanship but a comparatively large outlay of money.

That, however, it is an advantageous way of exploiting the modes is brought out by the advertising manager of that store which produced the Directoire play: "Whereas," says he, "the stage setting gives you only the most unsatisfactory glimpse of the new styles, the promenade's intimacy enables our audience to catch every detail of a cos-tume—the quality of the fabric: the design tume—the quality of the fabric; the design of the trimming; the cut of a sleeve." In spite of this fact there can be no doubt

about the artistic quality of the fashion play that is given on an actual stage. Evidence of this was afforded not only by the scene which has been described, but by the opening of this spring's styles produced by the same establishment,

Attention to Detail

This opening occurred several days after the Directoire play and was given in the auditorium of the store. Here, to an audi-ence of twelve hundred people seated downstairs and in the balcony, the mannequins played out two scenes of the fashion drama.

A startling bit of American enterprise, indeed, was this latter part of the program; for on the very day when the French play was having its première the American de-partment store was showing duplicates of the costumes designed for it. More startling still was the attention bestowed on each detail of the production—the Grecian twist to the letters on the program; the selections from Orfeo ed Euridice and Thais, played by the great organ; the statuesque poses of the mannequins, contrasting sharply with the swaggering, insouciant walk and the piquant expression of those mannequins who were the street suits of the first scene.

Man has recently set his profane foot on the productions of the store fashion play, and in many a dramatization of tea party and street scene the masculine model lends his clothes as a foil to the airiness of chiffon and the glimmer of silk. In the former part of this particular opening, for instance, nearly every spring suit was shown in con-junction with the masculine garment that had inspired it; and this novel presentation reached its climax when the last mannequin was met from the other side of the stage by a man wearing the overcoat of M. Poiret, on which garment the designer had piped the feminine variation shown by the accompanying woman model. That the play's the thing in fashions is

demonstrated by the fact that today nearly Importing shop has its miniature stage, Sometimes, indeed, the fashionable dressmaking establishment maintains a company of models all through the season. One such organization, presided over by a woman of title and ministering to the wealthiest women of New York, trains these models as carefully as any professional producer would train them.

The types of beauty represented by the four mannequins of this establishment are widely eclectic. One is a tall, Junoesque blonde: another is an equally tall and beaugray eyes; and the fourth is a petite brunette. With this staff at her command, the owner of the establishment refuses to attempt the experiment of permitting a customer to try out a gown.

On the contrary the moment Madame is

announced and questioned as to the type of gown she desires, one of the mannequins who best suits this model is ordered back of the scene. A few minutes later she walks slowly out to the right of the stage, raises her arms in a slow, rhythmic gesture, pro-ceeds to the left of the stage, and repeats this posture. This accomplished, she comes down and pirouettes before Madame. D6nouement-Madame buys the frock.

In speaking of this method of showing her owns one famous dressmaker assets: Most of the modern creations look like absolutely nothing when off the figure. For this reason a mannequin is almost indispensable. Why, one of my beautiful show girls can convince the most skeptical that a gown makes the beauty instead of beauty making the gown."

#### Expensive Selling Methods

The tea fan now has her inning at the opening of many a fashionable dressmaker's establishment; and a cup of oolong, with a plate of diminutive sandwiches, has even been embraced by a certain New York department store as a part of the advanced exploitation of the imported models in its dressmaking salons. The tea system pre-vails, of course, only in private views and in openings to which special invitations are extended.

Everywhere we look in modern merchandising we find this same expensive exploita-The first showing of spring dressgoods is often the occasion of special music and of a setting that summons up the lenfy summer destiny of these materials. Windows are trimmed with an absolute regard for association and frequently form perfect stage pictures of bridal parties, hunting scenes and garden parties.

The store decorator, on whom devolves the window displays and the practical control of the fashion shows, must supplement his knowledge of period furniture and con-tumes with that of the latest currents of foreign merchandising. Often he is sent abroad by his organization for the purpose of learning all the latest decorative schemes and always he is paid a salary ranging from five thousand dollars upward.

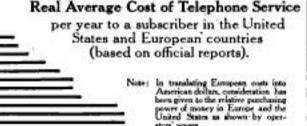

The expense of equipping a private dres-making establishment is brought out by a visit to a typical establishment. An ante-room fitted in exquisite blues and grays of the Louis Seize period, and concluded with the inevitable stage; a tiny room done in Adams stuff and hung deftly with electric lights for the special examination of evening colors; and a sumptuous consultation chamber-these three rooms cost the management, according to the director, not less than ten thousand dollars.

In the antercom one's attention is an rested by numerous small diplomacies of merchandise—hand-painted mirrors and fantastic bottles of imported perfume; ex otic little needle books lying on the carved gray tables; and, above all, by the insidi ous scent of verbena, which creeps from : translucent vase, there by the long divan

"To mesmerize your customers?" on asks regarding this last bit of atmosphere "Not exactly," replies the director with a smile; "but you have no idea how fa things like this go in a business like our Yes"—with an amused smile at one's con tinued interrogation of that transluous vase of incense—"we burn it by electricity Very delicate, isn't it; and it goes right along with these soft carpets and beautifu hangings and Watteau prints in taking woman right out of the struggle and unre of New York. 'So soothing!' is what ever customer says of it; and we spare n expense to make it so."

Many and costly as are these small detail utting on the fashions, there can be n doubt that artistry in this domain receive its proper toll. The department-store styl show, in particular, is so efficacious a put licity feature that the organization which produced the Directoire pageant is well con tent with its outlay of twenty-five then sand dollars. Of this one receives a fina assurance from the advertising manager.
"What good does it do?" repeats h

"Doesn't it bring eighty thousand people to our store every season? Don't they hav to come through our place, up to the eight floor, to see it? Don't they get the habits dealing here often through that very fashis opening? Well, I guess they do!"

\$10 \$20 \$30 \$40 \$50 \$60 \$70 \$80 \$90 \$100 \$110 \$120 \$130 \$140 \$150 \$160 \$170

These are the reasons why there are twelve times as many telephones for each hundred persons in the United States as in Europe.

#### A STUDY IN CREDITORS

(Continued from Page 16)

fact that he has been caught in the landing net of a soft composition held at the four corners by his kindly and generous creditors; but if there is a latent streak of yellow in the man the composition treatment is admirably intended to develop it.

The bankrupt of this sort who has been let down easy is likely to wake up to the fact that the composition game, artfully played, contains possibilities for the bankrupt as well as for the creditors. Hence the soft composition has come to be regarded by bankruptcy officials as a consistent encourager of repeaters.

About four years ago a small merchant on the outskirts of a large city became insolvent. He was thoroughly scared and lost sleep until he became thin. His insolvency had been brought about by the usual combination of causes: loose business methods in general; easy extension of credit; losses by the peculations of clerks; indiscriminate buying; and a few strokes of personal hard luck.

When he saw he had reached the end of his rope he called his creditors together and put himself in their hands. At this hearing he made a decidedly pathetic figure. The creditors wished to see him continue in business and so an insolvency settlement was arranged. As one of the creditors put it: "Perhaps he'll pull himself together and learn something from this experience."

Evidently he learned several things. One

Evidently he learned several things. One of them was that goods settled for on the basis of fifty cents on the dollar yield a much larger profit than goods paid for in full. He also acquired a new idea of creditors—before, he had thought them shrewd, hard and grasping; but now he was inclined to feel that they were about as easy a bunch to handle as he had ever met. Insolvency was not so bad after all! It was something like a cold bath—mighty shivery in anticipation, but after the first plunge it had its compensations.

A little more than a year later this merchant made his appearance in the bank-ruptcy court with an extended volume of liabilities. Apparently he was just as distressed and despairing as before. He had given careful consideration to the selection of an attorney—choosing one of good standing, who at the same time thoroughly understood the possibilities of the composition.

Those of his creditors who had been parties to the former insolvency settlement were a little more inclined to be exacting this time; but they were finally maneuvered into line, and a composition settlement at a low percentage was eventually secured.

#### A Specialist in Composition

Evidently this storekeeper learned quite as much from his second experience as from his first. This was indicated by the fact that a little more than two years later he was again thrown into the hopper of the bankruptcy mill. This time, however, he had apparently centered his attention on the selection of creditors. Though his liabilities showed a modest increase over those listed in his former schedules, there was a decided dearth of old names among the creditors represented. Evidently he had considered that even a fairly credulous creditor might object to being hit three times by the same hand in the same place.

Consequently he had shifted his trade

Consequently he had shifted his trade from the old houses that had been twice lenient with him and had taken on a new and unfamiliar set. Also, he had a new lawyer, who was able so to pull the strings that a new receiver was appointed. Courts and referees occasionally have a disconcerting habit of remembering previous compositions in connection with the lawyers and the receivers handling them. At any rate there would be less likelihood that the court or the referee would recall the previous composition and the preceding insolvency settlement with a new attorney and a new receiver.

As a result of his discretion this experienced bankrupt once more demonstrated the possibilities of a soft composition. He had, in fact, become quite an adept, and there was nothing in his affairs that would give the court license to act on the presumption that fraud was being committed. Once more the advantageous composition was put over, and again the merchant started in business.

Whether he will again attempt to pyramid his liabilities and take another hand at the composition game remains for the future to unfold—but he certainly has acquired the composition habit; and in this he is representative of quite a large class of small bankrupts who, after having once tasted blood in the form of a soft composition, are wise to the possibilities of repeating the experience.

It would be a mistake, however, to class all repeaters in bankruptcy as deliberate manipulators of the soft-composition trick. Again, it should be repeated that the majority of failures are genuine and honest cases of insolvency. Judges, referees and receivers are apparently united in the opinion that creditors are quite generally responsible for the frequency of both soft compositions and repeaters.

One receiver illustrates this by the bankruptcy experiences of a certain large retail establishment handling a large volume of goods of a somewhat inexpensive character. It had been in business for forty years and was one of the largest of its kind in the country. About three years ago this house was thrown into bankruptcy. Practically all its creditors were large jewelry manufacturing concerns.

As soon as the failure took place their representative investigated the condition of the bankrupt's affairs. An experienced receiver was appointed, and it did not take him long to arrive at the conclusion that the estate would bring a very good percentage—perhaps fifty or sixty per cent. The estate was a large one and he felt that here was an opportunity to make a good record; but the creditors had a surprise in store for him—they appeared in court and offered to accept a settlement of thirty cents on the dollar.

#### The Receiver's Neutrality

In the accepted interpretation of the law the receiver is supposed to maintain a neutral position and to take as inactive a part as possible in the adjustment of relations between the creditors and the bankrupt. Unless it can be shown that the bankrupt has committed an offense against the bankruptcy act, or has done or failed to do something that would prevent his discharge—such, for example, as the concealment of assets—even the court feels impelled to sanction any composition that is demanded with practical unanimity by the creditors.

In this case the creditors offered to accept a composition of thirty cents on the dollar. The court was loth to entertain this settlement, believing that the assets, administered under the receiver, would bring much more; but as there was not a dissenting voice among the creditors he felt constrained to give his approval to the composition.

In the proceedings, however, the fact was clearly established that these creditors were influenced in their generous treatment of the bankrupt by two motives: The slighter of these was perhaps that of personal sentiment—long and pleasant relationship with the head of the bankrupt house had built up on the part of the representatives of the creditor concerns coming into direct contact with him a high personal regard for him; but undoubtedly the dominating consideration was a purely business one. He had sold enormous quantities of their goods in the past and would continue to sell them in the future if this stroke of adversity was sufficiently softened.

And the margin of profit to the manufacturers on practically all the goods he had bought from them had been very large, ranging from thirty to sixty per cent. In a word, if they had been in position to present their claims outright to him as a free gift they would have been well ahead of the game.

Again, it was of the utmost importance to these creditors that this big outlet for their goods should be continued without interruption and under the most favorable auspices possible. Therefore the percentage of the composition was evidently fixed at the lowest point to which it was thought the approval of the court could be obtained.

A few months ago this same house was again thrown into bankruptcy. Again the bankrupt prepared to put through a composition—this time at twenty-five cents; but he found the atmosphere so unfriendly to this proposition that it was not officially presented to the court.

There are times when the composition can be overworked and ways in which it

THIS trade mark represents the Standard of Excellence all over the world. The serial guarantee number is a duplicate of that appearing on the printed guarantee that accompanies every K-W Master Vibrator.

In buying your Master Vibrator, insist upon these identification marks. Beware of imitations,

The fact that over 90,000 Ford owners are getting efficient, reliable service from K-W Master Vibrators is conclusive proof that the K-W is electrically right. Ask any user of a K-W Master Vibrator what it is doing for him every day.

may be quietly nipped in the bud. The court ordered the receiver to sell the prop-erty. With fifty thousand dollars less assets in the estate than at the first bankruptcy, it will pay out forty cents, accord-ing to the trustee, who has already paid a twenty-cent dividend.

If a party in interest in the case is able to prove to the satisfaction of the court that the bankrupt is guilty of any of the offenses which under the law would prevent his discharge, composition proceedings are speedily called to a halt. Any one of the following is held to be an offense sufficient to prevent the bankrupt's discharge and to bar a composition:

First—Committing an offense punishable by imprisonment, as provided in the act. Second—Destroying or concealing his books of accounts or records with intent to

conceal his financial condition.

conceal his financial condition.

Third—Making a false statement for the purpose of obtaining credit.

Fourth—Concealing or transferring property with intent to defraud his creditors.

When a wave of waivers surges in on a bankruptcy case the judge or referee, the receiver, and all concerned come to quick attention. The wave of the waivers is conattention. The wave of the waivers is considered a fairly sure sign that perhaps there is something doing. As a waiver is a voluntary offer on the part of a creditor to absolve the bankrupt from providing for the payment of his claim out of the composition funds deposited, such generosity is often received with suspicion.

Though a waiver is only an incident to a composition—and is often wholly justifiable—it becomes a significant incident when the composition involves deferred payments or settlement by notes. One able

referee declares:
"I cannot regard the waiver with friendly eyes save in somewhat exceptional cases. As a matter of law the waiver is designed to work out the ends of human justice. tice; but, as a matter of practice, it is often abused and made to serve the opposite pur-pose. In the mind of the experienced bankruptcy official the waiver too often implies an underground settlement of some sort that is more advantageous to the waiving creditor than the payment of his claim on the basis of the composition.

"In a certain well-known case, where the bankrupt had already put over two com-positions and was seeking a third, I was impressed by the number of waivers this bankrupt had been able to secure. Because of my suspicions I held up this case quite a long time and made an industrious search of authorities to see whether there was anything in the law or in its interpretation by the higher courts that would give a court the power to ignore and override a waiver offered in due form and without objections from creditors. Not finding any such authority I was obliged to accept the waivers offered, though my suspicions were not dissipated."

#### The Credulity of Creditors

"The possible inference is that when a composition has been perfected, and the bankrupt is again in possession of his prop-erty, he makes a secret settlement with the creditors who have filed their waivers— the settlement having much more tacked on it than that received by the other creditors under the composition. It would generally be difficult to prove to a court or generally be difficult to prove to a court or a jury that this unscrupulous and fraudu-lent misuse of the waiver privilege has taken place; but I am morally convinced that it does happen in altogether too many cases." According to the head of the bankruptcy department of a big trust company, the credulity of creditors passes the love of woman. It is the standing marvel of busi-ness, and the miracle that takes on a new phase at every repetition.

phase at every repetition.

"Not many months ago," declares this official, "I was hurriedly summoned to a meeting of creditors. They were a cheerful bunch, and even the two men at the head of the insolvent concern were far from being as depressed as one might expect. The liabilities were large—amounting to several hundred thousand dollars—and the principal assets consisted of a hundred or more contracts scattered throughout the Middle

West, "The main creditor was the largest manufacturer in America of the kind of supplies used by the contracting firm, and the repre-sentative of this establishment pointed out the fact that the contracts were perfectly good, being made with large concerns that were fully responsible.

"The proposition before the creditors was to the effect that the receiver should continue the business of the bankrupt and complete the contracts on hand. To this proposition I objected, unless it could be shown that there would be a decided margin shown that there would be a decided margin and I insisted that snown that there would be a decided margin of profit to the estate; and I insisted that the margin, if any, could be demonstrated only by an analysis of each contract by competent accountants and experts.

"The heads of the insolvent concern took

"The heads of the insolvent concern took up considerable time in explaining what a good margin of profit there was in every one of those contracts. This rosy view of the situation was apparently indored by the representative of the chief creditor.

"The natural inference was that this man ought to be able to spot a weak or unprofitable contract on sight. As he seemed to regard them as good, and as there were several other experts in the conference, my attitude was apparently regarded as de-

attitude was apparently regarded as de-

cidedly uppish.

"Finally I told them that if they felt so confident there was a good profit in all these contracts, which totaled something more than half a million dollars, they certainly should not object to putting up twenty-five thousand dollars in cash with which to finance the completion of those contracts that offered the best opportunity for quick return. If this were done and the results of the experiment justified further operations, then all the contracts could be

operations, then all the contracts could be filled.

"The other alternative I offered them was that they should furnish enough money to have these contracts thoroughly investi-gated by experts. Then, if such an investi-gation clearly disclosed the advisability of going ahead with the contracts, I would take hold of the enterprise—if the trust company were appointed receiver."

#### Loose Figuring Common

"Some of the heaviest creditors were in Some of the heaviest creditors were in favor of advancing the twenty-five thousand dollars and losing no time; but others held out for the other plan I had suggested and that was adopted. The results of that investigation were mighty interesting to me, especially in view of the fact that the best figuring talent in that line of industry was available to these creditors right inside their own houses: in fact, several of the their own houses; in fact, several of the men present at the meeting, who looked over the actual contracts, were considered wonders in that line.
"The firm of experts employed figured

every one of those contracts as carefully as though it were new business. To do this thoroughly they had to send their men to many of the places where the work was to be done. And what was the result? The investigation showed that forty odd contracts, if completed, would result in a loss of twenty, five thousand dollars to the estate. wenty-five thousand dollars to the estate that the largest margin of profit possible on the entire volume of business covered by all the contracts would be twelve thousant dollars, and that the deferred payments provided for in the contracts would string

the returns out over several years.
"A twelve-thousand-dollar margin on a business of more than five hundred thousand dollars is no margin at all, even on a cast basis. Any business man knows that. And here were more than one hundred chance to lose not only the twelve thousand dollar

but several times that amount along with it
"The optimism suddenly oozed out o
that bunch of creditors. They were a
astonished and rather shamefaced aggregation when all these facts were placed befor
them; but the two men at the head of th bankrupt firm were completely nonplused They could not understand how they ha made such figures, and neither could the representative of the great manufacturin concern that was their chief creditor. "To find this sort of thing among sma

business men, who have started on a short string and grown for a while because cor ditions outside of themselves forced then grow, is not surprising; but it no gives one a jolt to discover that wild an

incompetent figuring of costs is common.

"There are many businesses—both larg
and small—where costs are figured with a most marvelous accuracy; but, all the same thousands of enterprises go to pieces on the shoals of bankruptcy every year from loos figuring alone, and still other thousand survive by the skin of their teeth, as were—firms that are richly entitled to fai but which persist, in spite of their bad bas figuring, merely because they happen to b surrounded by conditions that are peculiar kind to them."

#### VANILLA

(Continued from Page 11.

However, when they landed at St. Joe bey stopped being serious and plunged perhapith into such gayeties as the amuse-ment park and the beach afforded.

Complete abandon was, indeed, not poside. A wooden signboard ten feet high established the tone of the place with the amountement that all persons acting other-rise than in a gentlemanly or ladylike manse would be prosecuted to the full extent of the law-just what the resources of the aw were for punishing the omission to be a gentleman or a lady were not stated—and other more specific directions for conduct tere posted here and there along the board-adk, in the roller-skating rink, the bowling aleys and the dancing pavilion. Indeed, in euple might not do, respectability reached

meestasy—an apotheosis.

Mike and Vanilla were a little overawed a first, but the resilience of holiday spirits resently asserted itself and they set about with a magnificent, thoroughgoing deter-mission to have all the fun there was, and

Part of their unearned increment of joyess came from occasional glimpses of the Vampire. They had never completely ist her. She had stalked by them, melan-noly and severe, up on the deck; had need at them laboriously while they ate their lunch; and the magnificent uncon-sisusness of their existence she achieved as be picked her way past them when they were burying each other in the sand on the beach, turning her basilisk eye on them without acknowledging that she saw them it ill, might have given them a foreboding of tragedy—but it did not. It only induced on their part new explosions of arontrollable mirth.

Well, then, at five-fifteen they were danc-right the pavilion. They had been dancing better for more than an hour, and I am imid their enjoyment of the exercise was mewhat heightened by the fact that they ad twice been warned, by a sort of master of eremonies, that their deportment did of come up to specifications. The rule posed bodies of all dancers had once been

crotten, and on another occasion they are accused of dancing what the man aspected was a tango.

Another thing that added to the piquancy the occasion was that the Vampire was tanting too. She had a partner with a pura necktie and an apparently unlimited apply of nickels—you paid one at the betraing of each dance—and was proceeding rassly about the floor in perfect harmony parently with the decorous regulations of the place—only, as Mike and Vanilla dis-overed, this harmony was only a pretense. the and her ductile partner were following them about, giving the Vampire a chance to take derogatory remarks whenever they

had presently, this method of attack be-oming inadequate to the rising tide of the lampire's emotions—and you could not wonder that the tide rose with the contem-pation of the pleasure Mike and Vanilla. were taking in each other's society and the obtious inferiority of her own partner, in spite of his supply of nickels—presently, I sy, she abandoned words and resorted to treet action.

"That's three times she's bumped into "said Vanilla, with an edge of justifiable edgnation in her voice. "She's doin' it on turpose. If she steps on me again I'm goin' tep on her toes. I believe she's got corns

You might think that Mike, being presmally wise to the ways and manners of public amusement parks and excursion rounds, would strongly have discountetanced this intention; but, for whatever rea-Timed and gave Vanilla a joyous spin.

"Go to it, kiddo!" he said; and then he tated her demurely into a corner to

it was an absolutely clear case. The impire came straight down into their corat rather higher speed than before and with Vanilla.

It was a bump that would have discon-ted anybody who was not ready for it; a Vanilla and Mike were braced, and the second the Vampire gave a squeal. French heels were small and pene-" of z and her surmise that the Vampire corns was right.

There are any number of people who will swear quite automatically when their feet are trodden on; so the fact that the Vam-pire did so is not very surprising. Also, I do not think it altogether to be wondered at that, when the stimulus of really excruciating physical anguish was suddenly added to a long-smoldering sense of outrage and dis-appointment, she should have slapped the cause of it. The really extraordinary thing is what happened next!

If she had slapped Eunice Leaventritt, Eunice, who had been brought up by an empirical psychologist on the most advanced principles, who had never been directly reprimanded in her life, let alone slapped—I think it likely that Eunice's astonishment would have inhibited any action whatever on her part—almost any emotion, at first. Then there would have been a slowly rising wave of disgust, quite as much with herself as with the person who had assaulted her; but that is a purely academic

question anyway.

Eunice had never been slapped and never would be so long as she lived. The person who felt the sting of the Vampire's fingers was Miss Vanilla Jerome—one day old, hampered by no supercivilized inhibitions, quite simply and primitively blazing mad.
What Miss Vanilla Jerome did was to slap
the Vampire. The rest of the nightmare
followed along, as a matter of course.
There were planty of people at hand

There were plenty of people at hand ready to cope with this sort of situation whenever it should arise. They were prepared to maintain a high level of gentility in that dance pavilion, even if they had to arrest a lady every now and then to encourage the others.

The flurry did not last a quarter of a min-e. Then Vanilla found herself walking out beside the master of ceremonies, while two earnest guardians of the peace, less formally attired, escorted the Vampire.

Horrified? Overcome with shame? Wish-ing the earth would open up and swallow her? Thinking of the disgrace that awaited her or asking herself incredulously whether it could indeed be she who had done this horrible thing? Not the least in the world!

On the contrary, from scalp to toes she was tingling with the delightful sense of a job well done. Never in all her life—well, she was only one day old—had she experienced anything quite so satisfactory as the smack her fingers had made against the Vampire's painted face. She drew deep breaths and walked as though on air.

The feeling—she had not begun thinking yet—lasted her all the way up the hill and along a rather shabby business street, and up a dingy stairway and into an office, where a man in his shirtsleeves, chewing tobacco, sat behind a deal table. The first stir of an intellectual process was the reflection that this man must be a justice of the peace who sat there all day to marry people. How would it seem to be getting married in a place like that?

She gave her name automatically as Miss Vanilla Jerome. Eunice had, for the pres-ent, simply ceased to exist. And she heard indifferently the recital of the complaint.

The justice seemed unmoved by it.

"Ten dollars each!" be said, and spat
expertly at the flange of a large spittoon.

She watched the Vampire sulkily open a
purse and produce a yellow-backed tendollar bill. The justice scratched something down on a piece of paper and put the bill in his pocket. The siren went away. The justice looked up at her. "Well?"

he said; and, at that, something inside her mind exploded with a bang and she woke to a realization that she had no ten-dollar bill to produce.

She had started from home that morning with precisely one ten-dollar bill and there was not such a lot of it left. She had suggested to Mike, with some trepidation lest it give her away, that the basis of their lark together should be Dutch; and, though Mike had looked a little disconcerted over it, he had accepted the proposition and had played fair. Nothing you do at an amuse-ment park costs much, but everything you

do—except breathe—costs a little.

Vanilla looked blankly into her purse.

Her knees began to feel wabbly and her hands to shake.

"I haven't ten dollars," she said. The ruminant gaze of the justice came into sharper focus on her face. He sat up a little straighter in his chair and remarked that he would "Swan to Guinea!"

## Three Books that Have Stirred Up a Lot of Trouble

But it has been the kind of trouble that opens the eyes of business men-trouble that results in improvement.

Business won't go on by itself. It needs something behind it—to keep pushing.

These books have acted as a stimulus for hundreds of business heads. They have cleared up the mysterious side of advertising and selling. They have presented the subjects in such a way that it is easy to see their meaning. You can't mistake it.

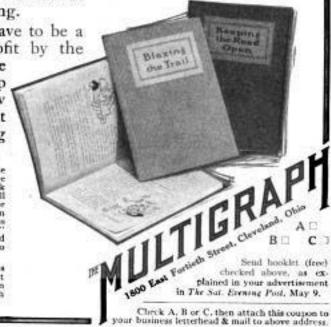

By pointing out the errors of others they tell you how to avoid the snares of unwise advertising.

You don't have to be a big gun to profit by the teachings in these books. They help the little fellow get started right and keep the big one on his feet.

If you check "A" on the coupon below, you'll receive "Blazing the Trail," a book for non-advertisers; "B" will bring you "Building the Roadway," a book for men who spend \$25,000 or less a year on advertising; "C" brings "Keeping the Road Open," a book for those who spend over \$25,000.

One book —whichever 614

One book—whichever fits your needs—will be sent free. If you want more than one send 25 cents for each actional cone. additional copy.

## To San Francisco in 1915

PROBABLY hundreds of men and women will attend the Panama Exposition at our expense. Will you be one of them?

You have two or three spare hours each week, those hours before dinner. We will buy them from you for just what they're worth. You can pay your expenses to San Francisco and leave a balance in bank, with the funds you can earn by employing those late afternoon hours as

THE CURTIS PUBLISHING COMPANY PHILADELPHIA, PA.

His surprise was natural enough. person who had said she had not ten dollars was Eunice Leaventritt—but the red hat, the red hair and the orange-and-white blazer were still Miss Vanilla Jerome's. The situation was embarrassing too.

"You ain't got ten dollars?"
"I'm sorry," said Eunice;

It seemed rather beneath the dignity of the court to ask her how much she had and then profess that justice would be satisfied with that. Another expedient occurred to

"Ain't you got no friends?" he asked.
"No," said Eunice; and once more she
added: "I'm sorry!"

She was still, you see, in the condition of a just-awakened somnambulist. It was an effort to remember the details of the dream that had landed her in this situation.

"Where," asked the justice, "is the feller you were dancin' with when you got into the fight?"

Eunice winced at the word fight, but it Eunice winced at the word fight, but it did not keep her from almost smiling over the memory of Mike McKeough. She had been aware of his walking out of the pavilion behind her, but somewhere in the proceedings he had faded away.

"I don't know where he is," answered Eunice, and she added: "He hadn't anything to do with it."

"Well, I should say he had!" answered the justice indignantly. "You just set down there and I'll send a constable out to find him."

find him.

But they adjourned the debate on that point until they should learn who it was coming up the stairs two steps at a time. It turned out to be Mike.
"Oh!" said Eunice.

Mike nodded at her reassuringly, then

turned to the justice.
"How much is the fine, judge?" he asked

cheerfully.
"Oh, please!" said Eunice Leaventritt.
"It's awfully good of you; but really you
don't come in this at all."

"Most assuredly I do!" said Mike. "I shouldn't have dropped out of it, except that I was afraid I hadn't money enough and had to go and-get it."

The justice, apparently discerning in the girl's face a disposition still to protest, came

"Let him loan you the money if you don't want him to give it to you. You can't go to jail." He turned to the young man. "Ten dollars!" he said.

Before the girl could protest further Mike

had handed over the money. They walked downstairs together in silence. When they reached the street they stopped and looked

reached the street they stopped and looked at each other.

"I can't begin to tell you how grateful I am!" said Eunice; but at that point the words faded away and the two just stood there looking at each other.

The sight of a puzzled perplexity in his eyes had been what stopped her. She had given herself away. Vanilla Jerome would not have said that.

not have said that.

Then, with another bang, she waked up a little further. The Mike McKeough she had been playing with all day would never have used the phrase: "Most assuredly!"

Indeed not.

They looked and looked; and then simultaneously and a little ruefully they smiled.

And then they both blushed.

"I suppose," he said finally, "that it's

"Flocked together?" suggested Eunice.
"I suppose so. It wasn't the real thing we wanted; it was our idea of it. That's rather sad, isn't it?"

The young man nodded and sighed

rather sad, isn't it?"

The young man nodded and sighed.
"But perhaps," he suggested, "we might begin again with—without the peacock's feathers, you know, and see how we'd like each other that way."

Eunice smiled. He was a nice boy.
"All right," she said. "There's a bench over there. Will that do to begin on?"

And really they had about as good a time on the boat going home that evening as they

on the boat going home that evening as they had coming over, though they did not exhibit any more fancy dances on the lower deck.

There was a satisfactory moon, and a pleasant place to sit and talk abaft one of the lifeboats. In that environment it proved queerly easy for the girl to tell him just why she had planned the adventure and to decide that, after all, it had been a

All the while she had somehow assumed that his reason for embarking on it had been the same as hers.

"I don't regret a minute of it," she said.
"Not even having slapped the Vampire?" inquired the nice boy—his name was John

"Not even that!" said Eunice. "Of course it would be horrible if anybody found out-especially father."

He looked a bit puzzled.
"From what you have told me about him," he said, "I shouldn't think he'd be

"Angry!" Eunice exclaimed. "He never was angry in his life! That's why I never had any fun getting into mischief. He'd just look interested and wait to see what I was going to do next—make notes right before my face. It's all in that child-psychology book of his. If he found out about this he'd write a special monograph on it."

"Well," said John Forbes, "it was lucky it happened to be me you picked out to play with! You see the powerapers watch St

with! You see, the newspapers watch St. Joe for features like that."
"Newspapers!" she gasped. "Do you

"You see, I'm a reporter myself," he went on. "This was my day off, and I thought I'd just breeze over to St. Joe and see whether I could turn up anything."

There was a long moment of frozen

silence.

"Well—you did," said Eunice at last.

"I hope so," said John Forbes.

"I suppose," she said, "you will make the front page with it, won't you?"

"I suppose I oughtn't to wonder you thought that," he said; "and, of course, if it hadn't been my day off—if the boss had given me a regular assignment — But, you see, this was my holiday—mine to do just what I liked with; and what I meant I hoped was that—that I'd find somebody to play with. Because really you aren't to play with. Because really you aren't phony after all."
"Oh!" said Eunice, and she held out a

hand to him. Presently, though, she thought of something. "But the other pa-pers!" she said. "Wasn't there anybody

"That's what I meant by saying you were lucky to have picked me," he told her. "You see, nothing that happens to a reporter ever gets into the papers; so the next time you want to run away you might let me know."
"M-my, but it's been a nice day!" said

Vanilla presently.
"You aren't cold, are you?" he asked

#### Back Fire

ALONDON advertising solicitor was sent up into the Midlands to get business for a special edition of a daily paper dealing with an important industry. The kingpin of this industry was a manufacturer of great repute, a baronet, whose actions determined policy in the trade; but it was said he had never spent a penny for advertising. The success of this special edition turned on Sir John. If this important personage could be landed for an advertisement others would come in, as a matter of course.

The solicitor went after Sir John first. He tried to see him, but failed. He wrote to him, but got no reply. Finally an arrangement was made with his private secretary whereby the latter was to doze for five minutes on a certain afternoon, and the solicitor was to slip into Sir John's office on his own responsibility, providing his own introduction.

This plan worked out all right. The advertising solicitor got in. Sir John looked up threateningly when the door opened to admit a stranger. It was a large office, and as the intruder hurried across to where the manufacturer sat he could see stormclouds rising. The moment he was within earshot he said:

"Sir John, I am a staff investigator for the Clarion, and in visiting the leading men of your industry here in the Midlands two things have impressed me particu--the uniform courtesy with have been received everywhere and the intelligence with which a survey of the industry has been comprehended."

The rising storm subsided. Of course Sir John was bound to be as courteous and intelligent as the rest of the trade after that, and he wanted to hear about this investigation. He listened as the salesman quickly explained his proposition. The word advertising was not spoken. Before the interview ended, however, he had given his order for a page; and, with that, everybody else in the trade worth while was brought into line.

#### Out-of-Doors

#### Vacation Nuisances and Their Cure

If THERE is any one cause more pro-lific than another of disillusionment regarding camp life, it is the petty inconvenience inflicted by insect pests. The large discomforts we can endure, but it is the little ones that, as it were and in the vernacular, get our goat or goats. In the wilderness as in the city it is worry and not disaster that bulks most ominously. Nor does this annoyance always stop at dis-comfort. Disease follows the bites of some insects. Moreover, there are others that are distinctly poisonous of themselves. Once, after a bass-fishing trip in Indiana,

where we hunted bait-frogs round the marshes with lanterns at midnight, our whole party began to feel badly soon after

the return to the city.
"Malaria!" said the doctor.
"Frogs!" said we, with sudden recollection.

"No," said he; "it was anopheles. Anopheles is the name of a special brand of mosquito that bites you and gives you malaria—it is not the mists of the marsh

but the mosquitoes that carry malaria.

All over the world there are dangerous mosquitoes. We have learned the habits and attributes of the yellow-fever mosquito—the one that wears a felon's stripes. Everybody knows that the first thing done in building the Panama Canal was to kill the mosquitoes. Travelers in the tropics know the value of protection against these pests. For instance there is in Ceylon a certain small mosquito that flies only at night and perhaps is not suspected at all by the traveler. The bite is certain to produce a bad fever. The same is true of other species in different countries.

Under the microscope the mosquito is a monstrous and formidable thing. It is only under the microscope that one learns the many differences in mosquitoes, all of which look or sound alike to the naked eye or ear. You may learn easily to tell the difference between anopheles and stegomyia. One species will have a harp on his back; another white-banded legs; another white feet, and so on. There is none of them, however, which is altogether lovable; and, poisonous or merely inconvenient, they make more combined danger and discomfort in camp than all the wild beasts of the wilderness

#### Keeping Clean and Keeping Well

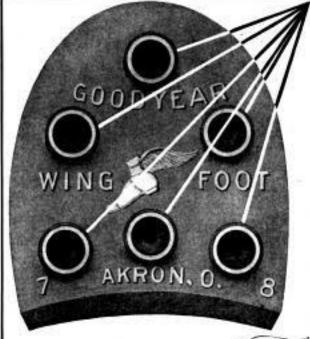

Nature has some kindness in her makeup though for the most part she is merciless. She paints some poisonous plants and poisonous fishes bright scarlet, so that we may be warned against them. She gives the rattlesnake his warning rattle and teaches us to detest the mosquito's whining note of warning; but there are many minor pests in the woods against which she has no warning at all—gnats, chigres, flies, tarantulas, centipedes, many bugs or buglets, on which we

realize after taking and not before.

Mankind is just beginning to wage intelligent warfare on many of these. The campaign against the house fly is world-wide. We know now that it was the Texas tick which caused Texas fever in range cattle in the old days—just as we know that it is a tick living on ground squirrels which causes the deadly spotted fever in human beings. It is well known that the flea is the immediate cause of the deadly Asiatic

Perhaps the aversion of some persons to camp life is a sort of hereditary fear of these pests and dangers of the wilderness, slight as they actually are when proper measures are taken against them. It is just as well to keep in mind a few things in the way of cure or prevention. Of course absolute protec-tion only can be obtained by absolute destruction of the entire insect species. It is a part of the landscape gardener's duties today to wipe out all mosquitoes from low and wet places round a country residence.

Malaria disappears as countries settle up, because the wet ground disappears, and hence because the mosquitoes disappear. Be clean—that is the remedy of Nature. When the West was young surgery could be performed there that is impossible there today. Germs come in with human occu-pation. Be clean and you will be well—at home or in the wilderness. When we shall

Six added factors of safety that hug the walk at every step.

Six air cushions that add to the heel-andspine comfort.

All built into heels of rubber of unusual life and action.

have become able to cope with the pests of the wilderness we shall acquire merit in the eye of Nature, in whose court only survival wins a smile and failure elicits not a tear.

From time to time mention has been made of insect-proof tents that are used in camp. In general it may even once more be said that tents will be better when they are made with more windows. Especially is this true of the waterproof tents known as silk or silkoline. Shut yourself up in one of these tents to keep out the mosquitoes and you will nearly freeze, even on a summer night, because of the condensation of moisture within it. A screened window, with a current of air blowing through it, will really make the tent warmer as well as safer against insects. Your tent should be flyproof, but not airproof.

A good head-net is sometimes essential, either by day or by night, in bad fly country. When you wear it you may feel like a dog with a muzzle; but you will soon get used to it, though you cannot well wear it on the trail in the woods. Have your headnet black, never white or green-you cannot see through anything but black. Perhaps the best net is one that draws in over the top of your broadbrimmed hat, comes down free of your face, and is tied under your arms. You can even get a head-net today with a hole in it for your pipestem, if you like.

Another item on which too high value cannot be placed is the long mosquito glove arranged with a sleeve and elastics, essential in some bad fly countries, such as Labrador or the Far North. Usually these gloves are made with the tips of the fingers cut out, so that you can work. By keeping the ends of your fingers well coated with dope, your wrists and hands can thus be rendered immune against all manner of biting insects. Sometimes on the salmon waters of Quebec the little gnats or "no-see-ums" are so bad that the angler also wears a havelock, or light linen neckcape, which tucks down under his collar. If one smokes a pipe all the time, usually that will be sufficient protection.

#### The Cedar Bark Smudge

Much of your comfort, as regards insects, will depend upon your clothing. You can get a beautiful suit of olive-green khaki or one of the light sporting cloths; but let it not be too thin—in bad fly country the mosquitoes will go through it easily. A looser garment of wool, with thick underwear, will prove a much better protection; and in general it is better to have on too much wool and too thick clothing than too little and too light. Light cotton under-wear, with thin stockings, has ruined many a vacation trip. Women especially dislike the clumsy look and feel of good sporting wear, and they are the ones that suffer most about the camp-they simply will not wear sufficiently heavy stockings. Short sleeves and gauze underwear are far better for winter than for summer.

Of course you can save yourself much discomfort by pitching your camp with judg-ment. In fly countries camp in the open and in the wind—a mosquito cannot make any headway against the wind, because he turns his wings up sidewise, and then he is

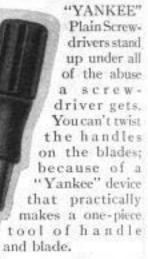

If you have no other protection try a smudge in camp—if the mosquitoes are bad. Perhaps the best one is made of cedar bad. Perhaps the best one is made of cedar bark, though it is very hard on the eyes. You may use grass or leaves if you can do no better. In the pine woods you may have seen the homesteaders' smudges—built in an iron pot in front of the door, mostly with bark. In many parts of Canada you will see a smoldering fire of damp hay, with a rail fence round it. The fence is to keep the horses and cattle from crowding into the fire when they are driven well-nigh mad. fire when they are driven well-nigh mad, as they sometimes are, by the swarms of mosquitoes or flies.

Besides these physical protections preventions, little remains but dope. some countries dope is no protection at all, so numerous and bloodthirsty are the mosquitoes. In the ordinary sporting country of the temperate zones, however, a good dope will do the trick. No one can tell you which is the best dope, for every sportsman has his own formula; but dope of some kind, in a box or a bottle, you ought to have with you—as paste or liquid—if you are going into camp in the mosquito season and in the mosquito country.

The stand-by of the woods is tar and oil. Some use sweet oil, but castor oil is more

#### SICK or WELL

POLE MILLER DRUG CO., Inc., 804 E. Main St., Echo

(Continued from Page 82)

distasteful to insects-nobody and nothing likes castor oil, not even a hungry mosquito. The usual formula is oil of pine tar, three The usual formula is out of pine tar, three parts; castor oil, two parts; and oil of pennyroyal, one part. Sometimes I add to the above as much oil of citronella, which also is very distasteful to mosquitoes and many other insects. This dope is liquid. The smell is not unpleasant, but the prescription requires that you put it on and do not wash it off, which to some persons especially fastidious ladies—is something of a hardship. Do not be afraid to use it; and do not get the idea that a little dab on your nose or ear is going to keep the mos-

your nose or ear is going to keep the mos-quitoes away from you—use plenty. If you perspire this dope will run.

All the resources of applied chemistry have been called on in the manufacture of fly dope. Some are cleaner than others and are as efficient. You can, for instance, take castor oil and citronella, or castor oil and oil of lavender, and look a trifle more ladylike than if you use the tar compounds, Most sportsmen agree that citronella is a

good repellent.

There is nothing so good as quinine to cure malaria, which comes from mosquito bite. From this fact one ingenious sportsman reasoned that mosquitoes do not like bitter things, and he concluded to put something bitter, like quassia, in a fly dope of his own. He used this dope successfully in all parts of the United States and in Central America, and claimed that it made

a good protection even against chigres.
This inventor was Colonel Crofton Fox, now deceased, but once a well-known Michigan sportsman. His recipe, which has been printed from time to time, was as follows:
"Fox's Fly Dope: Oil of pennyroyal; oil of peppermint; oil of bergamot; oil of cedar; third extract of quassia, of each, one dram; sum camphor four drams; year. one dram; gum camphor, four drams; vase-line, yellow, two drams. Mix. Dissolve camphor in vaseline by heat; when cold add remainder." The druggist will understand this.

A Western firm makes a dope something like the foregoing, with the addition of oil of cloves and citronella. This is put up in collapsible tubes, convenient for use. Vaseline or mutton tallow is used as a body in

line or mutton tallow is used as a body in several of the pastes, some of which are very efficient and all of which are cleanly and convenient to use. Most of these pastes have pennyroyal as the main repellent.

A fly dope has been on the market for thirty years that has quite a vogue in black-fly country. I do not know the ingredients, except that oil of tar is one of them and very likely pennyroyal is used. The mixing oil is of less importance and we may classify this simply as one of the tar dopes. It is good against no-see-ums and black fly—those little nuisances that bite you along your hatband or back of the ears. you along your hatband or back of the ears.

#### Fly Dopes for Every Taste

If you are going on a long and hard journey the paste dope you can carry in a box has some advantages over a liquid dope—if you carry the latter in glass. It is better to carry a liquid dope in a little screw-top tin holding a couple of ounces or so. It is thus less likely to be lost through breakage.

A gentleman in Kentucky some years ago sent me the recipe for a dope he found very efficient in the northern woods—merely a variant of the old staple. It calls for pure pine tar, one ounce; pennyroyal, one ounce; vaseline, three ounces. The same gentleman sometimes used another formula: genteman sometimes used another formula; tar, two ounces; castor oil, three ounces; pennyroyal, one ounce. He always said that most of the volatile aromatic oils, or even camphor, lose efficiency through evaporation very quickly; but, from his hints and those foregoing, any woodsgoer can evolve a dope that will do the work as

well as anything.

Deer flies—the big green chaps—are keen cutters. Perhaps dope may help keep them Try it-at least on the necks and flanks of your horses; for you may save them much misery. The bite of these flies is very painful to a horse or to a man. The bulldog flies of the Rockies are well-known nulsances. Sometimes the high grassy meadows in the mountains, which look like fine camping grounds, are almost untenable by reason of these greenheaded flies. Sometimes on the prairies, or near the

mountains of the West, you may have been termented by swarms of flying ants, which hang round back of your head as you ride on horseback or in a wagon. They bite rather keenly and sometimes get in your hair. A head net is best for them, or a silk handkerchief will answer if you have no net.

We have with us tonight also the tick we have with us tonight also the tick and chigre, neither happily of general distribution, though sufficiently abundant. Ticks are bad things, especially in tropical countries. They constitute one of the menaces of hunting in Africa. Carefully fitted clothing, leggings and footwear make the best protection against ticks. A bodyband soaked in kerosene sometimes is used. The African hunter at night always wears mosquito boots-a soft, light footwear, which will turn ticks as well as mosquitoes

The worst tick country of the United The worst tick country of the United States is in the South; and still farther to the southward, in Mexico and Central America, the tick nuisance is yet worse. There you may find the pinolias or the garapatas. When you come into camp covered by the latter, each with his head buried in your system and each very much absorbed in the work he has found to do, the best thing is to get some one to touch the end of a lighted cigarette to each of the nuisances. He will then blow up and cease to trouble

Eternal vigilance is the only price of safety in tick country. Dope is not much good. Perhaps if one were liberally anointed with kerosene it might keep them off in good measure. If you get a bug in your ear pour in kerosene—it will make him back out. Sometimes it will have the same effect on a tick. Sometimes accombon has effect on a tick. Sometimes camphor has something of the same effect—or chloroform, or diluted ammonia. I am strong for a bottle or can of ammonia in camp. It is a sovereign remedy for the alleviation of insect bites. If a tick gets on you do not get excited and pull off his head—induce him to back out before he dies.

#### What to Do for Snake Bite

One of the worst pests of the woods, One of the worst pests of the woods, especially in a warm or moist country, is the minute little red spider, called the chigre, chigger or jigger. There is nothing more odious in all created Nature than this almost invisible pest. He lurks for you in the bark of the log where you sit down to rest, or drops on your clothing from the leaves or the grass as you walk. Nothing happens then for perhaps three or four hours. Then you experience an intolerable itching and begin to swell up in lumps about as big as a hazelnut—each lump about as big as a hazelnut—each lump being a place where a chigre has set up housekeeping. This irritation will continue for several days, and sometimes is bad enough to deprive one of all sorts of hap-piness in camp if one does not know how to handle the moledy. handle the malady. It is suggested that chloroform is excellent

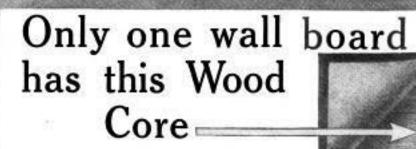

to allay the sting of chigre bites, and sometimes kerosene has been used for the same purpose. Perhaps you may have neither of these remedies with you, but you are almost sure to have a good piece of rusty bacon rind—and that is the standard remedy of the woodsman. Rub the bites—and the places that are not yet bites—thoroughly with this grease. You will find it alleviating and in most cases a specific. Mercurial ointment, no doubt, would be better, but bacon rind is always handy. It will do for prevention as well as cure. Happily the chigre is not very common in a pinewoods country. Usually you will find him in hardwood country or in the warm and moist parts of the prairie country. If you are afflicted by insects in camp do

not sit down and moan because you have not a drug store at your command—use the remedies you have. What you want is something alkaline. If you have no ammonia use strong salt and water. Try kerosene, but not too copiously. That very thorough-going woodsman and woodswriter, Mr. Kephart—by all odds the most recurred and informing of the book writer. accurate and informing of the book writers on these topics—suggests that you can kill a mosquito bite by touching it with indigo-or, if you have not indigo, by rubbing it with a raw onion. Even whisky-used externally-sometimes will take part of the sting out of the bite.

There are sandflies that walk by day and midges that stalk abroad just at dusk. Dope will do for them. Nets do not always keep them out perfectly, but they do not

fly so much by night.

Some people have a great horror of snakes. It is not of much use to point out to them that the percentage of danger is very slight, indeed, and that it annually grows less—in the temperate zone at least—as the few poisonous species more and more

It's a patented feature.

Wall board, to be strong, durable and entirely satisfactory in every way for walls and ceilings and many other uses, must have this wooden core.

Yet Compo-Board is the only wall board that has this wood core.

Don't be satisfied with just wall board - ask for Compo-Board and be sure you get it. The wood core, as illustrated in this ad, is a certain means of identification; in fact that's the most important reason you can have for preferring Compo-Board.

Dealers almost everywhere have Compo-Board in strips 4 feet wide and up to 18 feet long. Write us for booklet and sample piece, and we'll send you nearest dealer's name.

approach extermination. The copperhead snake, once of the North, now infrequent even in the South, is poisonous. So is the moccasin snake of the South, mostly found round the bayous or in the wet country. The several species of the rattlesnake, very widely distributed at one time and even yet to be found occasionally over a great part of the United States, are very poisonous.

The bite of any one of these snakes might, but very rarely does, cause death. It would be certain to produce great danger and distress. Any American hunter of many years' experience hasseen one or all of these species. I have killed many of them all, but never personally knew of but two cases of snake-bite. One was that of a bird dog, bitten by some snake-we never knew what. The dog's head swelled up a great deal and for some days he suffered very much, but did not die; and eventually he recovered en-tirely. The other case was that of a child bitten by a rattler, and death resulted in a few hours-no remedy being used.

The usual remedy for snakebite is whisky and then some more whisky. Doctors say it is of no use; but if you have nothing better and are snakebitten it may help you to forget the snakebite if it does not cure it. If you have courage to cut deeply into the wound as soon as the bite is inflicted, and to squeeze the poison out, you will need less whisky. It would not do much good to cauterize the wound if the poison were left under the scar.

I remember reading an old book of boys adventure, long since out of print, which told of a rattlesnake bite that was cured by the application of the bodies of many fowls split open along the back and applied to the wound. A sort of cupping glass can be made of a bottle, heated quite hot with hot water, and then applied empty with the mouth to the wound.

When bitten by a poisonous snake you will want a doctor and probably cannot get one. Therefore cut the wound deeply with a knife that has been sterilized by passing through a flame.

#### In Case of Scorpions

The real remedy for snakebite is potas-sium permanganate. If you are in a bad snake country it is just as well to have along a few of the crystals and a hypodermic syringe for this solution-you can get the outfit, with instructions, at any good sport-

ing outfitter's.
In the Southwest we used to have centipedes—sometimes in our boots, sometimes in our coatsleeves of a morning. They had a way of crawling into your blankets at night also. The cowpunchers always said the bite of a centipede would drive a man crazy, and that if one crawled across a man's flesh its feet were like hot needles with

poison in them. There are scorpions, also, even pretty well to the northern edge of the Southern states; and there are tarantulas in a great part of the dry West and Southwest. The bite of none of these creatures is apt to be fatal, but it is certain to be the cause of great suffering. Cut the bite open; press out the blood the best you can—cup it if possible. Drench it with ammonia if you have it; use tobacco and whisky if you have nothing better.

If you are timorous about any of these things, and are in a country where they are found, carry a hair rope with you, such as the Mexicans make out of horsehair. Put this down on the ground in a loop round your bed. The cowpunchers always say that no scorpion, tarantula or rattler would crawl over a hair rope. That may be superstition, just as the whisky antidote may be superstition. And perhaps, also, you may remember the old saying that a rattlesnake would not cross a little streak of the ashes of the black ash if you mark that round your bed. I presume a great many rattlesnakes have not crossed either a hair rope or a streak of ashes.

As a matter of fact, man is the shiftiest and most resourceful of all animals. You very soon learn the discomforts in any given camping locality and very soon learn to overcome them, so that you can be quite comfortable in camp under almost any circumstances—usually with simple reme-dies close at hand. And, of course, what applies to the camp proper applies also to the summer resort or country hotel.

Many a vacation has been unpleasant

or unsatisfying when a little knowledge of some simple things and a little personal re-sourcefulness would have brought in quite a different story.

SCORED cylinders, burned bearings and ruined motors are the direct result of overheating. It is this overheating that steals on your car like a thief in the night. Without the

#### THE REQUITAL

(Continued from Page 8)

Her voice flickered into a tenderness at word, as new as the new color in her tek. Her mother drew a long breath. dughter-Ellen, the poised, the balanced, the reasonable, the controlled? If this was is influence already! thought Mrs. Hadley.

"There is always a certain shame in any possial defect," she replied, a little the more only for that warmth of Ellen's; "but I am

oot blaming Pierre."
"No," blazed Ellen; "Pierre is not to

But it is a very serious question whether he has any right to marry!" and espe-mily my daughter, was what Mrs. Hadley ment; she might have found excuses for here smarrying somebody else's daughter, het precisely hers ---- "Such things are at precisely hers ---

"I'm sorry you feel that way about it," aid Ellen; "but I can't give Pierre up." Mrs. Hadley looked at her daughter, spalled. Could she be under the sway of ist dreadful thing called passion? Mrs. Hadley turned hot to her finger-tips; she was ashamed to look at her daughter with such a thought in her mind; but when she id look she was equally unable to keep her Elen's whole face and figure seemed

daged-dilated with an inner eestasy she vis incapable of hiding wholly, though her mother divined she was doing her best to ide it—that what shone through her was he nerest glint of the shining within. Even so she glowed with it, as if some

one had suddenly lighted a lamp within the day. And it was Pierre who had lighted t-Fierre! Mrs. Hadley remembered the tow cadence of his phrase and his eyes: Elm has such a beautiful figure!

She shut her own eyes and shuddered; mewhether Ellen's columnar throat could mean an overdevelopment of the thyroid! he had heard that could change your whole mrader.

'I-I'm afraid"-Mrs. Hadley spoke with extreme gentleness, as one speaks to a invalid—"you are not judging this is nost important matter with the calm-

It is all judged, mamma; and as for tany-why, we have always been in love!" Mrs. Hadley made a movement of open mustion.

"Been in love! My dear Ellen, what an excession!" she repeated with genuine

And the climax of the whole-for heruse when Ellen, after one astonished three at her, threw back her head and eighed-laughed, even as Pierre might lave laughed, or any other girl of any other

Her mother sat stonily regarding the wrek of a lifetime's teaching; and sud-

only Ellen stopped laughing.

"I'm sorry," she said gently; "but relly-I'm afraid there isn't any other phrase for it." She looked at her mother and the last twinkle died from her eyes; she rew sober-a recognizable Hadley again. Have you anything else, mother, against Ferre, besides his lameness?"

Mrs. Hadley wanted to say that she had verything else—that the entire family and bevery natural bent were repugnant to her: but these were antagonisms so irra-tional that she would have blushed to own then verbally—so she answered:

"No. I will not pretend I should not have preferred a man of more serious time of mind and profession; but I am lad of Pierre himself, as you know—and pity him very much," she added, dealing miscously or unconsciously the sharpest possible thrust.

Ellen's chin went up in the air imme-

"Idon't think you need do that, mamma."
"Do what?"

Pity him so much. He is already firinguished—has made a place and a Postion for himself among musicians."

"Exactly - among musicians," mured her mother.

Well, would you expect him to make anong chemists?" asked her daughter bey, softening instantly to add: "And twy happy." She did not need to add: "am !!"

Mrs. Hadley, looking at her, suppressed and half-sighed sigh. She had her

moment of maternal prescience and suddenly knew the value of words. She got

up from her chair.

"I only ask you, Ellen, to weigh well what you are doing; not to—to decide on blind impulse," she said almost apologetically. "Of course, if you have really thought this over-if it is the judgment of your-your highest conscience, then, no matter what we may feel or think, you know we shall do our best to—to——"
"To——" said the implacable Ellen.
"To make the best of it," Mrs. Hadley

concluded limply.

Ellen walked over to her mother.

"Thank you," she said. "And—please begin making the best of it right away." She kissed her mother's cheek, passed a hand of unwonted tenderness over her moth-er's hair, and walked calmly and unabashed from the room.

It was dreadful! Mrs. Hadley, whom her husband found trying to wipe away an unwonted and surreptitious tear, could only

phrase it thus:
"It didn't seem to be Ellen at all. It was as if I had never known my own daughter. If this is Pierre's influence——"

Mr. Hadley, confronted with another problem as serious as frames and about which he felt no wiser, thought rapidly

rapidly for him:
"At least it is an irreproachable family eonnection; and Pierre has no-no bad habits."

Privately his wife felt inclined to retort that living at all might be called a bad habit—in some people.

Aloud she said: 'But it is a dreadful blow, with our wellknown views—everything we are known to stand for. Ellen—to marry a cripple!" "That, of course, is deplorable," assented her husband; "but there is absolutely

nothing else

"Isn't that enough? Lame people ought not to be allowed to marry!" exclaimed his wife tragically.

"True; but if Ellen holds out ——"
"Oh!" said Ellen's mother. "Ellen will hold out!"

"Then, my dear, I really see nothing but o—to make the best of it." "There is nothing," grouned his wife, 'but to make the best of it."

They looked at each other, and in the look were all their patient years of loyaltyof selfless devotion and steadfast bannerbearing; but no lightest wavering. It was wordlessly understood between them that even if their eldest flinched from the standard they should not; they would go right on and somehow make their flying banners cover even Ellen.

Though they might deplore, they would not forsake. Out of that silent communion they emerged not only able but almost eager to face the worst and make the best of it—only as they turned together to leave the room did Mrs. Hadley voice her last

misgiving:
"And Henry Kilvert -

Mr. Hadley shook his head in answer. He added the brief commentary:

We shall never know! Meantime in the Garnett household there was consternation. Being the Garnetts, they did not dream of interfering with their son's choice; but they looked at each other in silent dismay. Marry Ellen Hadley!—that very commonplace girl, of an utterly commonplace family!-with a whole world of girls to choose from! Pierre—their Pierre—who had had their own dream-romance always before him and

of it in blood and brain! What can be be thinking of?" exclaimed Mary Garnett, propping a Rossetti face on one long hand.

was himself the very quintessential flower

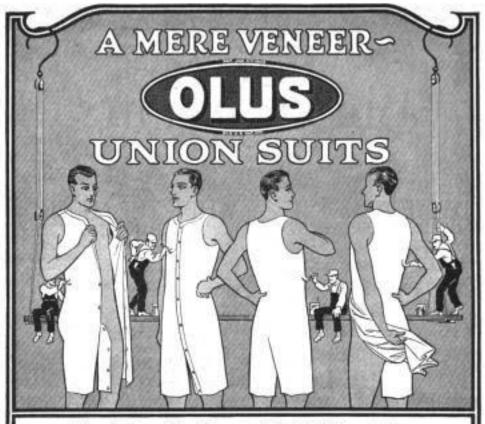

My dear, he isn't thinking," smiled her husband, and sighed. "Certainly it isn't what we would have dreamed or wished for He stroked the cloud of Rossetti hair, down which his fingers found their instinctive way to hers and clasped them sympathetically. "But, after all, since he loves her-

"Oh, of course, since he loves her!" repeated Pierre's mother.

Yes-since he loves her!"

"And since she loves him," added Pierre's mother hopefully, "there must be some-

"There must be something; but whether there is or not," said Pierre's father with a

little shrug and a growing twinkle, "clearly the only thing we can do is just to make the best of it."

"Yes," assented she: "we must make the

best of it. But-Pierre and Ellen Hadley!

They were married—with all the dignity due the bride's traditions, and so much of the grace of a pagan, yet divine, festival as the bridegroom's family could import into it. They had offered their rose garden; but the ceremony took place decorously in a drawing room.

"Never mind!" Pierre had whispered. "This is their wedding; there will be silver and golden and rainbow and moonbeamy and starshiny ones-and we'll have those as we like."

They behaved, in fact, as though it had as though they were only being married at all to gratify their families. Henry Kilvert, who acted as best man, showed a far more conscientious interest. He went about heavier applications are applications. about beaming, explaining to everybody, with a singular lack of his usual reserve, what an auspicious event it was-Pierre being the only man in the world fit to be intrusted with Ellen; and Ellen the only girl in the world capable of nourishing a genius so precious as Pierre's.

Mrs. Hadley, listening to him, was al-most convinced—until she caught sight of his face during the ceremony, his gaze fixed on Ellen. Her husband had been right they should never know!

After the wedding the two lovers went to live in a honeymoon cottage a long way from anywhere—unless you had a motor. Mrs. Hadley had found a much more ad-vantageous one, socially and domestically, as she pointed out, nearer at hand; but Pierre had found this, and he pointed out values in viny porches and thick-set lawns.

"It will be damp," Mrs. Hadley foreboded.

"It will be delicious," replied Pierre. The married lovers sat in the big hammock on the porch a few months later, swinging softly. Pierre's arm was about Ellen and her hand in his.

"It is like living in a fairy tale to live with you!" said Ellen softly.

"It is like living in a comfortable heaven to live with you—a comfortable heaven!'
emphasized Pierre.

"Do you suppose"—Ellen lifted her eyes to his—"it will always be like this?" Pierre looked into those eyes.

"No; much better!"

She had on the barbaric embroidered jacket, and he rolled back deftly one of the wide sleeves and kissed her bare arm. You are-music!" he murmured.

Ellen's eyes glowed.

"And isn't it wonderful that I'm not a bit musical—really—except that I love yours? Any more"—she glanced down at the gorgeous jacket—"than I'm really bar-baric; though I love this."

"That's why I said it suited your style," Pierre smiled. "I shouldn't want you to be really barbaric. It's because you're all those other straight, stiff things your parents taught you—and which they are— that I love you. You are like a straight, severe Greek goddess—that's why I love you and why I needed you."
"And you," excluimed Ellen, "are like

the wonder prince in the fairy tale, who marries the plain peasant girl. Oh, you are like everything I've ever wanted in my life—you are you!" Another pause. "Pierre!"

"Yes-well?" Looking down, he was struck with something inscrutable in those pellucid eyes.
"When Christmas comes, and every

single hirthday, and on our marriage anni-versaries—all of them—will you

little, perfectly foolish and useless and

unnecessary thing?"
"Why of course I will!" replied Pierre

promptly.

Ellen laughed softly; her wise eyes were

shining like a child's.
"All my life I've had all the things I needed—my parents were so splendid!— and I've simply longed for things I didn't need. I've had everything that was wise and right and sensible—and I've just ached for something perfectly foolish."

"Was that why you married me?" asked

Pierre unmoved.

"Maybe!" laughed Ellen. She caught her breath. "All my life I've so envied children who had hardly anything—but whose parents gave them gifts. If ever we have children —

"Of course we are going to have chil-dren!" Pierre interrupted her calmly.

The child that was born to them at the end of the year was as straight as Ellen, with Pierre's flaming forehead—as Henry Kilvert called it—and Ellen's eyes, deep-ened to a fathomless blue, darkly fringed

and full of both their dreams.

Of course he might have been crooked and devoid of imagination—but I tell the

facts.
"Pierre has the most wonderful little son!" the Garnetts joyously proclaimed everywhere.

"He is really a most remarkably fine child—Ellen's boy!"—the Hadleys went about complacently telling every one they

met.
"See here! Have you seen my godson?" Henry Kilvert beamingly demanded of all his acquaintances, rubbing his hands with glee—"Henry Hadley Garnett! He's simply the greatest thing on earth-perfectly great!

Pierre's sonata—the first of his famous Fatherhood series—was finished the very week after his little son's birth, and was dedicated—like all the others—to Ellen, his unmusical wife.

#### Birds as Transmitters

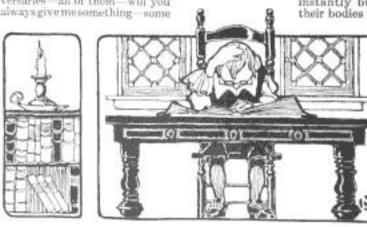

BIRDS are becoming so injurious to the high-voltage electric transmission lines now so common in the country, carrying their great power from some river to a dis-tant city, that engineers have been forced to devise protection for the lines at considerably increased cost.

At the least excuse electricity will come across from one of these wires to another or to the ground, and perhaps put the whole system out of service and necessitate ex-pensive repairs. The body of a bird, or the bodies of a flock of birds, may give the electricity just the opportunity it requires to make the jump, like stepping-stones in a wide brook.

A California company has had great trouble with eagles, the bodies of which have enabled the current to jump from the wires to the steel towers of the transmission line, and so to the ground. An Eastern company is now building its lines with wire so far apart that the current cannot make the jump through the body of a greatbuzzard flying with wide-spreading wings between the wires.

A German company that has had much trouble because birds sat in chains on the crossarms of the poles or towers, and thus gave the electricity the stepping-stones it is always seeking, has rebuilt its lines with crossarms so oblique that the birds do no find them convenient for roosting; and over the insulators are placed conical cap so sharply pointed that a bird would slip Of course while the birds are danger ous to the transmission lines, the electricity is fatal to the birds, not only killing then instantly but usually burning

their bodies to a cinder.

# The Meaning of the Hay-Pauncefote Treaty—By David Jayne Hill

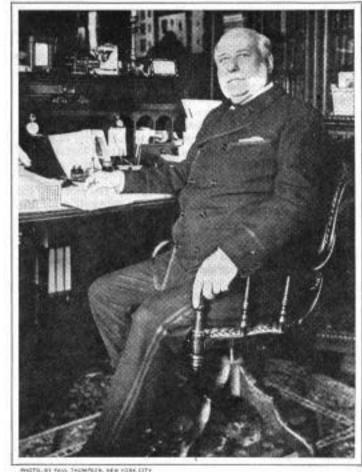

John Hay, Who, as Secretary of State, Represented the United States in the Treaty Negotiations

touching on the expediency of either affirming or surrendering such rights as the United States may possess in the Panama Canal, it may be useful at this time to inquire what are the respective rights of the United States and Great Britain under the Hay-Pauncefote Treaty.

THE CLAYTON-BULWER TREATY -In 1850 the occupation by Great Britain of territory in the vicinity of a possible future canal connecting the Atlantic and the Pacific led to the negotiation of a treaty between the United States and Great Britain, signed on April nineteenth of that year, which contained the following provisions: the fifty years that had elapsed since the signing of the Clayton-Bulwer Treaty, might consider it expedient to denounce that treaty, on the ground that treaties, even when alleged to be perpetual, are morally binding only rebus sic stantibus, and cease to be so when conditions have essentially changed. In the conduct

of the negotiations Mr. Hay discovered that Great Britain was deeply interested in the construction of a canal at the expense of the United States, and would readily consent to it on condition that the general principle of neutralization, which had been definitely specified in the Clayton-Bulwer Treaty, should be recognized in a new

Lord Pauncefote, England's Ambassador to the United States at the Time the Treaty Was Made

Accordingly a new treaty was signed on February 5, 1900, designed to take the place of the Clayton-Bulwer Treaty, in which it was agreed that a canal might be constructed "under the auspices of the Government of the United States, either directly at its own cost or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares."

THE FIRST HAY-PAUNCEFOTE TREATY—Though the treaty of February 5, 1900, released the Government of the United States from some of the obligations of the Clayton-Bulwer Treaty, it did not release it from all.

In the second article it was declared:

"The High Contracting Parties, desiring to preserve and maintain the 'general principle' of neutralization established in Article VIII of the Clayton-Bulwer Convention, which convention is hereby superseded, adopt, as the basis of such neutralization, the following rules."

The rules, substantially as embodied in the Suez Canal Convention, signed by nine Powers in 1888, then follow. The first one reads:

"The canal shall be free and open, in time of war as in time of peace, to the vessels of commerce and war of all nations, on terms of entire equality; so that there shall be no discrimination against any nation or its citizens or subjects in respect of the conditions and charges of traffic or otherwise."

The seventh rule reads:

"No fortifications shall be erected commanding the canal or the waters adjacent. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder."

Evidently here, as in the Clayton-Bulwer Treaty, Great Britain shared with the United States the power to determine the conditions under which the canal should be used. It was distinctly agreed that all nations, without qualification of any kind, and therefore plainly including the United States, were to be treated on terms of entire equality with the United States.

The language is plain and explicit, and can have no other meaning. So complete is the condominium in the control of the canal that Great Britain in the first Hay-Pauncefote

"The Governments of the United States and Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship canal; agreeing that neither will ever erect or maintain any fortifications commanding the same or in the vicinity thereof, or occupy, or fortify, or colonize, or assume, or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America," and so on.

So long as this convention remained in force—that is, down to the year 1900—it was impossible for either Great Britain or the United States to build an isthmian canal over which it could, without a violation of the treaty, exercise such rights of control and defense as would justify the expenditure of the cost of construction by either nation.

Meanwhile, under rights obtained from Colombia, a French company began, but afterward abandoned, the construction of a canal across the Isthmus of Panama.

In 1900 the Government of the United States desired to construct an isthmian canal for the purpose of connecting its Atlantic and Pacific coasts by a waterway through which its ships of war and its domestic commerce might be transferred from ocean to ocean. This was to be an American canal, constructed and controlled by the Government of the United States. The obstacle to procedure was the Clayton-Bulwer Treaty, by which the United States was solemnly bound not to exercise the control it now desired to exercise.

THE ABROGATION OF THE CLAYTON-BULWER TREATY—The task was intrusted to the Secretary of State, Mr. John Hay, to open negotiations with Great Britain for the purpose of liberating the Government of the United States from its agreement with Great Britain, in order that it might be free to proceed with the construction of a canal under its own exclusive control.

Would Great Britain agree to release the United States from the then existing obligations? That was the question which Secretary Hay was called on to face. On the one hand, Great Britain might be reluctant to permit the United States to construct and control a waterway between the two oceans, through which American ships might at all times pass freely and from which British ships might sometimes be excluded.

On the other hand, Great Britain, as the greatest of maritime powers, might profit greatly by the construction of such a canal; and there was the possibility that the United States, whose position in the Western Hemisphere had been profoundly modified in

Treaty still possessed and exercised the right to forbid the fortification of the canal, as well as to share on terms of entire equality all the privileges of the United States, both in war and peace.

THE SECOND HAY-PAUNCEFOTE TREATY—Though it is well known that the first Hay-Pauncefote Treaty was not ratified by the Senate of the United States and was returned to Secretary Hay with several proposed amendments, the language of that treaty has so impressed itself on the memory of many persons that they persist in quoting its words as constituting the present obligations of the United States, unmindful of the fact that it was never ratified.

It is, therefore, of the highest importance to a comprehension of this subject that we should not only distinguish between the unratified treaty of February 5, 1900, and the treaty of November 18, 1901, which was duly ratified and is now in force, but that we should closely follow the steps of the transition from the one to the other by which the relations of the two Governments were radically modified.

Without encumbering this brief exposition with the discussion of the first Hay-Pauncefote Treaty before the Committee of the Senate, it may be sufficient to point out the nature of the modifications actually adopted, with the reasons for making them.

When the Senate declined to ratify without amendment his first treaty, Secretary Hay reopened the negotiations with Great Britain on the understanding that the canal was to be exclusively American; that the right of fortification was not to be denied; and that neutralization as a general principle could not be interpreted as excluding the owners of an object from unlimited control over it, so long as all neuters were subjected to equal treatment. Great Britain and all others were to be treated with strict equality, but the Unifed States was to have a free hand in the management of its own property.

In pursuance of this purpose the draft of the second Hay-Pauncefote Treaty withdrew from the obscurity of a merely parenthetical clause the statement that the Clayton-Bulwer Treaty was superseded, and brought to the front, as the first article, the plain declaration:

"The High Contracting Parties agree that the present treaty shall supersede the afore-mentioned convention of the nineteenth of April, 1850."

It is, therefore, useless to look back of the Hay-Pauncefote Treaty of November 18, 1901, for any light on the present rights and treaty relations of the United States and Great Britain. So far as the Clayton-Bulwer Treaty and the first Hay-Pauncefote Treaty are concerned, they have no existence and no effect. The rights of the two countries respecting the canal are, therefore, to be determined solely by an interpretation of the second Hay-Pauncefote Treaty, which alone is still in force.

Happily we have clear and authentic written evidence of the intentions of both sides in this negotiation. In communicating the new treaty to the Senate for ratification Mr. Hay says:

"The whole theory of the treaty is that the canal is to be an entirely American canal. The enormous cost of constructing it is to be borne by the United States alone.

When constructed it is to be exclusively the property of the United States, and is to be managed, controlled and defended by it. Under these circumstances, and considering that now, by the new treaty, Great Britain is relieved of all responsibility and burden of maintaining its neutrality and security, it was thought entirely fair to omit the prohibition that 'No fortifications shall be erected commanding the canal or the waters adjacent.'"

There are then, from Mr. Hay's point of view, no limitations whatever on the enjoyment by the United States of "all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal," as provided for in the second article of the new treaty. The Clayton-Bulwer Treaty casts no shadow on the new convention, which is based on a new conception of the relations of the two Governments to the canal.

That the British Government took the same view is evident from the difference between the two Hay-Pauncefote Treaties and the statements of Lord Lansdowne, the British Minister of Foreign Affairs, in his communications to Lord Pauncefote.

THE CHANGES IN THE TREATY AS RATIFIED— Lord Lansdowne's memorandum for the instruction of Lord Pauncefote, dated August 3, 1901, reveals how completely the British Government had modified its point of view since the negotiations began,

"In form," says Lord Lansdowne, "the new draft differs from the convention of 1900, under which the high contracting parties, after agreeing that the canal might be constructed by the United States, undertook to adopt certain rules as the basis on which the canal was to be neutralized. In the new draft the United States intimate their readiness 'to adopt' somewhat similar rules as the basis of the neutralization of the canal. It would appear to follow that the whole responsibility for upholding these rules, and thereby maintaining the neutrality of the canal, would henceforth be assumed by the Government of the United States. The change of form is an important one; but in view of the fact that the whole cost of construction of the canal is to be borne by that Government, which is also to be charged with such measures as may be necessary to protect it against lawlessness and disorder, His Majesty's Government are not likely to object to it."

In brief, the rules for the use of the canal, instead of being laid down, as in the first treaty, by the United States and Great Britain jointly, in this new treaty are now to be laid down by the United States alone; the reason for this being that the cost of constructing, maintaining and defending the canal is now to be borne solely by the United States. The bilateral agreement becomes a unilateral regulation. In exchange for the added burdens assumed by the United States, Great Britain surrenders all rights in the canal except those explicitly accorded under the rules adopted by the United States.

This radical change in the ground conception of the treaty seemed to Lord Lansdowne to require a corresponding change in the phraseology of the rules. Accordingly, in the draft of the treaty sent by the British Foreign Office to Lord Pauncefote, Lord Lansdowne proposed to change the expression in the first rule from:

"The canal shall be free and open, in time of war as in time of peace, to the vessels of commerce and war of all nations, on terms of entire equality; so that there shall be no discrimination against any nation or its citizens or subjects in respect of the conditions and charges of traffic, or otherwise"

to the form:

"The canal shall be free and open to the vessels of commerce and war of all nations which shall agree to observe these rules, on terms of entire equality; so that there shall be no discrimination against any nation so agreeing," and so on.

The significance of this change is evident. The rules in question were now to be adopted by the United States alone. The canal was not to be thrown open to "all nations," but only to "all nations which shall agree to observe these rules." Not only so, but the expression, "in time of war as in time of peace," which appeared in the first treaty, is now dropped, thus giving the United States in time of war the right, if necessary, to close the canal, even to those nations that agree to observe the rules laid down by the United States.

Clearly the United States Government in this new treaty occupies an entirely different position from the one it occupied in the previous treaty. It now possesses the right not only to fortify the canal but to close the canal in time of war. It is recognized as sole proprietor, and as such is empowered not only to adopt rules but by its own means and at its own cost to enforce the observance of them.

What, then, is the position in the new form of the treaty of all other nations, Great Britain included? "All nations which shall agree to observe these rules," now adopted by the United States alone, and no others, are, according to

David Jayne Hill, Former Ambassador to Germany

Lord Lansdowne, to enjoy the use of the canal. A distinction is here made that did not appear in the first treaty. In the first treaty the United States and Great Britain together adopted rules that opened the canal to "all nations, on terms of entire equality." In the second treaty the United States alone adopts the rules; and, as sole owner of the canal, offers terms of entire equality to all nations that shall agree to observe them.

Does the equality here referred to mean equality with the Government of the United States or equality among those agreeing to observe the rules? This is, without doubt, the critical point in the interpretation of the treaty, and it is necessary to proceed with extreme caution and absolute

freedom from prejudice of any kind.

It would appear that the right to fortify the canal and to adopt rules for its use, with the power of closing it in time of war for purposes of defense, places the Government of the United States in a position quite different from that which it occupied when all these prerogatives were denied. The consideration offered by the United States to Great Britain for these new advantages was the assumption of the whole burden of maintaining and defending the canal as a piece of national property, thus relieving and discharging Great Britain from any obligation whatever, except observance of the rules.

A close examination shows that not one of the rules the nations were to agree to observe could be regarded as applying to the owner of the canal; so that the expression, "all nations which shall agree to observe these rules," can hardly be regarded as including the United States.

The purpose and character of the rules seem to forbid such inclusion. They are almost exclusively prohibitions that could not well apply to the United States as sole proprietor of the canal, whose whole interest would be to secure the observance of the rules and could not in any way be promoted by violating them-such as blockeding the canal; committing acts of hostility within it; the revietualing of belligerent vessels; delay in transit; the treatment of prizes of war; the embarkation or debarkation of troops and munitions of war, and so on; and the occupation of waters adjacent to the canal by belligerent vessels all of which relate to acts interfering with the control of the canal. Such rules have from their very nature no application to the United States, which, therefore, cannot fairly be regarded as included in the expression: "All nations which shall agree to observe these rules."

We have, then, apparently two classes of Powers designated in the provisions of this treaty: 1—The sole builder, owner and controller of the canal, on the one hand; and 2—The nations that agree to observe the rules it has adopted, on the other. Does the United States consent in this treaty to extend to other nations entire equality with itself in the use of the canal, or only entire equality among themselves as equal and neutral Powers?

The answer to this question is to be found in the statements relating to the effect of the treaty by those who commented on it at the time when it was negotiated. Lord Lansdowne, in his instructions to Lord Pauncefote, states very clearly his reason for changing "all nations" into "all

nations which shall agree to observe these rules."

His reason is—with the new conception of the treaty as giving to the United States complete control of the canal, thus making it exclusively American—that Great Britain would be placed at a disadvantage if all nations, without distinction, were to enjoy the privileges of the canal without any obligation to observe the rules.

"The omission of the words under which this country"—Great Britain—"became jointly bound to defend the neutrality of the canal, and the abrogation of the Clayton-Bulwer Treaty," Lord Lansdowne admits, "would materially diminish the obligations of Great Britain." "This," he adds, "is a most important consideration." "But," he continues, "having assumed the whole burden of defending the canal, the United States would have a treaty right to interfere with the canal in time of war or apprehended war. Great Britain alone, in spite of her vast possessions on the American continent and the extent of her interests in the East, would be absolutely precluded from resorting to any such action or from taking measures to secure her interests in and near the canal," though other Powers not bound by the treaty would be free to take such action as they pleased.

"I would, therefore, suggest," he concludes, "the insertion, in Rule One, after 'all nations," of the words 'which shall agree to observe these rules." This addition will impose on the other Powers the same self-denying ordinance as Great Britain is desired to accept, and will furnish an additional security to the neutrality of the canal, which it will be the duty of the United States to maintain."

What, then, is the substance of this self-denying ordinance on the part of Great Britain and this new burden assumed by the United States? Is it not the complete and unrestricted surrender of the control of the canal to the one Power that takes the place of the

# SAUCE FOR THE GANDER

T WAS after the affair of the Prime Minister that I left Daphne. We kidnaped him, you remember-only it arned out to be some one else; and Violet arcourt-Standish got in awfully wrong nd had to go to the Riviera. I really did ot wish to kidnap him, but the matter me up at tea at Daphne's one day-and se hates to stay out of things.

Poppy Harmsworth was going on a otor trip just then, and when she asked e to go along I agreed. I was spending Sunday with her.

"I'm not running away, Madge," she plained; "but I'm stony broke, and at's the truth! I'll have to get back to ork."

Poppy paints and makes a lot of oney-mural decorations, you know, mels for public buildings, and all that et of thing; but she never has any money, matter what she makes.

"I want sea-sea with mist over itid rocks. And a cave -

"Caves are damp. There are plenty of stels."

"A cave," she said, examining her rings eamily, " with the tide coming in against setting sun, and the spray of every dor in the world—I think it's Tintagel,

Poppy is terribly pretty and this is her cry—not mine. I did not think at first at she was serious.

"That's a sweet frock," I said. "Did m bear that man today when you were eaking at the Monument? He said: lless its pretty 'art! If the rest of them oked like that they could 'ave the vote, c all of me!""

Poppy's hair is the softest, straightest ir you ever saw and her nose is short id childish. Her eyes are soft too, and g profile is so helpless that the bobbies ap her across the streets; but her full ce is full of character.

"Was he in front of me?" she demanded.

"At the side." We both understood—it was her profile

min. She fell back in her chair and sighed. "If you could address the House of Lords in profile,"

said, "you'd get the vote."
"That's rot, you know!" she retorted; but she colored. She knew and she knew I knew that her new photographs

ere profile ones. And we both knew, too, that they were ken because Vivian Harcourt had demanded a picture

"You're not doing the right thing, Poppy," I accused r. "For one day in the week that Viv sees you full face ere are six days for him to look at that picture."
"He isn't obliged to look at it at all."

"So long as women beg the question like that," I said verely, "just so long do they postpone serious considerain for the Cause."

She leaned back and laughed-rather rudely. The iglish can be very rude sometimes. They call it frankness. "The ridiculous thing about you is that you don't know ything about the Cause," she said. "With you it's a i. It's the only thing you can't have; so you want it, tle Madge. With some of us it's-well, I can't talk out it."

That made me furious. The idea of dedicating your life

a thing and then being accused

"I think enough of the Cause to stand out all day in a oiling sun," I snapped, "and be burnt to a cinder! dn't I pass out your wretched literature for four hours d make six shillings?"

"Don't call it wretched literature," she said gently. 3ut—now think a minute! If it came to a showdown ur own expression, isn't it?-a question between one of ese men who are so mad about you-Basil or any of the hers-and the Cause, which would it be?"

"Both!" I replied promptly.

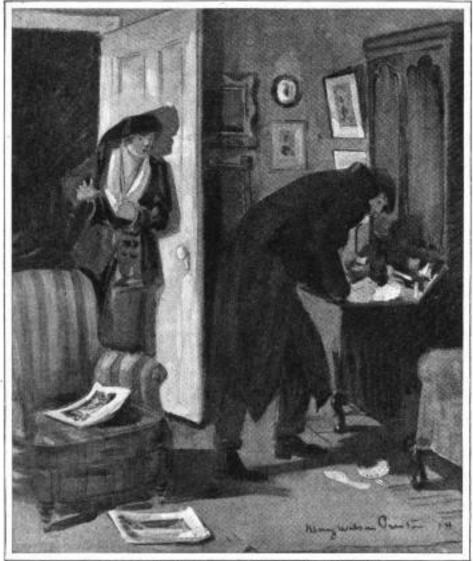

She laughed again.

"You delightful little hypocrite!" she cried. "A comomise, then! Not victory, but a truce! Oh, martyr to ie Cause!"

"And you?"

"The Cause!" she said, and turned her full face to me. Well, of course that was Poppy's affair. I believe in ving up to one's conviction, and all that; but when you link of the lengths to which she carried her conviction,

### By Mary Roberts Rinehart

The Burglar Was There, Going Through Vic's Desk

and the horrible situation that developed, it seems an exceedingly selfish theory of life. I believe in diplomatic compromise.

I wrote the whole conversation that night to father and he cabled a reply. He generally cables, being very busy. He said:

Life is a series of compromises. Who is Basil?

I had been in England for six months visiting Daphne Delaney, who is my cousin; but visiting Daphne had been hard work. One started out to go shopping with her and ended up at a counter in a big shop demanding of a mob of women hunting bargains in one-and-six kids—gloves—why they were sheep.

"Sheep!" she would say, eying them scornfully. "Silly sheep, who do nothing but bleat-with but one occupation or reason for living-to cover your backs!"

Then two or three stately gentlemen in frock coats would pull her down and I would try to pretend I was not with her.

Now, I believe in suffrage. I own a house back home in America. Father gave it to me so I could dress myself out of the rent. But between plumbers and taxes, and a baby with a hammer, which ruined the paint, I never get much. The first thing I knew, the men voted to pave the street in front of the old thing, and I had to give up a rose-colored charmeuse and pay for it. But that is not all. The minute the street was paved some more men came along and raised my taxes because the street was improved! So I paid three hundred dollars to have my taxes raised! Is that reasonable? Is that government?

Well, that made me strong for suffrage. And of course there are a lot of other things. But I am not militant. You know as well as I do that it is coming. The American men are just doing what father does at Christmastime. For about a month beforehand he talks about hard times and not seeing his way clear, and all that. And on Christmas morning he comes downstairs awfully glum, with one hand

We always play up and tell him never to mind-maybe he can do it next year. And we are always awfully surprised when he brings his hand round with checks for everybody, bigger than they had expected.

And so, just as soon as the men realize that we are really in earnest about the vote, and will not just smile and look tolerant when we try to learn something about politics, they will give it to us, with bells on it. Of course I am speaking of the American men. They will have to extract the vote from the English with forceps.

I have really thought a lot about it, though Daphne once said I had enthusiasm instead of intelligence, politically. But how am I to learn? Men always talk nonsense to me instead of politics. I tell you it gets on my nerves sometimes. Now and then one does tell me a little; but he is always elderly and not alluring.

Well, Poppy and I got started at last. Poppy left in a raging temper over something or other—a bill before the House, I think. I was so busy getting packed that I forgot what it was, if I ever knew-and she hardly spoke for twenty miles; but at Guildford she recovered her temper. It was during the assizes and the sheriff was lunching at the hotel. His gilt coach was at the door, with a footman in wig and plush, white stockings and buckles, and a most magnificent coachman. Poppy's eyes narrowed. She pointed to the footman's ornamented legs.

"The great babies!" she said. "How a man loves to dress! Government, is it? Eighteenth-century costumes and medieval laws! Government-in gold lace and a cocked hat! Law in its majesty, Madge, with common sense and common justice in rags. That can vote, while you and I ——" She stopped for breath.

The footman's calves twitched, but he

looked straight ahead.

I got her into the building somehow or other. She looked quite calm, except that she was breathing hard. I reminded her that she had promised to be quiet on this trip; and she powdered her nose and looked penitent and distractingly pretty.

"I'm sorry," she said. "It's this parade of authority that gets on my nerves—this glittering show of half the people ruling all the people."

When she came back from ordering the luncheon she was smiling. I thought it was all over.
"Luncheon!" she said cheerfully. "With strawberries

as big as a teacup, and clotted cream!"

I think my mind was on the clotted cream, for I followed her past one dining room to a second—a long, low room full of men. She pushed me in ahead. "I-I think it's the wrong room, Poppy," I said.

"There's the -It was the wrong room and she knew it! The sheriff was at the center table and near him was a great serving stand with hot and cold roasts and joints. I tried to back out, but at that moment Poppy slammed the door and locked it.

"Don't yell!" she said to me under her breath, and dropped something ice-cold down my back—the key! About half the men started to their feet. Poppy raised

"Gentlemen," she said, "you need not rise! I have a few things I would like to say while you finish luncheon. I shall be entirely orderly. The question of the suffrage

They dodged as though she had been loaded with shrapnel instead of a speech. They shouted and clamored. They ordered us out. And all the time the door was locked and the key was down my back!

"Poppy!" I said, clutching her arm. "Poppy, for the love of heaven -

She had forgotten me absolutely. When she finally turned her eyes on me she never saw me.

'The door is locked, gentlemen," she said. "If you will give me five minutes –

They would not listen, however. The sheriff sat still and ate his luncheon. Time might come and time might go, tides flow and ebb, old eras give way to new—but the British lion must be fed. But once I caught his eye and I almost thought it twinkled. Perish the thought! The old order wink at the new?

They demanded the key. The lunch hour was over. The assizes waited. In vain Poppy pleaded for five minutes to talk.

"After that I'll turn over the key," she promised. The only way she could have turned over the key was, of course, to take me into a corner, stand me on my head and jounce it out! I was very nervous, I will confess. No one had laid a hand on Poppy as yet. She was so young and good looking—and the minute anybody loomed very close she turned her baby profile to him and he looked as though he had been caught gunning for butterflies!

Finally, however, the noise becoming a tumult, and Poppy and I forced back against the door, the sheriff approached. The crowd made respectful way for him.

"Now, young ladies," he said, "this has been an agreeable break in our long day; but—all pleasant things must end. Open the door, please."

"Will you give me five minutes?" Poppy demanded. "I'm a taxpayer. I help to pay the people in this room. I have a right to be heard."

"Open the door!" said the sheriff.

"No!"

"Then give up the key and one of my men-

I caught his arm. I could not stand it another minute. It is all well enough for Poppy to say it was cowardly and that the situation was ours until I gave it away. The key

was not down her back!
"Break the lock!" I said frantically. "The—the key is where I can't get it."

He was really twinkling now, but the crowd round was

outraged on account of him and his dignity. "You didn't swallow it, did you?" he asked in an

undertone. "It's down the back of my waist," I replied.

Poppy said afterward that I cried on the sheriff's breast and made a scene and disgraced her generally. It is not true. I only leaned my head against his arm for a minuteand he was not angry, for he patted my shoulder. I am terribly fond of Poppy, but she is not always reasonable.

There had been a great deal of noise. I remember hearing echoes of the dining-room excitement from the hallway beyond the door and some one pounding. They were breaking the lock from the outside. All the time Poppy was talking in her lovely soft voice. Finally she said:

"Since woman is called on to obey the laws she ought to have a voice in making them

"Hear! Hear!" cried somebody.
"Since she doesn't make them, why should she obey them?" demanded Poppy, lifting violet eyes to the crowd.

"I didn't make the Ten Commandments," said a voice from the rear of the room, "but I'll get hell just the same if I break them! What have you got to say about that?" Poppy was stumped for once. I believe it was the most

humiliating moment of her public life. She went quite pale and opened her lips, but no retort came.

Luckily the lock broke just then and we were hustled out of the room. There was a crowd in the hall and it was most disagreeable. I expected to be arrested, of course; but the crowd, feeling it had the best of things with the Ten Commandments, was in high good humor. They let us by without a word and the sheriff himself stood on the steps while we got into our car.

Just as Poppy's chauffeur got the engine started the landlord ran out and demanded the key. Poppy told the chauffeur to go on in a frantic voice, but he hesitated. All the majesty of British law was there on the steps and the gold coach was waiting. Of course to be arrested for

disturbing the peace with a suffrage speech is one thing, but theft is another. I threw a pleading glance at the sheriff and he came slowly down the steps. Men with wands kept the crowd back. The fat coachman with the wig did not turn his head, but the footman at the coach door leered and avenged his calves. Even Poppy flushed.

"Quick!" said the sheriff feroclously in a low tone. "Give me something that looks like a key, and then get away as quickly as you can.

I opened my pocketbook. The only thing that was even the size of a key was my smelling-salts bottle. So I gave him that and he covered it with his big hand. Then, still frowning savagely, he made a lordly gesture for us to move on.

Have you ever been in the Wom-Clubhouse that Poppy orated? The staircase walls are wonderful-crowds of women, poor and old, young and rich, with clouds round them, and so on, all ascending toward a saintly person with a key-Saint Peter, or somebody. Well, the saint looks like the sheriff at Guildford, and the key does not look like a key!

We slept at Bournemouth that night-or, rather, we did not sleep. Poppy sat up half the night trying to think of an answer to the Ten Commandments thing. She said she should get that again—she felt it—and what was she to say? I had recovered the key and my good humor by that time, but I could not help much. Seeing her so disturbed I had not the heart to tell her what I suspected; but I was sure I had seen Vivian Harcourt on the edge of the crowd at Guildford. It would have made her furious to think that she was under any sort of espionage; but Vivian was following us, I felt confident, with money to bail us out if she did any-

thing reckless. He knew her, you see. Poppy slept late in the morning, and I got up and went down to the pier, a melancholy place, wet with morning mist and almost deserted.

There were rows of beach chairs and overturned boats littering the beach, and not a soul in sight but a few fishermen. I sat there and thought of Atlantic City on a bright July morning, with children and nurses on the sand, and nice young men in flannels. I was awfully homesick for a minute. And it came over me, too, that I had no particular business helping the Cause in England, and having keys put down my back, and giving up my gold-topped salts bottle, which was a present from Basil Ward, when all the time the Cause at home was fighting just as grimly and much more politely.

Vivian was on the pier. He was sitting looking out, with his finger booked round his cigarette which is Cambridge fashion, I believe, or maybe the king does it—and looking very glum.
"Where is she? In jail?" he demanded.

"She's asleep, poor thing!" I said.

He snorted.

"Lots of sleep I've had!" he said. "Look here, Madge, is she going to take her vacation by locking up sheriffs all along the route? Because if she is, I'm going back to London."

"I think it very likely," I replied coldly. "You'd better go back anyhow. She'll be murderous if she knows she's followed."

"I can't leave her alone, can I?"

"I'm along."

He laughed. It was rude of him.
"You!" he said. "Madge—tell me honestly—where was the key?"

"She put it down my back."

He fairly howled with joy. I hated him! But he calmed before long and offered me a cigarette as a peace offering. I declined.

"You'd better go along," he said; "she may need the back again. Madge, is there any chance for me-with her?"

"Well, she likes you—when you are not in the way." "I'd be in the way now, I suppose, if I turned up tonight

Where do you stop?"

"At Torquay. Look here, Vivian, I've just thought of something. She's put out about a thing a man said yesterday. She wants an answer. She's got arguments, but what she wants is a retort. If you could give her one she'd probably forgive your hanging round, and all that."

Ousebreaking it is; I Watched You in and Hout"

So I told him about the Ten Conmandments, and Poppy knowing she should get it again and sitting up to worry it out. He said it was easy. He would have something to break his appearance in Torquay. But it was not so easy a it seemed at first. I left him sitting there looking out to sea, with a notebook on his knee. He called after me that he would follow us—a few miles behind; but he should not turn up until he had thought of some thing worth while. We did not see

Vivian at Torquay. Poppy was tired that night and went to bed early. Her faith in herself had been shaken, l could see, and not even the newspaper

accounts of her having locked up the sheriff at Guildford could cheer her. But she brightened that morning when she made a clever retort to a man in the Torquay public square. She was speaking from the machine and there was : splendid crowd.

"When the women go to vote, miss," said the man, touching his cap, "who is going to mind the children?"

"We intend to establish a messenger service."
"A messenger service?" The crowd was listening.

"Yes-to summon the fathers home from the pubs to hold the babies."

That gave her a laugh and we drove on in triumph. It helped Poppy, reinstated her in her own esteem, gave her a little peace-though the T. C. thing was still in the back of her mind. Then Dartmoor Forest put her into a trance—the heather was in bloom; and she made sketches and color bits, and lay back in the car in a sort of dream. planning the next winter's work.

If she thought of Vivian she never mentioned him, and she snapped me off when I spoke of him. I had a fright at Dartmoor Forest. We had climbed a long hill and Poppy had turned the glasses back along the road. Suddenly I saw her straighten and she gave the glasses to me.

"Who are those men in that car down in the valley The car below had stopped also. I looked. It was Viv and Basil Ward. Poppy's lovely eyes are shortsighted; and, with her mind on color

schemes and things, I knew Vivian had no business to appear. "Well?" she snapped.

"One looks as though he might have a beard," I said slowly, "and the other-the other's driving-He's a chauffeur, isn't he?"

"I dare say!" said Poppy, and eyed me; but I looked my blandest and gave her the glasses.

She did not glance at the men again, but climbed into the car rather grimly. All the rest of the way to Tintagel she never turned her head to look behind.

Poppy was tired and went to bed early. I walked out on the terrace and Basil was there. He said Viv had sent for him on the T. C. matter and he had something in

"He gave it up, poor chap!" know. As a matter of fact he and Poppy are both so bally serious that it makes me wonder how they'll hit it off."

"If she's as earnest about matrimony as she is about suffrage." ! said, "she'll be a sincere wife."

Basil said nothing. We had walked out to the edge of the and were leaning against the rough stone parapet.

"It's rather nice, isn't it?" be said suddenly. "Here we are

"You Haven't Got a Headache - You Have a Pain in Your Disposition"

almost at Land's End and the old Atlantic. Madge, will you give me a perfectly honest answer to a question?"

I braced myself. "Yes."

"Did you stay over here in England because your whole eart is in the Cause?" "Ye-es."

"Your whole heart?" "Our motives are always mixed, Basil," I said kindly. It would have been awfully silly to have endured that niserable spring and not have stayed for June and July."

"You get a great many cablegrams from America." "That," I said with dignity, "is, of course, my own

"About the Cause?" "Not-always."

"From a man, of course?"

"Yes," I said sweetly, and went back to the hotel.

I broke the news to Poppy about Vivian and she stormed; ut suddenly she stopped, with a calculating light in her eye. "He's a fool to follow me," she said; "but he has gleams

f intelligence, Madge. I-I shall put

he T. C. matter up to him!" So I sent Viv a letter that night. You æ, one must manage Poppy.

Dear Viv: She knows, and the worst over. Breakfast early and keep out he way until noon. She is going to work. I you have a good retort to the T. C. usiness don't give it too soon, when he asks you. It would humiliate her. 'hen, if she's pleased, you can ask her he other. MADGE.

P. S. Make her promise to let you and think as you like about suffrage. le sure! Get her to write it if you can. happen to know that if she marries you he hopes you'll take alternate Sundays ith her at the Monument, so she can peak at Camberwell.

Poppy came down to breakfast in her est morning frock, looking stern but wely, and sat with her profile to the oom.

She took only an egg, though she sually has a kipper also.

Once or twice I caught her watching he door, but Viv did not appear. She sitered over the Times for quite a while, ut at last she got her sketching things nd we went out to the cliffhead, where here was a bench. It is a long tongue I rock, about twenty feet wide or so; nd far below, on each side, is the ocean. here was a rough-haired pony out there lso, and the three of us were crowded. he pony wanted sugar or something ad kept getting in the way. Poppy ketched, but her heart was not in it; nd at every new hello! from some tourat exploring King Arthur's ruins—the astle of course-she looked up ex-

After a time she grew impatient and illed the pony a beast, and asked what as the use of her trying to paint the lace anyhow when one could buy ten plored postcards of it for a sixpence. t was one of her difficult mornings.

At last I caught sight of Basil waving me from the hotel and I went back. left Poppy there alone, pretending to cetch, though it was perfectly clear to very one that the only view she had as of the pony's mangy side. Shortly

fter, I saw Vivian, in walking tweeds, going along one of sesheep paths, and looking very handsome and determined. Basil and I sat on the terrace and concentrated. It was

ly idea. "Will her to take him!" I said:

"I will," said Basil, looking at me.

"She's so pretty," said I. "Lovely!" said Basil.

into a corner.

"And it's such a natural thing," I went on. "He has a of character and he's gentle as well as firm."

"I thank you," said Basil; and, rising, he bowed. "I don't believe," I said, "that you are concentrating." The pony had got round behind the bench and we lost bem for a moment; but the little beast moved off just ben, and it was like lifting a curtain. Poppy's head was on

vivian's shoulder. "Good old Viv!" said Basil. And he sighed. I met Vivian as I went down to luncheon. He was comng up three stairs at a time, but he stopped and drew me

"Right-o!" he said. "You're a trump, Madge! The

T. C. did it. She's promised all sorts of things.

"And you?" I demanded. I thought he evaded my eye.

"I?" he said. "Well, I've agreed not to interfere with her career. That's only reasonable."

"And—suffrage?"

"She's going to be less militant," he said. "Of course her conviction is the same. I want her to stand by her principles. I wouldn't respect her if she didn't.

That did not quite satisfy me. I knew Poppy. But he was so happy I said nothing. After all, what could I say? Viv had never opposed suffrage except in its militant form—though I don't believe he had felt the necessity for it; but the trouble was that Poppy was a born militant. And he had promised her the strength of her convictions!

I wrote it all to father that afternoon, and his cablegram came when I was back in London again and settled. It was:

No great revolution was ever accomplished without bloodshed.

WHEN Poppy and Vivian had been married and gone to Brittany I went back to Daphne's. Daphne was very discouraging about them. I remember her standing by the fire and orating, with her teacup in her hand.

"Of Course," Said Poppy. "Nothing Should Interfere With the Freedom and Right to His Opinion of the English Voter"

"There's a loss somewhere—bound to be!" she said. Daphne is short and stout, and wears her hair short and curled over her head with an iron. "Either suffrage loses her or she loses a husband. I've watched it. It doesn't do, Maggie!"-which is her pet name for me. "A suffragist as valuable as Poppy should not marry. You remember what Jane Willoughby's husband said to her-that he expected the Cause for his wife to be himself, and that if she'd rather raise votes for women than a family of children she would have to choose at once. When she asked him why she couldn't do both he went to Africa!"

"Without giving her an answer?"

"Bless the child! There isn't any answer! Of course she could do both. Does a man neglect his business to vote? Of course not. Raising children is a woman's business and there's no need for 'em to neglect it. It's idiocy that takes refuge in silence-or goes to Africa."

"Viv isn't an imbecile," I said feebly.

"He's a male," she snapped, and ran her fingers up through her fringe, so that she appeared to stand in a gale of wind. "A lord of creation! What rot!"

The first blow fell about a week after. Poppy and Vivian came home from their wedding trip. They were settled in Viv's house in Lancaster Gate, and one of the wings was being turned into a studio for Poppy, with a glass roof. Vivian is a playwright, you know, and his study was to be beneath the workshop, with a private staircase connecting. She was most awfully happy. She had brought home some stunning sketches and her first work was to be his study

Basil and I were asked to dinner. Poppy wanted to talk over her plans with us—and there was no one else. Poppy was radiant. We drank to the pony at Tintagel, and to the key at Guildford, and to the new play and the new paintings. The thing was a great success until halfway through the dinner, when suddenly Poppy said:

By the way, Viv, the income-tax man was here today." I felt, for some reason, as I had felt when the key went

down my back. Viv smiled and went to his doom.
"Just imagine, Basil!" he said. "The sweet young person across the table made more than I did last year! Four thousand pounds!"

"I'm too commercially successful to think I have any real genius," said Poppy complacently.

And some small sum the same sweet young person will have to pay over to the tax man," Basil observed.

Poppy raised her violet eyes. "I don't intend to pay it," she said. Vivian put down his glass.

"That's what Madge would call a bluff," he said, with his eyes on her. "You'll be obliged to pay it, dearest. You know that."

"Taxation without representation is what it amounts to!" Poppy's face was dangerously agreeable. "The American Colonies seceded, didn't they, for something like that? I paid it last year; but I made up my mind then I'd never do it again."

Basil was looking very uncomfortable. "I gave you the privilege of your conviction," said Vivstiffly. "Of course, if that's your intention there is nothing more to be said."

Poppy looked puzzled.

"But it is wrong, isn't it?" she demanded.

"The principle may not be entirely equitable. Few laws work equally well for all." Vivian now was a little white about the lips. "But, such as it is, it's the law of your country."

"I didn't choose my country or make its laws!" Poppy cried. "I have a right to protest. I'll not pay it!"

Now, as I have said before, motives are seldom unmixed. I think what Poppy meant to do was simply to register a protest-to make a lot of fuss about it. If they sent her to jail, being the prominent person she was—she was the Honorable Poppy; I think I forgot to say that before—it would make a lot of feeling. Then, having asserted her principles, she could get sick or go on a hunger strike; and Vivian would pay the tax and get her out. Basil laughed with assumed cheerfulness.

"Then Viv is stuck for the tax," he said.

Vivian looked across the table and met Poppy's eyes.

"That's hardly what you are getting at, is it?" he asked. "Your protest is against the imposition of the tax, isn't it? It's a matter of principle."

"I have not asked you to pay it."

"As a matter of fact I haven't the slightest intention of paying it, Poppy. You put me in an absurd position that's all.'

Well, we talked of other things and pretended not to notice Vivian's strained eyes and Poppy's high color. She took me off after a time to see the new studio, and it did not take me long to tell her what I thought.

"It's absurd!" I said. "Do you expect to break down iron bars by banging your head against them?"

"It's my head!" she said sulkily.

It was rather a ghastly evening. We were all most polite and formal, and Basil took me home. I told him about my house at home in the United States and the way I'd been treated, and about having nothing at the end of a year but plumbers' bills and tax receipts.

"I'm glad you haven't any particular income," he said at last. "That's one element of discord removed."

"I don't understand."

"Yes, you do," he said calmly. "You know exactly what I mean, and what I hope, and what I feel. I don't dare to say it, because if I start I'll - Madge, I shall not propose to you until my Uncle Egbert dies. I don't

want you until I can support you comfortably — That's a lie! I want you damnably all the time.'

I do not remember that we said anything more until we reached Daphne's. Then, as he helped me out I said:

"How old is Uncle Egbert?"

"Eighty-six!" he replied grimly, and went away without shaking hands.

Well, to go back to Poppy—for, of course, it is her story I am telling, not mine-mother came over soon after that and I went with her to Mentone for two months. Then she went back to America from Genoa, and I went back to London. Mother is the sweetest person in the world and I adore her; but she represents the old-fashioned woman and of course I stand for the advanced. For instance, she was much more interested in Basil Ward than in the Cause and she absolutely disapproved of Poppy's stand about the income tax.

"I don't care to discuss the Cause," she said to me. "We have trouble enough now, with only the men voting. Why should we double our anxieties?"

"That's silly, mother!" I retorted. "Because one baby is a trouble should one have only one child?"

Basil met me at Charing Cross and I knew there was something up the very way his stick hung to his arm.

"How's everything?" I asked when he had called a cab and settled me in it. "How nice and sooty it is, after the Riviera!"

"Filthy hole!" said Basil grumpily. "Haven't had a decent day since you left."

"And Poppy?"

"Poppy's a fool!" Basil broke out. "I'm glad you're back, Madge. Maybe you can do something with her."

He refused to tell me anything further however. He asked whether I would mind going directly to Lancaster Gate and sat back in a corner eying me most of the way.

"You make me nervous!" I said at last. "If you can't look at me pleasantly, why look at all?"

"I can't help looking at you; and I'm blessed if I can look pleasant! Madge, just how much is your heart and soul in the-er-Cause?"

Well, I was pretty tired of being questioned all the time and having people insinuate that I was only posing about suffrage. And, more than that, I'd seen women carrying bricks in hods up ladders for new buildings on the Continent, and being harnessed to milkcarts to drag them about; and it seemed to me that they should be able to stand up

under the fearful exertion of going to the polls to vote! "There isn't any sacrifice I wouldn't make for it."

"Why should you have to make sacrifices? Why not let—some willing male go ahead of you through life, clearing away the difficulties, smoothing the path?"

"Not shoulder to shoulder," I observed, "but the man a little ahead!"

"The man always has gone a little ahead, hasn't he?" "I don't remember," I replied, "that, when Adam and Eve left the garden of Eden, Adam went ahead and got everything ready, carpets down and stove connected—and all that. They went hand in hand; and, dollars to cents, Eve carried the spade!"

He seemed to drop farther back into his corner. The whole thing puzzled me. For Basil looked dejected and beaten somehow. And yet he had always believed that women should vote.

We found Poppy in her studio, but Viv's workroom below was empty and the door into the passage stood open. His desk was orderly and his pens in a row. Poppy was painting; she gave me a cheek to kiss-and she was positively thin!

"You're looking fit, Madge," she said without a smile.

"We've missed her, haven't we, Basil?"

Basil grunted something. Suddenly it occurred to me that he and Poppy hardly glanced at one another, and that he was still holding his hat and gloves.

"You'll stay, won't you, Basil?"

"Sorry!" said Basil. "I'll-I'll drop in again."

"Crumpets for tea!" said Poppy. They had engaged the cook on account of her crumpets.

"Thanks, awfully!" Basil muttered; and having said something about seeing me again very soon he got out.

I stared after him. Could this be Basil-this brooding individual who did nothing but stare at me as though he were trying to work something out? Poppy came over to me with her fists in the pockets of her painting apron.

"Frightened, like all the rest!" she said. "They say I'm responsible for hundreds of broken engagements! They made the law themselves-and now, when they see it is operation, they squeal."

It came over me then-Poppy's strained eyes and Basil looking so queer!

"Then Viv

"Viv is in jail, my dear," she said. "He made the law of course; but I wish you'd hear them! The Husbards' Liability Act, child! A married woman's husband is responsible for her debts. I refused to pay my income tax as taxation without representation. Viv got stubbern and said he wouldn't. Result—the entire male population screaming for help; engaged men breaking with suffragist fiancées; the population prospects of the country poor; and-Viv in jail!"

"That-that's what is wrong with Basil?"

"Of course I'm sorry, Maggie. The men have banded together. They call it the Husbands' Defense League! They take turns at visiting Viv and sending him books and things. It's-it's maddening!"

Poppy asked me to stay with her. She was really in a bad way. She was not eating or sleeping; and that very night a crowd of men gathered in front of the house and hissed and called her things. One of them made a speech, He said his wife was holding out her taxes on him and he expected to go up the next day. Poppy went out on the balcony and tried to tell them why she had done it, and that it was a matter of principle—and all that.

(Continued on Page 57)

# Cutting Down Some Staple Unnecessaries By James H. Collins

THEN the insurance man undertakes to sell you an accident policy he dwells on the big disasters that might happen to you-such as being caught in a railroad wreck or a sinking ship—and gives you a graphic schedule of what the company will pay you for each arm and leg you lose, and for fractures of such odds and ends of anatomy as your ribs, fingers and

When you get your policy, however, probably none of these well-paid disasters will happen to you. The only claim you ever make may be for something like injuries due to falling from a stepladder while taking down the stovepipe; for such minor humdrum mishaps cause a large proportion of the losses paid by an accident company. If you can manage to get hurt in a big disaster-like a trainwreck or a boiler explosion—the company will pay you double indemnity; but it is not so easy as you may imagine.

The business world has now seriously set about eliminating certain things connected with its affairs that are not needed. Among these unnecessaries are industrial accidents.

Until quite recently industrial accidents were thought of as big, dramatic affairs, like the major disasters that help insurance agents to sell accident policies; also that most of them happened away off somewhere and happened to the other fellow anyway; and that, therefore, the average workman and employer could not do anything about it and were not concerned.

Today, however, all business is out for safety first; and the most hopeful phase of this new movement is a mental one—the general recognition by everybody that the industrial accidents which really matter are the little ones; that even the big disasters usually have very trifling causes; and that everybody is in some way responsible.

A railroad engineer took out an extra locomotive instead of the engine he was used to running. He is a careful man and inspects everything before pulling out; but this time he neglected to inspect the whistle rope. Two hours later, while he was bowling along downgrade, a man stepped on the track right ahead, with his back turned to the approaching train. The engineer reached for the whistle rope and

In the End. No Matter Who is to Blame, the Accidents Come Down to Jo Many Little Causes

gave a yank, and the rope broke—it was rotten. Fortunately he got one good blast and that toot saved the

Another case that turned out less happily happened in the construction of a building. The contractor had hired a hoisting engine from a near-by factory. One day while a six-ton load of lumber was being lifted with this engine

the load fell and killed a man. Investigation showed that the hoisting engine had a bad habit of reversing when too heavy a load was put on it. At the factory where it was owned the engineer had taken off the cylinder heads and found the piston rings worn; so that under a heavy load the steam escaped past the rings and the load simply turned the engine backward.

Instead of fitting new rings, however, he had reported to the superintendent and replaced the cylinder heads. The superintendent did nothing about it; so thereafter the engineer ran that engine with allowance for its eccentricities, splitting heavy loads and doubling up on the pulleys and purchases. When it was handed over to an engineer ignorant of its personal equation there was a tragedy.

Little causes lead to most accidents, large as well as small, and everybody is responsible-

including the public. About a year ago an alarming increase in mishaps to women began to attract attention at the terminal of a big railroad. It seemed as though women had suddenly taken to falling down the stairs, tripping as they left or entered trains, and finding similar ways of hurting themselves and boosting the accident statistics. Investigation revealed the cause—one already familiar to trolley people in connection with the alighting and boarding accidents that make up a large percentage of trolley mishaps.

The cause was high heels or hobble skirts. The railroad company announced that it would not be responsible for injuries to foolishly dressed women, and that when they were hurt through their own freak clothes it would publish their names, addresses and ages.

In the end probably some of these high-hed and hobbleskirt mishaps would get into the statistics showing the number of people injured and killed by our railroads. That is what might be termed a very popular schedule. Many an editor has written about the terrible toll of human life exacted by our railroads, contrasting our statistics with those of Europe and ignoring the fact that about every other person killed in this country is trespasser.

Last year, out of ten thousand five hundred and eightyfive fatalities on all American railroads, only three hundred and eighteen persons killed were passengers and three thousand six hundred and thirty-five employees. The rest were chiefly trespassers—six thousand six hundred and thirty-two persons-leaving about five thousand trespassers after deducting for grade-crossing accidents. Figures gathered by an Eastern road show that four out of ive lived near the scene of the accident; so it is not the ramp who suffers. They were people walking on the track or crossing the right-of-way instead of using the crossovers provided for safety.

In Europe it is against the law to walk on railroad tracks; out in this country, where railroads have tried to stop respass by arresting offenders, there is a disposition among ourts to dismiss the case because the offense seems trivial.

Now that it is understood how accidents arise from rifling causes, that many are due to heedlessness or ignoance, and that everybody must help reduce the number, here is much fine prevention work going on everywhere. accident prevention is like playing baseball with a good eam. The statistics of mishaps in a given plant or industry an be studied like a ball score and better play developed o make a better showing.

About thirty accidents in every hundred appear to be up o the boss. On the whole the boss realizes this and is rying to play better ball at his end. Automatic safeguards are being devised very rapidly. Gears, belts, wheels, harged wires, and so on, are being screened; dangerous

nachinery made afe or self-feeding: lefective equipment epaired or sent to he scrapheap.

Exhibitions of afety devices are eing held and mueums established where men reponsible for the nanagement or intallation of plants an see what is availble to reduce the isks in every line. mproved apparatus ends to eliminate such danger-the lirect-drive motor m machinery, for zample, has abolshed dangerous hafts and belts, and is tiny switch close t hand permits intant stopping of sachinery when nything goes

rong. Not only is machinery safeguarded but industrial lants are studied as a whole to provide safer working onditions.

Last year in one great electrical works more than twelve undred unsuspected danger spots were found and abolhed—improper grouping of equipment; narrow passages; ark corners; slippery places, and the like, where a man light safely pass ten thousand times and be hurt the next me. During the past five years a big steel company as spent three-quarters of a million dollars for accident revention, and reduction in serious and fatal mishaps has flected the saving of life and limb for more than eleven bousand employees in that period. In money it works out t a cost of sixty-five dollars to save a man; but ultimately he cost will fall far below this, because much of the work permanent improvement.

#### Accidents the Result of Vanity

DESPITE popular belief, it is not machinery that causes most industrial accidents. An orderly German invesgator has looked into the records and finds that men at ork are hurt chiefly by the crude forces of Naturespecially by the force of gravity. Accidents come largely om using men to carry burdens, lift loads, climb heights. be cure for many such accidents is to stop making mules nd monkeys of men and turn the work over to mechanical ppliances. In just about the degree that mechanical quipment is employed man is in control of the situation nd fairly safe. Seventy accidents in every hundred are aid to be due to shortcomings that lie outside the boss' eld and often beyond his control. Therefore they are up o the organization; and at this end of the team, too, good all is being played.

When the organization runs down the first causes of this ig percentage of accidents it finds all sorts of important rifles. Hobble skirts and high heels are large items, for

Mechanics are not supposed to be vain; yet in machine hops many workers are hurt by flying metal chips and the dust from grinding operations, simply because they will not wear the goggles and respirators that would give protection. Factory inspectors say the chief reason is appearance! Goggles make a man look like a guy! And the inspectors themselves admit that in visiting shops where these devices ought to be worn they seldom wear them and for the same reason.

In one plant the men thought the boss childish when he advised them to cut their shirtsleeves off at the elbow, turn them up and fasten them with rubber bands, always to wear shirts tucked into trousers and never to wear neckties at work. Some of the men followed this advice, however, with such a reduction in the number of hurts received by being caught in machinery that the whole force soon adopted the boss' fashions.

In a foundry men were being burned by hot metal and laid up for a week or so at a time. By adopting hardwoven overalls and old-fashioned gaiter shoes the number of severe burns was cut down eighty-five per cent-the hard cloth turned chance splashes of metal; and the shoes, clinging tightly to ankles, did the same-while in an emergency they could be slipped off in an instant. Lace shoes, dangling shoestrings and frayed trousers were found to be responsible for so many hurts in another plant that they were abolished by rule.

How important it is to dress properly for work was shown when the foreman in an electric-light plant, pointing out to some of his men a joint in a charged wire, touched it with the rim of his hat and was fatally shocked. Ordinarily

of this Y and the rear trucks on the other branch a car would foul the wall. This had been known by all the motormen for some time, but accepted as a matter of course, nobody considering it his business to tell the engineering staff its business.

Ignorance as a cause of mishaps lies partly with the rganization and partly with the boss.

The organization can instruct and caution fellow employees likely to bring about a mishap through lack of knowledge or experience, and particularly it can report the man who, through persistent carelessness or incurable stupidity, is apt to hurt himself or others. The false sense of honor that often makes workers hesitate to report that man is being replaced with the understanding that he had better be out of the organization and in some other line of work; for the man he ultimately hurts or kills may be one who is too conscientious to report him.

Other forms of ignorance come within the province of the boss. He can instruct men put into responsible positions and safeguard dangerous places where they are apt to

One very essential thing in accident prevention is clear labeling about every plant, with warning signs on all the danger spots that cannot be abolished. Apparatus is marked with red paint or signs. For foreign employees these last must be in several languages or reduced to symbols that will convey Danger! Hands off! without words.

One ingenious device for this purpose is a round card, to be hung at danger spots, with a terrifying red-and-black

skull printed on both sides, furnished by a big machinery house to any of their customers who want it.

Don'ts

#### HOWEVER, after the warning has been reduced to pictures there is still a chance that the foreigner may be colorblind and, because this red-and-black sign is not seen in its true colors, may touch a charged electrical conductor or turn a valve that will burn somebody with live steam. For that reason it has been suggested that all such warnings be printed in blue

and yellow.

Then comes in the public, which complicates the accident situation in many ways through ignorance of the hazards in transportation and the use of public utilities of various kinds. This has lately led to systematic campaigns by corporations to reach people through moving pictures, advertisements and pamphlets, with clearly illustrated Don'ts! for their protection, and to teaching safety principles in the public schools.

Sometimes the purpose is accomplished in a roundabout way. The division superintendent of a Western railroad found that there was a bad record in accidents to boys on his part of the line, due to their love for hopping trains. This superintendent was an athlete, having formerly been a physical-culture teacher. Don't! had never made any impression on the boys; so he worked out a successful scheme based on Do!

Opposite his office there was a fine swimming hole in the river, and this was fitted with a platform, steps, springboard and a dressing room. Then he called the boys together, told them that was their swimming pool, and that he would teach them to swim and do other athletic stunts; but they must stop hopping trains-any boy caught hopping trains would be barred from the pool. In a year the personal-injury accidents at that point dropped sixty-three per cent and not a boy was hurt on the railroad.

In the end, no matter who is to blame, the accidents come down to so many little causes that-after all the machinery has been safeguarded, and all the inspection provided, and all the workmen's compensation laws passed, and all the indemnity insurance taken out-the big part of the accident problem still remains to be reckoned with.

That is the human equation. It persists. It turns up unexpectedly in strange places and is such a negligible factor—until it really matters.

A railroad can be bulldozed into safe operation for a year-two years-five years. Workers can be coached to be careful for a while and the public held to safe habits so long as it is interested; but by and by, if accident prevention is undertaken spasmodically, the idea becomes (Concluded on Page 70)

Many Accidents are

clothing is pretty good insulation if used in the right waymen who work round electrical apparatus use it as such in an emergency; but the foreman's hat was a derby, and in the rim of a derby hat there is a perfect electrical conductor—the steel wire that reënforces it.

Carelessness and ignorance on the part of employees are responsible for many accidents.

In the factory-inspection bureau of one city a study was made of mishaps due to bursting grinding wheels—a class of accidents long thought to be mysterious and unavoid-

Step by step each mishap was classified by its general cause, and the general causes were carried out into a larger number of secondary causes, and these into still more remote causes, until all the big accidents were split up into as many small final causes as one of the burst wheels itself had been split into pieces.

They looked like a genealogical tree turned upside down, with the one child in the present generation a serious mishap, in which somebody had been hurt or killed, and the great-great-grandparents of that mishap a group of very commonplace and unpretentious persons of the following

Improper size

Ignorance.

Carelessness Thoughtless increase Horseplay of speed Lack of oil

About two-thirds of these items were chargeable to workmen-a good many to foremen; and very few could be carried all the way up to the boss. This genealogical tree of grinding-wheel-accident causes was published for general

One day a trolley car being taken into the shops over a certain Y was smashed against a wall that was too close to the rails for clearance. This hurt the professional feelings of the engineering staff, because it thought ample clearance had been provided over every track for every piece of rolling stock the company owned.

An investigation was held and it was discovered that when the forward trucks of a few cars were on one branch

# WITH TABASCO SAUCE

"Plerrot, He Walts Like Some Chicken at Coney Island"

a wizard at his craft and a disturbing element. Just then his attention was wholly centered on the activities of one of the canvasmen, who was chasing a persistent razorback hog from the fodder pile.

Callahan admired Barker. He admired Barker's resourcefulness, his resiliency and his vocabulary. He related incidents of each quality and acquirement—how, for instance, in 1889 Barker had taken a bale of hay and stuffed Ajax, the decrepit lion who had "died on him," and had done it in such a manner as to improve on life and delude the most sophisticated of his public; how Barker had painted the spots on the hyena, so that, until the ferocious animal had got into a fight with another dog and had the pacifying hose turned on him, it had been one of the main attractions of the menagerie.

He told of Barker's apt reply to the old gentleman who complained of a marked discrepancy between the melancholy monkey in the three-by-four cage and its pictorial representation as a man-eating chimpanzee of the African jungles tearing up a banyan tree with one hand and abducting a beauteous savage maiden with the other in the face of an infuriated but terrified native population. Nevertheless, Callahan admitted that Barker had a vindictiveness of character that was often allowed to interfere with business.

Here the razorback emitted a rasping squeal as a fourfoot tent peg came into violent contact with his prominent spareribs. Then he trotted briskly off in the direction of Main Street, grunting disgust as he went, while the grinning canvasman leisurely recovered his missile. Frenchy wiped his dyed mustache with the sleeve of his shirt and twisted the ends upward.

"That pig, he squeals C sharp," he remarked. "For a squeal that has not been cultivated, it is magnifique!" "Yes; Barker's all right," concluded Callahan; "but

"Yes; Barker's all right," concluded Callahan; "but he'll bite off his nose to spite his face any old time and he's no contortionist at that. That's his weakness."

Frenchy's black eyes glittered.

"That's Sam Barker you talk about, eh?" he said in a harsh voice. "I tell you what I do to him some time: I cut that nose off his face for him all right, by blue! And I do it with a blunt knife and I do not hurry. Then I take his skin off and I stuff him with hay like your Ajax; and I say: 'How you like that, Mr. Barker—eh? R-remember R-roland and Tou-tou and Dagobert and Pierrot and Henriette and Mimi, big animal that you are!' That's what I do to Sam Barker. You wait!"

"Don't you let him find out you're doing it or he'll get peeved and hurt you in several places," advised the old clown. "What did Barker do to you, Frenchy?"

The animal trainer made a gesture that sprinkled the company with tobacco from the cigarette he had begun to roll.

"Only he r-ruin me," he declared; "that's all! Knock me out of six the declared; and more'n that, sacd papier!

If you like I tell you about it. You see that pig with the C-sharp squeal, that r-razorback Bill soak with the peg—eh? You see him? Eh, well; wait, and I tell you.

"I come through this country sixteen, maybe seventeen year ago, with Joe Collins. That Joe he bust up the same year. His boy, Henri, he's doing ground-and-lofty stunt for Rosbeck now and he keep the old man like sick monkee. He's good boy, that Henri. Well, then I got some dog. Not much good, those dog. They have not the capacity for learn, and it is with dog like folks—some you can't learn damn thing, no matter. So I feel sick. Right then my luck fell from the sky—bing! But I do not know my luck.

"He sport ginger whisker on his face"—Frenchy, with rapid pantomime, indicated a flowing and irregular beard— "and his pants, they have patch to beat the band. He is sad, this rube, most sad, because he want to see the show and he have not the mazoum. He have in his wagon one old sow and six leetle peeg he will sell, but nobody want to buy him.

"'S'pose you come see those peeg, mister?' he say.

"Well, I don't care, me, and I go to his wagon with him; and there is the mamma peeg and six leetle peeg. You can hear them three mile. François de bas bleu! They make r-racket. They is r-razorback. I lift up one leetle one by the ears, and his nose go down and his tail go up—comme cela; but all the same they are très chic, cunning as leetle red-spotted pup.

"I let you have them peeg cheap,' he say, this old rube.
"I shake my head. 'Mon Dieu! What you think I do
with them peeg?' I say; but I have g-grand idea all the
same. 'Heich, heich, heich!' go the leetle peeg; 'Harumph,
harumph, harumph!' go the mamma. With that, I know
what I shall do. Also, I think it is good thing when the
most heft of those animal is above the ear. Napoleon, he
say: 'Give me the man with the big nose. Those man is
the smartest.' And, by blue! Napoleon he know what he
is talk about, you bet you! Your friend Barker, he have
nose like shoebutton—only it is red.

"Eh, well, I buy those six leetle peeg. I give two bit each for them; and that old rube, he is tickled to death. I guess when he get that dollar and half cold cash he feel so rich he would start a bank if there was not a show in town. Me, I take those peeg and I put them in a spare cage, and all the boys laugh to beat the band. Joe Collins, he say: 'What you think this is, a packing house?'

"'All right,' I say. 'You watch the smoke I make. Wait and see! I bet you I make thousand dollar out of them p'tits cockons. You see!' Then they holler and laugh plenty; but I tap my nose and I wink my eye. 'Nous persons,' I say. 'Watch me!'

"So I go to work with those peeg. I call them R-roland, Pierrot, Tou-tou, Dagobert, Henriette and Mimi, and I tr-rain them all the time I get; I wash them and currycomb them every day, and I feed them like they was my child. I tell you they was smart. I have tr-rain dog and and drive Dagobert and Henriette round the ring. It bullee act, I tell you! None of them peeg talk ——" "Why didn't you learn 'em?" demanded Call:

rather surlily.

"No, they do not talk," Frenchy continued, ignoring interruption; "but they do 'most everything else. \ Joe Collins, he bust up and I take my leetle peeg to N' and I make good money there with Bloodgood & Co till we go to Chicago. I make good money in Chic They are all crazy about my peeg there; but I like tr-me, and I go back on the road to N'York and get cor sion at Dreamland. While I am there Pete Grunewale come to me and say: 'How you like take them pee yours South for the winter—eh, Frenchy?' 'Well, I d care, me,' I say; 'but I am from Missouri and you've to show me how much I make.'

"'One hundred per and expenses for the tour,' he
"Well, I make more as I am, but I got leetle tout
rheumatism and Pete, he's most crying he want m
much; so bimeby I say all r-right, we go.

"We show at Memphis and Vicksburg and New Ma and Natchez and Baton Rouge; and finally we get d to New Orleans and make a pitch over by Bayou St. J Well, we do land-office business there and have b time. I tell you that New Orleans has got the finest pe what there is—big heart, open hand, très gentil—and t is the opera and Bayou Cook oyster. Me, I have the of my life. I say to Pete: 'We stay here till after M Gras.'

"We are sitting in the St. Charles lobby, smoking good feefteen-straight cigar. Nothing is too rich for blood, you bet!

"'Sure thing,' Pete say. 'Pretty smoot'! I ain't at nobody, me.'

"'And you make that hundred dollar a week hun and twenty-five,' I say.

"'Make another guess,' Pete say. 'Maybe you get r-right the next time.'

"I do not like that. Here we are jam full—the pe bulge out the side of the canvas, by blue! And Pete can't shut the lid of the cash box after the performs. The Picayune give my peeg half-column notice and story for lagniappe. Me and my leetle peeg, we are whole show. I bite my teeth, I am so enrage; but I nothing, and just then there come up to us one big and with red face and fancy vest, and he slap Pete on shoulder. It is Barker. He have come in from Hamm with two-ring show and he pitch 'long out by Carond

with two-ring show and he pitch 'long out by Carond
"'Plenty room for us both,' he say. 'The more,
merrier. Come up and see me sometime.'

"Sure thing," Pete say. 'You come over and see We got the swellest line of attraction ever you lay eyes "There is more talk, and then we take friendly drin the bar and Barker go away. Pete, he is mad. Two ci in one town make punk business for one of the two. insw-ch? Still, he have me and R-roland and Pierrot nd Dagobert and Mimi and Tou-tou and Henriette, and

us do land-office business just the same.

\*Bimeby, in two, three day, Barker he come up to Bayou it loan for see our show. He sit in the front row and I me my eye on him sharp. Fine! Splendide! He like maything. He clap his hand and stamp his feet to beat the band. When the clown come on he laugh fit to bust basel and the clown is punk-r-rotten! Then I come with my leetle peeg. I give the concert unique. Barker, is like stone image. They sing ensemble. Barker, he is hick of his old mother who is dead. Tou-tou, he spell his me. Barker have still expression of sorrow. The seesaw now and the waltz, and Mimi drive Dagobert and Hennette in the little cart. Everybody is crazy. They holler; by dap; they yell 'Encore! Encore!' Only Barker is bore. He yawn behind his hand. He would like stie sleep, eh? I smile in my sleeves. 'Aha!' I say to

Sure enough, the next day I meet Barker in oyster sion on Royal Street and we talk long time round the mb but himeby he say:

Frenchy, what you take for them peeg?'

"I do not sell those peeg, me,' I say. 'I have affection is them because I br-ring them up from babee; but if I moder five thousand dollar maybe I sell them."

"Five thousand dollar, my foot!" he say. "Talk sense." "I talk dollar," I say. 'If you do not like that talk, ng off"

He look at me. Bimeby he say:

"Igive you two thousand for them. Take it or leave it." There it,' I say, and I walk out of the saloon. But he ent follow: so after minute I go back and, by blue! he reals tabasco sauce on his oyster. 'I am sick of peeg, eeg peeg all the time,' I say. 'I like the variety. Give two thousand dollar and the peeg is yours."

But till I have finish these oyster and we go fix it n'bessy, and he shake more tabasco sauce.

Well, then I go back to Pete and I tell him. Pete is ui. He shake his fist and he swear blue streak. By gosh! se would think he have lose an act worth hundred and msty-five dollar a week. I tell him that.

"I'll get your goat just the same. I impourrest for breaches of contr-ract!

"Rectain your shirt on your back, whichd, I say. 'Maybe if you wait at while you will see something what mass.' Then I talk some more to him. m bimeby he see reason and he say he

"After that I take leetle holiday. I buy swill r-rag and diamond ring. I have inge my apartment at the hotel. I put its coat red paint several place back of is. Louis Cemetery. I am at the opera. liv sutomobile. I r-raise Cain! I have

Then come Barker. He is more red the face than ever and his voice is like

"What kind of bleeding swine you sell "teh!" he say. 'Those sacré peeg, they tething-only eat and fight and squeal. m. f'un nom, d'un nom!' he say. Sam! He is hot under the collar. 'They lot work for sour apple," he say.

"Maybe you do not understand them Tisay. 'They work for me all right.' Youromeand make 'em work,' hesay. 'Just now I take holiday,' I say. no, lam sick of peeg! I would not take bfor less than two hundred and fifty a

"You ought to understand them peeg," http-'you talk their language. I give trans hundred for one week."

"I stake my head and blow rings of

"I am capitalist now,' I say. 'Two indred and fifty."

"Et, well, I have him by the short in: so be come down off his perch and

ike hawk. He is wonderful tr-rainer. watch me with eye l #Bll Jordan-eh? Oh, mon Dieu, yes! You know him, ! Well, when my week is up he take hold, this Bill Jordan; ## is to laugh. He can do nothing, no more than before. 🛚 📨 I have my method, scientific, psychic, and I stand

"Eh well, again I take my holiday and all time I wait. Two bundred fifty dollar a week, I say presently. of one damn cent less, by gosh! Take it or leave it.' The by he come. 'Br-ring me some Bayou Cook oyster,' my, and tabasco sauce also."

"Barker laugh fine laugh; but I feel a leetle nervous and I sit light on my chair, ready for jump.

"'I get you,' Barker, he say. 'You win this hand. Eh, well, how much you give me for those peeg back? They are no use to me.

"'I am sick of peeg,' I say. 'If you have good tr-rain sheep, that is different; but I give you five hundred dollar cold cash for them. Not one cent more will I pay you, by blue!"

"Barker, he say --- Well, no matter what he say. He is angry man and I make allowance. But he go away and I smile and tap my nose. I can wait. I eat my oyster, but he does not come back. Instead, comes Pete. He is not polite, Pete, no more than Barker is. I explain to him that he is most unreasonable.

"'You make me pain in the neck,' he say. 'One week you have play me this monkee business. Now you get them peeg back right away and you pay me fifty dollar for each those six night-three hundred dollar. If them peeg is not back in the show for the evening performance I have you arrest, and I soak you couple thousand on the con-tr-ract. You know me!' he say.

"I explain some more. At last he agree he wait two day if I pay him fifty dollar each day. That make hole in my profit of four hundred dollar; but I figure to myself I make Pete take that four hundred in installment when I get the peeg.

"I wait one day, two day; then there is note from Barker.

"'Come up to pitch and see me. Maybe you like buy them peeg now?' the note say.

"Well, I wink my eye, and I make toilet and take Carondelet car. Where I get off it is one block from the empty lot where Barker have his circus. I swing my cane and hum leetle tune, and step out along the banquette. Then-what you think?"

Frenchy glared round the circle, his leathery, wrinkled face working with tragic grimaces and his hands clenching and unclenching spasmodically.

"I am approach the corner. I stop! I choke! My head go r-round. I am transfixed with horror! Before me is

"Mon Dieu! What You Think I Do With Them Perg?""

wit for one week. The tr-rainer he have, Bill Jordan, butcher shop. Just inside, Barker gr-rin like hundred devil: and on ong bar outside, hang corpse! The hair is scr-rape off and the inside of them is open with leetle stick; but I know them corpse: R-roland! Mimi! Tou-tou! Dagobert! Henriette! Pierrot!"

### Comfort in Camp

IN NORTHERN winter travel, when the temperature I is low, the Indian or any other man must have a fire at night or perish. He builds it then of as heavy stuff as he can get to hold the heat. Sometimes he will use a rock or an upturned root as a background, and sometimes he will rig a lean-to shelter back of his bed to reflect the heat. Of course in this sort of camp he will be apt to have a fur robe, a blanket or so, and perhaps a tarpaulin from his sledge. In this way he can stand very cold weather and keep going. For a camp of this kind you need both a good fire and a good robe. A robe made of lynx pads is as good as any, the fur of the foot of a lynx being deep and springy.

In the Northern woods birch makes a good backlog. Perhaps you can get dry pine or cedar for your light woodcottonwood or aspen for your smaller wood. Again you may be in some country where there is plenty of hardwood oak or ash or hackmatack. Use what you can get and begin your camp early, so that you may have time to get plenty of wood. It will take two or three times as much wood as you think, because the nights are very long.

When you go into camp in the wintertime things may look pretty snowy. Your firewood sinks down in the snow and it does not look as though you could start a fire. The first thing to do is to kick away the snow and get your firelogs as close to the ground as possible. Pile up two or three for a sort of backlog if you can. Go to the nearest spruce or pine tree and you will probably find near the bottom some dead twigs or branches sticking out-perhaps with dry moss on them. Get one of these large enough so that you can make a shaving stick out of it if you can find no birchbark. Start your fire going as soon as you get into camp. Then go to the other end of your scooped-out place and build another fire at right angles to it.

You will find that these two fires will keep you warm much better than one. If there are two of you in camp you can sleep at right angles and each have a fire to keep his back warm. When the thermometer registers thirty degrees below zero it gets cold very quickly when the fire begins to drop. Have some logs where you can reach them handily in the night and so avoid that dreaded chill-the rigorso uncomfortable or dangerous when one wakes in a cold night and finds the fire gone down.

Your bed should be made to keep the cold out. Pile up all the boughs you can get. Put your fur robe or thick blankets on top of them and rig yourself a shelter of boughs back of your bed. Sometimes one can use a strip of canvas back of the bed in the winter camp, with snow piled in

behind it. The heat is reflected consider-

ably in this way.

In short, the things to be remembered about the winter campfire are that it should be long, that it should be reflected in from a backlog, and also reflected down on the bed.

Such a campfire implies regular use of the ax by a skilled axman. That breed of man is passing away, along with those who knew how to build a kitchen fire. Never rely on a small ax in winter camping, but have a good one-man-size and sharp. Your belt-ax is useful none the less; and every man who goes hunting alone or who camps out at all ought to have a belt-ax with him all the time-in case of an emergency at least. It may save his life, and it certainly will save time and lessen discomfort.

In spite of the general advice not to build a circular or conical fire, there are exceptions to the rule—as there are to all rules. Suppose you are traveling on snowshoes in deep snow and stop at noon to boil the kettle and warm your feet. You do not want to dig down in the snow and you do not need a long fire. Go, therefore, to the nearest dead pine tree, cut it down, log it out into six-foot lengths and split each section once or twice.

Now take your splits to a nearby tree and stand them up on end in a cone, as men do cordwood when they are drying it in the woods. Touch this off, and you will have a sheet of flame in front of you higher than your head as you sit on a nearby log. It will warm you very soon and is very quickly built.

As to the material for your fire, that depends on where you are and what you can get-driftwood, downwood, willows,

alders. When you have a selection it is another matter. For any cold-weather fire you want some dry wood

A time-honored fashion among woodmen is to put two or three green logs one on top of the other, slanting back slightly, and supporting them by stakes at the rear. This practically makes a backlog. Cut a couple of short logs, say six inches through and a couple of feet long, for handlogs or forelogs, and lay these at right angles to the backlog. Build your long fire, supporting your long firewood on these handlogs.

This will give a good draft and soon make a big bed of coals. The heat will be reflected to you by the backlogs, which ought to last all night. Green birch makes a good backlog. Get anything green and heavy and thick that you can find.

# WRITING FOR THE MOVIES

A Moving - Picture Company in the Field

Director Rehearsing a Ballroom Joene

HOUGH a police-court justice in Los Angeles recently declared that moving-picture scenarios had no value and dismissed the case against a producer who had used the written ideas of a photoplay writer without paying for them, the amateur and professional moving-picture scenario writers of America-and that means almost everybody in the country-are not a whit discouraged; in fact they are very much encouraged, for the prices paid for photoplay ideas have gone up tremendously in the past few years.

Up to four years ago the producing photoplay companies paid from five to ten dollars for plots of moving pictures. Since then the prices have gone up to twenty-five and fifty dollars a reel, and in some cases more; and in consequence, as I said, everybody is writing for the movies. A thousand moving-picture plays are written and sent to moving-picture companies every day in the year.

However, though everybody is writing moving pictures, everybody is not selling them; in fact the business of writing photoplays is almost entirely in the hands of salaried staff writers with the moving-picture companies, and there are not over one hundred free-lance writers of moving pictures in the country who sell enough photoplay plots, or scenarios, as they are called, to make it worth their while.

A dozen moving-picture magazines and countless correspondence schools of photoplay writing encourage the amateur to take up this alleged profitable field of scenario writing. Yet so worthless are the majority of contributed photoplay manuscripts that many producing companies will not consider manuscripts except from trained writers. Other companies welcome manuscripts from whatever source they may come, but have practically decided it is hardly worth while to read them. Mr. Frank Woods, head of the manuscript department of the Mutual Film Corporation, one of the large combinations of producing companies, received and looked through contributed manuscripts at the rate of a thousand manuscripts a week for six weeks, and found only seven manuscripts worthy of filming!

#### The Silent Drama to the Fore

ON THE other hand, the vast army of amateur moving-picture writers are encouraged to persist by the continued announcements of prize offers for film stories of exceptional merit. The Balboa Amusement Producing Company, of Los Angeles, began by offering a prize of two hundred and fifty dollars for the best picture story sent them. The Italian Society Rome, offers five thousand dollars for the moving-picture play submitted to it. The second-best writer is to receive one thousand dollars; the thirdbest, five hundred dollars; the fourth-best, two hundred dollars; and there are five consolation prizes of one hundred dollars each.

The Cines Company is the producer of the most famous of all picture plays, Quo Vadis? To take this picture, it is said, cost three hundred thousand dollars, and it has already earned five millions, for it has been exhibited with great success all over the world.

Through the New York Evening Sun, the Vitagraph Company of America is conducting at this writing a The first prize is one thousand prize photophy-

### By Roy L. McCardell serials, The Adventures of Kathlyn, was written for

dollars; the second, two hundred and fifty dollars; and there are consolation prizes of one hundred dollars each. These prize contests have greatly encouraged and stimulated the amateur photoplay writers throughout the country. They have also delighted the overworked staffs of readers of the many producing motion-picture companies, as these contests are deflecting tens of thousands of more or less hopeless manuscripts these people would otherwise have to read.

The interest taken by newspapers all over the land in motion pictures during the past year is significant of the tremendous impression the moving pictures have made. For years the newspapers ignored the silent drama. Now, in conjunction with the moving-picture companies, many newspapers are running serial and complete movingpicture stories contemporaneously with their showing in the local picture theaters.

The contention held by experienced photoplay producers that only trained fiction writers can conceive and execute moving-picture stories to any extent worthy of attention is proved by the success and popularity of the big moving-picture serial films. The first of these, What

women photoplaywrights are Miss Gene Gautier and Mrs. Lois Smalley. These two began as and still are film-drama actresses, and as such are known to all the moving-picture fans who are not sware that these ladies write most of the pictures they dominate as heroines.

Captain Charles Kiener, an ex-army officer, now in the Library of Congress Copyright Department, is also one of the most successful photoplay writers. Calder Johnstone, scenario editor of the Universal Film Company, is also a newspaper man and a writer.

These names comprise practically the entire list of people who make a good livelihood by writing moving pictures. Four out of five of them are salaried staff writers.

The truth is, though almost everybody s writing for the movies, the movingpicture producing companies saw, as far 
back as five or six years ago, that of the 
undreds of manuscripts they received 
only about one out of a hundred was 
worthy of consideration, and these were 
he work of trained newspaper, magazine 
and stage writers. Immediately the 
notion-picture companies secured the 
acclusive services of these writers on a 
generous salary basis. The duties of 
nany of them, as salaried scenario writers, 
nclude scenario editorship—that is, they

ook through the manuscripts of outside or free-lance vriters, and select and adapt for the camera such as may cossess any novelty of plot or theme.

Sad to say, the ratio of acceptable manuscripts from intrained writers is just about one in a thousand. The writers mentioned, and some few others who may have sen inadvertently omitted from the list, comprise the ames of those who have furnished the bulk of movingácture plays for the past six years or more.

Now, however, following the lead of Harold MacGrath he big names of fiction are coming into motion-picture laywrighting. Already Rex Beach and Richard Harding lavis are under contract to write moving pictures, as are ames Oppenheim and Jack London. Percival Gibbon, fontague Glass, Irvin S. Cobb, George Randolph Chester, and other contemporaneous writers of note both here and broad are being approached by the motion-picture cople to furnish stirring stories for the film.

#### Laughing When You Say Good . By

THE books and short stories of every writer of consequence, living or dead, have been or are being dramazed for the motion-picture camera. There are twenty-five tousand moving-picture theaters in the United States and anada alone, and it is estimated there are a hundred tousand in other countries. Their demands are insatiable, or at least one-half of them have a daily change of promum—new films every day.

The price of admission being so modest in the majority moving-picture theaters throughout the world, their stronage consists of the same people night after night, specially is this true of what are known as community suses—the little five and ten cent theaters that are

Daniel Frohman, Madame Bertha Kalich, J. S. Dawley and a Supporting Company in Cuba, Going Over the Manuscript of Marta of the Lowlands, Produced in Motion Pictures

conspicuous in residence neighborhoods of the large cities and the main streets of small towns.

So pressing is the demand for more and new pictures, and so critical have the audiences of even the lower-priced moving-picture theaters become, the film-producing companies are at their wit's end to supply good pictures. Of bad pictures and dull pictures there is no end; but of good pictures, especially good comedies, there is a disheartening dearth.

The little exhibitor, whose name is legion, clamors at his exchange, as the film-supply bureaus of the various producing combinations are called. He clamors for comedies, one-reel comedies, to close his show. The little exhibitor is a protagonist of that shrewd young showman and playwright, George M. Cohan, who lyrically voiced the axiom of the amusement world when he wrote and sang: Always Leave Them Laughing When You Say Good-By.

An average of a hundred letters a day are received by the big producing combinations' film exchanges demanding one-reel comedies. Many write to the effect that deathbed scenes and horror pictures are all well enough in their way to get the crowd interested and its emotions stirred up until toward the end of the film show; but, say the little exhibitors, if audiences do not go away laughing and pleased at a good comedy at the end of the show they do not come back the next night. "Anybody can tell a hard-luck story," say the little exhibitors—"and most everybody does," they add. "And hard-luck stories are all right for the first films; but if you do not hand your audience a laugh in the last one, then it is good-by to good business until you get a feature film to pull the crowds again."

This mention of feature films brings to attention one of the remarkable phases of the moving-picture craze. A feature production is a multiple-reel story, either part of a weekly serial or a complete show in itself in two, three, four, and even six reels, shown continuously at the same performance.

These feature films were first taken and gained popularity abroad; and until Quo Vadis? was shown in this country the American photoplay producers gave little attention to them. After the remarkable vogue of Quo Vadis? the American producer sat up and took notice.

Among those first to recognize that feature pictures were in demand in the United States were Adolph Zukor and Daniel Frohman. Mr. Frohman was long one of America's leading producing theatrical managers. Mr. Adolph Zukor was connected with the Marcus Loew Vaudeville Enterprises. These two men secured the services of Mr. Edwin Porter, an experienced and notable moving-picture director. They formed what they called the Famous Players Film Company and turned their attention to securing famous plays and famous players for film production.

Their first effort was putting out Sarah Bernhardt in Queen Elizabeth. This picture was taken in Paris and Madame Bernhardt was paid thirty-five thousand dollars for appearing in it. Next followed James K. Hackett in The Prisoner of

Zenda, and Mrs. Fiske in Tess of the D'Urbervilles. These feature films were a success from the first and were put out in the beginning exclusively in the moving-picture houses; but meantime, as everybody was going to the movies as well as writing for them, the attendance at the regular theaters at regular theater prices fell off alarmingly.

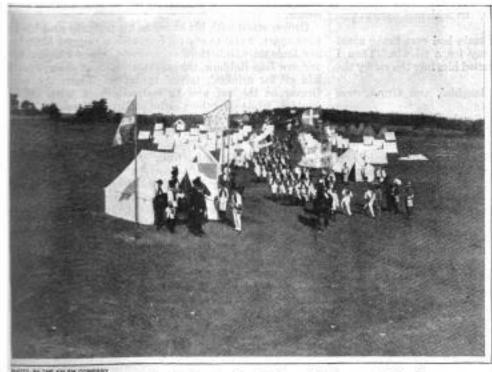

#### The New Line-Up of Movie Magnates

THEATER after theater in New York and other cities throughout the country was compelled to close through lack of patronage, while many of those that remained open were conducted with a disheartening decrease in receipts. One by one half the big theaters throughout the United States went into moving-picture shows. It was in these theaters that the big feature productions were found most suitable. At prices ranging from twenty-five cents to one dollar the established theaters that had closed were opened again with moving pictures; and they found the feature productions profitable attractions. Feature-producing companies sprang up like mushrooms.

In one month alone over two hundred moving-picture feature companies were incorporated in the state of New York. All the theatrical managers in New York went in for moving-picture features. Some of the managers arranged with established film companies to reproduce their old dramatic successes in motion photography and some of them formed companies of their own for that purpose.

Klaw & Erlanger combined with the Biograph Company; Liebler & Company allied themselves with the Vitagraph; the Shuberts negotiated with the Mutual Film Corporation; and William A. Brady went it alone. At this writing Charles Frohman has joined with the Famous

(Continued on Page 68)

Scene From Love's Old Dream, Photoplay by Roy L. McCardell

# THE HEAD OF THE FAMBI

ANIE was seventeen then and Grover five, and me only eleven. We three was all Pa had to take care o' him when the old wreck wounds made him leave the engine and come home to live as long as he

could. One night he called out for us all to come visit him, and we huddled in the doorway lookin' at his old lantern, which he kept lit and hangin' to the head o'the bed. He'd wound a piece o' red cloth about the globe so it signaled danger.

Pa's face showed white even in that light and his eyes were blazin'.

"Stand in line," he said, very low and plain; "Cole first; you hold fast to him, Grover; and now, Janie, you hold to the little feller."

Even Grover knew this was no game, and they both held fast.

"Take your orders!" said Pa to me. "Those two are your trainyou're the engine. Run to the card, Cole, but mind your signals; here, move up and down, stoppin' at this red lamp. Hold fast to him, Grover, and he'll get you through - understand!"

The little feller, trippin' over his nightgown,

had hitched it up with his teeth. Now he let go and looked back at Pa, with his forehead scowlin'.

"Mogul," he answered, meanin' I was that kind of engine.

Pa looked hard at me, sayin':

"I'm glad you're 'fraid o' nothin'."

And Grover said:
"Nussin!" just as plain.

Three days later, when pore Pa was gone, we three came home and walked up and down the room; and it was mighty good to feel them two orphans holdin' so fast to me, which they've been doin' ever since, for two years.

The old superintendent had made me night call boy, and we got along fine on the salary and Pa's insurance, which came in every three months.

One payday mornin' I was comin' back to the dispatcher's office after callin' the last crew for the night runs, when Second Thirty-six slowed down for yard limits, and the engineer, leanin' out o' the cab, signaled me to board him for the ride down.

But I gave him the high sign and, it bein' daylight by then, put out my lantern. The engineer called to know if I wanted him and the fireman to stop and help me aboard, but I didn't answer. They was used to seein' Smoke Fish, the day call boy, swarmin' over the trains like a wildcat, and I was thirteen years old and pretty near as big as Smoke; but I didn't have his nerve.

Down at the office Mr. Charley Barrens, the new superintendent, stood inside the rail smokin' a cigarette; he was watchin' me over a trainsheet and listenin' to the engineer and Smoke Fish ask if they might give me lessons in boardin' a stationary engine. My! but he was a fashionable, flabby young man, who was kin to big folks and said he'd taken to railroadin' 'cause playin' polo was such a hard life; and besides, in polo, you didn't have any chief clerk to buck the game for you.

All at once the chief dispatcher bawled out the engineer. "You let Cole alone!" he said. "The boy only plays 'em safe, like his daddy; though old Flynn would run on time with only a teakettle for an engine."

The engineer, who'd just signed thirty minutes late, bawled him back, with eight good reasons for it, and asked the superintendent if he wasn't right. No engineer would have dared to bawl out the old superintendent that way.

O' course everybody grinned, knowin' that Mr. Barrens couldn't tell whether water made suds or steam in the boiler. But he answered, "One excuse is enough, if it's a good one," and went on studyin' the train-sheet.

The engineer went out swaggerin'; and then I saw Brother Grover standin' in the corner, havin' come down to see me sign the roll along with the men in the paycar.

about due, ought to go on the old account. He splained that Pa would sure want to have it paid up; so I had to promise, though Janie needed a new dress pretty bad. O' course every head of a fambly has to stand such things; Pa had never worried me

bout debts, so there wasn't any reason for me to worry my folksby tellin' about this one. When I got home Janie showed me in the

catalogue a picture of the new dress she'd picked out, and I hadn't fallen asleep yet at noon when Grover got home with his eye.

"Is it mighty black?" he asked, comin'in; and then I knew how I must have worried Pa and Ma by fightin' when I was at school.

Janie thought we ought to go to the mat'nay without'im.

"Look at Cole; he never is such a disgrace to the fambly!" she told him; and Grover was all broke up 'cause she didn't praise him for fightin'. He came up is his temper to yell at her:

"Cole's scared o' everythin'-SmokeFish and the engineer said so."

Janie gave me a quick look and her eyes snapped:

"Cole ain't 'fraid-none of us Flynns is 'fraid; but we don't go round huntin' trouble."

In all the two years I'd never seen 'em in a temper afore and it scared me.

"There's no use quarrelin' over me," I said. "I won't fight-you might as well know it now, Janie, 'cause you'll hear it anyhow."

I noticed for the first time how tall she'd grown, with dresses comin' down to her shoetops like a young lady's. Janie tried to look pleased, but her shoulders set back a little and her under lip dragged in a sulky way.

"You used to fight sometimes—just a little bit. You wasn't 'fraid," she said, with a kind o' blush, as though shamed o' sayin' it.

"I'm 'fraid now," I answered; and they both looked at me and then down at the floor.

We all started uptown pretty soon, with a quarter spice to treat each other, as we always did on payday; then we went to the mat'nay, but didn't talk or laugh at everything as we used to. And when the time came for me to go to work the others didn't start home as they'd always done

Grover stood with his hands in his pockets and his feet wide apart, tryin' to start a fuss with a ragged little boy. and Janie stared into the shopwindows. Once I looked back and saw Dan Robbins, the operator who was always getting laid off for drinkin', talkin' to Janie. Then she boxed Grover on the ear and he walked ahead with his fatt doubled, while the others came on laughin' and talkin'.

There was sure trouble on the line now and already my chest seemed achin' with wreck bruises, though maybe it was only the scare. There's nothin' to do 'cept follow orders, and I'd had mine from Pa not to run by signalsthe red sign was up against me; but in daytime things are all hard and unfriendly, and I thought the color might come out white in the night shadow pretty soon.

There wasn't many trains that evenin' and after calling two crews I sat on the upper platform, where pretty soon thought just what to do about us Flynns, and was all right and whistlin'.

The yards was still and I could hear some boys played over in the town. A feller can't be always playin' about his job, and at home your fambly spects somethin' else of yve besides foolin' with games, or they wouldn't have no trust in you.

But I kept a top under the toolhouse up the platform and right in back was a cinder bed, hard as a floor; so got the top, which was rubbed over with wet matches, and spun it like a white-hot coal-it was 'bout the same # playin' with the other boys.

"Run to the Card, Cole, But Mind Your Signals"

He was just old enough to go to school with his primer, but he's wise, and his face was so red I knew he'd been listenin' to 'em roast me.

Grover ain't 'fraid of nothin', and he went up to Smoke Fish and said:

"Cole rides on engine pilots and he grabs hold o' cars goin' miles a minute!" Then he kicked Smoke on the shins.

"What a lie!" said Smoke, whistlin'; and, havin' his first crew to call, he went out and caught a freight roarin' past with the exhaust open.

The little feller looked at me so worried that I was sorry for him; you see I was the only head he had to his fambly and it was pretty tough to hear everybody sayin' I was so scary, though it was a wonder he hadn't heard it before.

He asked me right out if I was scared o' the cars, and I had to tell him yes. Grover was pretty well broken up by the news and stood lookin' at me without speakin' till the paycar came in; and when I whispered to him to hold fast and the Mogul would pull him in to the payroll he shook his head.

"You ain't Mogul any more," he said, and wouldn't go with me.

This was the first time our train had ever broke apart and I didn't know what to say for a minute. Then I splained it wouldn't do and hustled him into the car by the shoulders.

Mr. Barrens watched us, laughin', and Grover was pretty mad.

"I bet you'd be 'fraid to grab Smoke Fish!" he said; and after we'd come out to the platform again: "Well, ain't you 'fraid to grab Smoke Fish?"

I had to tell him yes, with Mr. Barrens still grinnin' and listenin'. Then the superintendent threw down his cigarette and stepped in front of Grover, leanin' over with his hands on his knees.

"Wha' d'ye mean, tryin' to get my men to fightin'?" he said.

Grover was so sulky that I said:

"I'll tell Janie you ain't had any bringin' up; I'm 'shamed of you." "I'm 'shamed o' him too," he told Mr. Barrens, pointin'

to me, and wouldn't say anything else. "Now you trot on to school while I go home for a nap,"

told him; "and this afternoon we'll take in a show." He pretended not to hear; but after a while I saw him start up the street to school, where he got into a fight and come home with a black eye.

I stopped at the store to pay the bill for that month, and the groceryman said the fifty dollars' insurance, which was An engine slid down the track soft as a big black cat with one eye, and stood opposite purrin' a little, with a big private car coupled on. A porter ran over to the superintendent's office and Mr. Barrens hurried out. He was dressed in white fannels in that sooty place, and the car bein' dim it I could see him meet a lady inside. After a while they come out and walked up and down the upper platform, taughin' and talkin' o' polo and old times.

Her voice was low and soft, but so clear I couldn't help tearin' her ask, as she went back to the car:

"And how do things go here with you, Charley?"

"Ripping!" he answered.

Then she said good-by and stepped aboard, and the big asseger engine flew on down the main line, whistlin' for rossin's. I couldn't help runnin' to ask Mr. Barrens, who jidn't know nothin' about railroadin' yet:

"Have they got orders for right-o'-way? I mean a clear

He looked down at me s'prised and held my lantern to

"They have," he answered, laughin'. "Do you think a alread superintendent would send the car o' the president the board o' directors into a smash?"

"I wasn't sure if you understood," I answered, and new I'd been too fresh.

"What are you scared about now?" he asked, still oldin' up the lantern; and my face was pretty white. "I don't want to lose my job," I told him.

He asked:

"Why are you 'fraid o' losin' such a job? The boys and here lead you a dog's life." I splained I wanted to sep it 'count of us three Flynns, and he said: "Then se't have a cold chill every time one o' these blackguards swis you out, you know."

The dispatcher came to the door o' the office, looked and and, seein' my lantern, screeched out:

"Where's that pinwheel?"

"Down the main—West—five minutes," I told him. He rushed back inside talkin' o' God, and I heard the nummin' o' his sounder, which had a piece o' zinc over it, it would wake him up any time.

"What's the matter o' that feller?" asked Mr. Barrens. I knew so well what was the matter that I could hardly swer that he was always rushin' about excited.

O' course by pinwheel the dispatcher meant the lightdin' passenger engine which was drawin' the private car.

I. Barrens, knowin' the young lady wished to visit him
st thirty minutes, had made out the train order himself
d given it to the engineer. Before leavin' the office he
d hung the duplicate on the hook; but the dispatcher,
pposin' the engineer himself would come in to sign the
gister and ask for orders, had let a stock train in on the
e. Now the two trains were headin' into each other
stty fast! Things sure were runnin' wild on that division.
"By the way, I told that engineer I'd sign the book for
n," said Mr. Barrens, and we went into the office.

The dispatcher was leanin' over his key, white as paper.
raised his hand as Mr. Barrens spoke.

"Shut up!" he said in a kind o' croak.

Mr. Barrens stood stonestill, and then went through the te after him.

"I'm a good feller with all the boys, y'understand," he d; "but I guess you've overshot the mark a bit ——"

Just then the sounder began drummin'—it was the O. K. to an order just given. The dispatcher wrote it down on his sheet, and then for a second leaned back limp, with his hands over his face. All of a sudden he broke out with what had happened:

"I caught that stock train by yards—feet—inches!" he said. "That engineer on the special didn't come in to sign."

The superintendent stared and, after hearin' him out, walked back to the platform. I went out to call a crew and about midnight found him still sittin' there on a truck.

"If you hadn't answered the dispatcher like a flash," he said, "that stock train wouldn't have been caught by inches." He splained that the lady on board the special was Miss Cloud and he thought more o' her than he did o' anybody.

People sittin' together in shadow are always talkin' friendly. He asked 'bout the Flynns, and I told him how nice Janie kept house and Grover went to school.

"But you're the head o' the fambly," he said. "What do you do when little brother kicks over, as he did this mornin'?"

I told him I could hang up Pa's lantern, burnin' red, and it would be all right. He thanked me for answerin' the dispatcher and rose, lookin' up at the stars.

"Miss Cloud might have been lyin' under 'em white and cold!" he said, and wiped his eyes with his handkerchief.

Then he went in to the dispatcher again, and said that he was to blame for the engineer's not signin' the book. When I went home next mornin' Janie and Grover watched me without sayin' much, 'cept "Howdy?"

"We'd better meet in Pa's room," I told 'em; and lightin' the old lantern with the red cloth wound round I hung it on the bedpost. That room was always kept dark, and Grover's eyes were right round watchin' me by danger light.

"Pa said to mind signals; and now we're in trouble I know be'd want this lit up," I splained;

"it'll warn us that we must hold fast together to keep out o' wrecks." Janie watched me very close, with her chin in her hands; but Grover sat straight without touchin' the back of his chair.

"Hat you goin' to do if we won't hole fast?" he asked. "I can't do anything 'cept leave the lantern burnin' and

keep close as I can with you," I answered.

"Ain't you goin' to call us on the carpit, or rough us up, or nuffin?" he asked, frownin'; and Janie tossed her head.

I had to answer that I wasn't any fighter and Grover said, very earnest:

"It ain't hard, and when you're mad it don't hurt. You just hit a feller like Smoke Fish in the eye and he hits back ——"

"Fightin' is all you think about!" said Janie, sniffin' at him. "Cole's got somethin' else to do. But I don't see why I should hold fast to him ——"

"Pa's orders," I minded her, and Janie stood bitin' her lips.

"Oh!" she said, pantin', and then, with a quick motion she threw up the curtain.

The daylight came in, showin' all our faces white and angry, so that we moved still farther apart; and I guess Pa lost us with the shadow, for we began to quarrel.

"Pa didn't stop to think that I was most grown up," said Janie then; "and he might have thought you'd turn

Well, Ain't You

out bolder. And I'm goin' to do as I please and have my party dress, and go to the dance-hall next week with Mr. Robbins!"

"He ain't fit company," I said; but Janie's face set hard and pink against me. It was a terrible danger signal itself.

"I'm a young lady," she told us, "and I'm goin' to have my good times and you can ——"

my good times and you can ----"
"Go to sunder!" said Grover.

"I don't mean that," said Janie; "it ain't nice. I'll keep house the best I can and be polite to Cole; but I'm my own missus from now on and he must understand it." "I understand," I told her.

She bowed and was always polite to me after that. Grover, he went out right away and beat his drum all

round the house; and then he went off to play hooky from

So there was nothin' to do but darken the room and keep the lantern burnin', though the other two never did go in there any more.

That evenin' was pretty busy; but 'bout midnight I was sittin' on the platform eatin' my lunch when Mr. Barrens came up. He said that Miss Cloud and her father were comin' through on their way back East. Mr. Cloud was figurin' for the directors on buyin' a short line which had a junction with ours, and the lady just traveled with him for company.

"I dropped my fortune and somebody had to give me a job," explained Mr. Barrens; "so she told the old gentleman to offer me this one for a starter."

Pretty soon the special came slidin' in and he boarded it to speak to Mr. Cloud; then the lady came out on the station platform and walked up and down with Mr.

Barrens.

Once they came up to me and Miss Cloud shook hands.

"Your name is Cole, and I know that you saved me from a wreck last night," she said. "How are little brother

and sister?"
I couldn't see her face very plain, but liked her anyhow,

and answered that they was well.

"They're lucky to have such a head to the fambly," she said, "and I know you're just as brave as you are quickwitted. Now hold up your lantern so I'll know you next

time we meet."

I did so, and could see her face a little; she was very pretty, with big gray eyes.

"Wouldn't you fight for such a lady?" asked Mr. Barrens, jokin' me.

"O' course he would!" she said; but I told 'em no, though I'd like to. And Mr. Barrens laughed right out; but Miss Cloud stood watchin' me a minute before sayin' good night.

"Papa hasn't finished his business and we'll be back next month," I heard her say; and then:

"Oh, Charley, I'm so glad you like railroadin' and are makin' good!"

Then the engineer ran out with his orders and the special began slidin' through the yards. We stood watchin' the tail-lights swing out o' sight round a long curve.

"Damme! Damme! Damme!"said Mr. Barrens, louder and quicker each time, and walked up and down wavin'

his stick. I asked what for, and he said: "I am a rascal; she has backed me for a winner and I am left standin'! Can I ride an engine, you know, and hammer trains up and down the division like polo balls?"

I answered, "No, sir!" and he grinned at me with all his teeth, like a skull.

"Then I am a rascal," he said, " 'cause that's the only way I can run a division. And she thinks I'm makin' good!"

It was time to go callin' then, and I went down the main street thinkin' of the danger light burnin' in my home night and day, and hopin' the folks remembered it afore goin' to sleep. I b'lieved they would, and was whistlin' when I came under the windows o' the dance-hall and heard Janie's voice and laugh. Then the music started up.

I climbed the stairs and asked the ticket taker to let me stand in the door; and when Janie came waltzin' by I called that I'd come to take her home. The crowd was pretty noisy, but she heard; and walkin' over to the door she whispered for me to go 'bout my own business; but I set my lantern by the wall and just waited.

O' course Janie was too proud to quarrel before people; and without sayin' anything to Robbins, who had brought her to the dance, she got her wrap and followed me to the street, but wouldn't speak any more.

At the gate I told her she would have a new dress to go to the neighbors' parties in, which were nicer than the dance-hall. Janie laughed and said:

"Thank you."

She pretended it was polite of me to bring her home, and hoped I'd call at the hall for her every night. Then she danced up the walk to the porch and went inside, without seemin' to notice the dim red light shinin' on the curtain.

I had to run fast to call the crew and got to one of the brakemen so late that he gave me a fierce call down.

Janie was polite as ever next mornin', but went to the dance again after Grover was in bed that evenin', and between callin' crews and takin' her home I had to hustle every night. She did look mighty pretty when dancin', bein' slim and light as a feather. Her black eyes would shine, too, and her cheeks flush pink; so it wasn't s'prisin' Robbins was always at her heels; but she pretended I wouldn't let him walk home with us.

In about a week I missed a fireman spite of all the runnin' I could do, and was reported to Mr. Barrens' chief clerk, who called me on the carpit and swore at me.

"One more break like that and you're fired!" he said, and the superintendent heard him.

The insurance fifty came that mornin'; so I gave Janie twenty and told her that all the neighbors would want to see her new dress. Then I paid the old account at the groceryman's, and there wasn't any left for Grover's suit, who was wearin' out a terrible amount o' clo's fightin' and playin' hookey. As they didn't know what had gone with the other thirty dollars I didn't blame' em for accusin' me of spendin' it on myself.

Next night bein' Sunday there was no dance and only a few trains; so I sat on the upper platform 'bout midnight, wonderin' where I'd be this time next month if things kept a-comin'.

Mr. Barrens, who seemed to walk round a good deal at night now, stopped long enough to say that the chief clerk would not fire me.

It was that very night, while we were standin' there, that a flathead, inspectin' an oil-tank car just below the

depot, found a leak with his torch. It didn't blow up loud—just split the rusted old tank; and the flathead hotfooted it with a wave o' fire behind him. O' course everybody in the yards started down there on a run 'cept the superintendent.

He thought a minute' and said:

"Demmed if I'll go down where the light's brightest to show my ignerance."

Now the whole yard just below the depot was swimmin' in fire and a stream of it was runnin' under the rest o' the string o' cars, the oil tank bein' in a train made up to go East. The fireman had even brought the engine down from the round-house and it was standin' just above us.

It was one of our big new engines which, bein' too heavy for the old turntable, had its own stall built over one of the switch tracks at the end o' the roundhouse. The track must have been a little downgrade from the fire, for the oil came pourin' in a flood between the rails—it ran under a car with a red powder-card nailed to its door which stood just opposite the superintendent and me.

O' course if that blew up it would wipe out the comp'ny buildin's; and it would wipe out my home, too, which stood facin' the yards only a block away. I yelled for the fireman to couple up and found enough slack to cut the train just back o' the powder car. The oil was under the engine now, burnin' red, with clouds o' black smoke, and runnin' down to the roundhouse, only about two hundred yards away. The rails held it banked up, and some twist of the tank which had wrecked itself sent a new flood down.

As the engine didn't move I ran up, to find the cab empty—the fireman had gone down the track to see what was goin' on. So I started the Mogul backin' and dropped down to make my own couplin'—it was terrible smoky in there by that time, but I was lucky and made it. The Mogul kept backin' till I climbed up and shut her off.

All this time Mr. Barrens had been follerin' in and out of the smoke, and across the engine and back in again learnin' what was goin' on. He'd seen how I started it and how I stopped it. The powder car seemed to be smolderin' from the heat below, and I'd have to move fast to get her out o' the blazin' oil in time.

As I held the lever, Mr. Barrens shoved me away.

"Sportin' chance—one to three!" he yelled, and I nodded in such a scare that he saw I'd never take her through; so, catchin' me by the back o' the neck, with a laugh, he leaned out and dropped me clear—then threw her wide open, I guess, for the wheels spun, the rails beginnin' to grow slippery with greasy smoke. Then the big drivers caught—and she lunged straight at the roundhouse, where, the stall doors bein' closed, she went through 'em like paper, and then on through the back door, strippin' off the dome and stack and cab. Lucky Charley Barrens stood low behind the boiler head! But he must have been as cool as ice, for he shut off steam at the very moment o' the first crash, and the Mogul, holdin' to the rails, beat her way clean through and stopped up by the blacksmith shop.

When I got there I found Mr. Barrens pullin' himself out o' the wreck o' the cab; he leaned on me some comin' down the gangway and said in a weak voice:

"Old chap, you miscalled the odds a bit—it was one to a thousand!" Then he grinned and settled to the ground. I'd forgot to tell him that he would have to take his run through the roundhouse.

The foreman and two or three wipers, who had been watchin' the oil spread toward 'em, came runnin' up; and when I splained they doused the smokin' powder car good before goin' to fight their own fire. Mr. Barrens staggered to his feet agin and, holdin' to my shoulder, managed to walk across the yards and down the street to my house.

I called to Janie that it was only me, with a hurt friend; and I had him lie down on Pa's bed. Mr. Barrens kept talkin' a little dazed till we come in on the red lantern; then he went perfeckly still and stared at it from the pillows till I set it in a corner and lit a lamp. I remember his sayin' that he didn't want to get his signals mixed again.

Janie, who'd helped in accidents before, asked if there was anything she could do and came to the door with her street cloak over her nightdress. I told her she might go to the neighbors and telephone the comp'ny doctor that Mr. Barrens was hurt at our home.

Janie's black hair was wound loose and her face was pale, so that Mr. Barrens stared as though seein' a ghost. Then he began pullin' himself together and asked in a waker voice:

"Have you brought me home, old chap? It's awful good of you!"

He was watchin' Janie and seemed fightin' to keep his eyes open; but the lids sank down and closed tight. Then Janie ran to fix the pillows so his head wouldn't slip down and I went to the neighbor's telephone.

When Janie heard me comin' back she tiptoed out to learn 'bout the wreck and if anybody else was hurt. Mr. Barrens seemin' to be in a kind of deep sleep; she said that smashin' through the roundhouse with that powder car, over burnin' oil, was a brave thing to do. Then we went into Pa's room and watched till the doctor came.

I helped put Mr. Barrens to bed; he had three broken ribs and a bruise on the head and some sprains, but noth; dangerous; so after telephonin' the doctor's 'sistant to bring splints and things I went back to the office.

They were just clearin' away the blockade o' bursel cars so trains could get through and I was in plenty o' time to call the first crew out.

Next mornin' Mr. Barrens told me to take a layof and let somebody else do the callin' for a few days. He brand up on the pillows and pretended he'd just come to visit as. He grew 'quainted with Janie and Grover right away, and was so funny that I never had so good a time since I was little.

Once I played a joke. It was on Grover and was played by puttin' a dynamite cap in the head of his drumstick. The first beat blew in the head o' the drum and he pover did understand how he struck such a hard blow. He guessed he'd better be careful how he hit anybody else in the eye and kept measurin' up his muscle.

Janie was always good in times o' accident and she played cards with Mr. Barrens; he said he'd never forget her standin' in the door, with face pale and her black har tangled, the night he was hurt.

"You thought you was seein' ghosts," I said; and he answered: "A angel!" So we all laughed—Janie most of all.

O' course everybody was talkin' 'bout the run he'd made with the powder car; it was a short run, but somethin happened every second. The dispatcher and two roadnet came down to thank him for savin' their lives, and Grove stood by frownin', and puffed up that he knew such a braw man.

Mr. Barrens told 'em square that he didn't know he war runnin' into the roundhouse.

"Cole was the one who coupled up, and he was startif the engine when I took it away from him—and Cole keet what he was gettin' into," said Mr. Barrens.

They all looked at me; Janie's eyes shone, and Grove left Mr. Barrens to come over and hold on to my coat I never did want to lie 'bout anything so bad and might's done it if I hadn't known they'd always expect me to b reckless after that—and my nerve wasn't good for it.

"I was only goin' to start her and then jump," I splained
"All I'd been figurin' on was to send that powder car out o
the fire and take chances on what might happen to it am
the engine after that."

"And I didn't have wit enough to think o' that," said Mr. Barrens, feelin' his ribs; and the men, laughin', said was all right, and they wouldn't take out a smokin' powde

car, either—even with a clear line and rights ove every train on the system

Janie looked down as Grover went back to M: Barrens; but that evenin' while I was standin' in the shadow o' the porch, the both came up.

"Cole, it's all right bou your not bein' reckless, said Janie. "You handle me just right by bein patient, and I'm not gon to the dance-hall an more."

She said she'd only don it in contrariness an never did like it much.

"I knew that all slorg."
I told her; and what
Grover spoke up and sa
he wouldn't play hooky
went in to take the re
lantern from the corns
and put it out.

Mr. Barrens had been too polite to notice it b'lievin' it was kept burnin' 'count o' trouble between Grover and me but when I put it out be (Continued on Page 62)

'You Mustn't Come to Our House Any More," I Told Him

# AN AMERICAN VANDAL

## That Gay Paresis!—By Irvin S. Cobb

ILLUSTRATED BY JOHN T. MCCUTCHEON

Gallus Mr. Fly, From the U. S. A., Walks Debonairly In

Moldy Old Whiskerados Hoper About You, Watchful as Chicken Hawks

As YOU walk along the Rue de la Paix\* and pay and pay, and keep on paying, your eye is constantly engaged by two inscriptions that occur and recur with the itmost frequency. One of these appears in nearly every hopwindow and over nearly every shopdoor. It says:

English Spoken Here.

This, I may tell you, is one of the few absolutely truthful ind dependable statements encountered by the tourist in he French capital—for invariably English is spoken here. It is spoken here during all the hours of the day and until in into the dusk of the evening—spoken loudly, clearly, listinctly, hopefully, hopelessly, stridently, hoarsely, lespondently, despairingly and finally profanely by Amercans who are trying to make somebody round the place inderstand what they are driving at.

The other inscription is carved, painted or printed on all sublic buildings, on most monuments, and on many pritate establishments as well. It is the motto of the French

Republic, reading as follows:

Liberality! Economy! Frugality!

The first word of this—the Liberality part—is applicable of the foreigner and is aimed directly at him as a prayer, n injunction and a command; while the rest of it—the leonomy and the Frugality—is competently attended to y the Parisians themselves.

The foreigner has only to be sufficiently liberal and he is saired of a flattering reception wheresoever his straying sotsteps may carry him, whether in Paris or in the provness; but wheresoever those feet of his do carry him he all find a people distinguished by a frugality and inspired of an economy of the frugalest and most economical character conceivable.

#### The Frugal Habits of Good Saint Denis

N THE streets of the metropolis he is expected, when going anywhere, to hall the fast-flitting taxicab‡, though he residents patronize the public bus. Indeed, the distinction is made clear to his understanding from the noment he passes the first outlying fortress at the national rontier§—since, for the looks of things if for no better reacon, he must travel first-class on the de-luxe trains||, whereas he Frenchmen pack themselves tightly but frugally into he second-class and the third-class compartments.

Before I went to France I knew Saint Denis was the atron saint of the French; but I did not know why until heard the legend connected with his death. When the zecutioner on the hill at Montmartre cut off his head the cod saint picked it up and strolled across the fields with tucked under his arm—so runs the tale. His head, in hat shape, was not of any particular value to him any sore, but your true Parisian is of a saving disposition.

'The x being one of the few silent things in France.

Flag station.

Diner taken off when you are about half through eating.

And so the Paris population have worshiped Saint Denis ever since. Both as a saint and as a citizen he filled the bill. He would not throw anything away, whether he needed it or did not.

Paris—not the Paris of the art lover, or the Paris of the lover of history, or yet again the Paris of the worth-while Parisians—but the Paris which the casual male visitor samples, is the most overrated thing on earth, I reckon—except alligator-pear salad—and the most costly. Its system of conduct is predicated, based, organized and manipulated on the principle that a foreigner with plenty of money and no soul will be along pretty soon.

Hence by day and by night the deadfall is rigged and the trap is set and baited—baited with a spurious gayety and an imitation joyousness; but the joyousness is as thin as one coat of sizing, and the brass shines through the plating; and behind the painted, parted lips of laughter the sharp teeth of greed show in a glittering double row.

Yet gallus Mr. Fly, from the U. S. A., walks debonairly in, and out comes Monsieur Spider, ably seconded by Madame Spiderette; and between them they despoil him with the utmost dispatch. When he is not being mulcted for large sums he is being nicked for small ones. It is tip,

brother, tip—and keep right on tipping!

I heard a story of an American who spent a month in Paris, taking in the sights and being taken in by them, and another month motoring through the country. At length he reached the port whence he was to sail for home. He went aboard the steamer and saw to it that his belongings were properly stored; and in the privacy of his stateroom he sat down to take an inventory of his letter of credit, now reduced to a wan and wasted specter of its once plethoric self. In the midst of casting-up he heard the signal for departure; and so he went topside of the ship and, stationing himself on the promenade deck alongside the gangplank, he raised his voice and addressed the assembled multitude on the pier substantially as follows:

"If"—these were his words—"if there is a single, solitary individual in this fair land who has not touched me for something of value—if there be in all France a man, woman or child who has not been tipped by me—let him, her or it speak now or forever after hold their peace; because, know ye all men by these presents, I am about to go away from here and if I stay in my right mind I'm not

And several persons were badly hurt in the crush; but they were believed afterward to have been repeaters.

I thought this story was overdrawn, but, after traveling over somewhat the same route which this fellow countryman of mine had taken, I came to the conclusion that it was no exaggeration, but a true bill in all particulars. On the night of our second day in Paris we went to a theater to see one of the topical revues, in which Paris is supposed to excel; and for sheer dreariness and blatant vulgarity Paris revues do, indeed, excel anything of a similar nature as done in either England or in America—which is saying quite a mouthful too.

In the French revue the members of the chorus reach their artistic limit in costuming when they dance forth from the wings wearing shabby lingerie over soiled pink fleshings; and any time the dramatic interest begins to run low and gurgle in the pipes a male comedian pumps it up again by striking or kicking a woman—but to kick her is regarded as much the more whimsical conceit. This invariably sets the audience rocking with uncontrollable merriment. Howsomever, I am not writing a critique of the merits of the performance; I am thinking now of what happened to us on our entrance into that theater.

#### The Whiskered Sisterhood

AT THE door a middle-aged female, who was raising a natty mustache, handed us programs. I paid her for the programs and tipped her. She turned us over to a stout brunette lady who was cultivating a neat and flossy pair of muttonchops. This person escorted us down the aisle to where our seats were; so I tipped her. Alongside our seats stood a third member of the sisterhood, chiefly distinguished from her confrères by the fact that she was turning out something very fetching in the way of a brown vandyke; and after we were seated she continued to stand there, holding forth her hand toward me, palm up and fingers extended in the national gesture, and saying something in her native tongue very rapidly. Incidentally she was blocking the path of a number of people who had come down the aisle immediately behind us.

I thought possibly she desired to see our coupons, so I hauled them out and exhibited them. She shook her head at that and gabbled faster than ever. It next occurred to me that perhaps she wanted to furnish us with programs and was asking in advance for the money with which to pay for them. I explained to her that I had already secured programs from her friend with the mustache. I did this mainly in English, but partly in French—at least I employed the correct French word for program, which is programme.

To prove my case I pulled the two programs from my pocket and showed them to her. She continued to shake her head with great emphasis, babbling on at an increased speed. The situation was beginning to verge on the embarrassing when a light dawned on me. She wanted a tip—that was it! She had not done anything to earn a tip that I could see; and unless one had been reared in the barbering business she was not particularly attractive to look on, and even then only in a professional aspect; but I tipped her and bade her begone, and straightway she bewent, satisfied and smilling.

From that moment on I knew my book. When in doubt I tipped one person—the person nearest to me. When in deep doubt I tipped two or more persons. And all was well.

On the next evening but one I had another lesson, which gave me further insight into the habits and customs of these gay and gladsome Parisians. We were completing a round of the all-night cafés and cabarets. There were four of us. Briefly, we had seen the Dead Rat, the Abbey, the Bal Tabarin, the Red Mill, Maxim's—and the rest of the lot to the total number of perhaps ten or twelve. We had listened to bad singing, looked on bad dancing, sipped gingerly at bad drinks, and nibbled daintily at bad food—and the taste of it all was as grit and ashes in our mouths.

We had learned for ourselves that the much-vaunted gay life of Paris was just as sad and sordid and sloppy and unsavory as the so-called gay life of any other city with a lesser reputation for gay life and gay livers. A scrap of the gristle end of the New York Tenderloin; a suggestion of a certain part of New Orleans; a short cross section of the Levee, in Chicago; a dab of the Barbary Coast of San Francisco in its old, unexpurgated days; a touch of Piccadilly Circus, in London, after midnight, with a top dressing of Gehenna the Unblest—it had seemed to us a compound of these ingredients, with a distinctive savor of what was essentially Gallic permeating through it like garlic through a stew.

We had had enough. Even though we had attended only as onlookers and seekers after local color, we felt that we had a-plenty of onlooking and entirely too much of local color; we felt that we should all go into retreat for a season of self-purification to rid our persons of the one and take a bath in formaldehyde to rinse our memories clean of the other. The ruling spirit of the expedition, however, pointed out that the evening would not be complete without a stop at a café that had—so he said—an international reputation for its supposed sauciness and its real Bohemian atmosphere, whatever that might be.

Overcome by his argument we piled into a cab and departed thither.

This particular café was found, in its physical aspects, to be typical of the breed and district. It was small, crowded, overheated, underlighted, and stuffy to suffocation with the mingled aromas of stale drink and cheap perfume. As we entered a wrangle was going on among a group of young Frenchmen picturesquely attired as art students—almost a sure sign that they were not art students.

An undersized girl dressed in a shabby black-andyellow frock was doing a Spanish dance on a cleared space in the middle of the floor. We knew her instantly for a Spanish dancer, because she had a fan in one hand and a pair of castanets in the other. Another girl, dressed as a pierrot, was waiting to do her turn when the Spanish dancer finished. Weariness showed through the lacquer of thick cosmetic on her peaked little face.

An orchestra of three pieces sawed wood steadily; and at intervals, to prove that these were gay and blithesome revels, somebody connected with the establishment threw small, party-colored balls of celluloid about. But what particularly caught our attention was the presence in a far corner of two little darkies in miniature dress suits, both very wally of eye, very brown of skin, and very shaved as to head, huddled together there as though for the poor comfort of physical contact. As soon as they saw us they left their place and sidled up, tickled beyond measure to behold American faces and hear American voices.

#### Homesick Pickaninnies

THEY belonged, it seemed, to a troupe of jubilee singers who had been imported from the States for the delectation of French audiences. At night, after their work at a vaudeville theater was done, the

members of their company were paired off and sent about to the cafés to earn their keep by singing ragtime songs and dancing buck dances. These two were desperately, pathetically homesick. One of them blinked back the tears when he told us, with the plaintive African quaver in his voice, how long they had been away from their own country and how happy they would be to get back.

"We suttin'ly is glad to heah somebody talkin' de reg'lar New 'Nited States talk, same as we does," he said. "We gits mighty tired ob all dis yere French jabberin'!"

"We gits mighty tired ob all dis yere French jabberin'!"
"Yas, suh," put in his partner; "dey meks a mighty fuss
over cullud folks over yere; but 'tain't noways lak home.
I comes from Bummin'ham, Alabama, myse'f. Does you
gen'lemen know anybody in Bummin'ham?"

They were the first really wholesome creatures who had crossed our paths that night. They crowded up close to us and there they stayed until we left, as grateful as a pair of friendly puppies for a word or a look. Presently, though, something happened that made us forget these small dark compatriots of ours. We had had sandwiches all round and a bottle of wine.

When the waiter brought the check it fell haply into the hands of the one person in our party who knew French and—what was an even more valuable accomplishment under the present circumstances—knew the intricate French system of computing a bill.

He ran a pencil down the figures. Then he consulted the price list on the menu and examined the label on the neck of the wine bottle—and then he gave a long whistle.

"What's the trouble?" asked one of us.

"Oh, not much!" he said. "We had a bottle of wine priced at eighteen francs and they have merely charged us twenty-four francs for it—six francs overcharge on that one item alone. The total for the sandwiches should have been six francs, and it is put down at ten francs. And here, away down at the bottom, I find a mysterious entry of four francs, which seems to have no bearing on the case at all—unless it be that they just simply need the money. I expected to be skinned somewhat, but I object to being peeled. I'm afraid, at the risk of appearing mercenary, that we'll have to ask our friend for a recount."

He beckoned the waiter to him and fired a volley of rapid French in the waiter's face. The waiter batted his eyes and shrugged his shoulders; then reversing the operation he shrugged his eyelids and batted his shoulderblades, meantime endeavoring volubly to explain. Our friend shoved the check into his hands and waved him away. He was back again in a minute with the account corrected—it was corrected to the extent that the wine item had been reduced to twenty-one francs and the sandwiches to eight francs.

By now our paymaster was as hot as a hornet. His gorge rose—his freeborn, independent American gorge. It rose clear to the ceiling and threw off sparks and red clinkers. He sent for the manager.

The manager came—all bows and graciousness and rumply shirtfront; and when he heard what was to be said he became all apologies and indignation. He regretted more than words could tell that the American gentlemen

Try as Hard as You Picase to See the Real Paris, the Paris of Small, Mean Graft Intrudes on You

who deigned to patronize his restaurant had been put to annoyance. The garçon—here he turned and burned up that individual with a fiery sideglance—was a debased idiot and the accursed son of a yet greater and still more debased idiot. The cashier was a green hand and an imbecile besides.

It was incredible—impossible—that the overcharging had been done deliberately—that was inconceivable; but the honor of his establishment was at stake—they should both, garçon and cashier, be discharged on the spot. First, however, he would rectify all mistakes. Would monsieur intrust the miserable addition to him for a moment—for one short moment? Monsieur would and did.

This time the amount was made right and our friend handed over in payment a fifty-franc note. With his own hands the manager brought back the change. Counting it over, the payee found it five francs short. Attention being directed to this error the manager became more apologetic and more explanatory than ever, and supplied the deficiency with a shiny new five-franc piece from his own pocket.

And then, when we had gone away from there and had traveled a homeward mile or two, our friend found that the new shiny five-franc piece was counterfeit—as false a thing as that manager's false smile. We had bucked the unbeatable system—and we had lost.

Earlier that same evening we spent a gloom-laden quarter of an hour in another café—one which owes its fame and most of its American custom to the happy circumstance that in a certain famous comic opera produced a few years ago a certain popular leading man sang a set extolling its fascinations. The man who wrote the set must have had a full-flowered and glamorous imagination, for he could see beauty where beauty there was not.

To us there seemed nothing particularly fanciful about the place except the prices they charged for refreshments. However, something unusual did happen there once. It was not premeditated though—the proprietor had nothing to do with it. Had he known what was about to occur undoubtedly he would have advertised it in advance and sold tickets for it.

By reason of circumstances over which he had no control, but which had mainly to do with a locked-up street wardrobe, an American of convivial mentality was in his room at his hotel one evening, fairly consumed with loneliness. Above all things he desired to be abroad amid the life and gayety of the French capital; but unfortunately he had no clothes except boudoir clothes—and no way of getting any, either, which made the situation worse. He had already tried the telephone in a vain effort to communicate with a ready-made clothing establishment in the Rue St.-Honoré. Naturally he had failed, as he knew he would before he tried.

Among Europeans the telephone is not the popular and handy adjunct of every-day life it is among us. The English have small use for it because it is, to start with, a wretched Yankee invention; besides, an Englishman in a hurry takes a cab, as his father before him did—takes the

same cab his father took, if possible—and the Lam races dislike telephone conversations because the gestures all go to absolute waste. The French telephone resembles a dingus for curling the hair. You wrap it round your head, with one end near your mouth and the other end near your ear, and you yell in it a while and curse in it a while; and then you slam it down and go and send a messenger. The hero of the present tale, however, could not send a messenge—the hotel people had their orders to the contrary from one who was not to be disobeyed.

#### The Episode of the Borrowed Pants

FINALLY in stark desperation, maddened by the sounds of sidewalk revelry that filtered up to him intermittently, he incased his feet in bedroom slippen, slid a dressing gown on over his pajamas, and negotiated a successful escape from the hotel by means at the rear way. Once in the open he climbed into a handy cab and was driven to the café of his choice, it being the same café mentioned a couple of purigraphs ago. Through a side entrance he made a hasty and unhindered entrance into this place—not that he would have been barred under any circumstance inasmuch as he had brought a roll with him.

A person with a cluster of currency on hand is always suitably dressed in Paris, no matter if he has nothing else on; and this man had brought much ready cash with him. He could have gone in figleaved like Eve, or fig-leafless like September Monit being remembered that as between these two, as popularly depicted, Morn wears even less than Eve So he whisked in handily, and when he had hidden the lower part of himself under a table he felt quits at home and proceeded to have a large and fulevening.

Soon there entered another American, and by the mental telepathy which inevitably attracts like-spirit to like-spirit he was drawn to the spot where the first American sat. He introduced himself as one feeling the need of congenial companionship, and they shook hand

need of congenial companionship, and they shook hard and exchanged names, and the first man asked the secont man to be seated; so they sat together and had some thing together, and then something more together; and a the winged moments flew they grew momentarily monintimate. Finally the newcomer said:

"This seems a pretty lachrymose shop. Suppose we get elsewhere and look for some real doings."

"Your proposition interests me strangely," said the first man; "but there are two reasons—both good ones—who I may not fare forth with you. Look under the table and you'll see 'em."

The second man looked and comprehended, for he was married man himself; and he grasped the other's hand is warm and comforting sympathy.

"Old Man," he said—for they had already reached the Old Man stage—"don't let that worry you. Why, I've got more pants than any man with only one set of legs has all right to have. I've got pants that've never been workyou stay right here and don't move until I come back My hotel is just round the corner from here."

No sooner said than done—he went and in a surprisingly short time was back, bearing spare trousers with him. Beneath the shielding protection of the table draperies the succored one slipped them on, and they were a perfect fit. Now he was ready to go where adventure might swall them. They tarried, though, to finish the last bottle.

Over the rim of his glass the second man ventured at opinion on a topic of the day. Instantly the first man

challenged him. It seemed to him inconceivable that a person with intelligence enough to have amassed so many pairs of trousers should harbor such a delusion. He begged of his new-found friend to withdraw the statement—or at least to abate it.

The other man was sorry, but he simply could not do it. He stood ready to concede almost anything else, but on this particular point he was adamant; in fact, adamant was in comparison with him as pliable as chewing taffy. Much as he regretted it, he could not modify his assertion by so much as one brief jot or one small tittle without violating the consistent principles of a consistent life. He felt that way about it. All his family felt that way about it.

"Then, sir," said the first man with a rare dignity, "I regret to wound your feelings; but my sensibilities are such that I cannot accept—even temporarily—the use of a pair of trousers from the loan collection of a person who intertains such false and erroneous conceptions. I have the pleasure, sir, of wishing you good night."

With these words he shucked off the borrowed habiliments and slammed them into the abashed bosom of the abstinate stranger and went back to his captivity pantless, 'tis true, but with his honor unimpaired.

The majority of these all-night places are singularly and nonotonously alike. In the early hours of the evening the nusicians rest from their labors; the regular habitues lay side their air of professional abandon; with true French rugality the lights burn dim and low. But anon sounds he signal from the front of the house—Strike up the band; sere comes a sucker! Somebody resembling ready money as arrived. The lights flash on, the can-canners take the loor, the garçons flit hither and yon, and all is excitement.

Enter the opulent American gentleman. Half a dozen unctionaries greet him rapturously, bowing before his riumphant progress. Others relieve him of his hat and is coat, so that he cannot escape prematurely. A whole eception committee escorts him to a place of honor facing he dancing arena. The natives of the quarter stand in ows in the background, drinking beer or nothing at all; at the distinguished stranger sits at a front table and a served with champagne—and champagne only. It is afferior champagne; but because it is labeled American frut—whatever that may denote—and because there is a oster on the bottle showing the American flag in the correct olors, he pays several times its proper value for it.

From far corners and remote recesses coryphées and ourt jesters swarm forth to fawn on him, bask in his resence, glory in his smile—and sell him something. The shole thing is as mercenary as passing the hat. Cigarette irls, flower girls and bonbon girls, postcard venders and onfetti dispensers surround him impenetrably, taking him ront, rear, by the right flank and the left; and they shove heir wares in his face and will not take No for an answer—at they will take anything else.

#### Pearl and Her Wonderful Ears

TWO years ago this coming fall, at a hunting camp in North Carolina, I thought I had met the creature with he most acute sense of hearing of any living thing. I refer Pearl, the mare. Pearl was an elderly mare, white in color nd therefore known as Pearl. She was most gentle and ind. She was a reliable family animal too—had a colt very year—but in her affiliations she was a pronounced factionary. She went through life listening for somebody say Whoa! Her ears were permanently slanted backard on that very account. She belonged to the Whoa odge, which has a large membership among humans. Riding behind Pearl you uttered the talismanic word in he thinnest thread of a whisper and instantly she stopped.

ou could spell Whoa! on your fingers—and she would stop.

For the Looks of Things, if for No Better Reason, He Must Travel First-Class

You could take a pencil and a piece of paper out of your pocket and write down Whoa!—and she would stop; but, compared with a sample assortment of these cabaret satellites, Pearl would have seemed deaf as a post. Clear across a hundred-foot dance-hall they catch the sound of a restless dollar turning over in the fob pocket of an American tourist.

And they come a-running and get it. Under the circumstances it requires self-hypnotism of a high order—and plenty of it—to make an American think he is enjoying himself. Still, he frequently attains to that happy consummation. To begin with, is he not in Gay Paree?—as it is familiarly called in Rome Center and all points West? He is! Has he not kicked over the traces and cut loose with intent to be oh, so naughty for one naughty night of his life? Such are the facts. Finally—and

herein lies the proof conclusive—he is spending a good deal of money and is getting very little in return for it-

Well, then, what better evidence is required? Any time he is paying four or five prices for what he buys and does not particularly need it—or want it after it is bought—the average American can delude himself into the belief that he is having a brilliant evening. This is a racial trait worthy of the scientific consideration of Professor Hugo Münsterberg and other students of our national psychology.

She Had Not Done Anything to Earn a Tip That I Could See

So far the Münsterberg school has overlooked it—but the canny Parisians have not. They long ago studied out every quirk and wriggle of it, and capitalized it to their own purpose. Liberality! Economy! Frugality!—there they are, everywhere blazoned forth—Liberality for you, Economy and Frugality for them. Could anything on earth be fairer than that?

Even so, the rapturous reception accorded to a North American pales to a dim and flickery puniness alongside

the perfect riot and whirlwind of enthusiasm that marks the entry into an all-night place of a South American. Time was when, to the French understanding, exuberant prodigality and the United States were terms synonymous; that time has passed. Of recent years our young kinsmen from the sister republics nearer the Equator and the Horn have invaded Paris in numbers, bringing their impulsive temperaments and their bankrolls with them. Thanks to these young cattle kings, these callow silver princes from Argentina and Brazil, from Peru and from Ecuador, a new and more gorgeous standard for moneywasting has been established.

You had thought, perchance, there was no rite and ceremonial quite so impressive as a head waiter in a Fifth Avenue restaurant squeezing the blood out of a semi-raw canvasback in a silver duck press for a free spender from Butte or Pittsburgh. I, too, had thought that; but wait—just waituntil you have seen a maître d'hôtel on the

Samples is the Most Overrated Thing on Earth—and the Most Costly

Avenue de l'Opéra, with the smile of the canary-fed cat on his face, standing just behind a hide-and-tallow baron or a guano duke from somewhere in Far Spiggottyland, watching this person as he wades into the fresh fruit—checking off on his fingers each blushing South African peach at two francs the bite, and each purple cluster of hothouse grapes at one franc the grape! That spectacle, believe me, is worth the money every time.

There is just one being whom the dwellers of the all-night quarter love and revere more deeply than they love a downy, squabbling scion of some rich South American family, and that is a large, broad negro pugilist with a mouthful of gold teeth and a shirtfront full of yellow diamonds. To an American—and especially to an American who was reared below Mason and Dixon's justly popular Line—it is indeed edifying to behold a black heavyweight fourthrater from South Clark Street, Chicago, taking his ease in a smart café, entirely surrounded by worshipful boulevardiers, both male and female.

#### The Paris That Will be Glorified

NOW, as I said at an earlier stage of these remarks, there is another Paris besides this—a Paris of history, of art, of architecture, of literature, of refinement; a Paris inhabited by a people with a pride in their past, a pluck in their present, and a faith in their future; a Paris of kindly aristocrats, of thrifty, pious plain people; a Paris of students and savants and scientists—of great actors and great dramatists. There is one Paris that might well be burned to its unclean roots, and another Paris that will be glorified in the minds of mankind forever.

And it would be as unfair to say that the Paris which comes flaunting its tinsel vice and pinchbeck villainy in the casual tourist's face is the real Paris, as it would be for a man from the interior of the United States to visit New York and, after interviewing one Bowery bouncer, one Tenderloin cabman, and one Broadway ticket speculator, go back home and say he had met fit representatives of the predominant classes of New York society and had found them unfit.

Yes, it would be even more unfair; for the alleged gay life of New York touches at some point of contact or other the lives of most New Yorkers, whereas in Paris there are numbers of sane and decent folks who seem to know nothing except by hearsay of what goes on after dark in the Montmartre district.

Besides, no man in the course of a short and crowded stay may hope to get under the skin of any community, great or small. He merely skims its surface cuticle; he sees no deeper than the pores and the hair-roots. The arteries, the frame, the real tissue-structure remain hidden to him. Therefore the pity seems all the greater that, to the world at large, the bad Paris should mean all Paris. It is that other and more wholesome Paris which one sees—a light-hearted, good-natured, polite and courteous Paris when one, biding his time and choosing the proper hour and proper place, goes abroad to seek it out.

For the stranger who does at least a part of his sightseeing after a rational and orderly fashion, there are pictures that will live in the memory always—the Madeleine with the flower market just alongside; the green and gold woods of the Bois de Boulogne; the grandstand of the racecourse at Longchamp on a fair afternoon in the autumn; the Opéra at night; the promenade of the Champs-Elysées on a Sunday morning after church; the Gardens of the Tuileries; the wonderful circling plaza of the Place Vendôme, where one may spend a happy hour if the maniacal taxi-drivers deign to spare one's life for so unaccountably long a period; the arcades of the Rue de Rivoli, with their exquisite shops, where every other shop is a jeweler's shop and every jeweler's shop is just like every other jeweler's shop-which fact ceases to cause wonder when one learns that, with a few notable exceptions, all these

(Continued on Page 77)

# THE VORTEX By the Author of the Autobiography of a Happy Woman

# One Way Out for the Unemployed Woman

ILLUSTRATED BY WLADYSLAW T. BENDA

F YOU were on the ragged edge of nothing; if you had no home but such as you made for yourself; if you had no savings and had never had wages that permitted savings; if you had not much strength and were gradually losing your nerve from fear of want; if you had no security against want and lost your job, and could not get another-what would you do? Particularly what would you do if you were a woman past forty, physically a good deal the worse for the wear and tear of city life, with streaks of gray in your hair that put you at a discount against the nimble agility of youth? Having through no fault of your own started wrong, is there any vocation where you could begin again, where your mature experience would count against the nimble fingers of youth?

Because there is such a chance for every woman out of the vortex of the city's great unemployed, I am going to set down, with as strict accuracy to detail as I can recall, word for word, the story told me by one who found a way out which every woman in like case could follow if she would.

The other day there was a meeting in New York of the city's unemployed women; and women who had never before in their lives faced an audience stood up and voiced the cry for work, for a chance to live. Among the white-goods workers alone it was found that more than twenty-two thousand were working on half time—that is, at wages from three and a half to four and a half dollars a week. Among the shirtwaist and kimono makers ten thousand were entirely out of work, fourteen thousand on half time. Of the seventy-

five thousand women workers allied with women's trade unions twenty-two thousand had been permanently out of work for the winter. When you consider that of all industrial workers among women not a tenth are allied with any trade unions whatsoever, it is a pretty safe estimate to say that at least one hundred thousand women workers in industry are out of work in the big cities of the East today. This estimate is considered under the mark by the union women of New York, Philadelphia and Baltimore.

What is the cause of it? Not hard times; for this country has never at any era in its history had hard times as that phrase is understood in other lands. Transition in styles, such as the present narrow skirts that prevent women from wearing yards and yards of white petticoats, may have something to do with one trade; but that is only a surface shift of the great economic current, throwing such multitudes adrift. If you look for the real cause you will find it not in shifting styles but as one woman, who began life at fourteen as a capmaker, expressed it, in the perfection of the machine.

#### The Age of Machinery

ONE machine today does the work of five cashgirls; one typewriter, the work of a dozen longhand secretaries; one sewing machine driven at top speed by electricity, the work of fifty women at handsewing; one canning factory, with machinery self-driven and almost automatic, supplants mother's homemade pickles and preserves in ten thousand families. Do the workers, then, curse the machine and mob the inventors, as the weavers did a hundred years ago in England? Not a bit of it! I have never heard the faintest shade of resentment in tone toward the machine. Workers today realize that the machine has become the burden-bearer of the age, a thing making possible ease of production in a way ancient wizards never dreamed and fairy tales could not invent.

Meantime what happens? Fingers fourteen, fifteen, sixteen to twenty years old are nimbler, quicker, safer with the swift-speeding shuttles, or steel cutters, or plaiters, than fingers of thirty-five to forty. Also, in an age when competition is as fierce as war of old and overhead expenses the heaviest ever known, fingers of fourteen, fifteen and sixteen are cheaper than the fingers of a mature and experienced woman, who has a right to expect to be paid for her knowledge as well as her mechanism.

Good! Turn on the power! Whirl the wheels! Watch the shuttles flying so fast they are a blur to the eye!

The Men of the Family Drift to the City, While the Women Stay On in the Factories

What happens? Those nimble fingers, age twenty-five, do not go so fast! The machine power has flagged and fagged the nerve power. At twenty-eight there is an accident, a broken finger, or a functional smashup from exhausted vitalities. At thirty-five and forty—is it to be the scrapheap? That is the question these armies of women in industry are asking themselves; and the fact that there are one hundred thousand women out of work who want to work is more than the sign of an economic transition! It is the century tragedy of a machine age.

Is it necessary? Granted these out-of-works are drifters on an economic tide they can't control! Are so many hundreds of thousands a year to be permitted to become the flotsam and jetsam of humanity? If so it will come high in cost for hospitals and asylums and places of refuge. It will come still higher in bitter social discontent and hatred. Socialists say: Take over all instruments of production for the public! Doctrinaires say: Let the Government give these people a job! Philanthropists say: Let us give these people immediate help! The first two suggestions accomplish nothing; for they are years away and the out-of-works are hungry. The last remedy relieves immediate need, but it does not get down to fundamentals and it offends self-respect; it is like bailing out water thrown in by the waves of a continuous tide. It helps, but it does not stop!

Then there is the system being tried out succeasfully in Germany and New Zealand and Australia—government insurance against old age and want through a system of small weekly deductions from earnings; but this, like the remedies suggested by the socialists and doctrinaires, does not relieve immediate want. This system is not in vogue yet and requires years to bring its beneficiaries any returns. There is no use saying these people are unfits or they would have hoisted themselves out of their predicament by their own efforts. They are not unfits—they are misfits. You show how and they will do the hoisting all right. It is not, What can a woman do?—which implies a victim in a trap. It is what a woman can do, which implies a way out of dilemmas. So I shall tell the story of the woman who found her way out as nearly in her own words as possible.

I belonged to that type of family from which so many girls who have to earn their living come. We were neither rich nor poor. We were never in debt; but we never saved. My mother did not believe in the new fashion of women going out to earn their living. She believed that every woman should marry early and settle down, with a little family of her own. She did not believe in what you call women-in-industry. Neither did I. I did not think that was what women were for; and I used to feel alitie bit of superiority and contempt when my old girl friends of the high school began going out to work in offices and factories.

We lived in a little New England fartory town. If you know anything about factory towns you will know that the successful men of the family drift to the city. while the women stay on in the factories. You can think anything you like about marrying; but there simply are not enough men to go round in these little villages. Now that it is all over and done with I know where I made my first terrible mistake and sinned, and have paid in sufering for my sin; but lots of women do the same thing and it does not turn out a mistake. I believed I was doing what it was the duty of every woman to domarry-and it seems a poor sort of joke now; but then I should rather have died young than have my name go on a tomistone as an old maid. That used to be one of the jokes at our house.

Well, I married. I suppose at the time I thought I was marrying for love; but I know now I was not—that I married for a home, for a man to support me; and I was too young to realize that the man I had chosen married me as a sort of protection against his own waywardness. He needed support that I could not give, that I was not old enough to give him. I think we both unconsciously tricked each other. He thought if he married a good girl it would keep him straight. I thought if I married a smart fellow it would protect

me from the blasts of the world. You see we were both simply loving self and did not know it.

My brother and I had gone on an excursion to New York for the day. The man I was to marry was one of the old boys from our high school. We met him by chance on the street and he asked us to have lunch with him in one of the big Broadway restaurants. Jokingly my brother turned to me as we were going to meet him in the restaurant and said "There is a catch for you, Sade! Mack earns twelve had dred a year as bookkeeper in Wall Street; and you can judge from his dress and style of living how much he must earn on the side." I did not answer, but I thought a let

#### The Savers and the Spenders

HE WAS the best-dressed man I had ever met, and he looked prosperous. You could see the waiters jump is serve him the minute he entered.

Though I was a country simpleton, I had eyes in my head and could not help seeing how the necks of all the women in the restaurant craned as he passed. The check he paid for our lunch amounted to seven dollars, and he tipped the waiter fifty cents. Then he took me to a matinée. At the train, saying good-by, he told us he intended to spend his holidays back home for the first time in years My brother looked at me queerly. On the train he said "Mack always was a fourflusher on spending. Only thing I have against him is that diamond ring he wears on his little finger."

How could I confess that diamond ring was on my own finger under my glove, where I had promised to wear it till he came up for his holidays? We were married at the end of his holidays. The only inkling of anything amis came from an old-maid aunt, who threw cold water of everybody and everything. She was knitting in the corast by the chimney the day before our wedding.

"So he is a free-spender!" she said. She always dicket her needles when she was going to say something herrid "It's all right for them as has it"—clicking very fast and hard—"but them as has it don't usually spend it; and them as spend it don't usually have it."

It shocked my country ideas to find we were paying a rent of fifty dollars a month for our small apartment east of Fourth Avenue near Twenty-third Street. It seemed a great deal to pay half of one's income in rent. At home, when my father earned sixty dollars a month, we never paid more than ten dollars for rent; but when I spoke to my husband about it he told me to leave business matters we

him and he would leave household matters to me. It would affect his standing with the fellows if they thought he couldn't afford as good an apartment for his wife as these bachelor boys had for themselves. Who the fellows were I didn't know. Not a soul came to see us that first year in New York. It was fearfully lonely. I used to be riad to pass the time of day with the hallboy or the milkman; and there did not seem to be any way to form friends or make acquaintances. I used to clean the apartment and reclean it, and walk the streets, and parade the department stores to keep from being physically sick with loneliness; but in the evenings and on Sundays, when my husband was home, we were very happy.

I really think it is that kind of loneliness drives so many young people out to the dance-halls and the moving pictures and the cheap restaurants. We got into the way of going to the cheap shows on Saturday nights and to the cheap restaurants for dinner on Sundays. That was all we could afford. Really we could not afford that; but I did not know it. I used to long for the birth of our baby for company. I had intended to go up home for the baby; but my father died that winter and my mother went to live with a married brother.

"So you won't go up home for the arrival of His Little Royal Highness?" my husband asked. "How can I?" I answered.

He seemed terribly worried. I asked him if finances were not all right. He answered: "Of course!" Would I never learn to leave finances to him? Business was for men-and so on, like that!

It was a day or two after that the diamond ring was missed-the one he had given me that afternoon at the matinée. I wanted to have the police question the hallboys but my husband would not hear of it—that would only put the thief on guard. He would employ a private detective to rake the pawnshops.

That night he was late coming home to dinner. I was wild with anxiety and nervousness; and I could not go out for him. I tried to telephone the Wall Street brokerage firm, but the office had closed for the day. It was a miny summer night that brought back the very smells of the rose gardens up home. A hurdy-gurdy was playing in the street below our window and a lot of ragged children were dancing round and round in the gutter. A faint feel-ing came over me. What if anything happened so that our thild would be a poor youngster like those below the window? Had I done all my part? Was the woman's part to let the man support her? I can never hear a hurdy-gurdy get without that same faint feeling—it was a sort of horror.

#### Getting Ready to Go to Work

THERE is no use going back over that night. It cripples I me to think about it. I wanted to send for the policeind was afraid. I sat paralyzed all night listening and listenng for steps. By-and-by all the steps stopped and there vas nothing but the roar of the Third Avenue L. By norning I was walking the floor with terror. The minute be clock pointed to nine I called up the brokerage office. The boy who answered did not know who was speaking and iid not catch the name for a second. Then he said:

"Oh, yes, Mack-he ain't been here for weeks. He was red for swoipin' office funds!"

I was stunned. I could not believe it. I would not let myself think of the missing ring; but the morning mail killed my last hope. It was a little, curt note. It said:

Don't try to trace me. There has been a mixup in the office checks. If you trace me it will end in my arrest and your disgrace. Better go back home.

Home! There was no homeand he knew it. I, who had married to escape facing life and earning a living outside the home, had now to earn a living for two! I was untrained. I was unskilled. I was temperamentally unfit for

any kind of work but in a home. I was one of the thousands of helpless women thrown in the big cities—the very fate I had married to escape. I was ashamed to go back to my native place humil-

iated and disgraced. There was no place for me there. My brothers had married. One was supporting my mother, and his wife resented that. Our home factories were running slack. There was no work there.

I did not come to my senses enough to know what to do till I was convalescing from the birth of the baby in the maternity hos-

pital. I used to think I should be so happy when the baby came; but now I could not look at him without crying out as if something stabbed me. Furniture we had paid twelve hundred dollars for I sold to the second-hand shops for three hundred dollars. Of that, fifty dollars went to the maternity hospital and fifty dollars for the rent of the apartment the month I had been away. That left me two hundred dollars. While I worked I arranged to have the baby cared for in the daytime at a church nursery. Then I paid fifty dollars for a special course in stenography and typewriting, with the use of a machine for practice.

That left me one hundred and fifty dollars. I rented a little back hall bedroom with the use of a bathroom, where I could do my own washing and light cooking. This took three dollars and a half a week. Try as I would, I could not get my living expenses down lower than thirty cents a day-five cents for breakfast, coffee and a roll without butter; ten cents for lunch near the shorthand school, sandwich and coffee; and fifteen cents for supper, coffee and a roll and soup, or a small piece of meat, a cheap cut. And when it rained so that I had to take the car to and from the shorthand school, I had to skip one meal to keep my expenses down to thirty cents a day.

That made my living five dollars and sixty cents a week. I used to count and count at night-that, at this cost, my

Try as I Would, I Could Not Get My Living Expenses Down Lower Than Thirty Cents a Day

principal would not last thirty weeks; and I had made up my mind never to spend my last ten dollars. I always wanted enough left to reach my brothers. What if I were unable to learn shorthand in thirty weeks? What if I could not get a position?

It is right here that if some of the able rich women who want to help really would, they could save so much suffering and waste. If I could have had some one who was not knocked silly with fright to advise me in the hospital I should not have studied stenography at all. I should have done then what I did two years later after such suffering that I hate to recall it. I was not cut out for a stenographer. Spelling and punctuation always bothered me. A sharp word from the person dictating rattled me so I lost my head and made more blunders than

ever. The only thing I loved doing and wanted always to do and had looked forward to doing as my lifework was homemaking, cooking, sewing and housekeeping; but there was no one to tell me there was any market value for these things. I had not the faintest idea, any more than any other young girl has, that though every other vocation is crowded with more workers than there is work, the one vocation where there is always more work than there are workers-the one vocation in which a capable girl can get pretty nearly any price she asks-is homemaking.

#### The Manicurist's Ambition

SUPPOSE, if I thought of it at all, I thought of housework as being a servant, stuck away in a basement bedroom off a dark hall next to the ashcans. I did not know there was such a thing as domestic science. I did know there was scientific nursing; but I did not take up nursing because I did not know what to do with my baby during the years of training. A woman who was worldly wise would have known all those things and could have told me.

The other way in which rich women could help is in training such misfits as I was to find and fill and fit a special place. Why should any girl at the very end of her resources have to pay out fifty dollars to learn her job? I had thought of dressmaking, but at one dressmaking school where I applied the cost would have been sixty dollars; and at a school of design, where I wanted to learn millinery, the charge was forty dollars. If the women who form clubs for struggling girls would provide training for various vocations-yes, even training in cooking-they would have thousands of applicants a year and could save girls from the employment sharks and fake design schools, where they are bled to their last dollar.

One other point for the women who want to help: Many a girl, when she has finished her training, has not enough money left to furnish carfare, and there begins a weary tramp over miles of city streets to places of possible employment. I have walked ten miles a day-say, from Sixtieth Street to the Battery and back-and gone to a dozen different shops and offices, and found the same sign out on each door: No Applicants for Work Needed.

At the end of four months' training and searching I did get a position in one of the big department stores, where one hundred and fifty other stenographers were employed in the out-of-town mail-order department. I got this position through the girl who shared the bathroom with me as a place to cook and wash. She was a manicurist, who received one dollar and fifty cents a day in the ladies' parlor of the same store. She heard of a girl who was leaving, and really had me slipped in before I knew it.

She was a wonderful little thing-French, I think. She had come from San Francisco, working her way across the continent from point to point by manicuring. She had paid her Pullman fare from Omaha to New York by manicuring ladies' nails on the train. I asked her why she had come to New York. She said she wanted to see life and she "meant to land some swell guy with money." I asked her what she would have done in my case. She said before any man "got" her he would have to settle so much money

on her "snug and tight" before the ceremony. Her views left me sort of sick; but then had my motives been any better? She was full of catchwords she had heard at lectures about efficiency and average and subaverage and superaverage; about plans to get on. She said she herself was only an average; but she meant to be a superaverage.

She told me one of our women who was a foreign buyer had a salary of seven thousand five hundred dollars a year; and that the head cashier or auditor on the main floor, a married woman about thirty-five years of age, got five thousand dollars a year and had never been caught in a mistake in ten years. She said that both these women had begun in the Chicago branch of the store at one dollar and a half a week. They had come to work with their hair in pigtails tied in a shoestring. They were pointed out as examples of what we might become; but the hitch in that was, they were perfect fits. We were misfits. They were cut out for exactly the work they were doing. I was not fitted for the work I was doing. I had always been called a perfect housekeeper; and in the matter of buying house supplies and clothes I could make a dollar go as far as most women make ten; but in stenography my fingers were all thumbs. I did not think quickly, so I was always slow.

In my work I was very much a subaverage. I was a foreordained failure. My wages were six dollars a week; and looking back now I know that was more than I was worth. I broke my machine on an average once a month. Twice the repairs cost two dollars. I was not docked for them. I often had to do the simplest letters over twice, and, though I was reprimanded for erasures, I was never dismissed for my blunders. I think that was because it was so plain that I was trying hard. I had to take a cheaper room, this time at two dollars and a half a week, so near the store that I should never need to take the street car.

Later I found a room far over on the East Side below Twelfth Street at one dollar and a half a week. I was now able to cut my living expenses down to one dollar and a half a week. This left three dollars to clothe the baby and myself. After that first winter I left the baby with a German woman who lived in the same tenement. She took care of that baby in the daytime for nothing. I want to tell that, because that is the kind of help which counts far more than the investigations of vice committees or the lectures of philanthropists.

We are told that girls who work in the factories and stores should save for holidays and old age. If any one can tell me how I could save any of that salary I wish he would. One day, I remember, I was sent from the stenographers' department to pilot an out-of-town customer round the store. She asked me what I was paid, and when I told her she threw up her hands.

#### The Struggle for Existence

"WHY in the world don't you go West?" she asked.
"Out West they pay apple and orange pickers two
and three dollars a day. You girls are like our orange growers before they learned how to distribute their oranges in the
markets. Oranges used to lie and rot on our ranches. Then
we found out how to distribute oranges, and now no orange
grower loses. Why do you stay in these congested big
centers like rats in a cellar?"

I looked her straight in the eye.

"Lady," I said, "I don't go West because I can't walk."

I think she did not hear me. She was talking in blue streaks, like this: "Perfect outrage to pay such wages! Don't wonder girls go to the devil." I wanted to tell her they did not—not half so much as idle women—they did not have time; but she never stopped for breath. "Women should boycott stores that pay such wages." She had just bought a sealskin sacque from us. "A law ought to be passed establishing a minimum wage of twelve dollars at the least for every girl who works." What difference would that have made, I wonder? There were lots of girls in our store getting more than twelve dollars. It was because I was a misfit that I did not earn more. If such a law was passed the stores would simply be compelled to throw out us subaverages and double up high-speed work for those who were left. "Why, there are millions of homes in the West that can't get help for love or money—not for forty dollars a month and board! Why do you stay in these city ratholes? Why don't you go West?"

She might as well have asked me: Why don't you jump over the moon?

"Lady," I said, good and hard this time, "I don't go West because—I can't walk."

And that is another way the strong women could help the weak if they wanted to; but, after all, we have to work it out for ourselves. Several things impressed me more and more the longer I was in that store. We girls and women were on the wrong tack. You cannot get joy out of work unless it is a sort of personal service. Unless you own your job in some sort of permanent way you will not sing over it. My grandfather was a shoemaker and he always sang as he cobbled. My father went into a factory and he never sang. He got crusty and short over his work.

Then, speed is the keynote of modern work. You work up speed; then you speed up more. If the machine breaks

a new one is bought. If the operator breaks a new operator is employed. It eats up your youth. The more experienced you are, the less value you are. That is why so many women workers call themselves Miss when they are Mrs. and wear false bangs and dye their hair. I began to call myself Miss in my second year. The forewoman told me: "We don't like customers to think we are an old ladies' home." Then, rich men can talk of savings to the crack of doom. There is no save, or safe either, for us subaverages.

When I moved from our first apartment to the back hallroom I was still in a decent neighborhood. When I moved to the dollar-and-a-half room the neighborhood was decent enough, but it was not sanitary. There was no elevator in the tenement and there was no ventilation. There was only one dirty bathroom for each floor and perhaps twenty-five tenants lived on each floor—subrenters I suppose the little manicurist would have called sub-averages like myself. The windows of the inner court were littered with milkjars and plates of butter and meat placed on the ledges to keep cool; and Monday's washing always hung on lines stretched from window to window of the inner court. A wind would blow washdrip across our food.

Some of the faces leering round the doors were terrible—
fat, half-dressed drunken women and fat, half-dressed
sottish men. I have no judgment or blame for either the
girls or the men. They were desperate for life. I used to
feel, after the end of the second year, that if I did not have
a holiday or change I should scream out with hysterics at
night. I used to waken myself moaning in my sleep. I
suppose these girls and men felt the same. They all looked
as though they craved terribly for something. Where
uptown folks drank champagne over beefsteak these people
had beer over chop-suey. I suppose they were as much
God's children as the uptown folks too!

Once the German woman who kept my baby told me how the priest in her home village used to have his people come and dance on the village green every Sunday afternoon. For us there was no village green. There were only the movies, the dance-halls and Coney Island.

One evening when the beerdrinkers grew screaming noisy I took my baby, now a wee toddler, and went out for a walk. I wandered from Third Avenue over west across toward Madison Avenue along the brownstone fronts. A colored cook stepped from one of the basement doors and threw a tin of potted beef in the garbage can. Before I knew it, I had the most terrible hunger for that can of potted beef, for ice-cream, for a fizz drink, for beer-for anything with a taste, a lift, a kick to it-in place of the soupslops I had been living on for two years. Then I knew what sent the girls in the tenements to the beer gardens and back rooms of saloons. It was a craving of systems that were-well, you cannot call them starved, but not nourished. It frightened me, with the same faint sick feeling I had had that night the hurdy-gurdy played below the apartment window.

Here are two other places where the strong women can help if they want to—I mean with decent apartments and

Let Us Banish the Word Jeroant and Jubititute the Words Domestic Help

hotels for girls who work, and with cheap caféteriss, with nourishing food for ten cents.\*

I had been working now for over two years and had saved not a cent; and I knew other women more competent that I was who had worked for twenty years and saved not a cent. I was now twenty-three. I had never been really hungry, but I craved everything a woman should have—nourishment, rest, fun, security. I was only twenty-three, but I was losing my nerve. Why? Because I was not unit, but a misfit! And I was lonely with a loneliness that was sometimes a terrible, deep, black pit.

If I had not had the baby—but no, I will not admitthat, though Heaven knows if I had not had the baby, and any man had asked me to have either beer or whisky with him that night, I might have joined the noisy screams and dancers next door. I do not want to shock you and I to not suppose you would publish it if I did say it, but after that night I somehow never could find it in my heart to condemn a girl in the big city even if she went seventy times seven times straight to hell!

I made up my mind I would place my baby in one of those church nurseries again, so he would be well nouished. I wonder whether in the bottom of my heart if wanted to be free to have my fling! There was a shirtwast factory down Fourteenth Street way where I decided I would try for a position at ten dollars a week, if I could only keep up with the speed of those machines.

I know you are wondering how I could be so stapid as not to learn that all these experiences were simply driving me from where I did not belong to where I did belong, and where every woman belongs, into the one thing I was it for; but I figured this way: one dollar and a half a week would pay for my baby's keep; one dollar and a half more would pay for my room. I should have to raise on the cast of food and clothing. I was going under. Put these at three dollars a week. I could still do my own washing and cleaning on Sundays. That would leave four dollars a week. Four dollars a week might mean two hundred dollars a year saved—if I did not mangle a finger or break down, or lose my job in slack seasons. As I said before, I am not quick. I am subaverage. I am faithful and thorough. Could I risk my certain job for an uncertaintry!

#### The Trained Nurse's Advice

KEPT thinking of it all week till Sunday, when I went to I arrange for the baby to go out to the country with the church nursery. That last ten dollars I had faithfully kept all these two years, tucked in an envelope pinned inside my dress. If I were a misfit and subaverage, at any cost I must find the place I could fit and reconstruct my life. I nut quit being a round peg in a square hole. I must stop drifting or I should end a wreck. I skipped lunch and spent my ten cents taking the bus out Fifth Avenue. At Eighty-Sixth Street where the conductor calls All out! I noticed a handsome girl in the costume of a trained nurse, wheeling a baby carriage and leading another child, about three years old, by the hand. No! Don't you think help came rushing out of the rich house to me like the fairy godmother! It did not-and it never does; we have to work it out ourselves; but just as I came down off the bus that little three-year-old dived away from his keeper straight in front of a big touring car.

No, I did not save his life. It is no fairy story. I grabbed him by the neck and humped him back kicking to the trained nurse. He fought and screamed; and for a minute I held the little carriage to keep it from blowing over in the wind. The costumed nurse thanked me without looking up; but a thought had come to me in a flash.

"Excuse me," I said, "but are you a trained nurse?"
Then she looked up. She must have sized up in one glance my sallow, gaunt face, and shabby-genteel pride and draggled dress. There were tags on my petticosts. Being a nurse, she must have known I had skipped meds.

"Sure, I am," she laughed. "I began as a trained has pital nurse; and here I am ending up a baby nurse for this naughty pair! Where do you work?"

I mentioned the name of the big store.

"And get about twenty-five a month, and spend it all slaving your life out! Well, I'm not sorry for you. Yes might as well be in a good home, saving as much as the Quane of England had for spending money. If I could spend five years and seven hundred dollars on my education and don't consider it a comedown to do what I'm doing, you girls who are between the devil and the deep set shouldn't consider your dignity such fine china that it would go to smash over domestic science." †

\*Mrs. Belmont's splendid lunchroom, the Vacation Commine Headquarters for Workers, Tremont Inn. the Women's Trais Union Restaurant, and other similar club homes, did not exist if this time; though it should be emphasized very strongly that I there were a thousand such clubrooms they would not begin to fill the need today.

†Whoever the nurse was, she enunciated simple truth. To Queen of England had less than twenty-five dollars a month for an allowance as a girl; and the new system of nursing established in many European cities, combining kindergarten, Montess of for tures and hospital training, costs about seven hundred dollars and takes nearly five years.

(Continued on Page 52)

#### By Edwin Lefèvre CHEAP AT A MILLION

COME men are so picturesque they do not need publicity agents and so intelligent they wish to be let alone by the public prints. E. H. Merriwether was one. He employed the ablest experts for his corporations, and they got more than their share of publicity; but for him-

self-nothing. Possibly he realked that ungratified curiosity is a valuable asset; and, of course, he knew that in a democracy the less a man raises his head above the level of the mass the better it will be for his comfort.

He took pains to make it plain that he cared only for his work, because that proved he had no thoughts for mere moneymaking; and, since he was not interested in moneymaking, he could not be primarily concerned with despoiling the public-which, in turn, dearly proved he was not dangerous. And, of course, the more he kept himself out of the papers the more the papers wanted to see him

in their hospitable columns; so everything he did or thought was news. Anecdotes about him were so hard to get that the brightest minds in the profession manufactured a few. They had to be very good anecdotes-and they were.

To the metropolitan reporters, however, E. H. Merriwether was known to be mute, dumb, silent, constitutionally incapable of speech and, besides, devoid of vocal cords. His office was always free from reporters, because they had learned to save themselves time by the simple expedient of writing their interviews with him in their own offices,

Mr. Merriwether refused to discuss the matter. Neither confirmation nor denial could be obtained at his office.

The financial editors of the newspapers fared no better. He was never too busy to see them; but all news about his vork came from his bankers.

On the same day Tom went to Boston a young man went o the Merriwether offices in the Transcontinental Trust building. A stout, rather high railing fenced off the booksepers' room from the general and unwelcome public.

At a small flat desk near the gate sat not a freckle-faced oy, but a man, powerful of build, keen eyed and quick nuscled. He was writing a letter on a very good quality f notepaper. He said: "Well?"-but kept on writing. le did not look up. This always discouraged strangers, by sking them feel their utter insignificance. The effect on sillionaire magnates, who similarly found themselves mored, also was salutary.

"I wish to see Mr. E. H. Merriwether," said the young an pleasantly and unimpressed.

The gatekeeper wrote two paragraphs and then, still

riting, asked wearily: "Got an appointment?" "No: but

The over-mature officeboy, in one breath and in a voice at dripped insolence, said, still without looking up:

"What do you want to see him about? He is very sy. Cannot possibly see any one today. Good day!" There was a laugh, not at all ironical or in the nature of rexaggerated and audible sneer, but full of amusement; id then the stranger without the gate said:

"When I tell you what I am you will bring Mr. E. H.

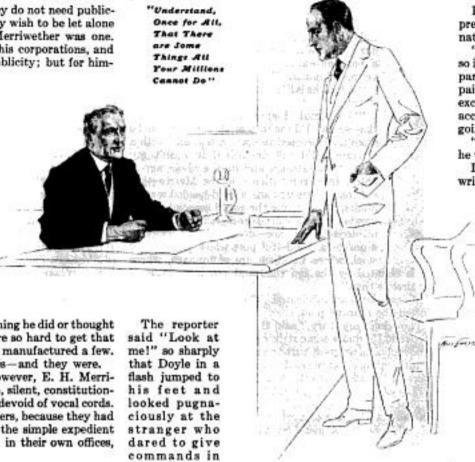

The voice was not menacing at all or cold, but there was assurance about it that made the Merriwether hireling ok up. He saw a young man, of about thirty, with very telligent gray-blue eyes, a straight, well-modeled nose d a determined chin. His square shoulders and general of muscular strength made him look as if he could give good an account of himself in a rough-and-tumble fight in a battle of wits.

The Merriwether gateman felt his entire being permeed by a feeling of hostility. This was neither a crank to m over to a complaisant police nor an alms-seeker to be ooed away; nor yet a millionaire in good standing. He ust be, therefore, a reporter of the new school made ssible by the fortunes of politics.

"My good James," said the new-school reporter with mocking superciliousness, "I would see your boss. Be

The gatekeeper, whose name was not James but Doyle, shed dangerously; but his wages were high and he forced mself to keep his temper under control. For all that, his ice shook as he said:

"If you have no appointment you ought to know it's no e. No stranger from a newspaper ever sees Mr. Merrither. I—I'm sorry!" Here Doyle gulped. Then he ished: "Good day!"-and resumed his writing.

that office.

"My Celtic friend," pursued the reporter in a voice of such cold-blooded vindictiveness that Doyle listened with both astonishment and respect, "for years the domestics of this office have been rude and impolite to my profession. Mr. Merriwether never cared how angry the reporters might feel or what they said about him; but today I am the one who does not care, and E. H. Merriwether is the man who is vitally concerned. I don't give a damn whether he sees

"And as for you, in order to avenge the poor chaps to whom you have been intelligently rude I, to whom you have been unintelligently impolite, shall have you fired. I've got E. H. Merriwether where I want him. If I can end your boss I can end your job—can't I? Oh, no, Alexander! I am not crazy. I simply have the power. It was bound to happen, for Waterloo comes to all great men who are not clever enough to die at the right time. Now you go and get McWayne-and be quick about it!"

Doyle at times saw things through the top of his head,

which was red. He said, a bit thickly:

"When you tell me in plain English, so I can understand .

"You are not paid to understand; you are paid to use common sense and discrimination. You go to McWayne and say to him a reporter is here and wishes to speak to him about a sad Merriwether family matter."

Doyle knew from the office gossip that something was supposed to be wrong with Tom Merriwether; so, his heart overflowing with anger because chance had put the one weapon in the hands of an insolent newspaper man, Doyle went off to tell the boss' private secretary. Presently McWayne, walking quickly, came from an inner office and

"You wish to see me?"

"No!" answered the reporter flatly.

"Then --- " began McWayne.

"I don't wish to see you. I wish to see if you have the sense to understand that I wish to do Mr. E. H. Merriwether the favor of letting him talk to me. Do you want me to tell you what I wish you to tell Mr. E. H. Merriwether?"

The reporter looked as though he hoped McWayne would say no. Reporters did not usually look that way, therefore McWayne was perturbed. He replied, with a polite anxiety:

"If you please

"Tell Mr. Merriwether that I wish to see him about his son's marriage. Tell him that if he does not wish to talk about it he needn't.

"You might add that there is absolutely no use in his trying to keep it out of the newspapers. Make that plain to him, McWayne."

McWayne did not dare deny the marriage. Tom was, alas! capable of even worse things. He did the only thing possible while there was still a chance to suppress the news; he said:

"And you represent which paper, please?"

Reporters do not always know why or how news is suppressed, nor the price; but this reporter laughed goodnaturedly and replied:

"McWayne, the trouble with you Irish is that you are so infernally clever that plain jackasses like myself are prepared for you. I represent myself and I don't want to be paid to suppress. No blackmail here; no threats; nothing except amiability and good will. Have you begun to accumulate a few suspicions that your taciturn boss is going to talk to me?"

"I'll see!" promised McWayne noncommittally; but he was so perturbed that he could not help showing it.

Doyle, who had made a pretense of resuming his letterwriting, noticed it and felt uncomfortable.

"And—say, McWayne," pursued the reporter, "could you let a fellow have a photograph or two? You know we've got some, but we'd prefer to publish those you think the family consider the best. Some people are queer that way."

McWayne shook his head and went away convinced of the worst. He returned and beckoned to the reporter, who thereupon said sharply to

"Open the door-you! Quick!" And Dovle. who saw McWayne beckoning, had to do it.

Four hundred and seventeen reporters were

Doyle was so angry that he was full of aches. He was tempted to throw up his job. Then he hoped E. H. Merriwether, who was a very great man, would order him to throw the insolent dog out of the office. Doyle would earn a bonus.

E. H. Merriwether, autocrat of fifteen thousand miles of railroad, fearless fighter, ironnerved stock gambler, but, alas! also a father, was seated at his desk. He turned to the

reporter the inscrutable poker-face of his class: "You wished to see me?"

"Yes, sir," said the reporter and waited: two could play at that game. The great financier was compelled to ask: "About what?"

"About what McWayne told you." The reporter spoke unemotionally.

"About some rumor concerning my son?"

"No?" E. H. Merriwether looked surprised.

"No. I wished to know what statement you desire to make about your son's engagement and marriage. If you do not care to say anything we shall not publish any fake interview, no matter what opinion I personally may form as to the real state of your feelings."

"I take it you are from one of the yellow papers, young E. H. Merriwether spoke coldly; but, within, his heart tragedy was being enacted.

"You usually take what you wish if it isn't nailed down, I have heard; but that doubtless is one of the slanders that automatically grow up about a great man, sir," said the reporter, without the shadow of a smile or frown.

"If I am mistaken about the newspaper you repre-" Here Mr. Merriwether paused, as if to allow the young man to introduce himself; but the young man

"If I told you the name of the newspaper that honors itself by playing fair with you I suspect you would set in motion the machinery that you-er-men of large affairs use to suppress news. You couldn't reach my city editor, who is a poor man with a family of eight, or the reporter, who is penniless; but you could reach the owner, who is a millionaire. This is my first big story in New York and it will make me professionally. It means a lot to me!"

"About how much does it mean to you, young man?" asked E. H. Merriwether with a particularly polite curiosity.

"Speaking in language that should be intelligible to you and using the terms by which you measure all things down " He paused and then said bluntly: "You mean in cash, don't you?"

"Well, I should say, Mr. Merriwether, that this story is - Let me see!" And he began to count on his fingers, like a woman. This habit inexpressibly angers men who find no trouble in remembering numbers of dollars. "I should say, Mr. Merriwether, that it is worth about three thousand two hundred and eighty-sixmillions of dollars! If I am to stop being a decent newspaper man to become a blackmailer and general damned fool I'd want to make enough to endow all my pet charities and carry out a series of rather expensive experiments in philanthropy."
"But ——" began the magnate.

"No, sir," interrupted the reporter; "no money, please. Just assume that I am a fool and therefore refuse to consider

"I have not bribed you," suggested E. H. Merriwether calmly. His eyes never left the reporter's face.

"Then I misjudged you and I apologize abjectly; but permit me to continue to be an ass and blind to money. What about Thomas Thorne Merriwether, only son of the railroad king of the Southwest?"

"Well, what about m?" The face of him?" E. H. Merriwether showed only what you might call a perfunctory curiosity. The reporter looked at him admiringly. After a pause he asked:

"Do you know her?"

"Do you?" "Then you don't!" exclaimed the reporter triumphantly. "This is better than I had hoped!"

When You Tell Me in Plain English, Jo I

Can Understand -

"Better?"

"Certainly; it means a better introductory article. The first of the series will be: To Whom is Tom Merriwether Engaged? Think of it, sir," he said with the enthusiasm of the true artist-"the heir of the Merriwether millions! By the way, could you tell offhand how many millions I might safely say?"

Whatever Mr. Merriwether may have thought he merely said, with the cold finality that often imposes on young

reporters:
"Young man, if you begin your career by being vulgar your ruin will be of your own doing."

"My dear sir, vulgarity never ruined any career. All the great men of history were at the beginning accused of hopeless vulgarity-by those on whom they trod. I tell you it is not vulgarity that prompts me, but mastery of the technic of my trade. Do you care to have me tell you about my article?

What Mr. E. H. Merriwether really wished to hear was that Tom was not in love-that he was not on the verge of brutally assassinating all the hopes and dreams of a fond father. What he said to the unspeakable reporter was:

"Yes."

"Well, I start with this basis-my knowledge of your son's engagement."

Where did you get that knowledge?"

"One of the few things a reporter is incapable of doing is betraying a confidence. To tell you the source of my information would be that. Starting with that one fact my problem is to make that one fact so important as to enable me to write several thousand words. To justify this I must make your son very important. He is not really very important, but you are. I shall slightly over-accentuate here and there"—he waved his hand in the air and repeated dreamily-"here and there! You will be the Napoleon of Railroads, the Von Moltke of the Ticker, doer of deeds and upbuilder, indisputably the greatest Captain of Industry that America has yet produced!"

"Heavens!" burst from the lips of the imperturbable

little magnate.

"You are a stunning study for a novelist. Yours is the great romance of the American business man! Having made you romantic I wave my magician's wand and quadruple your millions. Yours, my dear sir-if you don't happen to know it—is one of the great fortunes of the world! You've got Crossus skinned to death and John D. whining over his lost preëminence!"

"Now look here --- " interjected E. H. Merriwether

sternly; but the reporter retorted earnestly:

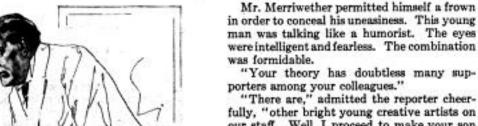

"Hold your horses!" And the great millionaire did. The young man continued in his enthusiastic way: "It is much to have the hundreds of Merriwether millions, but it is infinitely more to have all the Merriwether millions and such a father and youth. I thus make Tom, who is really of no importance, of even greater importance than the great E. H. Merriwether. Do I know my business?" And he bowed in the general direction of the elder Merriwether.

"I begin to suspect," replied the elder Merriwether,

"that you do."

He was watching the reporter closely. He always had found it profitable to let men talk on. A man who talks is apt to show you what he is; and that furnishes to you the best available weapon. You also may learn when it is better not to fight.

"When it comes to picturesque writing about people I do not know, I can assure you, Mr. Merriwether,' young man said modestly, "that I haven't an equal in the United States. In your case I shall not be handicapped by either facts or knowledge, which are always fatal to the creative faculty. I shall be free-absolutely free to write!"

misdeeds! You are-do you know what?-

song is chanted by the ten thousand purring wheels of

"My carwheels are lubricated. They don't purr," mildly

objected the railroad poet. "They do in my story," said the reporter firmly. "And to prove it I'll quote some striking lines from one of those unknown books we great writers always have on tap. Your romantic nature expresses itself in the creation of an

"That sounds good to me," said Mr. E. H. Merriwether

He did not know just how to win this young man's silence—perhaps by letting him talk himself out of creative literature; perhaps by the inauguration of a molasses diet

"Thank you! Your son Tom's romance is in his unusual love affair! This young man, the most eligible bachelor in looked inquiringly at Mr. Merriwether.

was lost in a great moneymaker.

"Thank you! And what do you find at the end of the -of my paper from intruding into a family affair."

"Will your paper be damned fool enough tobegan E. H. Merriwether, intentionally skeptical. "It is not damned

folly to extract all the juice contained in the scoop of the centuryit is technical skill of a very high order. Now what happens? My esteemed contemporaries, morning and evening, chuck a fit and bounce their society editors. They then rush for the telephone and dispatch their strongest photographers, sharpest sleuths and entire dictagraph corps to the scene. They can't find Tom; because, as you know, he is in-he is out of town. And they can't find her-because I haven't said who the young lady is. There remains you!"

"Your theory has doubtless many sup-

fully, "other bright young creative artists on our staff. Well, I proceed to make your son a paragon—a clean-minded, decent, manly young millionaire."

"Which he is!" interjected Mr. Merriwether

sternly.

"Of course! I know it. Have no fear on that score. I'd make him all that even if he wasn't. I proceed to draw attention-with a cleverness I'd call devilish if it wasn't my own—to the strange and, on the whole, agreeable vein of romanticism in the Merriwether nature. There you are, a hard-headed man of affairs, whose name the world associates with great engineering deeds and great high-finance a poet!-a wonderful poet whose lines are of steel, whose numbers are of tonnage, whose

your tireless cars."

empire in the alkali desert. You have written an epic on the map of America—in green!"

with the detached air of a critic of literature.

at once!

the world; handsome, rich, a fastidious artist in feminine beauty, with a heart that has kept itself inviolate-pretty swell word that?-in-vi-o-late-all these years, opens at her sweet voice. We alone are able to announce the engagement. High society is more than interested-more than startled. As thinks society, so thinks the shopgirl; and there are fifty millions of her. What society is incinerating itself with desire to find out is: To whom is Tom Merriwether engaged? Will our fair readers devour the article? I leave it to you, Mr. Merriwether!" The young man

"I'd read it myself," said Mr. Merriwether very impressively. "I couldn't help it!" You could see that literature had triumphed over the stockticker. A great diplomatist

article? What? Why, a nice psychological little paragraph to the effect that we propose to print the name of the one woman who, of all the tens of thousands who have tried, has won the heart of Thomas Thorne Merriwether, whose father you have the honor to be. We refrain, in order to have the parents of the young people formally announce the engagement. By doing this we get the full value of the to-be-continued-in-our-next suspense, for the first time utilized in a news story; and we also increase our reputation for conservatism, which prevents the refined reporter of

"Here is the History of the Pacific and Jouthwestern System From Its Very Start"

"That won't do them any good," said Mr. E. H. Merriwether decisively; but he shuddered.

"Pre-cisely! I banked on that. But, even if you did see them, what could you tell them? Deny what is bound to be confirmed in the next issue of my paper? You know better than to acquire a reputation for lying in the newspapers. No, siree! Your game is to deny yourself to all inquirers and say nothing. My esteemed contemporaries have now but one desire-to wit: To print the name and publish the portrait of your son's fiancée. Of course you see what happens then, don't you?"

The reporter looked at the iron-hearted E. H. Merriwether with such pity in his eyes that the great little ezar of the Southwestern Railroad for the first time in his life realized he was merely a man—a human being; an ordinary, every-day father; one drop in the vast ocean; one of the crowd temporarily above ground and therefore exposed to the same sorrows and troubles and sore vexations as all mankind. His millions, his position in the world, his great work, his undoubted genius-could not avail even to rid him of annoyance. Can you imagine John D. Rockefeller living on Staten Island in June and unable to buy mosquito netting-price, five cents a yard?

"What will happen?" asked the great millionaire, who

was also a father.

"My intelligent colleagues, of course, will look for the lady. Where there is a strong demand the supply automatically offers itself for consumption. And what will the seven hundred and fifty alert young men, with great capacities for fictional art who are temporarily assisting actressladies and self-paying authoresses and unprinted poetesses and fertilizer-manufacturers' unmarried daughters do! What will those estimable young artists, miscalled press agents, do when they encounter the demand for Tom's fiancée's photograph? What except 'Here she is!'-six thousand words, thirty-two poses and a facsimile of a love letter or two, to prove it! And then-chorus ladies, poetesses, fair divorcées about to honor the vaudeville The reporter stopped-he had seen the look on E. H. Merriwether's face. He felt sorry. "But it is true," he said defensively.

"Yes!" Tom's poor rich father felt cold all over. The

reporter pursued more quietly:
"You know the ingenuity of my colleagues, the great American respect for a millionaire's privacy, and the national sense of humor. Will your son's love affair be discussed? Will it be discussed with the gentlemanly reticence and innate delicacy of feeling of my story?"

Mr. E. H. Merriwether never before realized that the law against homicide was even more unreasonable than an Interstate Commerce Commission order: but he had to bow to the inevitable.

He was beginning to understand how Napoleon felt on the deck of the Bellerophon when on the way to St. Helena. Do you remember the picture? He nodded—not dejectedly, but also not far from it. "Well, in a day or two or three, according to conditions,

we come out with it. We print the lady's name and her portrait—possibly not the best of all her photographs, but the only one I could -

"Who is she?" burst from the lips of the reporter's victim.

Instantly the reporter's face became very serious. "I feared so, Mr. Merriwether," he said, very quietly. "Look here, my boy," interrupted Mr. Merriwether with an earnestness that had in it a threat, "I don't know

what your game is and I don't care. I'll admit right now that you are a very clever young man and probably not a crook; but I tell you calmly, quietly, without any threats, that you are not going to publish any damned-fool article about my family in any paper in New York."

The reporter rose and looked straight into the unblinking eyes of the great financier. Then he said slowly and.

the old fellow admitted. distinctly impressively:

"And I tell you, twice as quietly and ten times as calmly, without any fool threats, that all the daily newspapers in New York and Philadelphia, Chicago, Sas Francisco, Boston and ten thousand other towns in the United States, Canada, Mexico. the Canal Zone, and

countries in the Postal Union are going to publish articles about your son Tom's engagement, and later on about his marriage. Understand, once for all, that there are some thing all your millions and all your willpower cannot do. This one of them. It is the penalty of being a public characteror, if you prefer, of being an exceptionally great man. Do I understand that you have nothing to say about your son's coming marriage?

E. H. Merriwether in less than five seconds thought of more than five thousand possibilities, all in connection with his son's marriage. Then he said very slowly, fighting for time and a chance to escape:

"My son will marry whenever he and the young lady chiefly interested judge fit to do so. He and I are in perfect accord, as always." Mr. Merriwether was looking into the too-fearless gray-blue eyes of the reporter. Then he did what he did not often do in his Wall Street affrays-he capitulated. "Will you give me your word that you will not use for publication what I am about to tell you?

"No, sir, I won't!" emphatically replied the reporter. "You might tell me something I already know and then you'd always think I had broken my word. I will not pledge myself not to print the name of your daughter-inlaw-to-be; but anything that concerns you personally or your attitude toward your son's fiancée, or hints of a family guarrel-or those things that offend a sensitive man-I promise not to print. You have some rights; but I also owe certain things to myself and my paper. I've been frank with you. You can be frank with me if you wish. I put it up to you."

Mr. Merriwether, after a thoughtful pause, said: "Look here! I don't know anything about my son's engagement.

I cannot swear he is not engaged, but I don't know that he is. It follows that I do not know the young lady. You don't have to print that, do you?

The reporter gazed on the financier meditatively. Presently, instead of answering the question, he asked:

"Have you had no suspicion of any romance?"

"Well"-and it was plain that E. H. Merriwether was telling the truth, having made up his mind to that policy as being the wisest-"well, I have of late suspected that such a thing might be possible. It is, I will confess to you, a terrible predicament, tecause a man naturally cherishes certain hopes for his only son." On Mr. Merriwether's face there was a quite buman look of suffering.

"Of course," said the reporter apologetically, as though offering an ex-

cuse for a friend's misdeed—"of course a man in love is not always wise." "No. And though I have no intention or desire to bribe you, and though I would not presume to interfere with you in your professional activities or influence you by pecuniary considerations, you will pardon me for suggesting

The reporter did not let him go on. He rose and said, with real dignity:

"Mr. Merriwether, suppose we drop the matter right here."

"You mean?"

"I will not print any story yet-on one condition."

"Name it. I think likely I can meet it."

"Give me your promise that you will give me an interview the next time I come to see you. It may be in a day or two, or a week. I don't promise not to print the story, you understand; but it will give you time to—well, to see your son."

E. H. Merriwether held out his hand and said:

"I will see you any time you come. But let me say, as an older man, that if you should suffer any loss by not

"Oh, no-I shall not suffer. I propose to print my story. I am simply deferring publication; but I thank you for the offer you were going to make. It shows more consideration and, therefore, far greater common sense that most men in your position habitually display before a reporter. I'll do talking and looked doubtfully at E. H. Merriwether.

"Thank you," said Mr. Merriwether with a remarkable mixture of gratitude, dignity and anxiety. "I am listening."

"Find out why he goes to 777 Blank Avenue. There are some things a really intelligent father, poor or rich, should He caught himself.

"Please finish, my boy!" cried the great little man almost entreatingly.

"There are just a few things"-the reporter was speaking very slowly and his voice was lowered-"which an intelligent father does not trust to others—not even to the most loyal confidential men-things that should be done by the father himself. The number of the house is 777 Blank Avenue!"

"I thank you, Mr. -

"William Tully," said the reporter.
"Mr. Tully, I thank you. I think you are throwing away time and brains in your present position, and if you should ever -

"Thank you, sir. Don't be afraid. I shall not bother you by

"But I mean it," said E. H. Merriwether.

The reporter smiled and said:

"If you knew how often my fortune has been made by men whose stories I have not printed you'd be deaf too.

"Young man, I sometimes forget favors, but not the possession of brains. I need them in my business."

Well, the story will not be published yet. He acted pretty

McWayne wondered how much it had cost the old man; but he said:

"Didn't he intimate -

"That reporter knows his business," cut in E. H. Merriwether. "He ought to be a dramatist. Have you heard from your men?"

"Yes, sir. Tom has gone to Boston. Two of them are with him. He suspects nothing."

"What else?" "They will let me know by long distance if anything

happens.'

"If anything! Great Scott, isn't it enough that me hear what they report—on the instant! Remember, McWayne, on the instant!"

"Yes, sir."

"And, McWayne --- " He hesitated.

McWayne, his face full of sincere solicitude, prompted gently:

"Yes, chief?"

It was the first time he had ever used that word. It made his speech so friendly, so affectionately personal, that E. H. Merriwether said:

"Thank you, McWayne. I wish you would find out for me at once who lives in 777 Blank Avenue."

"Yes, sir," said McWayne. "That's where -He caught himself.

"I am afraid so!" acquiesced the railroad czar listlessly.

#### VIII

WITHIN an hour McWayne reentered the office. His chief closed his jaws-a weaker man would have clenched his fists-in anticipation.

"Breese & Silliman, the real-estate men, say they rented 777 Blank Avenue, furnished, to a Madame Calderonan American woman, widow of a Peruvian nitrate king. She came up here and asked Breese about a suitable location. She has a daughter she wishes to marry off in America. She talked quite freely about her affairs. The house was for sale; but she leased it, furnished, with privilege of purchase. Belongs to the Martin-Schwenk Construction Company. The daughter is about thirty, dark,

"There are Things, Mr. E. H. Merriwether, That Not Even Time Can Heat"

"Well, then, suppose you show your appreciation by telling the red-headed person in the outer office that he is to take in my card to you when I call again."

"Certainly!"

And the czar of the great Pacific and Southwestern System nearly slew Doyle by accompanying the reporter

to the outer door and saying:
"Doyle, any time Mr. Tully comes to see me let me know instantly, no matter what I may be doing or who is with me. Understand?"

"Yes, sir!" gasped Doyle, looking terrifiedly at the

Tully! Irish! That was the reason, of course; but he was a wonder, all the same.

"Good day, Mr. Tully. I thank you. And don't forget

Mr. Merriwether bowed as the door closed on Mr. William Tully and then, walking like a man in a trance, returned to his private office.

He rang the pushbutton marked Number One, and when McWayne appeared turned a haggard face to his private secretary

"McWayne, that reporter has a story of Tom's engagement, but he wouldn't tell me who the girl is."

"I don't believe it!" cried McWayne, with a not very intelligent intention of comforting his chief. At times the male Irish mind works femininely.

"Neither do I-and yet I do. It confirms Doctor Frauenthal's diagnosis. I guess he knows his business after all.

Spanish looking and fleshy; rather-er-inclined to make googoo eyes, as Breese says, in a kind of foreign way.

"Mrs. Calderon said pointblank that she wished her daughter to marry a nice young man of wealth and position, preferably a blond. I gather that the agents were rather anxious to let the house and probably encouraged her. She has paid quarterly in advance and her banking references are O. K.; but nothing about her personally is known to any one. That's all I could get."
"Very well. Thank you, McWayne."

The private secretary stood beside the desk, hesitated and presently walked out. Shortly afterward the great and ruthless E. H. Merriwether, full of perplexity and regretand some remorse over his neglect of his only son for so many years!-went uptown. He desired to know what to expect, in order to be able to think intelligently and therefore to fight efficiently. How could he fight-not knowing what or whom to fight?

He told the chauffeur to wait and then rang the bell of 777.

One of the four footmen whose faces had impressed Tom as being too intelligent for menials opened the door.

"I wish to see Madame Calderon."

"I beg pardon, sir. Have you an appointment?"

"No. Say it is Mr. Merriwether."

"Mister who, sir?"

Mr. Merriwether took out a card. The footman received it on a very elaborate silver-gilt card tray and, pointing

#### American Shipping

As TO the mere flapdoodle that was uttered in considerable quantity over the Panama tolls question, no comment is necessary. It was not only so silly but so transparent that no one could have been taken in by it. In the opinion of those who speak with greatest authority the exemption of American coastwise vessels from tolls was a violation of our treaty with Great Britain; and we suppose even this glorious Republic, with its star-spangled banner flying, its eagle screaming, and its more vaporous politicians spouting fervid rhetoric, can live up to its agreements without lasting humiliation or without craven truckling to an ancient foe.

Aside from any treaty, the toll exemption was only a covert subsidy to shipping interests; and the day of subsidies ought to be past. True, our shipping languishes; and we hope it will continue to languish if there is no way to revive it save by Government bounty. This is hardly the Congress to demand a special privilege for any interest.

There is endless discussion of the low estate of American shipping; but one indubitable fact in that connection is seldom mentioned—namely, every great and flourishing shipping interest in the world today belongs to a trust in one way or another. The most important and prosperous part of the ocean-carrying trade lives by pools and agreements in restraint of competition. There is no reason to believe that trade can prosper under unrestricted competition. All modern experience is against an assumption that it can. Probably if we have no combinations we may as well resign ourselves to having no ships.

#### A New York Election

TIME was when we dutifully followed our teachers in looking on a constitution as a tremendously important thing; but we have learned better. Theoretically, what in the field of politics could be more important than the organic law on which the whole structure of government rests? But, broadly speaking, the people have never cared much about constitutions, and they have been quite right in not caring much.

Recasting the constitution of the Empire State has been carnestly debated for years. Lawyers, judges, governors, mayors, scholars and other persons of distinction have urgently recommended it. More than six hundred bills to amend the present organic law have been introduced into the legislature. The demand for revision seemed so weighty that Democrats, Republicans and Progressives pledged themselves in their state platforms to a constitutional convention.

The question was submitted to the people in April and less than one-fifth of the voters of the state were sufficiently interested to cast a ballot on it. Among this relatively small minority, opinion was so evenly divided that close counting was necessary to say which side won; in fact after all the agitation the Empire State simply yawned and muttered sleepily: "Oh, well, revise it or not, as you please. I don't care a rap either way."

The present constitution has been in effect less than twenty years. It had hardly become operative before faults began to appear. And, with all due respect to New York's sapience, we say the new constitution—if there shall be one—will not be in effect five years before serious faults appear in it.

Who, writing an organic law in 1894, could have foreseen the political needs of New York in 1914? No more can 1915 foresee 1935. But when we come to write organic laws we must always assume—following the model of the Federal Constitution—that we can foresee, and so put in a lot of specific provisions that presently fail to fit. No wonder constitutional elections almost always show the people to be indifferent.

What is vital in our government depends on a few large and loose general principles. A model state constitution could be written on half a dozen sheets of paper; but we have not the modesty to write one that way.

#### A Transportation Tip

No CITY can have a really satisfactory transportation system without a good and reasonably cheap cab service, and in that respect most American cities fail.

This subject, we are aware, is not a popular one, because long habituation to excessive charges has schooled Americans to look on cabs as luxuries, almost as far outside the economy of ordinary folks as champagne and silk underwear. They stand patiently in an unexpected shower, waiting for an overcrowded car, or trudge with their parcels across town without even thinking of a cab; but we are unable to discover any good reason why cabs should be luxuries.

The London taxi costs sixteen cents a mile. In Paris the short crosstown trip, such as Americans almost always make afoot, regardless of weather and hundles, costs fifteen cents. Berlin charges are not much higher. London, Paris and Berlin buy our gasoline and our motors, and put them in use at from half to a third of our rates. The difference in wages hardly explains this.

Now and then, it is true, we pass an ordinance lowering taxi fares, and, generally speaking, the taxis get along as well on the lower as on the higher rate; but, with all our ordinances, our fares are double or treble those of Europe. In various American cities it is impossible to go anywhere in a cab and have anything worth mentioning left of a dollar.

Cities are always at work on this problem of transportation; but as trolley, elevated and subway can go only in certain prescribed places there is no satisfactory solution that does not include good and reasonably cheap cab service.

#### A Tax Trouble

ABOUT taxes a few things may be asserted with the utmost confidence. One of them is that there never can be an even approximately equitable system of property taxation unless the fixing of values is removed from local influences.

A Minnesota report shows that the local assessors generally ignored the legal mandate to return all property at its true value and substituted various ratios of their own, with the inevitable result that "the assessment abounds in the grossest inequalities." A New Hampshire investigation found some assessors returning property at fifty per cent or less of its true value and others at seventy per cent or more. In every state where the valuing of property for taxation is left largely to local officials the same conditions can be found.

So long as a general property tax is retained—which will undoubtedly be a long while—the only rational way to levy it is through a state board to which local assessors are directly responsible. The local assessor is almost always a taxpayer himself. His friends and political supporters are taxpayers. He does not want his community to pay more taxes relatively than some other community. His constant tendency is to cut down valuations.

Another thing that may confidently be asserted is that any attempt to assess all sorts of property at the same rate will fail. Minnesota now proposes to tax some personalty at a quarter of its value, farm products and livestock at a third, iron ore at half. In many other states different rates for different sorts of property have been adopted.

Assessments made or strictly supervised by a body free from local influences, and classification of property for taxing purposes, will go some distance toward making the general property tax tolerable.

#### A Sentimental Rebellion

RECENT English events are as remarkable as any that have occurred in the British Empire in half a century. For more than a year eminent Englishmen have openly preached civil war and openly prepared for it. Leaders of the second great political party have repeatedly declared in effect that a valid act of Parliament should be resisted by armed rebellion.

More extraordinary still, something very like coercion of Parliament by the army has happened, though two

years ago any Englishman would have said that would be preposterous. By a threat of wholesale resignations, officers of a cavalry brigade and of two regiments of lances have forced the government to negotiate with them, and procured what the leaders of this general strike of army officers triumphantly, but not accurately, described as "a signed guaranty that in no circumstances shall we be used to force Home Rule on Ulster."

And all this commotion is over a name—a sentiment. The Irish Parliament for which the Home Rule Bill provides is to be a body of strictly limited powers. In important respects it is more circumscribed than our state legislatures.

That it would in any way oppress Ulster is incredible. It could not even if it would. Under its limited rule every Protestant in the north of Ireland would go about his business and pleasure as freely and securely as he does today. He would be as much a British citizen as a Catholic in Iowa is an American citizen; but for matters of local legislation he would be parceled off on equal terms with the other inhabitants of Ireland.

That equality is what he cannot endure. There would be no injury to his person or property, to his freedom of thought or speech or action—but only to his sense of radial superiority.

To prevent that sentimental injury he is ready to revolt against constitutional government.

There is a famous theory of history that would explain all important human actions as arising from economic motives; but sentiment is still the bigger factor.

#### Planting Colonies at Home

IN PLEASANTLY forecasting a life-and-death struggle between England and Germany, writers and speakers keep on repeating that Germany must have colonies for her expanding population—quite as though there were the slightest truth in the statement, or as though the most cursory investigation of an open-minded nature did not disprove it.

In the eighties the population of Germany was about forty-five millions and it has grown to nearly seventy millions; but emigration has greatly declined. In the decade beginning with 1881 nearly one and a half million Germans emigrated from the Fatherland.

In that decade the natural growth of population by excess of births over deaths amounted to five and a half millions. In the decade beginning with 1901 the growth of population by excess of births over deaths was more than eight and a half millions; but only two hundred and twenty thousand Germans emigrated.

In 1912, when the population was sixty-six millions, there were only eighteen thousand German emigrants.

In other words, there is more room for Germans in the thickly populated empire of today than there was a generation ago, when the population was little over twothirds of the present number.

The explanation is that in 1882 less than six and a half million inhabitants of Germany were engaged in industry, while now more than eleven and a quarter millions are so engaged.

Within a single generation the development of electrical industries alone has made a place at home for more Germans than could be induced to go to any African or Asiatic colony.

#### Steam and Electricity

TEN years ago the steam railroads of this country took in seven dollars for every dollar received by electric roads. Now the electric roads get one dollar to the steam roads' five.

In other words, while steam road receipts have increased sixty-five per cent, electric road receipts have more than doubled. Three times in the decade steam roads have gone back or failed to go ahead in net earnings; but every year the electric roads made a gain both in gross receipts and net earnings.

Last year the steam roads, though gaining nearly a hundred and fifty million dollars in gross receipts, lost over thirty millions in net earnings; but the electric roads gained about six per cent in both gross and net.

With very few and unimportant exceptions there has been no increase in the rates of fare charged by electric roads. They are subject to the same general conditions of higher cost of materials and higher wages that cause the operating expense of the steam roads to increase rapidly, the increase last year alone being over a hundred and seventy-five million dollars; but by continual improvements in generation and transmission of current and in other details of operation the electric roads are able to overcome the factors that make for higher operating expense, while the steam roads are not.

Steam transportation on land seems to have been pretty thoroughly exploited. It yields comparatively few new economies; while electricity still has a large unexplored margin. The future of transportation, no doubt, is with electricity.

# WHO'S WHO-AND WHY

### Serious and Frivolous Facts About the Great and the Near Great

J. Benjamin Dimmick in Garden

qualification for the United States Senate that J. Benjamin Dimmick lacks, so far as I can see, is that he is not a politician. Since we began

fessional

having a Senatethere has been, of course, a tendency to consider this qualification essential-not, perhaps, by the senators themseives, but by the men who make the senators. In reality the Senate is composed of ninety-five politicians; but there would be ninetyfive denials, vehement and indignant, if that statement were made within the hearing of the full membership of that body as at present constituted, and ninetysix if the roll were full. Also, there

would be ninety-five following and vigorous assertions that, instead of being politicians, senators are statesmen; but we may let that pass. It pleases the senators and it

does not alter the facts. As a senator looks at it, he is a politician until he besomes a senator. At the precise moment te takes the oath he firmly believes he s transmuted from the grosser capacity to the finer quality. This is but a chimsicality based on a vague realizaion as to what a senator should be—a tope rather than an expectation.

There has been no similar error of odgment on the part of the politicians she have had the making of senators. is they look at the matter, the man elected to be a senator is a politician or ie would not be selected; and he is to emain a politician or he will not be reelected. To be sure, it has happened hat the man selected became more owerful than the men who put him in slace, and had most to say concerning is own return; though this is not beause he became any less a politician han he was in the original instance, but ecause he became greater along those ecessary lines.

The third side of the triangle is the cople. Until quite recently, except in few localities, the third side has been he negligible side. Senators were icked by the politicians and both the ickers and the picked were politicians. The part of the people was to indorse he selected and make effective the seections by sending to state legislatures ien who would operate complaisantly and do their part in carrying out the becree of the bosses.

Not so long ago the senators themelves, observing that the people had egun to hold this method as obsolete then considered in the enlightened perpective of the time, and being of suffiient political prescience to disregard vhat their former fellow laborers bought of the situation, made it posible for the people to expand from one ide of the triangle so as to include the HE only pro- remaining two sides. The Congress put before the states a constitutional amendment providing for the direct election of senators by the people. The senators did not want to do this, but they had to.

Thus, though the old bosses doggedly insist that the politician requirement is still essential, the fact is that the laymen are most likely to take an exactly opposite view. The question, insistent at this time when one-third of the Senate membership must go before the people for indorsement because of the amendment to the Constitution, does not concern the political aptitude of the candidates for the Senate, but does concern their potential usefulness as legizlators for the welfare of their constituents.

Must a man be a politician to be a senator? Need he be a politician to be a good and useful senator? Is knowledge of the devious ins and outs, the subterfuges, hypocrisies, fakes and insincerities of that profession requisite for the adequate discharge of senatorial duties? Is a man unfitted for senatorial place because be is not a politician?

#### Lawyer, Banker and Business Man

SO FAR as the people are concerned, the majority answer to these questions is comprehended in the "Yes!" they shout to the further question: Is it not the case, rather, that a man who is not a politician in the accepted sense of the term will make a far better senator than a man who came into public life because he was a politician and has remained there for the same reason?

That, I take it, must be the judgment concerning Mr. Dimmick. He is not a politician. Everybody grants that, and he does not claim that distinction; but he is a lawyer, he is a banker, and he is a business man. He has had experience in public affairs. He is a man of integrity and of the highest honor, who has made a success of his life, who has won to the front rank in all three of these important phases of endeavor-the law, finance and business.

As it stands, the legislating that is done for this country is done in the main by men of no experience in business. We spend more than a billion dollars a year-more than a billion!-in our upkeep. This country is a business institution that requires the expenditure of that vast amount of capital for its proper and successful conduct—a business institution; though it is at present managed by a board of directors and legislators of whom not one per cent is composed of men of business experience and of whom more than ninety-nine per cent consists of politicians.

This country is a business institution, and every person who lives in it owns stock in it. Likewise every person is directly or indirectly assessed according to the amount of stock he owns. Oddly enough, so potent has the political fetish become, the men owning stock in this country give their proxies for the management of the country into the hands of men who consider that management not from a business viewpoint, but from the viewpoint of politicsand most often personal politics at that,

In other words, the ordinary citizen does to this country, with its billion dollars of expenditure every year, what he would not for a moment think of doing with his individual business or any enterprise in which any share of his capital was invested. He lets the politicians do his governmental business politically when the way is open to give the control of it over to men who not only understand business but

are of the highest integrity and of proved success.

Mr. Dimmick is one of Pennsylvania's most successful business men. He is the son of Samuel E. Dimmick, who was Attorney-General of Pennsylvania under Governor Hartranft, and was born in Honesdale in 1858. He graduated from Yale, studied law and is a member of the Lackawanna County bar. He not only practiced law but engaged in banking and manufacturing in Scranton, which is the third largest city of Pennsylvania.

A Scranton manufacturing company got into difficulties and Dimmick took hold of it. He reorganized it, made it one of the most successful concerns of its kind in the country; and did that not by decreasing cost of production, but by paying higher wages than are paid by any similar company in the United States. He became president of the Lackawanna Trust and Safe-Deposit Company and, as his activities grew, took over interests in other banking concerns and in other business enterprises in Scranton and elsewhere in Pennsylvania.

His ability both as a lawyer and as a business man, and his high sense of public duty, made him the nominee of the

Republican party for Mayor of Scranton in 1906. At that time Scranton was boss-ridden. Its municipal government was conducted for the benefit of the machine politicians and their followers. It was a wide-open town, and wider open than most-in the East, at any rate.

Mr. Dimmick was elected; and he cleaned up the city, both morally and physically. He made it wholesome so far as its morals were concerned, and sanitary in its physical aspects. He was a business man and he ran Scranton on a business basis instead of by a political-machine formula. When he quit office Scranton was a clean city and was on a decent business foundation.

As Mayor of Scranton Dimmick did what there is great need for men of his stamp to do with the affairs of this Government. He was not influenced by politics. His actions were directed by the municipal needs of the people of Scranton as viewed by a business man skilled in the conduct of large affairs. Moreover, he is a man who will bring to the United States Senate those very qualities in sufficiently wide vision to make him as valuable to his state and to his country as he was to Scranton.

He is a Republican who believes in the rehabilitation of the Republican party; who is thoroughly in sympathy with the forward tendencies of the time, who is opposed to the continued domination of the bosses, and who has no entangling alliances.

Everything in Washington is political, and the present condition of unrest and protest is the result. Men of the Dimmick type are needed at the Capital; for when you ask, What is the matter with the governmental affairs of this country? the answer, if it is true, must be: There is too much politics in the business of this Government and not enough business in its politics.

# THE TEST By JOSEPHINE DASKAM BACON

ARIE FITCH rang the bell, stepped inside the tiny vestibule and tapped the shining knocker sharply.

She slipped into the fresh whitepainted hall with her usual quick, birdlike motion, but stopped suddenly, even as Max Fettauer's butler-valet-officeman-chauffeur drew her swathing velvet coat from her shoulders, and fingered the sash curtains on the sidelights pensively.

"I don't like that ivory tint after all," she said thoughtfully; and added: "Have these been washed yet, Joseph?"

"Madame, no," he assured her respectfully.

"They're all right by day, but they'll have to be deeper for night, I think," she mused. "I'll send up some real écru, I think."

"Bien, madame."

"I'm a little late. Is Mrs. Fettauer down?"

"Madame, no. Madame has not yet come in; but the doctor, he is here, and if madame will come to the library

Marie lifted her flexible eyebrows and trailed her twisting olive train up the stairway, tapping the wall authoritatively halfway.

"Don't try to wash that off, Joseph; take stale bread," she said abruptly. "I'm sorry to say it spots." "Bien, madame."

"The office walls wash all right, don't they?"

"Perfectly, madame. Today, only, Kat'rine and I have cleaned it-the office-entire.

"Does the doctor like his office, Joseph?" she asked from the landing.

"The doctor, he prefers his office to all the house, madame. Only yesterday he speak of it to madame."
"That's good." And she walked into the library, her

slim arm outstretched.

"How are you, Max?"

Fettauer sprang from his leather chair, threw away the inevitable cigarette and took her hand warmly.

"My dear Mrs. Fitch! This is always such a pleasure!" He looked very young. Marie found herself thinking that his smile was more boyish, even, than before his marriage.

"Lucia's not in, Joseph tells me. I hope nothing's the matter. She's not ill-or anything?"

"Heavens, no! Was Lucia ever ill?"

She laughed and perched on the arm of his chair's mate. "I believe there is a legend that she had jaundice in Rome once; but somebody went to the hospital, full of flowers and sympathy, and found her cleaning it and reorganizing the staff!

"Naturally! I wonder she didn't drain the Campagna! Seriously, though, she's very naughty, and I apologize for her. The grand high muck-a-muck of all prisons-from Ohio, I think he is-who was to honor us tonight as your vis-à-vis, is making a speech somewhere and Lucia is introducing him. It seems the mayor was late and they couldn't begin without him; the speech was long and the reception bids fair to be longer. So Lucia telephoned that we were not to wait too long—and you would understand! I hope you do?"

"Oh, yes!" and Marie subsided into the claret-colored "What's the difference! How's everything with leather.

"Quite all right, thanks. I hope you're admiring your handiwork!"

Marie gazed appreciatively about the snug, rich-colored room. The dull-gold walls above the lines of dim-tinted books; the dark red leather; the long, narrow mahogany table, with the homelike student lamps; the tiny tables ready to each deep-seated armchair—had been her specia study.

"Do you agree with me now about the curtains, young man?" she challenged him. "Or do you still think the room could stand more red?"

"You were right, as always," he assured her, with a gallant wave of the hand. "Anything but this particular goldy olive would have been impossible! Seriously, Mrs. Fitch, you've made us so fine and prosperous looking that I feel a little ashamed of us. It's hard to remember that we aren't so rich as we look!"

"Nonsense!" she said brusquely; but he knew she was pleased. "It's not that—it's my informing all your friends

what gifts would fit into my scheme—that's all. So everything counted and there were comparatively few gilt clocks and odd chairs and fish-sets! People really liked it, I think; it took away some of the responsibility.

It was a wonderful scheme," he said admiringly. "You see all those doctors at the hospital would have given different things; and when I suggested this table they were delighted. The same way with the dining-room set; the Forsythes, the Varnhams, the Girards—the whole crowd-simply whooped with joy at the idea. And, of course, they know you're using it all the time; and everybody's pleased."

"It's much too handsome for us."

"That's silly, Max! I got it at that Leydendecker sale, you see—from the house at Albany—and few dealers knew of it. And I got the bottom price, of course. You couldn't pick it up in New York for anything like the price, you know. I wanted dreadfully to write to your brother and suggest the dining-room rug; but I was glad afterward I

hadn't had the cheek when I saw that family silver chest!"
"Oh, that's our regulation wedding gift," he explained. "It's the third now, and the last probably, for my sister is very unlikely to marry. I was amazed that she should dream of coming to be bridesmaid; really, Mrs. Fitch, I couldn't believe her letter!"

'She was so interesting! I realized for the first time, Max, that you were really a foreigner when I saw her. And Count von Ette-oh, why don't we have uniforms like that? He was the most beautiful best man I ever beheld."

"Fritz is a handsome peacock," he agreed; "but oh, Mrs. Fitch, you should hear him on the American girl!'

"You mean to say he didn't reciprocate? They adored him, you know. Cynthia Girard and Nancy Varnham nearly came to blows over him."

"I know. Will you promise never to tell if I tell you what he said about those young ladies?" 'Never!"

"He told Nette that they should have been spanked back to the schoolroom!"

Marie laughed and settled back comfortably into the padded chair.

"I never could quite understand, Max, how you took such a risk," she ventured softly. "Any American girl would have been a dangerous experiment—but Lutie! How did you dare?"

"She was the only girl I ever wanted to marry," he said. "Really?"

She studied his dark, controlled face narrowly. More and more he interested her—this clean-cut young surgeon to whom Lucia had yielded "because it was easier to marry him than argue about it."

"Somehow I'd always fancied that Lutie would marry a much older man," she said; "her friends are all so much older than she is.'

"Her women friends—yes," he answered quickly; "but older men don't care for her, do they?"

"Why, I believe you're right!" she cried. "How ridiculous I never thought of it! Isn't that interesting!"

"That's the type," he began slowly, rolling a cigarette thoughtfully between his white, broad-tipped fingers. "It was one of the first things I noticed about Lucia Do you remember the first time ! met you, Mrs. Fitch? It was in a party of inspection to the Tombs."

"Oh, I know! We were just getting into the prison work!"
"Yes. As a matter of fact you

hadn't any idea of all this great prison investigation and reform then; Lucia was following up the career of one of the urchins in her boys' club."
"I remember." Marie smiled

reminiscently and her sharp face softened. "That was three years ago, wasn't it?" she said.
"Quite. Well, I was asked to go

round with the crowd and see what had happened to the young ladhe had just escaped the juvenile court and wasn't really old enough, Lucia insisted, for a police court. I had just been operating under Bull and wanted to shake off the strain-for it was a tricky operation and if it failed I'd get the blame. If it succeeded-of course that was another matter."

He paused, glanced at the handsome ship's clock on the mantela wedding gift from the officers of his first voyage-and

pressed his lips together for the fraction of a second. "Will the doctor have

"Yes, Joseph; serve dinner directly. Madame will not dress when she comes."

Marie took his ceremonious arm and they entered the dining room, no detail of which escaped her proprietary

"You don't find the white paint too much, Max?" "On the contrary, I like it immensely. The ordinary

New York dining room is a cavern." "So it seems to me, and I thought one dark room was

enough. I couldn't resist the library. But I think Lute makes a mistake in putting those embroidered things on the sideboard; they're splotchy."

"They shall be removed," he assured her, amusel.
Then, when the soup steamed before them: "What s

wonderful wedding present this was, Mrs. Fitch! Did any one ever have one like it, I wonder!"

'I loved to do it," she answered eagerly; "I never enjoyed a present so much. Of course I've done lots of entire houses, but never quite like this, for a friend-and one I knew so intimately as Lutie. It was great fun to try to express her personality—and yours," she added, with a sly glance at him. "Of course I had to guess more or less there."

"My compliments on your intuitions, madame!" he smiled at her.

"What do you like best?" she begged.

"My office and the drawing room," he replied promptly. "Good! They're the best rooms. Of course a small house like this is easier in a great many ways."

They are in silence, smiling sympathetically at the dejected soufflé, which had not been able to adapt itself so philosophically as the host and guest to the twenty minutes' delay.

'Your sister was most amusing about my doing it all." she began. "(Not at all; I don't object to mutton a little overdone.) 'Fancy allowing any one to decorate and furnish one's home!' she said to me when I escorted her through the house. 'Do you mean that you are arranging be

bedroom? That you decide on the kitchen?'
"'Indeed, yes, Fräulein; down to the pepper mill.' I assured her. She threw her hands in the air.

"And cried Du Liebe! no doubt," Fettauer added. Just that, Tell me, did you think it strange?

"Not at all. I knew the type. As Lucia put it: 'Marie has made a special study of all this and knows a lot better than I do. We're lucky to have her taste.' It's the Ameican point of view, dear Mrs. Fitch; and there's a lot to be said for it, as a matter of fact. That it would be my own point of view -

He shrugged his shoulders slightly. "And yet you let me handle your office?"

He smiled into her eyes.

In the first place, I was curious," he said frankly. "In the second place, I knew I had to do with a clevel, practical woman. In the third place, I foresaw what I have recognized since—that you would know quite as much what to leave undone as what to do. My offices, dear lady, were masterly outlines—for me to fill in."

She laughed.

"But Lutie didn't know that," she said.

"Oh! Lucia's intuitions run along other lines."

"The prison muck-a-muck won't get a tongue-mousse like that, wherever he's dining," she suggested; "she's probably giving him ale and ham sandwiches in the probationers' restaurant."

"To show the gentleman the workings of your scheme quite right," he agreed placidly. "I am only grateful not to have a household staff from the Bedford Reformatory and a cook from Blackwell's Island!"

"You little know how nearly you had them, my young

friend!" thought Marie.

"It was ale and sandwiches we had, that night I began telling you about," he went on, digging into a squat, orange-colored cheese. "And while we tucked them away, it suddenly occurred to me as I looked about the table, where we were squeezed almost too close to eat and the smoke from the cigarettes blurred like a cloud, that the ages of the party were curiously distributed.

"There was Miss Lucia Stanchon, twenty-eight, and looking older; there were you and Mrs. Forsythe and Mrs. Varnham, somewhere under forty, I thought; and there were little Van Wynken and that young Count What'shis-name, with whom he played about; and Bobby du Long and myself—and not one of them was over twenty-

six. And I, the oldest, was just thirty."

"Why, to be sure!" Marie nodded confirmatively.

"I never thought of that," she said, adding quickly:

"But you must remember, Max, that there was a sort of reason for that, after all. You see Peter Forsythe and Dick Varnham and—and my husband wouldn't have been dragged on such an expedition for anything in the world.

Men of that age ——"

"Oh, I understand all that. Though I'd like to suggest to you that Herr Peter has a flourishing boys' club—and Mr. Varnham plays baseball once a week with the lads in the villages near Hawkfield, by the way! But what I mean is that no man of her age—or the equivalent of her age—likes to do what Lucia likes to do. The Americans of thirty-five, say—which is the least age she could afford to associate herself with definitely—don't play with Lucia, somehow. Three years ago, before everybody was dancing as they do now, your husbands didn't care to dance or to play tennis with women; or to visit police courts with women; or to eat sandwiches in rathskellers afterward with women."

"That's true," Marie agreed.

"And yet the sisters of her young men bored Lucia—
"cst-ce-pas?"

"That's true," she repeated.

"As a matter of fact, now, do Peter Forsythe and Dick Varnham and Mr. Fitch like my wife?"

"Oh, Max, what a question! We've been pals—all of us—for years and years!"

"I know. But be honest and tell me now, since we're in the subject, do they personally, without regard to their wives' friendship for

Marie laughed.
"Let's have coffee in
he library, shall we?"

ier, like her?"

he library, shall we?" he suggested. Then is they sat down she aughed again.

'You're quite right bout the husbands, dax," she admitted. 'Peter doesn't approve f Lutie, and feels that he enticed his precious fattie out of the home ircle into what he calls that damned prison ork.' Did you hearou must have-how eabducted her and hid er away all summer, terally in a cave in the oods, with the chilren, and cured her, as e says? It greed with Mattie, bough; I'll admit that. hen Dick Varnham ndLutealwaysfightlways have. He says he's clever enough, ut he'll be darned if e'll be bossed out of his oots by any woman live! Hesays shetried o dictate the temperture of his bath."

Fettauer chuckled.

"But they respect each other, really. And they really get along pretty well, working on the farm at Hawkfield. They built a dam together once."

Marie laughed out suddenly.

"Dick said a dam was an awfully convenient thing to build with Lutie—you could refer to it frequently and relieve your feelings!"

"And Mr. Fitch?" Max suggested.

Her face hardened. Few people who knew her well mentioned Randall Fitch unnecessarily to his wife.

"Oh, Ranny detests Lutie," she said lightly. "They never meet. He calls her the spotlight uplifter, and she says she really can't know men who wear checked trousers. It's simply one of those antipathies——"

"Of course," he nodded, fitting his after-dinner cigar into his pasteboard holder. "How about Walter Girard?"

"Oh, Walter!" Marie pursed her lips doubtfully. 
"Walter's different, you know. He's not really in the crowd; I doubt whether Walter ever was in any crowd. 
He's a queer, solitary, self-sufficient sort of fellow, and I don't think he looks at women. Queerly enough, I think 
Lutie rather likes him. They play golf together. She says 
he never speaks though. How Betty endures it I don't 
know. I believe Walter would be perfectly happy on a 
desert island."

"I hate to think of Madame Betty on a desert island," Fettauer said, smiling.

"Betty? Don't worry! She'd fascinate the nearest merman and he'd swim away with her wherever she wanted to go!"

"Would she like it when she got there?" he added quietly,
"You're very clever, Master Max," she told him; "but
don't criticize our Betty! You can't apply the same rules
to a woman of genius—ah, there's Lutie now!"

"That certainly resembles her slam," Lucia's husband agreed quietly, as its echoes resounded through the house.

"Is that Joseph she's talking to?" Marie wondered aloud; but a hearty bass laugh and a heavier step than Joseph's on the first flight of stairs prepared them for the big, good-natured, sack-coated fellow who entered the library at Lucia's heels.

"Well! You certainly look very comfy-you two!"

Lucia stood in the doorway staring aggrievedly at them. Her fur-trimmed to ue had slipped to one side; her muff bulged with papers. A wisp of warm, molasses-colored hair lay along her cheek. She looked tired; but above the dark circles under them her eyes beamed triumphantly, and her boyish smile was as compelling as ever, though her cheeks were pale and a little too heavily lined for the beginning of the evening.

"Woof! I'm nearly dead! Is there anything left for us to eat? Hello, Max! How's Ri-ri tonight? This is Mr. Ben Braden, of the Ohio penitentiary, people! And he's nearly as starved as I am. Perfectly grand meeting, children—over fourteen hundred; and the mayor made the

speech of his life!"

"You crazy child, do you mean to say you haven't eaten?"
"When do you think I had time to eat? I had a glass of milk at six, though. Anything for us, Joseph?"

"Joseph looks worried," Marie suggested.

"Joseph's got to learn," said his mistress shortly. "I wish Max had let me bring Potts with me—he was used to odd meals, and father was willing."

Marie smiled at her host.

"Perhaps Potts wasn't quite so used to Max's office work as he was to odd meals," she said.

But Fettauer's smile was merely polite.

"Let me show you the way to the dining room, Mr. Braden," said he; and as the big Westerner looked doubtfully at his ungloved hands Lucia shook her head impatiently.

"Oh, for heaven's sake, don't stop to wash," she cried plaintively, "or I shall faint on the floor. Come right on with me—you can take a Turkish bath afterward if you

like!"

Braden burst into a great laugh.

"I don't believe there's much chance of this little lady fainting!" he said admiringly. "She ought to be out in Ohio, with us. She certainly can put things through!"

"And you consider that a peculiarity of the residents of Ohio?" Max inquired. "Dear me! Come down one flight farther, Mr. Braden, and inspect my lavatory. Lucia, we'll be with you in a moment."

Marie smiled to herself as Lucia shrugged her shoulders and dropped into a seat at the table.

"Max is so obstinate," she murmured. "Joseph, bring me a cocktail directly."

But Joseph placed a cup of hot soup before her even as she spoke.

"Doctor Fettauer tells me that this is the first thing madame eats," he said gently.

"Nonsense! Some Scotch, then—oh, well, I'm too tired to argue." And she gulped the soup hungrily.

Marie watched her in silence. Was it her firm, cleft chin, her brusque gestures, or simply the shade too much of flesh that cased her taut muscles? Whatever it was, Lucia looked almost older than her young husband.

"And she's three years younger!" mused her friend.
"In five years there'll be no doubt of it. I believe it's all
this managing."

"Max is down on cocktails, then?" Marie asked as Joseph hurried in with some apologetic slices of mutton.

"Always was. Of course it's nonsense—nothing else pulls me together so; but he says that if I depend on them whenever I'm rushed to death I'll be in an inebriate's ward—because I'm always rushed! Of course there may be something in that, you know."

And Lucia's warm gray eyes flashed with the old jolly, compelling charm into Marie's, so that the other woman

laughed in spite of herself.

"Oh, Lutie, you child!" she sighed. "Will you ever grow up? And yet"—returning to her first thought— "you look grown-up enough tonight, God knows! Aren't you getting fat? What do you weigh now?"

"For heaven's sake, Marie, do you suppose I spend my time on the scales?" Lucia broke her dinner roll irritably. "Bring me some butter, Joseph, I'm famished. And I'd rather have ale than that Moselle."

"Bien, madame." And Joseph scurried behind the beautiful leather screen that Marie had advised the

Women's Auxiliary to present to their chairman.

"A bottle of madame's ale—and be quick!" he hissed from mysterious inner spaces.

"It's all very well for you to make a fool of yourself on one square meal a day if you want to," continued Lucia; "but I couldn't get through what I have to without food, believe me!"

"But, my dear, you select such fattening food!"

"All right! I tell you I'm simply all gone without it, Marie! I simply cannot go from eight to one without a glass of milk, if you mean that."

"Oh, very well! It is not my affair. Of course, so long as Max is pleased——"

"Indeed! And do you suppose that I cat in order to please Max? I managed to nourish myself so as to put through what I had to for some time before I

met Max, and I trust to go on for some time longer on the same basis!"

"It must be jolly for him if you come home in this state of mind often!" Marie remarked placidly.

"Max knew my various states of mind before he married me, didn't he?" Lucia de-manded shortly. "Did I ever pretend —" "No, Lutie, you never did," her friend assured her. "I will say that for you." "Well, then, he knew what he was get-ting," said Lucia, appeased. "So it's up to him."

him."
"But perhaps he thought you'd change,"

"But perhaps he thought you'd change,"
Marie hazarded.
"Why should he? Why should the fact
that I live in this house make me act differently from what I did when I lived in my
own? When I changed my name I didn't
change my nature, did I?"
"Evidently not."
Marie stared at her friend through narrowed lids. Never before had she so realized the difference in their ages; the frank
change of outlook since she stood pale and
tired in her white satin and pronounced—

tired in her white satin and pronounced-

so firm of voice, so vague in thought—her calm "I do."
"Do you know, Lutie, I believe you really think that's the main fact of mar-

riage—that you live here instead of with Doctor Stanchon!" she burst out. "You'd think so if you lived with Max!" said Lucia imperturbably. "He's a regular old maid! I never supposed a doctor could be so fussy about being on time for meals.

anyhow!"

"I live in hope of undeceiving you, my dear," and Fettauer escorted his guest into the room. "If you could lunch with us Mondays, Wednesdays and Fridays, after clinic, and see our controlled rage if one of us reaches the table at one-twenty instead of one-fifteen, you'd see that one member of this family understands and respects his

stomach!"

"Oh! So that's why you picked those days for the office?" And Marie motioned Mr. B. "den to her side.

"Yes, wasn't it considerate of me?"

Lucia threw a saucy glance at her grave young husband, and his eyes caught and

held hers for a swift, warm moment.
"Oho! Old maid—is he?" thought Marie;
and then: "I wonder which of you two
gets the upper hand, Mrs. Lucia Stanchon

Fettauer!"

"I'm afraid you'll be eating alone, Braden—Joseph, bring Mr. Braden's soup," Max began. "These public workers get a habit of lunch counters, I believe."

habit of lunch counters, I believe."

"If you mean that for a brutal dig at me, Max, my lamb, it's no use!" his wife cried gayly. "I gave Mr. Braden all the chance in the world to begin with me; but he preferred to prink—or, rather, he had to pretend to prefer to! So if he's starved and lonely—it's his affair."

Mr. Braden smiled at her appreciatively. "You've no kick coming from me, Mrs. Fettauer," he assured her. "I'm well accustomed—as I'll bet you are—to eating when I can and being grateful to get it—

when I can and being grateful to get it—
especially on a trip like this. Your wife
would make a great campaigner, sir," waving his bouillon cup respectfully to Max.
"Or a great anything!" he added, draining
the squat Chinese bowl with relish. "When I saw that big, bustling restaurant, coppers shining, waiter girls so attentive, crowded with customers; the system, the neatness, the good, solid food—yes, thanks; rye, if you have it handy—I tell you I wished we had her in Ohio!"

He spiffed his mutton and couliforms.

He sniffed his mutton and cauliflower

with keen interest.

with keen interest.

"And I'll bet she runs this home every bit as well!" he cried enthusiastically,
"You will find no takers here, Mr. Braden," said Doctor Fettauer gallantly,
"Oh, housekeeping isn't difficult, Mr. Braden—really," said Lutie, relaxing, full fed, contented, and stimulated unconsciously by the open admiration of the big, breezy fellow.

She lay back in Max's serving chair, flat-

She lay back in Max's serving chair, flattered, at peace with the world. Food was always an instant tonic to her; and the sense of growing power, of authority, of ability to set big things in motion—the while this charming, dignified little establishment revolved so smoothly under her hand—gave her a curious detached sense of her own personality; she seemed to watch herself, amused.

One moment on a platform, civic dignitaries at her side, attentive faces, mob-like, turned toward her; a moment again, and the mob, blind now and surging down

the marble steps, was all about her-s was part of it; yet a moment, and t steam of the soup-kettle, the clash of plat and the heat of the great electric broils made a new background for the respect faces that clustered about her.

And now here she was in a silence th one positively felt, after all the moveme and clatter, at her own glistening table; her own quiet, clean-scented, clear-spac rooms; her own soft-stepping butler movi behind the russet-and-gold leather scree

behind the russet-and-gold leather scree Strange! Life moved so quickly—t pool of garnet roses glowed against to white linen; silver caught the light he and there under the garnet-laced cand shades; how perfectly the entwined me ograms on the big dinner napkins we embroidered, frosty and fine! How exq sitely gowned Marie was! How dark a distinguished Max was as he faced her! It was the very conftrast that made the life of hers so full and fascinating—he bored those women must be who knew he one mode of life, one set little scene! The

one mode of life, one set little scene! The one mode of life, one set little scene! The was why they wanted to be men; but she Lucia—she didn't want to be a multi-multiple of the stiff collar pinched her neck—whad she not changed into evening dreamed seven Marie had admitted that and even Marie had admitted that it

and even Marie had admitted that I

plumpness improved her shoulders!
"Lutie! Are you asleep?"
She turned dazed eyes on them; troses in the center of the table blurred a receded to a great red distance, like a su set—then sprang back sharply into pla as she sat up with a drowsy laugh. "I—I've been on the go all day!" s

murmured.

They smiled at her as at a child. Nothishe did could seem otherwise than endering to Mr. Braden, it seemed.

"She's a regular human dynamo!" chuckled delightedly. "I'll bet you would tire many a man to keep up with the doctor!"

her, doctor!"

"Oh, that goes without saying now days," Max returned easily. "It's que the fashion, you know, Mr. Braden. T man we dined with last Thursday told

man we dired with last Thursday told he'd been taking a nap from six to seven be ready for Lucia!"

"Now what do you think about that their guest demanded. "Well, well, well "However," Max went on, "even wh we used to call the weaker sex may be st we used to call the weaker sex may be st posed to recuperate occasionally; and i-might suggest it, Lucia, you'd better to yourself away and go to bed! We agre to take that nine-o'clock train for Lo Island, you know."

"I know," said Lucia dolefully; "thou it was a fiendish thing to propose, the train. Perhaps I'd better. If Mr. Brac will excuse——"

will excuse

"Oh, I'll finish my cigar with your go husband here and jump for my trail Braden assured her. "Good night, N

Braden assured her. "Good night, M
Fettauer. It's a real privilege to mee
woman like you!"

"All the same," Marie murmured
the stairs, "it's a little hard on poor h
to leave him with your expansive pri
friend, Lutie."

"Oh, nonsense!" Lucia switched on
light and faced Marie crossly in the mid
of her bedroom, all grayish blue, with h
ings and chintzes of bluish gray. "Brade
a good fellow and it won't hurt Max a
to talk a little with people like that—
really do things."

She pressed a button on the house t

"I'm not at home, Joseph; never m who."
"But, good heavens, child, doesn't I do things?"
"Oh, of course—you know what I m Ri-ri. Don't make me angry now by b stupid!"

Marie closed her lips temperately; while Lucia threw off her tight clothes the quiet maid picked them up paties the friend, sunk for the moment in the orator, regarded the charming beds

critically,
"I believe there should have been al old rose here, after all," she said half to self. "There was too much in that ch I tried first, so I eliminated it entirely; it's a little too cold—especially at all I think I'll make all the chair cushions! old rose, chaise longue and all. Would

mind that?" "Anything you say," said Lucia brig struggling with a refractory garter d "Pouf! That's off! Now just wait a ute while I get a bath, Marie, will yo

Wrapped in a trailing smoky-blue peign-oir, her thick hair in a dull bronze braid, she strolled into the bathroom; and while the odor of her favorite geranium perfume crept steamily into the bedchamber and the splashings of her plunge alternated with her unsteady humming — Lucia could barely carry a tune, but was never without one— Marie studied the room with the interest inseparable from her profession.

It was a curious and characteristic mix-ture—that infallible betrayal of the soul in all the shells it makes for itself, whether of flesh or silk or stone. Ancestors may arch our noses, architects may measure our lintels, tailors may conceal us with their stretched stuffs; but the twitch of the nostrils as we breathe, the angle of the bed as we lie in it, the creases of the coat as we walk in it—could God Himself change them, except through us?

So Lucia's room, though her friend's taste and skill and experience had designed to the most chalces and the column of the most chalces and red.

it with only the most obvious and reasonable regard to Lucia's complexion and tastes, spoke as clearly of its mistress' character as the slow growth of furniture and tiny oddments that chance had shaped about her when she was a girl in her father's house.

On the austere, glass-topped toilet table that Marie and modern hygienic simplicity had made fashionable between them lay one of Lucia's queer luxuries-a magnifione of Lucia's queer luxuries—a magnin-cent litter of tortoise-shell tools, gold mono-grammed. They were costly, breakable, flamboyant; they would have graced the dresser of a musical-comedy idol of the hour; but to Lucia they were dear necessi-ties. Dull, they must be polished; broken, they must be mended; lost, they must be

Not a chair but one was cushioned beyond its seat; but against the severe back of the chaise longue, dull blue and gray, Lucia had piled a mongrel heap of cushions, the embroidered, sprawling initials of which mingled Yale and Harvard in impartial navy blue and crimson, and dated back to the boarding-school, poker-burned work that set Marie's teeth on edge. Next to a wonderful etching of a great

cathedral interior hung a framed poster of a once-adored actor, and below this were some Landseer dogs in colored prints—a childish birthday present from her father; while above a wonderful little Monet, hung just at the proper angle for light and value, Lucia had stuck one of Betty Girard's first pen-and-ink double sheets: the famous golf man with Max's profile-in a cheap oak frame picked out with gilt!

Ranged photographs of her friends in heavy silver frames littered everything; battered riding-crops made a sort of trophy over the squat bookshelves—a girl's room, you would have shrugged, facing it. But the great manogany table, soaking in the sunshine of the bay window, would check you; nearly six feet long, it held orderly piles of reports, typewritten sheets, letter-heads, calendars, diaries, docketed files the desk of an exceptionally competent woman of affairs, with the blotting sheet and vast bronze inkwell of a company

The very spirit of orderliness, you would say; but one glance at the telephone, lurching from the top of a three-decked muffin stand above a litter of chocolate, old letters, odd gloves, newspaper clippings and half-cut French novels, would have left you

gusping.
Dresses and hats, severe, dark-toned, were crushed together waiting repairs and valeting in Lucia's untidy closet; immaculate scented lingerie, weblike and ribboned, lay in lacy geometric piles in the drawers of Lucia's great mahogany armoire, a treasure of heavy carving.
"If this room were only one thing or the

other!" Marie sighed.
"But I'm not one thing or the other, per-haps!" grinned Lucia, collapsing, clean and happy, among the hideous college cushions.

"That's as true a word as you ever spoke, miss—madame, I mean!" her friend com-mented sagely. "I suppose that's what \*\*

keeps us all ——"
"Bosh! Don't begin to analyze, for mercy's sake! Look here, Marie—will you do the decorations for the new recreation building at the docks for us? Just in your odd times, I mean."

Marie's face, which always softened and lighted with her little friendly circle of women friends, stiffened suddenly with the lines of the keen and bitter Mrs. Randall Fitch that her clients admired and feared.

"For love, you mean?" she said shortly.

"Oh, well, you know what we've got.
I've worked like thunder to get a year's
rent guaranteed and I can't dip into that rent guaranteed and I can't dip into that fund for anything but the strictest necessities. We've got the place clean, but it's a perfect barn. Of course we shouldn't expect much."

"Now see here, Lucia, we might just as well get this over now as later. You simply don't understand what you're asking. What's the average sum you're getting from people?"

"Oh, twenty-five—fifty. Why?"

"Well, I'll give you fifty dollars if you never ask me to do another thing. I can't afford it."

"Why, Marie Fitch! I shan't take it.

afford it."

"Why, Marie Fitch! I shan't take it.
The idea!"

"Oh, yes, you will. Now, Lucia, decorating is my business. The competition has grown very keen nowadays: it's different from when I began."

"But your discounts ——"

"All very well. Has it ever occurred to you that I may have other uses for my discounts? When I did this house for you it was the very best present I could give you was the very best present I could give you It is simply loved to do it. And I'm proud of it too; I stand behind it. My professional reputation is in it. Don't you realize that it will necessarily—my reputation—go into all this work you want me to do for you? all this work you want me to do for you? When you say you don't expect much, you're talking nonsense. What do you mean by that? That I'm to do a little of the job very well and let the rest go? Or do all of the job half or a quarter well? In either case it's my job, isn't it? It stands for me, doesn't it? You'll tell everybody that Mrs. Fitch decorated it, won't you? Can I afford that if it isn't well done?"

"Of course, Marie, if you choose to put it that way—""

it that way—"
"But I do choose to put it that way—I
must. See here, my child: you passed out
of the rank of the lady amateurs this year and became a paid professional worker in this prison business. Very well! Suppose the pure-milk-for-the-slums committee, or the employment-for-the-blind commit-tee or the child-labor people should ask you, in view of your great success in organizing your job, to give them a little of your odd time to overhrul and reorganize some of their departments, what would you say?"

their departments, what would you say?"
"Is that a fair comparison, Marie?"
"Absolutely. Why not? Could you afford it?" afford it?

"Absolutely. Why not? Could you afford it?"

"I notice you did- the Professional Women's Club for nothing, though—they bragged about it enough!" Lucia put in.

"Precisely. And why? In the first place that was my personal contribution to a club of which I'm a charter member. We began that club fifteen years ago, when it was a bigger venture than any women's club could be today. It meant more to us, I assure you, than clubs do now. The women who did things stuck more together and every name meant something. We were all very eager to back up all professional women. Betty painted half the wall decorations; lots of women gave a certain set of royalties on their books and stories; Doctor Harris—that Max's friend married—gave a week's office fees, I remember. That was a professional tax—gladly paid. Your house was a friendly gift—gladly given. I stand behind both willingly and expect to be judged by them. But why should I take that risk for your prison-reform schemes?"

"Oh, well, of course—"

"Another thing," Marie went on. "For the club work I set my own time and did it in the off season. Now your work must be done, like all your affairs, tout de suite—immediately, if not sooner. I happen to be extremely busy just now. Of course I lost on that job—but that was my affair. I lost on your house and Celestine's teahouse and Mattie's billiard room—but they were my presents to you all; and presents aren't business."

"Oh, don't rub it in, Marie—I see what you mean. Only I wonder, if all you people

"Oh, don't rub it in, Marie-I see what you mean. Only I wonder, if all you people feel that way, how all the men have helped us so much with their professional time and reputation? Why did those nice architects do over the up-the-river boarding house for nothing for us?"

Marie watched her narrowly.

"For us?" she repeated. "For us?"

"Well, for me, then," said Lucia frankly.

"Why?" Marie answered. "Why? I
wonder when you'll find out, Lutie!"

"Oh well it was in a good gaven any

"Oh, well, it was in a good cause anyway!" Lucia smiled, but faced her friend bravely. "You can't take out all the personal effect, Marie—you simply can't. Things go that way—that's all."

e frankly admit that the **EVER-READY** is the best Safety Razor at any price. Over four million users prove it.

The new model EVER-READY outfit complete with 12 'Radio' Steel Blades, One Dollar at dealers everywhere.

### A million people use this pen

The Self-Filling Conklin is the simplest of all fountain pens in both operation and construction. Just dip it in the nearest inkwell and press the "Crescent-Filler." That's all. The pen automatically fills itself in 4 seconds!

The "Crescent-Filler" is the natural and logical self-filling deviceeasy to get at, simple to operate. Remember, too, the Conklin is the original and recognized leader of all self-filling fountain pens. It is the only self-filler proved by sixteen years' use and over a million satisfied users.

> Sold by Stationers, Jewelers Druggists, on 30 days' trial. Prices, \$2.50, \$3.00, \$3.50, \$4.00, \$5.00 and up. Write for catalogue and two little books of pen wit - all free.

"They go that way just now," Marie re-turned slowly, "because you and I haven't been at this sort of thing such a terribly long time. People still feel interested and touched by women in business-as women; but in the jobs where they've been for generations—keeping boarding houses, for instance, and school teaching, I wonder whether the hotel men and the men teachers feel that chivalry much " feel that chivalry much.

feel that chivalry much."

"And you think ——"

"Of course I do. Thackeray, even, probably felt it for George Eliot; but do you think Mr. Hall Caine feels it for Miss Marie Corelli? I doubt it."

"I see what you mean," Lucia agreed thoughtfully. She stared ahead of her, digesting the new idea. Then her eyes flashed mischievously. "All right, Ri-ri—then let's go while the going is good!" she cried gayly.

cried gayly.

Marie studied the laughing face—the thrown-back, boyish shoulders.

"That's one way to take it, of course," she said thoughtfully. "After us the deluge—huh! Well, it'll be a deluge, all right enough. I shall be out of it, thank goodness! Of course when I began everybody ness! Of course when I began everybody gave me a hand. I was a woman; I had a new idea; I was in society; I needed money. It was grand chie! Now every girl that gets impatient at home wants to be an interior decorator. So there you are!"

They sat in friendly silence.

"How you do go into things, Ri-ri!"
Lucia began after a moment.

"Do I? I expect it's because I've been through things. One usually leads to the

through things. One usually leads to the

Again they were silent. Lucia had sup-posed that after her own marriage she would perhaps be able to touch a little more easily on her friend's experiences with Mr. Randall Fitch, but it seemed that this was not so—if anything she felt more con-

"This is awfully cozy—just like old times, isn't it?" she said lazily. Marie looked at her oddly. "It certainly is," she agreed; "a little too much so for monsieur, perhaps?" "Max? How ridiculous! Didn't he send me up here himself?"

"My dear child! You were falling asleep

in your chair!"
"My goodness, Marie, you'd fall asleep yourself in my place! What do you think I've done today?"
"Oh, I don't doubt ——"
"You'd better not! Listen! In the first

"You'd better not! Listen! In the first out to supper after. Then we all went round to supper after. Then we all went round to see the dancing at that new place; and, of course, Van Wynken and I couldn't stand that—and we danced until they turned us all out; Van tipped the orchestra as it was. Well, I had to be called at eight, for I had an approximent at the office at for I had an appointment at the office at nine. I worked like a dog there until lunch; the warden gave us an interview at three; I had to see that recreation building—they were tinting the plaster all wrong and I lost my temper dreadfully; then met Braden and showed him everything—I'd hate to see that taxi bill! The meeting I told you about, and that lasted until I took him through the restaurant and staggered home.

of course, after I'd had my dinner, I passed away—wouldn't you?"

"Long before, Lutie—long before," said her friend quickly. "It would have been a case of 'Please omit flowers' with me by three o'clock."

"Well, then," grunted Lucia, placated, "what are you rowing me for?" "I'm not rowing you; I'm merely sug-gesting that the fact that you're all in has nothing to do with the fact that it must be rather dull for Max."
"But, heavens above! Max knows what

I'm doing, doesn't he? He agreed to it be-fore we were married, didn't he? He knew the way I worked before, I suppose.'

Marie smiled.
"Ye-es, he knew," she agreed; "but he couldn't have got you any other way,

Lucia shrugged. Lucia shrugged.

"Well, there it is," she said shortly.

"Yes, there it is, all right enough,"
Marie repeated; "but how long does it
stay there?"

"What do you mean?"
Lucia stared in such honest blankness
that her friend choked between a sigh and

"Oh, Lute, Lute!" murmured Marie.
"You baby! You spoiled baby!"
"I'm pretty hard worked for a spoiled baby," said Lucia complacently.

A better vacation; one that sends you back home with a glow of health on your cheeks, is yours if you own an

### Evinrude Detachable Rowboat Motor

It attaches in less than one minute to any rowboat, yours or a rented one, and makes it an eight-mile-anhour motorboat. It will send a canoe dashing twelve miles an hour over the waves and being perfectly portable, you can carry it with you just like a satchel.

Its superior construction has caused it to be adopted by twelve governments including U.S.A., and its popularity among vacationists and sportsmen has become so great that the capacity of the great Evinrude factories was necessarily increased to 60,000 motors per year.

Those who are contemplating the purchase of a small motor should carefully consider the "Evinrude" exclusive mechanical features, which cannot be procured with any similar device.

Built-In Reversible Magneto

In the process of manufacture we have eliminated 15 to 20 pounds of weight, which comprised the battery. In place of this weight we have instituted a waterproof Magneto, which not only accomplishes perfect ignition, but which is not affected by rain, waves or even complete submersion. The Evinrude Magneto is built within the flywheel, taking up no room and protected from injury. To demonstrate that it is not affected by rain, waves or even complete submersion, we operated this Magneto at the Chicago Motor Boat Show for five

Completely Submerged in Water No other Magneto in the world has ever operated under these conditions. The Evinrude Magneto is a factor of safety, which entirely eliminates the possibility of a "dead" motor in dangerous waters. Its reliability and wonderful endurance powers have made it the choice of many important parties of explorers, such as

The Roosevelt Expedition and the Stefansson Expedition

The "Evinrude" is the only portable motor which can be equipped with a Maxim Silencer, as this type of silencer is made exclusively for the "Evinrude" and eliminates the disagreeable noise of operation experienced with most motors. No other motor is equipped with a Shock Absorbing, Compensating Device, which absorbs the vibration which in most motors is communicated to the tiller.

Illustrated catalog upon request-write for it today.

### EVINRUDE MOTOR COMPANY MILWAUKEE, WIS.

## HOW POOR RICHARD BECAME RICH

It is 175 years since old Ben Franklin got out his Almanac. Under the name of "Richard Saunders" he circulated many proverbs, most of them having to do with earning and saving. "A penny saved is a penny earned," "Keep your shop, and it will keep you," are among the sayings which seem to have given modern Philadelphia much of its character.

For Philadelphia has 100 banks and trust companies. Among them are savings banks having 380,000 depositors, or more than one to every dwelling in Philadelphia.

So much for Poor Richard and his Almanac.

Ben Franklin was also Philadelphia's first printer. Today the printing press in Philadelphia earns \$46,000,000 yearly.

Among these products of the printing press is the Public Ledger, the newspaper that since 1836 has been the first thing in the morning, in the homes, and in the hearts of Philadelphians.

# PUBLIC LEDGER

Marie's eyes narrowed suddenly. She

drew a deep breath.

"You are, indeed," she replied, "and you're showing it. Do you realize, Lutie, that you are thirty-one and that you look thirty-six?"

"Always did, thanks."

"N-no; not this way. You're settling. Do you realize that Max is thirty-five and looks thirty?"

"Just as you like, my dear—it's your funeral."

Lucia squirmed reflectively on the chaise

"Just as you like, my dear—it's your funeral."

Lucia squirmed reflectively on the chaise longue.

"Of course Max is a man," she began defensively; "and then he takes precious good care of his little self." Tennis twice a week and golf every Saturday—he won't week-end where he can't play, if you please. And he goes to bed at ten if he's operating the next morning. That sort of thing's all very well if you can do it; but I can't."

"Why not?" Marie asked simply.

"Why not?" Are you crazy, Ri-ri?

When could I get the time, pray?"

"You're getting too fat. You'll have to take the time pretty soon."

"There it is again!" And Lucia's tone grew regretful. "I simply must have my lunch—I go all to pieces. Max doesn't eat it unless he's exercising. No wonder he keeps thin."

"Oh, I'm not going into the reasons. I'm simply suggesting the facts," said Marie calmly. "If you must eat, then take the corresponding exercise, I should say."

"All very well," Lucia returned hastily; "but how can I? And anyhow, if I could dance enough I'd be all right. But then, of course, I don't see so much of Max—he wants to hear music so; and so we go on his account. And all the dancing that's any fun is so late this year."

"It's a little complicated, certainly," Marie admitted briefly.

"I believe you—it's complicated!" Lucia assured her with some warmth. "I simply want you to realize that I must be tired at night. Max is himself."

"Maybe; but he doesn't fall asleep at the table," said Mrs. Fitch dryly.

"Well, for heaven's sake, what am I to do then—sleep in the afternoon?" Lucia demanded ironically.

"I should suppose you'd have to, under the circumstances," said Marie placidly.

"You might do worse. I don't think you realize, Lute, how snappish you get sometimes."

"Well, for heaven's sake, what am I to admanded ironically.

"I should suppose you'd have to, under the circumstances," said Marie placidly.

"You might do worse. I don't think you realize, Lute, how snappish you get sometimes."

"Why, Marie Fitch!"

"Perhaps not snappish ex

The tone was so much softer than the words, the look in the older woman's eyes was so unusual, that Lucia swallowed her irritation and spoke more gently than she

felt.
"Mattie Forsythe's been talking to you,
Ri-ri," she said, "hasn't she?"
"Mattie? No. I haven't seen her for

"Mattie? No. I haven't seen her for ages."

"Oh! I thought perhaps you had."
Lucia pursed her lips patronizingly. "You know, since Mattie left the board," she explained, "she's simply a sort of phonograph—whatever her precious Peter tells her Tuesday night she tells us Wednesday morning. Since sister went on the Junior Committee I see a little more of her—because, of course, the mothers have to be perfectly satisfied that their darling children aren't overworked or get their sympathies aren't overworked or get their sympathies too much played on. But father says it's all right—for a wonder! So Miss Martha Forsythe is treasurer this year for the kiddies."

"Mattie's children will never be as at-

"Mattie's children will never be as at-tractive as she is," Marie commented.
"Oh, I don't know. Sister is bossy, of course, like Peter; but I think the baby's

course, like Peter; but I think the baby's pretty nice. Well, Mattie was wondering how I got through the amount I did. 'I simply had to go off, my dear,' she said. 'I found I couldn't do much outside work and keep fresh for Peter—evenings.' Now what do you think of that?"

"Well," Marie suggested, her eyes on her

lap, "somebody has to keep fresh for them— evenings!"

Lucia stared.
"For heaven's sake, why?" she cried. "I can't say that Peter ever troubled to keep fresh for Mat!"

"It used to be called 'greeting him with a smile,"" Marie said slowly. "You see the theory was that he came home tired from battling with the world—and there you were, with a rose in your hair."

"Um!" Lucia commented. "It doesn't appeal to me, some way. How about you? Suppose I've been battling with the world

"That's just it." Marie's eyes avoided the younger woman's. "Perhaps the idea was that both of you needn't battle." Lucia gasped.

Very pretty, I'm sure," she commented; "but how does it apply exactly? You mean that I'm to drop quietly out from under all these obligations I've assumed in order to greet Max with a smile every evening?

"Oh, I mean nothing!" cried the other early. "Nothing at all! You know best, wearily.

"That's all very well, Ri-ri!" Lucia's eyes were dangerously alight now. "That's all very well; but you evidently mean that I don't know best! I might suggest that you don't seem to have gone into the roseand-smile business very much yourself!" Marie's fingers twisted in her lap, but

she met the younger woman's eyes full.

"That's all right, Lucia," she said quietly, the sudden apology began. "Never as the sudden apology began. "Never mind. I'm perfectly good for that, and I realize I brought it on myself. My child, that's why I—I'm so worried about you. You don't suppose I hold myself up—me?" Her face was a bitter thing to see. "But, Lutie, you must remember one thing: Heaven knows I was tired enough at night-I was a wreck. I never had your strength. But I was fighting for my life—I had to work! Ranny utterly refused to support -except on his own terms. It is doubtful if there was ever a time after the first six months when I shouldn't have been one of three ——"
"Oh, Ri-ri, never mind—never mind!
I'm a brute!"

Lucia's eyes were full of tears.

"No, no. It's no matter. Everybody knew it. And anyway, he was simply a gambler. He really couldn't help that—it was in his blood. But, everything else gambler. aside, I couldn't have tried that way were up to our ears in debt—foolish debts—two-thirds of the time. I had to 'battle with the world.' And you get very hard at it. But what could I do?"

"Nothing, of course." And Lucia's tones were like ice for Randall Fitch; her eyes

soft as gray velvet for her friend.

"And yet, Lutie—and yet——" Marie drove a deep look into those gray velvet depths—a look that hurt them both. "And yet—if I had been able to go into the rose-and-smile business—as you say—I've always felt I might have done a lot more for him!"
"But—but—— Heaven above, Marie

Fitch! Whyshould you? Whyshould you? What's the use? Look where you stand today!

"Oh, yes; I stand! I stand!" said Marie

dully.

Lucia shook off the depression that crept round them.

"See here, Ri-ri," she began; "we can't talk about this. It's a great exception. Take Betty, instead: Does she keep fresh for Walter? Would any one dare to suggest

such a thing?" Lucia drew a long breath.
"Betty Girard isn't in our class, Lute."
Marie answered quietly; "she's an artist—
and a big one. That she's made good as far as she has is simply marvelous—that's all.

With her temperament ——"
"Other people have temperaments, I

"Yes, indeed; but have they her excuse?
You know what Sargent said about her:
no matter what Betty might want to do,
it drives her on, that talent of hers, Lutie;
she has to exhaust herself! A talent like that drives you—you can't drive it. Heaven knows she's tried."
"Tried! Betty? You don't mean that

she ever thought she ought to ——"
"I mean that she's tried hard to play the

"I should say so! Putting up with that sulky brute of a Walter Girard at all is playing the game, if you ask me! He's jealous and obstinate, and he won't go anywhere or do anything. Honest to good-

ness, Marie, if Max was likely to grow anything like that —"
"He isn't," said Marie patiently. "He's

quite a different type."
"I should hope so."

"Oh, there are lots of good points to Walter," and Ranny's wife smiled sadly. Plenty of women would be lucky to get him, my dear. There's not a man who knows him that doesn't respect him. I admire Betty more than any woman I ever knew, and I'll back her to the last ditch; but I doubt whether, whoever she married, she could

"Greet him with a smile?" Lucia broke in impatiently. "Well, for heaven's sake, why should she? So far as that goes, it's his business to greet her!"

"I wonder! Perhaps it is—perhaps it is," said Mrs. Fitch, half to herself. "And yet would now man, that she would manny?

we're changing, my dear; we're changing, but—are they?"

"Why, Ri-ri!" Lucia gasped at this stroke, shut her eyes, shook her head and gasped again. "They've got to, then!" she

said at last.

"Ah!" The older woman sat silent.

"Oh, for heaven's sake," Lutie shot out, exasperated, "why should anybody greet anybody with a smile?—when you come to 

"Well, you can't help that."

"No, but he likes to have somebody smile."
"Well, what's he going to do about it?"

challenged Lucia "He's going to find somebody that does,"

Marie replied.

The room was quite still.

"Oh, I see!" Lucia's smile was chilly.

"I see! You're very kind, Marie; but I assure you -

"Lutie, wait! Before you say any more,

Marie rose, dragged her fur coat—which the quiet maid had left for her—over her

thin shoulders, and opened the door.

"I must go; but I'm going to tell you something. You're half boys, you girls, nowadays; but I swear you know less about men than we used to! Look here, my child; I'm a woman's woman now—have been for ten years. I'd had enough of men. But I used to be different, Lutie. I understood men better when I was twenty than you ever will; and I'd like to suggest to you again that, though girls like you may have changed a whole lot in the last fifteen years,

men like Max are pretty much what they were when I was twenty!"

"Now listen to me: if you think your case is like mine, you're wrong. Circumstances and my husband's nature forced us apart—and I lost out. If you think you can go by Betty Girard, you deceive your-self Lutic. Sho's an artist and her husband's self, Lutie. She's an artist and her husband's a perfectly normal man-and fate forced them apart. She can't change and he won't; so he lost out!"

Lucia trembled slightly; she never knew

why, for there was no sign then of any crisis.
"Men like Ranny, I'm sure, shouldn't
marry," Marie rushed on. "And I doubt if
women like Betty make a success of it once in a hundred years. But they always do marry; and then-Walter and I pay for it. 'm a woman and adaptable, and I make the best of it—pick up the pieces and go on. Walter's a man; so he balks and makes himself and everybody round him miser-able." She fixed her sharp, burning eyes on Lucia, huddled in the long chair among the gaudy college cushions. "But you haven't my excuse or Betty's," she said. "And let me tell you now that if Max isn't Ranny, neither is he Walter!"

Lucia sank deeper into the pillows.
"Max may like American girls," the un-sitying voice pursued her, "but he was born in Europe; and European women may not be such wonders on committees, my dear, but they're no fools when it comes to the great game—and it's the greatest game in the world, Lute—as nobody knows ike us that have lost it!"

The room was as still as the grave. Neither woman moved; and as they faced each other they started slightly, for at the same moment each caught a faint murmur of voices from below.

"What—what's that?" Marie whispered terrified. "Who's talking?"

Lucia sprang up.

"Max went out long ago," she answered softly. "Wait a moment. I'm going to see." "Oh, Lutie, don't! Call somebody! The

house is all dark—get Joseph."
"Hush! He's out for the night—I let him go. And Max is, too, I'm nearly sure.

He almost always goes over to the University Club when I come up early. Wait! I'm not afraid."

There is a No-Limit Guarantee behind Chalmers 'Porosknit." Let's consider WHY. Let's see what the genuine Chalmers "Porosknit" label MEANS—as compared with imitations,

Mere holes in underwear do not make it the genuine Chalmers "Porosknit." One must judge by more than appearance. That is, if one wants such quality as can be guaranteed unconditionally.

Let's first examine a Chalmers "Porosknit" garment. Then let's investigate its making.

Take this Union Suit. Observe the tri-angular piece in the back. The "stretch" in any knit goods runs only one way,

That is why this triangular piece is reversed. That makes its stretch run opposite to the rest of the garment. This is done to give full elasticity to the seat-so

that it will give—at every turn or bend. There can be no pull, no bulge, no draw-no "cutting in the crotch."

Turn the garment inside out. Notice how strongly all seams are reinforced throughout—double-seamed by cover scaming. Extra stitches to prevent ripping.

Stretch the fabric. See the other extra stitches surrounding each ventilating hole. These, with the lock-stitch, prevent unravelling.

Note that there are no cumbersome flaps to gape open. The Chalmers Closed Crotch is comfortable. It fits. It stays put.

#### The Extra Quality

The yarn is the finest long-fibre, combed. Indeed, we've been told it's bet-ter than need be. That we could pocket thousands of extra dollars yearly by using less costly yarn—and still have it "good hat none mis it detect it.

True. The same careful workmanship could be employed in finishing such less-good yarn—and Chalmers "Porosknit" would still look the same.

Yet-what if the durability suffer? If something be lost in softness or elasticity? We take no chances with durability-

CHALMERS KNITTING COMPANY 1 Bridge Street, Amsterdam, N. Y. Also Makers of Chalmers Spring Needle Ribbed Union Suits, Fall and Winter Weight

no risks with the established Chalmers "Porosknit" quality. Such fine shades in superiority you can-

not see. But they account for the inabil-ity to duplicate Chalmers "Porosknit." They explain the unfailing satisfaction. They mean unvarying comfort.

One doubts if imitations are a good buy. Judge if you will accept any but the genuine. The way to be sure is to look for the label-as shown here-and the

guarantee bond with every garment. Chalmers "Porosknit" is made in all styles-for man, for boy. Open in texture, and of soft, absorbent yarn, it keeps you cool by absorption and evaporation of perspiration.

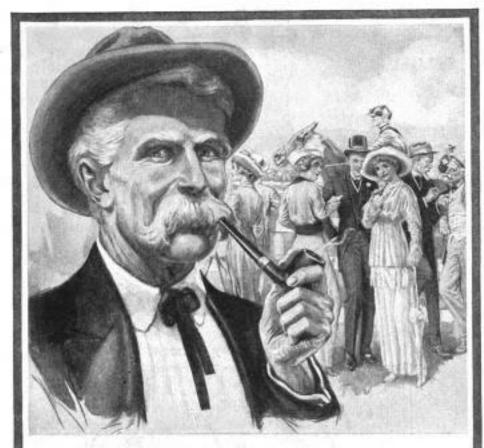

#### No-Limit Guarantee

"If any garment bearing the genuine Chalmers 'Porosknit' label, and not stamped 'Seconds' or 'Imperfect' across the label, fails to give you its cost value in underwear satisfaction, return it direct to us and we will replace it or refund your money, including postage."

Each garment is ironed individually before packing. See for yourself how pleasing the appearance in the box—at the dealer's.

Lucia sped softly to the drawer of the big desk, opened it, took out a small blunt-nosed revolver and passed through the

The stairs were dimly lighted. The mur-mur of voices flowed on, paused—then

began again.

They gained the heavy velvet curtains soundlessly, breathlessly; and Lucia, whom danger steadied mechanically, peered round the fluted folds, the weapon high in her hand. She looked, breathed, looked again, then slowly lowered it.

There in the circle of rosy light from the

There, in the circle of rosy light from the one big lamp, sat Betty Girard, dark and glowing against the bright-red velvet chair. Her exquisite arms and shoulders were like ivory-toned marble; under the heavy waves of her dark hair her startling hazel waves of her dark hair her startling hazel eyes seemed more exotic than by day. She was in green and silver, with one touch of crimson velvet. Max leaned over the chair, alert, yet lazy; amused, but intensely interested, Lucia knew, by his eyes.

"It's nearly twelve, child. Call me a taxi—oughtn't you?" said Betty.

"Ought I? But why—when this is the first real talk we've had for—for how long is it?"

"Heavens! Don't make me count! But when was that Paris summer, Max?"

"Nineteen-five—six. Oh, it was five

"Nineteen-five—six. Oh, it was five years ago, Bettchen," he counted, "and the jolliest summer I'd ever had!"

the jolliest summer I'd ever had!"

Betty laughed softly. Lucia felt a strange, toothed grip at her side. What a beautiful woman Betty was! Had Max always looked at her so?

"I told Walter to call for me, but it's ten to one he's forgotten," said Betty. "Call a taxi, will you, dear boy?"

Dear boy! And yet Lucia had heard Betty say that to many before this.

"Well, Bettchen, it was too kind of you to enliven my solitude—if you won't wait. I'll take you home."

"Child! I'm forty-one. Don't bother."

"And forty-one times more dangerous than you ever were, madame! You've never changed a hair ——"

changed a hair

Lucia took the hand behind her.
"Come!" she formed with her lips, and the two women slipped up the silent stairs.

Marie looked curiously at her.

"What are you doing?" she whispered,
though the door was closed.

"Changing," said Lucia briefly.
With one motion she twisted her rope of
heir high on her head; with another she With one motion she twisted her rope of hair high on her head; with another she pulled it out above her ears. From the closet she dragged down a smoke-colored teagown of velvet, frothed with heavy Venetian lace. It slipped over her head, and her cheeks, burning, flamed above it. She dusted powder on them and pulled clocked amber stockings over her feet and amber satin high-heeled mules over the webby silk. Behind the great coil of her hair she thrust a carved amber comb from

webby silk. Behind the great coil of her hair she thrust a carved amber comb from her tortoise-shell tray.

"Will I do?" she asked.

"Stunning!" said Marie.

"Then come on!" said Lucia.

They stood in the doorway. Neither Betty nor her host had moved, it seemed.

"Why, Lucia! How jolly!"

Max walked quickly over as Betty spoke.

"I thought you were in bed, madame," he said. "Welcome to our city!"

"Nobody told me you were here, Betty. How nice to see you!" And Lucia took both of Betty's lovely hands.

"No; Joseph said you were not to be disturbed; so Max took pity on me until Walter should come. He's at a directors' meeting; but I fear he's forgotten me. How gorgeous you look, Lutie!"

"I thought you were tired to death, child," Max murmured to her while Betty and Marie talked together.

"I had a vest" she said and turned her

and Marie talked together.
"I had a rest," she said, and turned her

eyes on his.

He took her hand.

"You look it," he said.

"If this is the way you look when you're tired, Lucia," Betty began, "keep on working! Come on home, Marie."

"Oh, wait!" And Lucia held her hands

out pleadingly. "Max isn't a bit sleepy, I know. Let's have some bridge and then

telephone for Walter! Won't you?"
"Anything you say." And her husband looked wonderingly at her crimson cheeks.
"But won't you be tired, dear?"
"I can rest tomorrow," she said softly,

"when-when you're not here!" Still he looked at her; and Marie Fitch,

catching that look, coughed and bit her lip,
"Thank heaven!" she whispered.
"Is heaven still on the job?" said Betty

### The Forehanded Man

By Will Payne

THIS Congress may pass an act provid-ing for banks of a new type, so far as concerns banking in the United States; and it may even put the Government into the business of lending money directly to individual borrowers.

It must have been about two years ago that Ambassador Herrick, at Paris, made a report to President Taft on farmers' loans in Europe. President Taft passed the re-port on to the country, with a statement that European farmers generally borrowed on better terms than American farmers could obtain. Since then this matter of rural credits has been extensively and continu-

ously agitated.
One of President Wilson's early steps was to appoint a commission, provided for by an act of Congress approved March 4, 1913, to visit Europe and study the whole ques tion of loans to farmers, both on land mortgage and personal credit. Senator Fletcher, of Florida, was chairman of the commission. At once a larger commission was appointed comprising the members of the President's commission and some sixty other persons representing all the states of the Union as well as the Canadian prov-inces. Of the larger commission Senator Fletcher was also chairman.

These two commissions spent the greater part of last summer in Europe, visiting Italy, Hungary, Austria, Russia, Germany, Switzerland, Belgium, Holland, Denmark, Norway, France, Spain, England and Scot-land. In each country there were hearings, at which persons most familiar with farm credits appeared, giving information and answering questions. Members of the commission examined cooperative farm-credit associations and land-mortgage banks, interviewed farmers, and so on. In short, a very comprehensive mass of facts was gathered and is now before Congress.

#### The Fletcher Bill

As one result of this elaborate investigation, Senator Fletcher last January intro-duced a bill authorizing the formation of farm-mortgage banks under Federal char-ters. Briefly, these banks would make farm-mortgage loans, to run for thirty-five years, the principal to be extinguished by the end of that period through amortiza-tion, which means that, in addition to pay-ing a given rate of interest, the borrower pays each year a small fraction of the principal. When these fractional payments of principal are spread over a long term of years the total annual payment amounts to only a little more than straight interest on a five-year loan.

Having loaned its own capital on ap-proved farm mortgages, the bank would issue and sell debenture bonds, secured by a pledge of the mortgages; and with the proceeds of the debentures it would make additional farm loans, which, in turn, would serve as a basis for a fresh issue of debentures. This would not be an endless chain, however, for the Fletcher Bill provides that the total amount of debentures outstanding must not exceed fifteen times the bank's capital. Thus the bank's capital would be a sort of margin for the protection of deben-ture holders in addition to the security of the pledged mortgages.

The Wilson Administration favors a sys tem of farm-mortgage banks in general outline like those described in Senator Fletcher's bill; but the Administration measure will no doubt differ considerably from the Fletcher Bill in details.

That measure at this writing is being formulated by the committees on banking and currency of the House and the Senate. The committees have been at work on the task almost from the beginning of this session, last December.

A subcommittee of the House committee began hearings on the subject early last winter, and somewhat later a subcommittee of the Senate committee took part in the hearings.

Of course the information gathered by the commissions that visited Europe last summer was drawn on, and persons with facts or theories to present had a chance to speak. A bill drafted by the committees may be presented to Congress before this appears in print.

Name.

Address

But Congress has still another bill deal-ing with the same subject, introduced in the Senate by Mr. Norris and in the House by Mr. Bathrick. This bill is indorsed by two large organizations of farmers—the Grange and the Farmers' Union—and no doubt can muster strong political support.

It provides for the organization of a Government office to be known as the Bureau of Farm Loans, which shall lend money directly to individual borrowers, the loan to be secured by a first mortgage on ap-proved farm land, to run for at least ten years, and not to exceed two thousand dollars in amount, or to be for more than sixty per cent of the value of the mortgaged

and.

The interest is to be four per cent a year, payable semiannually, one-fifth of the principal to become due in five years. and one-fifth in each succeeding year

and one-fifth in each succeeding year.

To provide funds for making such loans the Secretary of the Treasury is authorized to issue and sell government bonds bearing three-and-s-half per cent interest and exempt from taxation. It is figured that the difference between the three and a half per cent which the Government pays on its bonds and the four per cent that it gets from farmers will cover expenses and all possible losses. possible losses.

possible losses.

The real contest, so far as now appears, will be between the Administration measure as drafted by the House and Senate committees and the Norris-Bathrick measure providing for direct loans by the Government. Obviously the success of the latter would change the whole farmmortgage business as an investment field. Naturally farmers, like borrowers of every other class, want the lowest interest they can possibly get. That is merely saying that a man wants to buy everything he needs as cheaply as possible. Undoubtedly anyone can borrow at a decidedly lower rate with the Government's guaranty than without it. The credit of the United States is sufficient to lift the whole farm-mortgage is sufficient to lift the whole farm-mortgage business a notch higher than it could reach on its own strength—exactly as an issue of railroad bonds that might go at four and a half per cent on its own merits would go at three and a half per cent if guaranteed by the Government; but it would go to a somewhat different set of investors.

#### Using the Nation's Credit

The man who buys a five-and-a-half per cent farm mortgage would not ordinarily buy a three-and-a-half per cent govern-ment bond. He would look for something that paid higher interest, while the gov-ernment bond would be taken by a more timid or indifferent investor—the trustee of an estate or some one who would care com-paratively little for the interest rate pro-vided he felt his principal absolutely secure.

There is no doubt that by using the credit of the United States farmers could borrow more cheaply. Whether the credit of the nation ought to be used in that way is another question. There is no greater fallacy than to assume an unlimited credit for any nation. What are undied to assume an extension of the country of the for any nation. Whatever credit a nation uses in one way, it has just that much less to use in some other way. The quantity of money in the country available for investment in government securities is as strictly limited as the quantity available

for use in any other way.

Of late years we have seen British government bonds, with the finances of the government in a very flourishing way, too, selling at near thirty per cent discount. With new borrowings on a large scale, they might easily have dropped to fifty per cent, unless the interest rate had been advanced to a point equivalent to fifty per cent discount on the old bonds.

However, it is quite probable that farm-ers might, on the whole, get somewhat better terms for farm loans if there were a nation-wide organization to handle such loans. Debentures issued by such an organization and based on farm loans might ore attractive to many inv the farm loans themselves. The debentures would be for even amounts—say, one hundred, five hundred, and one thousand dollars. All the debentures of a given issue would be uniform in date and maturity, and no doubt there would always be a good open market for them; so that a man could dispose of one as readily as he could dispose of a standard railroad bond. And the in-vestor, instead of looking to a particular farm and a particular farmer for his secur-ity, would look to a great number of farms and farmers.

The laughing lake and rippling river invite you to skim over their placid nufaces in a canoe - to explore their charming isles and wooded shores-to feat your eyes and thrill your thoughts with their enchanting beauty.

What delights a canoe can afford you, your family, your friends! Think of the fishing, camping, hunting, picnic and vacation trips that can be enjoyed with a canoe—of the glories of the great out-doors it will unfold.

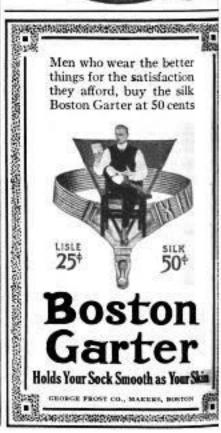

The first step in selecting a canor is to send for the catalog of

Blaisdell Paper Pencil

In short, a chain of farm-mortgage banks, making loans on agricultural land and issuing debentures against the loans, might attract money into that field which now seeks investment elsewhere; and, of course, whatever attracts more money into a given investment field tends to lower interest rates somewhat within that field. As a rough guess, I should say farmers might be able to borrow on a land mortgage somewhere from one-half of one per cent to one per cent cheaper than at present.

per cent cheaper than at present.

They might also get the benefit of long-term amortized loans. An individual lender, looking to a particular farm for his security, will not make a long-time amortized loan. He wants a relatively short maturity—hardly ever more than five years—so that if the farm or farmer begins to deteriorate he can step in and protect himself. And he objects to an amortized loan because he does not want his principal extinguished by tiny annual payments spread over a score or more of years. In that case to tell which was principal and which was interest would involve too much book-keeping for an individual lender; but a chain of coördinated farm-mortgage banks might introduce both the long term and amortization.

Probably in some parts of the United States agriculture has reached or is rapidly reaching a stage where long-time amortized loans can safely be introduced under proper regulations; but that type of loan implies both permanence of agricultural land values and a thorough system of cultivation. Obviously a thirty-year loan on a farm the soil of which is going to be exhausted, or greatly depleted by bad farming within twenty years, would be a poor investment. Whatever advantage farmers can derive from a better organization of borrowing facilities they ought to have; and it is a good thing for investors to have various sorts of securities from which to make a

Whatever advantage farmers can derive from a better organization of borrowing facilities they ought to have; and it is a good thing for investors to have various sorts of securities from which to make a choice. An investor who would not consider an individual farm mortgage bearing five per cent interest might be glad to get a solid concern's debenture, based on farm mortgages, though the debenture bore only four and a half per cent.

In that way a more extensive organization of agricultural land credit may benefit both borrower and lender; but the intervention of the Government for the purpose of lifting farm loans entirely out of their normal position by affixing its guaranty to them is, of course, a different matter. A market limited to government securities would be a poor one for the forehanded man with a few thousand dollars that he wished to put at work.

## The Ductless Glands

ONE of the liveliest hopes of doctors today is to find some way of controlling the ductless glands of the body, for those glands seem to be the bosses of the body. One of the latest attempts to control them is by X rays, and the experimental cases so far give some hope for expecting that X rays can at least stop them from doing too much bossing. Many of these glands, mostly very small in size, are scattered about the body in all sorts of inaccessible places, and each set of glands has charge over one activity of the body.

The pituitary body, for instance, which is given most attention, seems to control the size of the body; hence it is considered responsible for giants and dwarfs. The adrenals are known to control the pressure of the blood, and excessive blood pressure is to blame for many of the most serious troubles of the body. One disease, which is practically early old age, is even attributed to them. Diet and similar kinds of treatment to some extent help to make all these glands give the proper orders to the body, but only to a limited extent.

ment to some extent neip to make all these glands give the proper orders to the body, but only to a limited extent.

The knife is useless on most of them. As X rays can get into the body anywhere they are now being tried to see whether they can control these glands. So far as any successes have been reported, X rays have been useful only in cases where the glands were overworking. One case has been reported of the treatment of gigantism by directing the rays at the pituitary body and curbing its enthusiasm, with resulting improvement. In some cases of high blood pressure X rays directed on the adrenal glands have caused a reduction of more normal blood pressure, and other glands have been treated in this way with some good results. It is still largely experimental work by advanced skirmishers in medicine.

## Men's Wear Merchants! Do You Know What the Consumer Thinks?

THE JUSTICE OF THE KING. By Hamilton Drummond. "Living, breathing people and advectures."

## New Books for Boys and Girls

Every boy, every girl, likes a good story. These stories by popular authors are among the best ever published—exciting, thrilling, adventurous tales— every one clean, wholesome, good for healthy boys and girls to read.

Some Samples (complete list free on application)

THE HORSEMEN OF THE PLAINS. By Joseph A. Altsheler. "A story of the West, of Indians, of scents, trappers, for traders, and adventure."

UNCLE TOM ANDY BILL. By Charles Major. "A great story of bears, Indians and hidden treasure."

WHILE CAROLINE WAS GROWING. By Josephine Daskam Bacon. "Just the kind of story that girls—and boys as well—will like."

UNT JIMMY'S WILL By Mabel Orgon Wright. "Barbara has written no more delightful book than this. Every child will love it."

THE SLOWCOACH. By E. V. Lucas. "A charming narrative, as quant and original as its name." PICKETT'S GAP. By Homer Greene. "A vivid secture of truth and honor." THE RAILWAY CHILDREN. By E. Nesbit. "A delightful story of juvenile ways." BEARS OF BLUE RIVER. By Charles Major,
"Wholesome adventure of the best kind."

A LITTLE CAPTIVE LAD. By Marie Beulah Dix.
"The homan interest is strong and children are some to
like it."

Complete lists of these books will be mailed to any address for the asking. The books are well printed, on good paper, strongly and beautifully bound in cloth with decorated covers. They are not cheap books, but the best books at a very low price. You know the names of these authors and what they stand for. These books are for sale at 50 cents each wherever good books are sold. If there is no bookseller near you, send 50 cents (stamps or money-order) to the publisher, and the book you want will be forwarded at once, postpaid.

The Macmillan Company

## OUT-OF-DOORS

## Your Canoe and Its OutAt

No DOUBT the first boat was a log; and, seeing this pass upon the water, some soapless soul perhaps hailed it with the exclamation: "It floats!" It may have taken yet more prehistoric time to discover that the bark of a log will float as well as the body thereof; and, moreover, it is essign to correct the transport to prove easier to carry between streams or to propel on any water. These things happened before our time. We white men found the Indian bark canoe in a model long unchanged, and have but slightly improved upon it, except in the way of materials.

Imitating the canoe itself, we have to some extent imitated the customs that came down with it. The Indian was poor and had not much equipment. He could take his boat and its needful contents on his back and start across country by land very comfortably. Such has ever been the aim and ambition of the white canoeist in

his day. Your true canoeist takes himself seriously, even though he recognizes himself as an imitator of the savage man; but both the cance and the canceist are worth taking seriously. There is no more beautiful form of sport, none more clean; and if you look over the personnel of any branch of sport shooting, fishing, racing, boxing, golfing, all the amateur athletics—you will find no body of men to surpass the canoeists of this country. With few exceptions, they are men of good standards—in life, in business and in sport.

We have had canoeists ever since our leisure days began; but today there are more canoes a head than ever before. The sport grows, not only as to its organized form in the American Canoe Association and its allied divisions, but also in its un-affiliated and individual form. The parent body of all the organized canoeists is, of course, the American Canoe Association, whose great summer meets on the St. Lawrence or the Great Lakes are very famous affairs.

The Western division of the A. C. A. also has at times held important meets, local cruises, annual camps, and so on-not to mention the regular summer business meet-ing and the annual midwinter banquet. In this way canoeists, annually or oftener, are brought together; and there are members now meeting in one or other of these associated divisions who first met as canoeists thirty years ago, and who have grown old in the sport together.

#### Imitators of the Indian

Of course the summer meetings in the big permanent camps are largely racing meets for amateur prizes in a number of events— paddling, sailing, and so on. Among the men who go in for this sort of thing, however, are many who now and then take a solitary cruise in the wilderness or elsewhere; and an increasing number of men practice this form of the sport who care little for identification with any organiza-tion. These are the closest imitators of the

solitary Indian and his ways.

Besides being the cleanest, the most beautiful and the most spectacular of all our sports, canoeing is one of the most economical, even if you belong to a canoe association. You can get a good canoeing outfit for about what a good golf outfit will cost you, and there are no club dues to pay, unless a trifle of a dollar-a-year association membership be called such. There are no grounds or links to keep up, and the field is all the waters of the out-of-doors, free and uncommitted.

You can purchase a good canoe today, either of the cedar or cedar-and-canvas type, for from thirty to sixty dollars. Even if you go in for extras—cane-seated stools and lazybacks for the ladies, a carrying yoke, an extra cushion or so—you cannot very well spend much money on your boat—that is to say, if you purpose being a devotee of the cruising canoe. Of course, if you want one of the beautiful racing craft

built not for comfort but for speed, you

can spend more money.

That is but one branch of canoeing—the racing side of the sport—but even that is purely amateur. Very bold and skillful are some of the amateur sailormen who race these little fliers, built decked fore and

aft, with a self-bailing cockpit, rigged mainsail and mizzen, and sailed with a hiking board, which allows the skipper to lean entirely outside his boat, balancing as artfully as any bicyclist his weight against the thrust of the wind and his eye against the variations thereof. Such a boat is no place for a man who cannot swim. Fifty such men in fifty such boats make a merry

sight of a pleasant summer day. It is amateur work, absolutely on the square. There is no professionalism thus far in American canoeing. The most expert canoeist has no place to go if he wants to cash in his amateur knowledge. Not for him is any of the muck of the so-called Olympian Games, and not for him the commercialism that governs certain of our American pastimes of the more widely

The bone and sinew of the sport of canoeing, however, is your solitary man, who goes out alone, or with one companion, into the wilderness and takes care of himself as the Indian used to do, priding himself on the lightness and compactness

How light can the canoeist's outfit be? There was one old woodsman, more or less famous in his time, who reduced his outfit to twenty-two pounds in weight—that is to say, his canoe and all its contents weighed twenty-two pounds! A builder made for him several of these extremely light canoes—one as low as nine pounds! I saw one of them that I could lift out at arm's length on one finger-I think it weighed about eleven pounds. In this craft he managed to get about quite a bit up in the Adirondacks, carrying what sufficed him for a camp out-fit. This is like painting the lily, but it shows the possibilities of going light.

#### Clean as a Parlor Chair

After all, that sort of thing may be called faddish. No one knows how many men and boys were drowned in imitation of this old extremist. It is far more sensible to encourage a man's-size equipment. Any team of horses will run away and any boat will upset. To be practical and rational is always a good thing in sport. To make the canoe outfit light, practical and safe has been the study of many good business men, who have had offered to them the ideas of many amateurs. many amateurs.

There is a mental as well as physical stimulus in this fascinating form of recrea-tion, and you will hardly meet any canoeist or go to any canoe camp without learning of some new wrinkle that some canoeist

has discovered.

The canoe also has its social side. Round the city of Boston there are many hundreds of canoes in use in the summer season, and the canoe has become very popular of late in almost all the large cities where there is

any safe canoeing water.

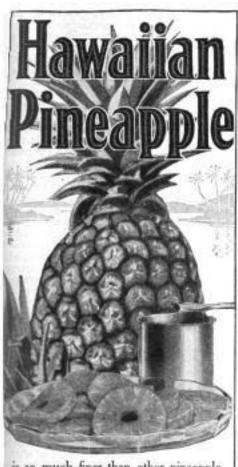

In many of the busy Western cities, where for a generation business men have thought it criminal to engage in any sort of sport, you may now of a summer evening see many and many a tired business man taking his wife or his sweetheart or his children out paddling on some lake or stream, and having a quieter time of it than the occupants of the chugging powerboats, which represent the ambition of others who

You can go in for a good deal of elegance in such a personal craft as the city man's cance—line it with tapestry carpets and silk cushions; have seats of cane and lazybacks of polished woods; but all the time the model of the cance will be that which have been practically extended to a long. has been practically stereotyped for a long time—the model of the woods.

The white man's canoe, however, has one great advantage over the red man'sit is always dry and clean; and so lends itself to decoration, even of the feminine sort. A rowboat is apt to be clumsy and sloppy, but a well-handled canoe is as clean

as a parlor chair.

Of course the big association meets-or summer cruising meets of less size-are the real clearing houses for canoe information. In any such camp you will find many interesting devices showing the personal love men have for this clean and tidy form of sport. In these cruises or traveling meets,

is so much finer than other pineapple because it is of the Smooth Cayenne variety, "the garden pine," grown extra big, golden, tender and luscious, in a sub-tropical climate, in a soil which exactly suits it and especially because it is picked and properly canned in pure came sugar surup on the very day it has fully riperied on the plant. The final days of ripening develop the sugar which gives a flavor and tone to the fruit that green cut pineapple ripened in the vessel hold, the refrigerator car and the storehouse never can get.

Regardless of its quality and the distance it has to come, Hawaiian Canned Pineapple costs no more than domestic fruits.

Have you our free book of one hundred scripes? The second edition is on the pees, "How We Serve Hawaiian Pineapple," by the following fifteen culmary experts:

## Ellictt Varnish &c.

3 S. Kolmer Avenue 1 Washington Avenu

Chicago Brooklyn

Brantford Roofing Company, Ltd.

where camp is broken every day or so, the usual thing is for two men to go in one canoe, and to divide the camp outfit. A fourteen-foot or sixteen-foot canoe-not to mention the fine craft that are made up to twenty feet-will carry two men and a perfectly comfortable camp outfit.

Men have used cruising canoes on long trips, camping at night without any tent and sleeping in the canoe itself, with only a shelter over the cockpit. You will see the cruiser of today, however, usually carrying along a tent—a practical yet very light affair, usually of so-called silk or silkoline, which is really Egyptian cotton—of bulk scarcely larger than a pocket handkerchief and a total weight of only four or five pounds.

There are divers curious and ingenious forms of these light tents. They may be had with shallow walls—in the A model, the single-pole circular or miner's model, or in the open-front camp model, with an awn-ing over the door. Most often the canoeist does not carry tentpoles, but uses a ridge-pole made of a light rope, which he stretches between two trees or over two crotched poles that he cuts in the woods.

The oldtimer laughs at the man who carries metal tentpegs; but your dandy canoeist will be very likely to pull out a dainty bag with a lot of short pointed wire pins, with a ring at one end, like a sur-veyor's pin. They hold well enough to keep down the edges of the tent in ordinary weather. Of course the ropes on such a tent are not really ropes at all, but light, strong cords. The tent itself, however, will

turn wind and weather very well.

Sometimes the tent will have the floor sewn into it. If not the canoeist will have a light waterproof floorcloth of some kind, on which to make his bed. If the cruise is in the wilderness he will have some sort of defense against mosquitoes—either a bob-binet netting inside the tent or a door to the tent itself. All his equipment, however, will be light. He will not carry a big roll of blankets and comforters, or a tarpaulin of twenty-ounce duck, like the cowpuncher. In short, the canoeist's tent, floorcloth, blankets, clothing and grub outfit, all together, will not bulk so large and will not weigh much more than the cowpuncher's bedroll, which he throws into the

#### The Effete Side of Canoeing

In the fixed association camps there will be a regular street of tents, all pretty much alike, often of a big marquee model, tall enough for one to stand in, with plenty of arrangements for clotheshangers and the like, room for a cot, and all sorts of little artificial camp comforts. This is the effete side of the sport.

The canoeist makes amends for that by the severity of his costume. A sleeveless jersey, a pair of duck trousers and rubbersoled sneakers are en règle on cruise or about camp, even at mixed soirées—though there are occasions when blue coats and vizored caps come into use, for your association man can do either nautical or social stunts by second nature. The man on a cruise depends on a sweater or old coat for his evening costume. All his clothes must be of the sort to go into a bag, for the trunk or valise is taboo. These sailorbags are usually slim, round affairs, waterproof, and

capable of being tied in such way that they
will not take water even in case of a capsize.
Your canoeist still experiments with
blankets. They must be light and no larger
than needful. Bulk is almost as bad as
weight in his game. The cot is not quite the thing on cruise and the bed must go into a bag. A pillow, of course, is hardly allow-able in a tent occupied by really rugged canoeists; there are the round dunnage bags into which one can put a pair of boots, a sweater, an extra shirt—or even a little grass or straw-and so make excellent

There is one thing especially to be renarked about all canoeing—its cleanlines Etiquette, ethics and custom make this mandatory upon every man in the camp, or even upon the lone man in the wilderness. This is the one standard of conductto be neat and to be clean! In a canoe camp you are likely to see each chap make a little broom of twigs. The floor and front of his tent will be swept clean. There is an unwritten law against throwing rubbish in the company street or assembly grounds. Very often there will be a camp policeman appointed to care for the careless.

If you look inside a real canoeist's tent you will find everything absolutely in

Rice Leaders of the World Association to join with other leading manufacturers in a movement to further business integrity and honor, we regarded the invitation as a stamp of approval of unique value.

It showed that the favor and confidence which we enjoyed among men and women everywhere had been endorsed by those whose ideals and aspirations represent the worthiest things in American business today.

To promote interest in the merchandise manufactured by its members, the Rice Leaders of the World Association announce elsewhere in this issue a Prize Contest in which cash to the amount of \$25,000 will be distributed.

We commend this contest to our friends as a source of profit as well as a source of interest. It is our earnest desire that the public who are familiar with our writing papers and dealercustomers who market our merchandise will feel deeply interested in this unusual opportunity afforded them to develop new ideas and create artistic displays. Read the conditions carefully and let your original ideas bring a rich return.

## EATON, CRANE & PIKE COMPANY PITTSFIELD, MASS.

## Even Floods do not affect a Tarvia Roadway—

HERE is a road that was built in 1911 with a five-inch concrete base and a two-inch macadam surface bonded with Tarvia.

In September, 1913, it was flooded by river and tide in a great storm, as shown in the small picture. When the waters subsided, the tarviated road was unharmed and no repairs were required! The larger photograph was taken after the flood.

The City Engineer, Raymond R. Eagle,

"While this was a very severe test on the pavement it stood up perfectly under it and the pavement remained in as good condition as before the storm." He also says: "The Tarvia has given entire satisfaction."

Tarvia is a coal tar product of great bonding power.

It encloses the stone in a tough matrix from which neither water nor traffic can

It vastly increases the durability of the road and usually cuts down the repair bill enough to offset the entire cost of the treatment.

Booklet regarding the Tarvia treatment free on request.

THE TARDY BOY

PREPARES his lessons "any old time." He seldom does today what he can put off until tomorrow. He doesn't realize the importance of promptness. He has not learned that the performance of a duty is twice as easy NOWas it will be LATER.

Your advice is discounted by the tardy boy. He doesn't connect the theory of your lesson with his everyday life. Precept and practice'are unrelated in his mind.

Somehow the boy must convince himself that promptness is essential. Thousands of parents have recently adopted a plan by which their boys are teaching themselves this lesson. The exact method is fully explained in a booklet, "What Shall I Do With My Boy?" A copy will be sent you, free, upon request. Write today to

The Sales Division, Box 501

THE CURTIS PUBLISHING CO., PHILADELPHIA, PENNA.

apple-pie order. On the side of the tent you will see a little housewife, in which he keeps his combs, brushes, needles, thread, and other little articles not stored in his and other little articles not stored in his war-bag. Loose odds and ends of food or equipment are not good form. The camp mess, or the individual messes, are usually storage places for the receptacles carrying grub, and every effort is made to keep these

as neat as possible.

Above all, hospitality reigns in a canoe camp, whether of many men or of two—or of one. This, too, seems to have come down from Indian times. It is a pleasant virtue. and your cancelst practices it finely. What he has in camp is yours so long as it lasts. If you are in trouble of any kind with your boat or equipment, a dozen are ready to

help you.

There is a fine camaraderie in the sport. Your companion in shooting and fishing may be eager to beat you. Your companion in golf may be sour or morose or profane at his bad form. Your comrade in a canoe camp is loafing and inviting his soul, and the only competition he cares for is to make you have a better time than he is having himself.

In such a camp as one of these traveling canoe meets you can learn very much about the canoe and its outfit. All the standard models of the best modern canoes will be represented, and you will have an oppor-tunity to see the best efforts of the outlitters tunity to see the best efforts of the outfitters in producing things practical, yet portable. Of course the outfitters sell to canoeists many things not really useful. Nearly always you will find one or more tents that offer you soup made out of tablets, coffee prepared from lozenges, or desiccated vegetables that do not taste like anything in particular. These things lose something of their charm when there is a farm within half a mile, where one can get milk, eggs, fruits, vegetables or fowl; and usually the division canoe cruises are made in settled countries. countries

## A Portable Helpmate

Canoe cookery may or may not be good, for many men have many skills in cooking out-of-doors. The canoeist soutfit is usually simple and he does not carry many days' stores unless he is leaving the settlements altogether. Bacon he must have—in spite of those who insist that olive oil is better for frying. Fish or game he may have as oppor-tunity offers; if not, then plain beefsteak bought of the village shop, or chicken law-fully or unlawfully obtained. If he carries potatoes there will not be many of them.

You are apt to find his flour or his meal in little waterproof bags, well tied and nested in another waterproof bag. His sugar and his tea will be similarly cared for—no package being very large or very heavy. Rice, sometimes oatmeal, not infrequently beans, will be found in these light stores; but the wish of the canoeist to former on the country as much as posis to forage on the country as much as pos-sible—and in most canoe cruises villages are not far apart.

The best camp cooks rely on the stew-kettle as well as the frying-pan. Fried fish, fried ham and eggs, are not to be sneezed at; but neither is the stew, cooked slowly, made out of bits of meat, some vegetables, a dumpling or so, or even some crusts of bread. Squirrels go well in such an enterprise, or even a young rabbit.

Of course, in a game country where one can get fish or grouse, there is no cookery and no food better than that which you will find in a well-conducted camp of experienced canoeists. Many of these men can make good camp bread or biscuits. Those who cannot, depend upon the loaves of bread they find here or there in the country or in the village. Even butter you may find in camp; as good butter as I ever ate came from Nova Scotia, and I ate it in latitude fiftyeight degrees north—two thousand miles from where it was made.

His cook outfit is the pride of the canoe-ist's heart. You will find hardly any two outfits alike. Aluminum is likely to be the material used in part—though the experienced camper does not use an aluminum teacup, because it holds heat too long. The canocist nearly always has a stove, but one which will go into his pocket—a little grid-dle, with folding legs, which he can thrust

down into the ground, making his stovetop any height he likes.

Of course you can broil anything you like right on top of the stove, or you may use that as a support for your kettle or your frying-pan, or your coffee pot if the latter has no bail by which you can hang

it over the fire on a stick. Above all canoeist prides himself on the smallne his fire—another Indian tradition. good camp you may see several little going of an evening, each with a difficultit, any one of which is collap condensable, portable and practical.

I recall eating lunch once with a young in a camp when we had

man in a canoe camp, when we had potatoes, rice, beefsteak and coffee cooked at the same time on a stove foot across, and in a set of utensils had been used to carry the grub to the ing place. The entire cooking outfit cost twenty-five cents; in fact, it was no more or less than one of those four-st dinnerpails that workmen sometimes to carry their lunches. Each compart comes free, fitting into the top of the below it, which is provided with a sh flange. They all lock together; the clamps down; and when the workman up his pail by the handle he may be ting a dish of potatoes in the bases ing a dish of potatoes in the baser a pork chop on the main floor, a piece upstairs, and a can of coffee in the Of course you can carry raw food ir one of these compartments, as this y man did. He now took his dinner pail and used each one of these comparts as a cooking vessel. It worked

One trouble with such a cooking ou that it has no handles or bails; but a like this would not disconcert a canoeist. My host had in his pocket those Yankee pocketknives that ha sorts of things concealed in them. We wanted to lift the coffee pot he did so thook he found inside his knife. Wh wished to shift the compartment in he was boiling rice he used the jaw pair of pliers he also found in the which he applied to the side of the b which he applied to the side of the b vessel, just as though he intended to piece of wire—which also he could do wished. In short, with an outfit the cost next to nothing and had little web bulk, this young man and his wife cost meal for three with no difficulty who and a very good meal it was.

My friend's wife washed the dishest was not a very large lady; and I have wondered whether her husband—an it canoeist—did not marry her in part be of her portability.

of her portability. Taking this young gentleman's ca an instance and this meal as a st point, we might give quite an object-in neatness and dispatch. When the were washed the stove was folded u put into a clean canvas cover. The pail was assembled again, handle a Our plates—very light ones—went little packet. The unused raw food next meal was again put into the din

## The Guide's Ship

When the tent was rolled up it a pack less than eight by twelve inc size. The floorcloth covered the carg size. The Boorcioth covered the cargclean, soft double blanket went into
and another bag carried the clothingslender, round bags lay lengthwise
hull of the canoe. At the staff on h
fluttered the little burgee that late
adorned the tent. The two paddle
had supported one end of the ridgepcame into use. One trip from ca
boat served to carry the entire outh
when the little ship was loaded the
plenty of room for two or even three

plenty of room for two or even three p Granted two men, with eight or te as much food as we had in this bos a tackle box, two rods, a rifle or s and ammunition—and still the boat have ridden high and could have be pelled easily. With one companion-fourteen years old—I have paddle miles in two days up a very swif with a pretty heavy camp outfit, an felt uncomfortable either afloat or it As a means for a week-end vacati the canoe is not surpassed.

Of course in the Canadian wild in Maine and New Brunswick, the is the guide's ship—the one means o portation. The average man who g the woods does not know how to cu his duffel, and the guides dread a ci on the portage; but, with a rationa two good canoeists can go far it wilderness.

I know of one man and his wife w lost for a month in the Rainy Lake c on the Minnesota line—in a cou which they knew nothing whatevera risky undertaking, to be sure, but

IT it would have been in the scrap ap long ago but for an

BARA HAT CO., Dopt. A, 830 Besadway, New York City

which there was no disaster and no unbearable discomfort. Last summer the same gentleman and his wife and two children, with only one Indian guide, manned two canoes and journeyed far into the lake and river region north of Lake Superior. They came back after a very happy and comfortable time.

There are, of course, some experts in cance handling who like to take long and hard wilderness trips. The headwaters of the Mississippi River are sometimes visited in this way, and the fast waters of the upper Wissensin Piper are about the proper wissensin Piper are about the proper wissensin Piper and the fast waters of the upper Wissensin Piper are about the proper water and the proper water are about the proper water and the proper water are about the proper water and the proper water are about the proper water and the proper water are about the proper water and the proper water are also water and the proper water and the proper water are also water and the proper water and the proper water are also water and the proper water and the proper water are also water and the proper water and the proper water are also water and the proper water are a Wisconsin River are also popular. Maine is full of good canoeing waters, and the Adirondacks have long been a paradise for the little boats. But, quite outside of these remote and somewhat expensive regions— for a canoe is bulky and awkward to send anywhere by express—there are scores and hundreds of amiable little rivers close at home that can be used most pleasantly for small canoe trips.

You never know a river until you run it; and even your local river, where you have fished in restricted localities perhaps for many years, becomes for you a highway of romance when you run fifty or sixty miles of it and come out at some railroad town below, of which you have never heard.

Thus to explore some near-by, comfort-able stream; not hurrying at all; taking your own time; using your own labor and not too much of that; going light and neat and clean; changing your camp every day or so perhaps, and going in only for enough sport to give you food—nothing is very much better than that for the city man. A week of this is better than many days of hurried golf. A month of it is better than any amount of life at a fashionable resort.

As a fishing boat the campa cannot be

As a fishing boat the canoe cannot be called a success for the average amateur—though, of course, it is the fishing boat of the wilderness. Unless the canoe be large and roomy and handled by an expert, the amateur would better do his fly casting or bait casting from some more stable platform. Fine canoes, in the so-called lake model—broad and beamy; provided with a little keel; a socket for a short mast, and a pair of light oars for upstream work-can be secured in a weight quite within the portage capacities of two men of no very great strength or experience.

#### Much Fun for Little Money

A good, light outfit in a boat like this will afford a pair of vacationists about as much solid fun as they are likely to get elsewhere, no matter how much money they may wish to spend. A popular type of canoe is the sixteen-foot model, but guides who have to do much portaging will cut the size down to fourteen feet by choice.

The only thing to be urged against the canoe and canoeing is the danger of it. One should know how to swim-but, above all, should know how to be careful, and to avoid taking risks in bad water or in high wind. Some cruisers have rigged an airtank in each end, so that the canoe will not sink. Others rely on air cushions inflated for seats—rather wabbly and insecure seats

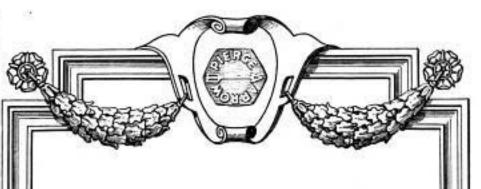

they are.

Some sort of life-preserver is a good thing to have about—I do not know anything smoother than the outside skin of an inverted canoe. The amateur, suddenly capsized, is mighty quick to forget about the fancy stunts he has seen the experts do at the association meet. The best thing to do is to keep the canoe right side up in comfortable water and under no risky conditions.

There is no sport that has had more care expended on it by professional outfitters; and the result of all this has been that the canceist can go out with the handsomest, nattiest and most complete outfit possible to be obtained by any sportsman whatever.

The boat itself has lines that tell of ease, the boat task has that that the case, strength, grace and self-confidence; and moreover, it has a jaunty, highbred air— one of quality and class—which endears it to the heart of the owner. With all its beauty, it is not very expensive; and, once you have your outfit, there is no sort of sport in which you will find it more difficult to spend very much money.

With a portable canoe that does not mind being used, a portable camp and cook outfit that never becomes aggravating, and a portable girl who does not mind getting freckled—or even a companion like himself-the plain North American citizen can get about as much dividend out of everyday, plain, inexpensive canoeing as he can out of any other line of human endeavor out-of-doors.

An investment that pays continuous dividends

▲PPLY to the purchase of a motor 🔼 car the same judgment that directs your purchase of securities. In each case you have a right to an unfailing supply of dividends and a ready market whenever you want to sell.

The dividend that comes from a motor car is the pleasure that it gives you. It is not enough that this should be as great as possible; it must also be as frequent as possible. Pierce-Arrow owners never get over the novelty of possessing a Pierce-Arrow.

Every time one of them sees his Pierce-Arrow approaching, every time he steps into it, every time he is carried smoothly and pleasantly wherever he wants to go-and back again-he experiences a new sense of ownership, a new dividend of pleasure.

And if that investment, which is great enough originally to supply this unique quality of service over many years, is ever to be liquidated, there is always a recognized current value for Pierce-Arrows. Motorists everywhere are anxious to get the added service and luxuries scarcely diminished by one owner in a Pierce-Arrow, for a price that indicates a loss of nothing except the sense of being the first owner.

Pierce-Arrow cars are built in three chassis sizes, 38, 48 and 66 horse-power. These chassis are equipped with many types of open and enclosed bodies, including a runabout with interchangeable Victoria and coupé top.

The Pierce-Arrow Motor Car Company Buffalo, New York

## Qualifications for Membership

HONOR:—A recognized reputation for fair and honorable business dealings.

QUALITY:—An honest product, of quality truthfully represented.

STRENGTH:—A responsible and substantial financial standing.

SERVICE:—A recognized reputation for conducting business in a prompt and efficient manner.

\$25.000° in Cash Prizes

> to more firmly establish this Emblem and its significance in your mind.

> This Emblem is the token by which you may identify the members of this Association. It typifies the ideals that are the Qualifications for Membership.

> The privilege of using this Emblem has been bestowed upon these manufacturers so that wherever you see it you may know that it is associated with those concerns whose record of achievement has won for them this merited distinction evidenced by the endorsement of public approval.

> We believe implicitly that there are men and women everywhere to whom these concerns mean infinitely more than merely successful commercial enterprises. We know that their years of fair dealing with worthy products have built up a legion of warm and loyal friends, and we say to each member's friends, "You are justified in having confidence in every other member."

It is one of the axioms of this Association that "an exchange of ideas creates new ideas." The offer that is described on the opposite page has been arranged to create an even greater appreciation of the integrity and merit that underlies these products. To give a just reward for the time and thought that will be spent, we are offering these prizes. Read every line of this message—including the opposite page—then turn your ideas into dollars.

Ninth Prize		. 100.00	Total, \$10,000.00

#### SPECIAL: - "AWARD OF MERIT" TO EVERY PRIZE WINNER

You will recrire a handsome "AWARD OF MERIT" as a permanent record of your "accepted ideas," a your name engrossed thereon, containing our complete membership and bearing the Association siem embossed in its natural colors, officially aigned and scaled by the officers of the Association.

CONDITIONS: 1st-You may submit one letter only for each Member of the

2nd - Each letter may be written on any or all of the subjects as listed above the prizes on this pag

3rd - Each letter must contain the respective Member's name at the top, followed by your idea, expressed in not over 50 words. Sign your name and address at the bottom. 4th — Each letter must be on one sheet of paper, written on one side only. 5th — This contest closes on May 15, 1915, and all contest mail must bear post mark

not later than that date. No questions can be answered in this contest. Do not send any of your suggestions direct to Members of the Association, but mail them in one package

#### "Idea Letter Department" Rice Leaders of the World Association ADDRESSED TO: Fifth Avenue and 34th Street, New York City

where they will be officially stamped, entered in the contest, and forwarded to each of the respective Members who will judge and pass upon the ideas submitted for their respective concerns.

6th - No contestant shall submit the same idea for more than one Member.

All ideas submitted will be judged upon their merit and value, and will become the property of the Association and its respective Members, and will not be returned.

The person having the largest number of idea letters accepted will

receive the first prize, the second largest number second prize, etc. In the event of a tie for any prize, such prize will be awarded in full

to each of those tying. Prize Winners' Names, listed by Countries, States and Cities, will be on display in the windows, or stores of various merchants whom

you see making window displays in the Window Display competition. These lists will be mailed to merchants from our New York Association offices on August 14th, 1915.

#### Power and Riches Come from Ideas

Read Every Word of this Unusual Message.

It carries beyond the thousands of dollars in cash prizes unparalleled opportunity to submit your ideas to these great concerns; consider what it would mean to you, beyond a cash prize, to have

your ideas accepted by such concerns.

Add your own ideas to those that have been behind the sale of these famous products. Successful as they have been, such ideas have by no means exhausted the fertile field of possibilities. Some of the best advertising and sales ideas in use today have been inspired in just this way.

Look for the avindow displays of these products at your dealers; ask your dealer and friends about these products. An exchange of ideas creates new ideas.

## To Dealers \$15,000.00 in Cash Prizes for

of any of our Members' Products as herein listed.

Consider the magnitude of this opportunity. Nearly Five Hundred

Did you ever hear before of \$2,000.00 in Cash being paid for one Window Display?

First Prize .		\$2,000.00	Tenth Prize \$250.00
			Eleventh Prize 250.00
Third Prize			Twelfth Prize 250.00

Eighth Prize		250.00	Next 300 Prizes 10.00 each
Ninth Prize		250.00	463 Prizes, Total, \$15,000.00

#### SPECIAL: - "AWARD OF MERIT" TO EVERY PRIZE WINNER

You will receive a bandsome "AWARD OF MERIT" as a permanent record of your "accepted model window display." with your same cagrossed thereon, containing our complete memberable and bearing the Association Emblem embound in its natural colors, officially signed and scaled by the officers of the Association.

## Special Prize to Every Contestant

An album containing the first 100 prize-winning window displays, with each winner's name, will be mailed free to every contestant after the cash awards have been made.

This album of model window displays and valuable ideas brought together from all parts of the country could not be purchased, nor could a value be placed upon it. It is made possible only by this universal campaign, embodying displays of such varied lines as represented in our member-The cost of producing this album will represent a small fortune.

CONDITIONS: 1st-A display can be made of any of the products herein listed as being produced by any of our Members

2nd — Each display must be exhibited for at least one week, any time between May 16, 1914, and May 15, 1915.

3rd — Each display must contain the Association Banner, which bears the Association

Emblem and list of members; it will be mailed free upon request.

State which Members' products you will display, and when you will make the first display.

Address "Window Display Department," Rice Leaders of the World Association, Fifth Avenue and 34th Street, New York City.

4th -- Photograph of display -- mailed flat -- bearing on the back the name of the store in which display was made, address, and date of display, photographer's name and contestant's name, to be mailed to "Window Display Department," Rice Leaders of the World Association, Fifth Avenue and 34th Street, New York City, on or before May 15, 1915. All photographs submitted shall become the property of the Association and will not be returned.

5th -- In the event of a tie for any prize, such prize will be

awarded in full to each of those tying.

6th - If any merchant in the United States desires to enter this contest and does not handle any of the goods listed as produced by our Members, the Association will see that he is loaned during the time of the contest some product of some Member free of cost in order that he may enter this contest.

We reserve the right to disqualify any contestant whom we learn is using, what we consider, unfair methods in this contest. The judges, whose names will be published, will be men of authority on window display.

PRIZE WINNERS' NAMES: Large sheets containing list of all prize winners in Idea Letter Contest, listed by Countries, States and Cities, will be mailed August 14, 1915, to every merchant who enters this Window Display competition, to be displayed in his window or store, whereby the public may see who are the prize winners.

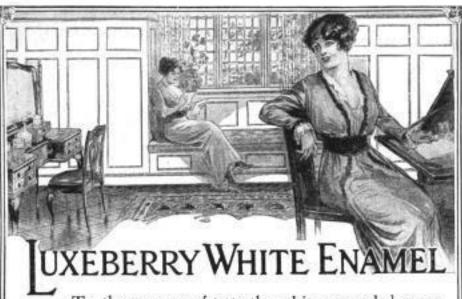

Enter this Unusual Window Display Contest. It will fur-ther the prestige of your store and the confidence of your customers.

## Rice Leaders of the World Association

Elwood E. Rice, Founder & President

Fifth Avenue and 34th Street

New York, U. S. A.

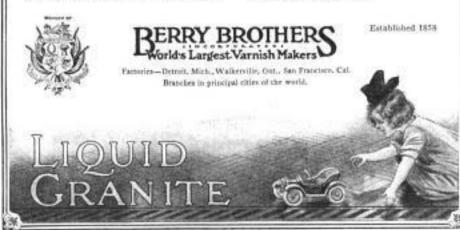

To the woman of taste the white enameled room makes a strong appeal. She delights in its atmosphere of cheery, dainty brightness. Not only in her boudoir, bedrooms and bathroom, but in the living rooms as well.

Luxeberry White Enamel produces a rich, deep, snow white effect unequaled by any other finish. A Luxeberry surface is smooth, satiny and durable, and may be left either a soft dull, or brilliant as the finest porcelain.

Luxeberry White Enamel won't turn yellow, chip or crack and cleans in a jiffy with soap and water.

In snow white rooms the natural wood floors should be protected and beautified by the finest floor varnish. Liquid Granite has all the toughness its name implies. It brings out the beauty of the wood, multiplying its attractiveness. Liquid Granite floors have a durable elastic surface that withstands the wear of grown-up feet and the romp of playing children—a surface you can wash without fear of turning it white—even boiling water has no harmful effect.

Berry Brothers' Varnishes have been the first choice of home owners, architects and decorators for over fifty years. Ask your dealer about them or write us direct for varnish information of special interest to home owners.

IF you have some spare time and want to convert it into money, let us tell you how to do it. Agency Division, Box 508, The Satur-DAY EVENING POST, Philadelphia, Penna.

## THE VORTEX

(Continued from Page 22)

"Quane"—that is the way she said it. I never saw that nurse again and she probably never thought of me again; but her sound, hard sense had pointed a way of escape from my trap. What was it the average girl looked forward to as her lifework? What was it she wanted? Homemaking—the trained nurse had called it domestic science. What was it the average woman was best fitted for? Homemaking. What was the one vocation in which I was not subaverage nor even average, but was always superaverage? Homemaking—domestic science—the science for which every other science and vocation exists. And here I was among the army of misfits because I had not had sense to find my fit!

Was that trained nurse, getting probably twenty a week and board, any lonelier than I was in my back tenement room, with not a cent above the margin of mere existence? Was she not safer, securer, happier? But she had called it domestic science. Was homemaking a science? I began to figure out what she said about saving. Could I but get twenty-five a month and keep, I could save three times more than John D. Rockefeller had earned the first ten years of his business life! It made me dizzy!

Years ago, what had sent our New Eng-

Years ago, what had sent our New England boys and girls into factories? The fact that they could earn bigger money in the factories than in the home—that there were more factory jobs than home jobs; but now was there a single home in all New York, was there a single home in all the United States, always sure of home help? Was there enough domestic help to supply all the homes in the United States? We women had been hopelessly on the wrong track. We had been shunning training for the one thing we all looked forward to. I thought of what that customer from the West had said to me: "There are millions of homes in the West that can't get help for love or money—not for forty dollars a month and board!"

#### Why Not a Uniform?

Was it not the same right here in New York, where I had been starving along—where a hundred thousand like me were always starving along? What was the matter with us? Was it the word servant? Were we such snobs? Was the word servant any worse badge than slave? And were women whose very lives depended on permission to operate a machine owned by some man any better than slaves with a sert's ring round their necks? Why did we shun domestic help?

Few of the factory women earned more than twelve dollars a week. The majority did not earn six dollars steadily the year round. A good nurse helped to look after children; a good housekeeper—a good general help—could earn at least twenty-five dollars a month and board and clothes, with two afternoons off a week, at the most up to forty and fifty dollars clear; that trained nurse must have been earning one hundred dollars clear.

What was the matter with us that we shunned this one open door and battered our stupid brains out against the wall of the impossible in industrial life?

What a woman can save is the exact measure of her security against want and danger. In domestic vocations she can save practically four-fifths of what she earns. In industrial vocations she can save—what can she save?\* I could save nothing. I was on the ragged edge of want and desperation—and do not forget the night I craved the can of potted meat!—I was on the ragged edge of something much worse! In this vocation honesty, thoroughness and faithfulness had a market value. Had they any market value fed into the high-speed machines?

Domestic vocations demanded a uniform. So did our stenographers. We had to wear black dresses, with white cuffs and collars. So does a nun's vocation demand a costume. So does the trained nurse's; and that costume protects her wherever she goes. So does an ambassador's vocation demand a costume. Whyshould domestic help resent a uniform? What was the matter with us? Were we fools and victims of words? Were we to be sneered out of life by prejudice? Were we foolish snobs?

\*State and Federal statistics show that the average earnings in industrial vocations are under six dollars a week.

The Orchid of Sweets

The rarity and costliness of orchids add to their fascination, but if they were as common as carnations their perfection of beauty would still make them the most prized of flowers.

Muylers Chocolates

are the most prized of sweets, not because tarest, or costliest, but because of their perfection of flavor. If only a hundred boxes a day were made they would be priceless.

The luxury of sinds may be enjoyed no matter where you live, because sinds Bonbons and Chocolates and many other sweet things from sinds are sold by sinds sales agents (leading druggists everywhere) in the United States and Canada. If there should be no sales agent near you, write us.

west PRICES direct better better The state of the cost of the c

There is not a well-to-do home today that is not on the ragged edge of despera-tion for help; and there is not a city today that has not its armies of women, thrown on the scrapheap by industry, on the ragged edge of desperation for a home. Why do they not come together? Is the washing of dishes so much more repulsive than the washing of smallpox sores by the trained nurse, or the swabbing of a diphtheritic throat, which any nurse in any hospital may have to do any day of her life at immi-nent risk to her own health? Are we so democratic in this most democratic of all nations that it is really snobbery that drives a hundred thousand women a year to the scrapheap of industrialism? Let us banish the word servant, though the motto of roy-alty is "I serve!" and substitute the words domestic help, as we have substituted the word surgeon for leech.

All of which reminds me of a curious experience of my own recently. I was inter-ested in a little girl who was wrecking her health studying for a vocation she could never possibly fill with financial profit to herself. She was a splendid little house-keeper—thorough, conscientious, careful; and I asked her mother why she did not allow her daughter to take a course in domestic science instead of plugging at Latin and foreign languages. The mother looked at me with one long, blank stare. "Do you mean—do you mean servant?"

she said slowly, glowering.
"Of course I don't! I mean the science of domestic life-the chemistry of cooking; the botany of gardening; the finances of housekeeping," I tried to explain. She almost threw me out of that house.

To resume the story of the woman who found her way out:

I walked back to my mean tenement lodging from Eighty-Sixth Street, and as I walked I came to my decision. Even if I had been fitted—built on wires instead of nerves-for electrified machine-driven industry, where would it leave me at thirty-five? Worn out, with little saved, if a cent. In domestic science I could save at least four-fifths of what I earned. The next day I put my application in at two employment agencies for the position of domestic help. Here, again, is a place where the rich women who want to help can. I had to pay a two-dollar fee at each employment agency, and the places found for me were neither suit-

## References Required

able nor safe.

The first place I left in a week. The wages were five dollars a week. In the next place the woman was dishonest and unfair. She expected her help to rise at five and work till midnight. She was a boardinghouse keeper. She paid eighteen dollars a month; and I had not been there a week before I knew that she had no intention of paying the wages unless compelled. She tried to make deductions for breakages. If women who can help want to, why not open a free employment agency where such as I can find the place for which we are fitted—where the character of the mistress and of the house and of the surroundings can be as thoroughly investigated as our characters are?

By this time I was discouraged by my change, but not downcast. I knew that my place existed if only I could find it; but I was now reduced to that last ten dollars I had kept so carefully tucked inside my dress, for I had been reserving my room and paying the keep of the baby while I experimented in finding a true vocation. I looked at that ten dollars a long time the night I came back from my second failure as a domestic help.

Should I break it? Should I not? What had I been keeping it for?

I wrote out a carefully worded adver-tisement: "A place wanted by a thoroughly capable and reliable woman as domestic help where faithful work will be appreci-ated and situation will be permanent. The highest references given and required." This I placed in a conservative family daily. The answer came within twenty-four hours. I was requested to call at a certain address in Madison Avenue where I had encountered the hospital nurse.

It was a beautiful, well-regulated home, such as I had never before seen in my life. My new employer listened quietly as I told her my faltering story. Then she asked me what I wished to know about her home. It was so surprising for me to be consulted by an employer as to my rights that I could not

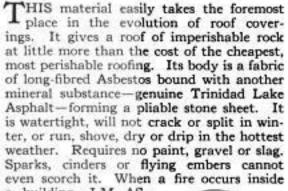

OHNS-MANVILLE Roofing Service has overcome all trouble-factors known to all types of city or country roofs.

This service, too, goes further than perfection of roofing materials or guarantees. Its development during fifty years has evolved an organization of over fifty principal Service Branches throughout the country. ## Next Sunday

Generally in 48 hours your corns will be gone if you use this simple method.

Apply Blue-jay tonight. To-morrow you will not even think of the corn. Day after tomorrow the corn will be loosened. It can then be easily removed.

Some people keep corns year after year, merely paring them once in

Some people use old-time treat-ments, and think corns can't be ended.

They wrong themselves. A famous chemist has solved the corn problem. And his invention - Blue-jay - now removes about one million corns a month.

Go try it. Note how the pain is relieved instantly. Note how gently Blue-jay undermines the corn. Note how soon the whole corn comes out, without any pain or trouble.

Next Sunday you can be as free from corns as a barefoot boy. And, so long as you live, you need never again let corns bother you.

## SAUCE FOR THE GANDER

(Continued from Page 8)

"You made the law!" she said. "You men made it because some of your fellow

men made it because some of your fellow roters were hiding behind their wives' petticeats. Surely, having made a law, you'll not refuse to abide by it!"

They would not listen, however, but only jeered. She came back into the drawing room looking quite exalted though furious; but the next moment she saw Viv's photograph on a table, and she covered her face with her hands. er face with her hands.

It was the next Thursday evening that Basil came to the house at Lancaster Gate. We had been very glum at dinner, Poppy staring through me with her fork half nised, and dabs of powder round her eyes 50 I should not know she had been crying. Vivian's place was laid; but, of course, he was not there.

And after dinner Huggins, the butler, rave notice. He said he was a married man. The Upper Servants' Society—male branch—had gone over to the Husbands' Defense, and he had been ordered to leave

Poppy's service.
He brought the coffee to the drawing

nom and was clearly uneasy.

"Of course," said Poppy, "you may go,
Huggins. Nothing should interfere with
the freedom and right to his opinion of the English voter."

No, madam." "O Liberty, thou goddess, heavenly hight!" said Poppy. "Yes, madam."

Poppy rose.
"Fiddlesticks!" she snapped. "Liberty!

And you let a tuppenny-ha'penny associa-tion dictate to you that you, must resign a good position!"
"Union is strength, madam."
"Bah! Union is also an evidence of

This being over Huggins' head he bowed and went out. Shortly afterward the tweeny, who is the buffer between the upper and lower servants, said her husband had sent for her. This time Poppy did not ar-gue, though it hurt. The tweeny had been recent convert.

It was just after this second blow that Basi came. Poppy heard him on the stairs. "Basil's intellect, or what he calls his intellect, has been fighting his heart," she said scornfully, "and heart wins, Maggie! Heart always wins with the male."

She looked at me defiantly, mutely challenging me to deny that Viv would come back to her on his knees. The trouble with Poppy was that she had always looked at Vivian's jaw, which was mild and amiable, and not at his wrists, which were hairy and till of characters.

ful of character. Basil stood in the doorway-he is very good looking, especially when he is ex-ited. And he was excited now. Poppy

sared at him. "Well?" she said.

"I'm deucedly sorry, Poppy!" said Basl. "I've been trying to make him listen to reason, but he absolutely refuses. He says he'll stay—says he likes it; it's so extremely quiet. He wants his pens and some paper sent over—has an idea for a new play."

Poppy's color came back in two spots in

"So be likes it!" she observed. "Very wel! Then that's settled." She turned to be. "You've heard Basil, Madge, and you've heard me. That's all there is to it."

"It's a horrible place," said Basil.

"Vivian likes it."

"You are going to let him stay?"

"I didn't make the law. You men made it. Now try living up to it. The matter is closed, Basil. I shall never pay the tax." Basil looked wretched. He dropped his

That-that isn't the worst, Poppy," strike!" He s-gone on a nunger

I cannot recall the week that followed without a shudder. Poppy went to bed with what she said was neuralgia and lay all day with the curtains drawn and her eyes staring at nothing. And Vivian continued the hunger strike.

You recall part of it probably—how the Husbands' Defense League put speakers at the Marble Arch and in Trafalgar Square raling on all Englishmen to rally. You can we what it meant. Suppose every wealthy Englishwoman refused to pay her income

tax on the ground that, so long as she could not vote, it was taxation without representation-what would happen?

"The House of Lords will cease to exist," said one of the posters. "Parliament will be held in prison. Our industries will cease. Our armies will be without officers or will follow their officers to jail. The state will become a matriarchy. Women, the real lawbreakers, will be free. while their husbands suffer!"

On the fourth day of Vivian's strike the papers began to issue bulletins:

"Harcourt holding his own!"

"Harcourt rather pale, but cheerful. Is working at a new play. In a statement given out today by Vivian Harcourt, the dramatist, he stated that he has written an entire scenario since he inaugurated the fast. 'The best work I have ever done!' he said, with enthusiasm, when seen today.
'Hereafter I shall always fast when em-barking on any important work.'"

"Harcourt not so well!"

"Harcourt weaker! Has stopped work."

"Harcourt confined to his cot-still undaunted, but lying in a stupor at times.

That covered eight days. On the ninth day a furious letter appeared in the Times

demanding to know why forcible feeding was not resorted to in the Harcourt case.

"Why feed the women in our jails," it said, "and allow to die of exhaustion a man who has committed no crime, but is standing for a principle?"

ing for a principle?"

I do not affirm that Poppy wrote this letter; I merely comment on the fact that when I visited her the day before it was pub-lished there was ink on her fingers and on the linen sheet of her bed.

Daphne had been on a Suffrage tour in day. She came to Poppy's home at once. She found Poppy in bed, with cold cloths on her eyes, and her wedding ring off. Daphne smiffed. the North and she came home on the ninth

You and Viv are two children!" she said. "You're a silly for thinking you can beat the Government at its own game, which is taxation; and Viv's a fool for

Poppy is not placid of disposition, and she flung the cold cloths at Daphne and ordered her out; but Daphne only sniffed again and raised the shades.

"You haven't got a headache—you have a pain in your disposition," she said. "Put this on again." And Poppy put on her wedding ring. "Now," said Daphne, "you won't pay this money as a matter of principle, and Viv won't for the same reason. I won't, because I haven't got it; Madge probably ditto. But the beastly thing must he paid. The point is—to do it without yielding."

Now I must give Daphne credit for this: She did not intend to get me into it at all; as

a matter of fact she sent me out of the room.
"Run along, Maggie!" she said. "Go
and telephone Basil to come and have tea

and telephone Basil to come and have tea with you, or go shopping and buy yourself something. We're going to talk."

I did not go out. I sat alone in the drawing room and thought; and the more I thought, the worse things seemed—for it was perfectly clear that Basil's protestations for the Cause were nothing when it came to the test. He was perfectly willing to stand on an eminence and let me look up at him, or even to put me on one himself. at him, or even to put me on one himself, hung about with his tributes; but I knew in my inmost soul that he would never go to jail for me—and it hurt.

And even if he did go he was not of the heroic stuff Vivian was made of. I felt quite sure he would have three meals a day and tea, and come out looking spruce and well fed. The thing that hurt most was that become him to be the sort of person nim to be the he was, I should be so fond of him. He had no mental or temperamental heights, and I knewit; but he was so solid somehow, and exceedingly good-looking—and he was not, like Viv, forever coaching pretty actresses. Viv's desk was covered with photographs indorsed: "To dear old Viv, from Dolly": or "The Tigress"; or "Passionately, Nell"! Daphne took me home with her. She

said she had a plan and it was best that I

said she had a pish and a should not be in Poppy's house. "It's a knot that's past untying," she "It's a knot that's past untying," we'll said as we went down the stairs, have to cut it."

SYPHON EFRIGERATORS ELICIOUS dainties just out of the Bohn! Fresh, sweet and approximately tendegrees colder than they could have been kept in other refrigerators. ## He Quadrupled His Salary

A post-office clerk in a Kansas city wished to attend Washburn College, but did not do so because he thought that lack of funds was an insurmountable obstacle. He had not heard of the Curtis Scholarship Plan.

He became dissatisfied with his position in the post-office; its promise of advancement was limited. After thinking the matter over, he enrolled as a student of Civil Engineering in a well-known institution of learning. A few months later he entered the employ of The Santa Fe Railroad. He was rapidly promoted from one position to another until, now, he is the assistant signal engineer for the company.

As a direct result of his decision to study Civil Engineering, he increased his salary 400 per cent.

If your position holds out little promise of substantial advancement, let us tell you how thousands of persons have, through our Scholarship Plan, secured the training they needed to establish comfortable incomes. Upon receipt of your letter, we'll send you a copy of our illustrated educational booklet which tells you how, free of charge, you can secure a course of training in any university, business college, musical conservatory, or other institution of learning in the country. Address your letter to

Educational Division, Box 506

THE CURTIS PUBLISHING COMPANY, Philadelphia, Penna.

There was a crowd of husbands round the door as we went out and they said things.
"'Ow fat and rosy they look!" said one
man in a bus-driver's uniform. "And the 'usband and father dyin' in prison! Smug-that's w'at they are!"

We did not bother to set him right. We got into a taxicab rather hastily and Daphne got into a taxicab rather hastily and Daphne twisted her knee. At first she said it was nothing; but she could hardly get up the stairs to her flat. She would not give in at first, but finally she let me put her to bed; and I saw she was all in for a day or two.

"It's tonight I'm thinking of," she said forlornly. "I could manage, with a stick; but I could never get through the window."

"Through a window!"

"I believe you'll have to do it after all."

"I believe you'll have to do it after all," she went on. "It's quite simple. You'll find the window unlocked and the money in the pocket of Poppy's painting apron.
In the morning she'll send for the police and say she has been robbed."
"I'll not go through a window!"
"But by that time a messenger will have

turned the money in to pay Poppy's tax, the receipt will be issued, and Vivian will be free. She can protest; but—the thing will have been paid, and with her money. An iniquitous measure can be fought only with iniquity.

But, Daffie dearest -

"But, Dafne dearest—
"The police will find the open window—
I broke the lock—and footprints—"
"My footprints!"
"Madge," she said sternly, "are you or are you not for the Cause?"
"I am!" I replied feebly—and the thing

The evening papers reported that Vivian was in bad shape and that his cheerful resignation had moved his attendants to tears. That settled me. There was no time to lose. I put on some clothes belong-ing to Daphne's maid and went round to Poppy's at ten o'clock. I stood on the outskirts of the crowd, which was raging, and waited for it to break up. Poppy did not come out. Huggins stood near me, hissing with the best of them. Even through my weil I believe he knew me, for he turned on me suddenly and said: "Yell a bit—can't ye, miss?" "There is quite noise enough already,"

"You're not one of these here suffragists, by any chance? Aren't got a 'usband locked up anywheres?" He seemed to have dropped back into the language of the people; in fact all the trappings of civilization had gone from the mob. They snarled like beasts. Primitive men they were, fighting their women—"That fiercest hate which is compounded of love!" as Daphne put it. The male brute contending against the female for supremacy. mind!" Matter against

Poppy's house is on a corner, with a wall at the side, and inside the wall is the door to the studio wing. Daphne had given me a key to the gate and it was easy enough, with the crowd in front, to slip in. The window was difficult, but I made it at last and found myself in a lower passage. Viv's den was dark and empty. I felt my way up to the studio and got the money. After all it had been easy. Viv was saved, Poppy's pride need not humble itself, and the Cause was free of its greatest menace! as free of its greatest menace

I felt heroic, magnificent! I clutched the money for Poppy's income tax in my hand and started down the stairs. As I reached the bottom somebody tried the lock outside. I nearly fainted. I turned and ran up in the dark, and the door below opened. A man in a long coat came in stealthily and went directly to Vivian's den. And just then a church clock struck eleven.

I was frightened. It seemed to me that as soon as he ransacked the room below he would come up to the studio. Perhaps he knew about the money! Burglars have an uncanny sense for such things. And the idea of being caught in the studio—as in a the state of the money and slipped down the state of the money and slipped down the state of the money and slipped down the state of th turned on and a cap down over his eyes

I forgot to be cautious then. I bolted for the door, flung it open—it was a patent lock, with a knob inside—and stepped out

into the night air—and a policeman's arms!
"Easy a bit, hold girl!" he said. "Hi'm
'ere and you're 'ere. What's the 'urry?"
He held me off and looked at me. Luckily I had never seen him before. "Quick with your 'ands, nin't you! In you goes and hout you pops!"

"If you think I'm a burglar," I said haughtily, "I'm nothing or the I'm \_\_\_\_" It came over me all at once that I must not say I was a friend of Poppy's with the exact amount of her income tax in my hand. "The burglar you followed is still in the house," I said. "He's in Mr.—

in the study, just beyond that door."

"None of that, young woman," he said sternly. "You'll just come along with me!
'Ousebreaking it is; I watched you in and

hout."

He took me by the arm and I went along. There was nothing else to do. I tried to drop the money as we went, but some of it was gold and he heard it. Still clutching me, he gathered it up as it lay scattered over the pavement. I was rather dazed. The only thing I could think of was that, for the sake of the Cause and Poppy. I must not tell who I was; but I begged him to send an officer to Poppy's house, because there was a burglar in it.

there was a burglar in it.

At the police station they telephoned Poppy—and here she made her terrible mistake. She thought it was all a part of the plot, and after she had looked in her studio she said she had lost a lot of money. She told how it was in notes and said. She told how it was-in notes and gold: and, of course, they found it all on me. She says that when they told her they had it, and a young woman, too, she almost swooned. She tried to find Basil, but he was not in his rooms; and Daphne was laid up and almost frantic when she heard

what had happened. Poppy's position was pitiable! She did not know what to do. If she declared the plot and freed me all London would laugh and the Cause would suffer. If she did not declare the plot I should get a prison sentence. I have drawn a poor picture of Poppy if you think I stood a chance with the Cause!

That is how things stood the next morn-g. Vivian and I were in jail; Daphne in bed; and Poppy in hysterics. Then a curious thing happened. The evening papers announced that Vivian had paid the

papers amounted that vivian had paid the tax for Poppy and was free. Viv repudated the payment—said he had not done it—and refused his liberty.

"Mr. Harcourt," said one paper, "feels the absurdity of his position keenly. He is apparently cheerful, but very feeble. His eyes flashed, however, as he stated that the eyes flashed, however, as he stated that the Income Tax Office could not legally accept the payment, as it was not his money. If any of his supporters had in mistaken real taken a collection for this purpose he said he could only regret their action and refuse to profit by it."

On the next day, however, the Times published a letter signed, "Not Even a Husband," which stirred the whole thing up again. The writer declared that the tax had been paid with Vivian's own money: that the writer himself had stolen it out of a deck in Mr. Harmself had stolen it out of a desk in Mr. Harcourt's house; that it had been sent by messenger to the proper authorities and a receipt issued, which was appended; and that, in other words, though Mr. Harcourt was to be lauded for his principles, his continued imprisonment at the public expense was absurd. Also, the writer was under the impression that an innocent person was being held for his crime; and he called on the public honor to

crime; and he called on the public honor to see that this wrong was at once righted. Immediately on the publication of this letter Poppy and Jane Willoughby, with a delegation, gathered before the Prime Minister's house, and Poppy made a speech from the carriage block. She said she had just learned that a suffragist, an American and a friend of hers, had been arrested while leaving her house and unjustly de-tained for two days. This was carrying tained for two days. This was carrying persecution too far. Undoubtedly it was the work of the Husbands' Defense League. "Taxation without representation!" she

cried. "I did not have a voice in making the income-tax law. Why should I obey it?"

"I didn't have a voice in making the Ten Commandments," boomed a man's voice from the crowd; "but I'm expected to obey them."

It was Poppy's chance at last.

"If you men had made the Ten Commandments into law," she said in her clear voice, "you'd have repealed that law long

The crowd roared. Then she and Jane drove to the jail and got me. Viv's T. C. retort had saved the day for her.

Daphne made a speech in the Edgeware Road that night, with her leg in a plas-

ter cast. Vivian and Poppy were together again. Jane Willoughby called me up about them.

## I do not fear your tongue

When you have answered my advertisement, just on the bare chance

that I may be telling the truth about my Panatela, and I have sent you a box of fifty with permission to smoke ten and return the rest if you like - there is still that suspicious, tobacco-educated tongue of yours to be satisfied.

I do not fear.it.

For eighty out of every hundred men who have smoked ten have kept right on smoking my Panatela.

It is on the second and third and many succeeding boxes that I make my small

manufacturer's profit.

My Shivers' Panatela is hand made by skilled adult men cigar makers in the cleanest factory that I know of. It is made of Cuban Grown Havana Tobacco with a genuine Sumatra wrapper. It sells for \$5 per hundred or \$2.50 for 50.

I do not sell through dealers, but do business directly with you.

MY OFFER is: I will, upon request, send fifty Shivers' Panatelas, on approval, to a render of The Seturday Evening Post, express prepaid. He remaining forty at my expense and no charge for the ten amoked if he is not pleased with them; if he is pleased with them and keeps them he agrees to remit the price, \$2.50, within ten days.

Shivers' Club Special is identical with my Panatela except that it is shorter and fatter and has a larger burning surface, Sold on the same terms as the Panatela.

Shivers' Panatela

In ordering, please use business stationery or give references, and state whether you prefer mild, medium or strong cigars.

"They're going to live in Italy," she said.
"It's desertion of the Cause—and that's all there is to it! Haven't they been round to see you?"
"No."
"I think it's shameful," snapped Jane, "after what you've gone through because of their pigheadedness!"
"Perhaps," I said, "Vivian was not able to come. He must be very weak."
Even over the telephone I heard Jane sniff.

"Weak!" she jerked out. "Never saw him look better! Fast, indeed! The wretch never went on a hunger strike. The H. D. L.

Sent him wonderful hampers daily!"

Everything combined to make me sad that night—Vivian's duplicity; and the fact that the members of the H. D. L. had conspired to make Poppy weaken; and that all men were alike; and that only when they were quite old and became fathers were they able to understand women at alland then only their daughters, not their

Basil came in that night rather late and sat in front of the fire—and looked at me.
"Uncle Egbert is dead," he said.
"When?"

"When?

"A month ago, Madge."

"A month ago, Madge."

"And for a month you've been weighing things pro and con!" I said scornfully.

"It has taken me a month to find out

that I cannot live without you.

He was very humble and quite miser-able; and, because he did not seem able to able; and, because he did not seem able to sit still under my cold glance, he wandered over to Daphne's desk and turned over her papers. It was the position of the man in Vivian's den! I knew it was Basil who had stolen the money for Viv and paid the tax—Basil who had written to the Times—Basil who had been seen stealing through the area gate. Basil, then, had been the cause of my arrest! The whole thing was too much. I told him so.

"I won't marry you!" I finished hotly.
"In America a man doesn't take a month to think things over because he's afraid, or write a letter to the Times when he's got the girl he cares about sent to jail! I'm going home to marry some nice American chap

home to marry some nice American chap and have the suffrage given to me as a right and not as a privilege; and I'm going where

there isn't any income tax!"

One of father's cablegrams arrived just then and I opened it. He said:

"Income-tax law passed by half the people for all the people!"

America too! And there was that wretched house, eaten up already by taxes and streetpaving—and babies with hammers!

Basil was eying the cablegram furiously.

I just held it out to him.

"It's about the house," I said, quivering a little. "You are quite right to be afraid of me. There's an income tax at home now and I shall never pay it. It's taxation without. without .

Basil held out his arms and his eyes glowed.

"You darling!" he said. "What is the income tax between you and me? I love you with all my heart, and nothing else

matters—unless you don't love me."

It was then that the awful truth came over me. The Cause was not first with me after all! Poppy had been right—it was Basil all the time; Basil, with his glowing eyes and his warm heart, and his English conservatism.

"The Cause " I gasped.

"The Cause ——" I gasped.

"I'm going to be your Cause!" said Basil, and caught me to him.

"But the tax ——"

"Don't pay it if you don't wish to," he said in his lordly way. "My wife may always live up to her principles. Besides, in America a husband is not responsible for his wife's debts! I looked it up!"

## A Kansas Comeback

MERLE THORPE, who is at the head of the Department of Journalism in the University of Kansas, presents this as his idea of the quick-as-a-flash comeback.

An oldtime Kansas editor was sitting in a restaurant eating a pickled pig's foot—or a pig's pickled foot, as the case may be. A tramp printer came in, saw the editor, and

"Git out of the way, you! I'm the old wild boar from Fort Scott!" "Yes," commented the editor genially; "and I'm eating one of your paws!"

Here's The a Screen That Best Hardware Dealer in Your City Wears Sells "PEARL" "PEARL" Requires No Paint or Repairs You've been using painted screen—had to paint or repair it every spring. This year try Gilbert & Bennett PEARL

Wire Cloth! Learn just how long lasting and handsome a screen can be. PEARL Wire Cloth is durable simply because it is practically rust-proof. And, as you know, rust ruins screens — not wear. As for appearance — well, the handsomest homes in America are equipped with Gilbert & Bennett PEARL. You'll have to see "PEARL" before you fully appreciate its beauty and worth.

For Screening Porches

For Screening Windows and Doors

"PEARL" comes in two grades - Regular for doors and windows, and Extra Heavy, Extra Strong for doors, windows and porches.

# udebake SEVEN PASSENGER

Full Floating Rear Axle Electrically Started Electrically Lighted

## This Car Against Any Car-Let Us Prove It

With every sense alert, try, as you ride in the Studebaker SIX, to imagine some one particular in which its riding qualities might be improved.

Try to recall some previous ride in a heavier, costlier car, which seemed to you, then, the uttermost in luxury.

Superfluous weight does, sometimes, make for steadiness, there's no doubt about that-see, now, how this light, strong car attains the same identical result in steadiness and roadability with none of the disadvantages of excess weight.

Take the wheel and see if you ever felt that you had at your command a greater flood of pent-up flexible power.

Test out that flexibility—see how instantaneously obedient this docile engine actually is to the touch of your finger-tips.

Put it through its paces—face it with obstacles and difficulties-and see if it does not respond in every case like the thoroughbred it is.

Demonstration—demonstration against any car, and every car-demonstration drastic down to the smallest detailthat's what Studebaker asks, without fear, from you, for this splendid Studebaker SIX.

## Descriptive Data

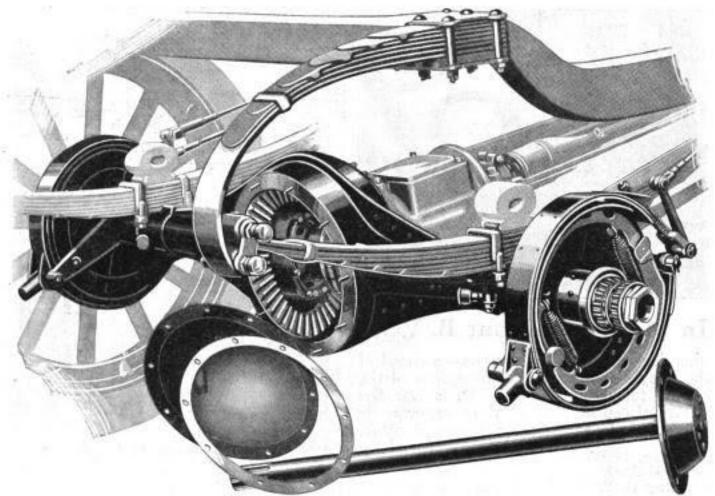

Studebaker FOUR and SIX motors are cast enbloc. Other points of excellence included in each Studebaker the highest possible efficiency in power and gallon-

Each Studebaker car has a full complement of adjustable Timken roller bearings - a pre-eminent antifriction device.

Built complete in the vast Studebaker shops, each Studebaker unit fits with perfect alignment into the synchronized Studebaker chassis. Even the tops and the Jiffy curtains of Studebaker cars are built by Studebaker workmen.

LOOK OF 21Y-

Full floating rear axle; the Studebaker-Wagner electrical system; gasoline tank in cowl with direct line to dash-adjusted carburetor; enclosed valves, quiet and retaining accurate adjustment; running boards clear of all equipment; extra rim, mounted at the rear; special quality electric lamps; electrically lighted dash equipment with lubrication sight feed, battery tell-tale and Stewart-Warner magnetic speedometer.

Studebaker Rear Axle, with Differential Cover Plate Removed

## Nearly 90 per cent of all Studebaker owners drive and care generally for their own cars.

And it is the amazing accessibility, on the Studebaker, of those parts which need occasional attention that enables these owners to do so with ease and without embarrassment.

Is this accessibility more pronounced on the Studebaker than other cars?

It is - as the three illustrations will strikingly show you.

For instance, all parts or assemblies needing lubrication or application of grease or oil are easily reached without effort.

Cylinder oil is very handily poured into the crank case through a filler tube; grease is injected into the rear axle through a plughole in the differential cover; the clutch collar is lubricated by means of a grease cup and flexible tubing, without removing floor boards.

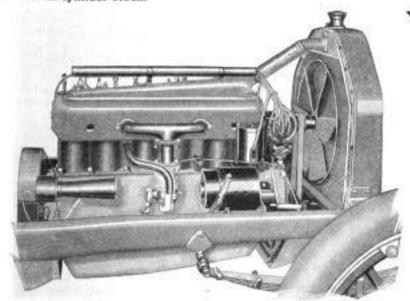

The gasoline tank is filled without disturbing passengers or going to the rear of the car.

Set considerably higher than the frame side member, the carburetor's position permits of easy and instant examination from any side.

The entire gasoline feed system from tank to carburetor can be inspected or cleaned without lifting floor boards or getting under the car—raising the hood makes it all accessible.

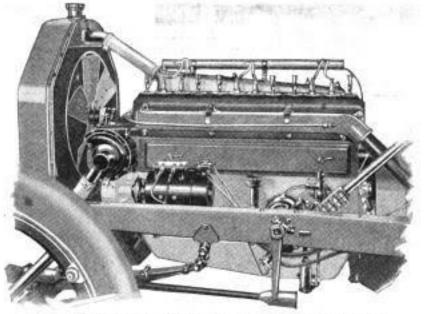

A dash control for the carburetor—a single instrument instead of two or three parts—performs all ordinary functions and does away with "jiggling" or "tickling" the carburetor with the hood raised.

If you want to "look at" the ignition system, you find it most conveniently located at the front of the cylinder block.

Fight hand side of Studebaker SIX motor, showing carburetor, ignition source and

You don't have to unlock boxes to reach the electric battery or tools—they are under the front seat.

Left hand side of Studebaker SIX motor, showing valve cover plate, electric

If the fan needs adjustment, you get at it without disturbing any other part.

The simple removal of the cover plate exposes the entire valve mechanism for examination.

The location of the ignition switch on the dash, under the driver's hand, and the means for easy padlocking, are features the experienced owner will appreciate.

Two nuts hold the extra rim and tire in place on their carrier at the rear, and a simple but effective locking device is provided.

Each top holder is adjusted and tightened by a single nut, instead of stiff, stubborn straps.

The curtains are Studebaker-Jiffy, lowered and raised from the inside in one-tenth the time required for ordinary curtains.

These are the reasons why most Studebaker owners not only look after their own cars, but take pleasure in doing so.

## THE HEAD OF THE FAMBL

(Continued from Page 16)

give my hand a shake. And then we all four sat in the dusk talkin'. And he said, once, he was mighty glad to be home with us. Grover and I answered we was mighty glad to have him; and Janie said, "Yes," in such a little voice that we laughed at her.

When Mr. Barrens went back to his office, o' course he had the upper hand on account o' the grit he'd shown. And he kept it by takin' no excuses for mistakes or

He was very thin and pale, and sat back in his office chair dressed in white flannels-not at all like other superintendents; but his eyes had turned cold and sharp, and when he stuck out his jaw at the men and spoke to 'em very quiet they felt a shock all over-for now they knew he was on to the way they'd been sneerin' at him, and often just his one low word meant that the man on the carpet had to sell his home and pack off with his fambly to another rail-road. Mr. Charley Barrens was boss o' his division and, bein' the friend o' the great director, no man dared answer back, for fear he'd be blacklisted with other roads.

The old hotel where he lived was just across a little park from the platform and one evenin' he came hobblin' out on his cane for exercise and stopped near me to

ask 'bout Grover.

Though we was together in the shadow, he didn't talk as much as he used to, sayin'

only this:

"When these men used to sneer at me I couldn't fight 'em all single-handed; but when that powder-car business showed 'em I wasn't 'fraid I just made use o' the chance it gave me. Now I'm makin' good and won't be 'shamed to face Miss Cloud." He was turnin' away and asked over his shoulder: "And how is Miss Janie too?"

I answered that she seemed kind o' lone-some since our parties in the evenin' broke up. He stood still listenin', but it was only a minute till some business came into his mind and strikin' down the cane he said "Damme! Damme!" and hobbled into the

The road men called the superinten-dent's office the throne room and the word comin' out o' there the law. There wasn't any 'sputin' it and Mr. Barrens never took it back—though twice men who got fired tried to beg off. Ever body understood there mustn't be a wreck or a late train. The men wondered what he'd do when there was a washout; but when that happened
Mr. Barrens laid off the bridge boss; he
was the big one, too, but didn't dare kick.
Some o' the men s'posed he called 'em
so hard 'cause be knew nobody would try to

get back at a wounded man; but when Mr. Barrens got well he was just the same, and would walk past men he'd fired, and who hated him, without a sign o' bein' scared o' their doubled fists.

All at once such talk shut up and the

whole division just knuckled down to him, and every man thought o' nothin' but to

That was an unlucky division, though, and there was a good many wrecks and blockades, which Mr. Barrens straightened out just by sittin' in his office and firin' the man most to blame.

Those were mighty good times for me, with nobody to bother 'cause I was a friend o' the big boss and ever'thing o' his was let strickly alone. One evenin' he called me in and said if I minded business and didn't miss any more crews I could have the job o' takin' car numbers on the first o' the year. He didn't have any pets. But it seems as if just havin' such a man

for your friend makes ever thing come right. There was no more red lamp at our house— Grover went to school and Janie kept the home better'n any woman in the neighborhood. She'd settled down for good-only speakin' to Robbins when they met on the street and never lettin' him walk with her. I did want her to go round visitin' more glad to take her to shows and dancin' parties; but she said she'd rather stay home and didn't seem so gay any more. She said:

"I'm mighty thankful, Cole, that you managed me just right." I guess all these good times made mestep

pretty high.

Late one afternoon, while Grover and me were throwin' a ball in the yard, Mr. Barrers came walkin' home with Janie. They'd met on the street and he said he must come on down to see how the Flynns

got on at home. Grover made a l He'd been listenin' to some o' talk, and when Mr. Barrens said and walked up, Grover said h shake the iron hand.

Mr. Barrens was puzzled a mi he smiled pretty grim and answe kept that for the office. He tossed the ball with us

stood on the porch. It was gett he kept chattin' to us all, by tu

last Grover said:
"Janie, Mr. Barrens'll be get

for his supper."
We hadn't known whether we hadn't known watcher for he'd only stayed with us b o' the accident. Now he laug swered that he'd stay if Jani him help cook. So we all w-kitchen, and Janie put on he tucked back her sleeves to t make the biscuit, and I peel Mr. Barrens broiled the steak terrible smudge.

I was s'prised to see him a boy and pretended not to Grover was makin' a big pla; and it was a wonder the way

and it was a wonder the way
in. Her face was pink and he
just like stars. And she was
"You got used to smoke by
der cars through the fire," sh
"And I didn't come out o' that black
wreck till I saw my good spirit," he answered quick, "with her face pale and black
hair hangin' loose!" which was the way
Janie had come in the door on the night o'
the accident. He said this and for a second the accident. He said this and for a second they both stood in their tracks starin' at each

Of a sudden Janie's face was white and he was bent over broilin' the steak again. They were still, then, and I guess she thought she'd been too saucy—even Gro-ver stopped his noise for a minute. It was gettin' dusk when I left home and Mr. Barrens came along. I thought Janie should have asked him to come again; but she only said good-by in a proud way, as though

forgettin' her manners.

It was that very night Miss Cloud's car came in on the West mail. I was comin' back from a round-up about midnight and saw it on the sidin' above the depot, with one dim lamp burnin'. As I stood watchin' and wonderin' if I'd see her this visit, some-

body came out on the platform and asked:
"Is that you, Cole, with the lantern?"
When I answered she stepped inside to
pick up a light shawl, and then I lit her path cross to the station platform. Miss Cloud said she'd sent the butler down to the office with word to me; and learnin' I was out on my round she had been keepin' a lookout.

She didn't seem to want anything done, though; just said her stateroom was close and she'd like a walk in the air. So we went pokin' up and down the platform, talkin'.
Mr. Cloud had come to make his last 'spection of the roads he was figurin' on. The car would be taken out in the mornin', but

in two or three days they'd be back to our headquarters to stay 'bout a week. She asked all about Mr. Barrens; she hadn't wired him to meet her so late at night. I told o' the red-hot run through the roundhouse and how he was hurt. Holdin'

tight to my shoulder, she said:
"But he's all right now, ain't he?" I bet
you Miss Cloud thought a lot o' him too.
She had to hear it all over again, and was
so glad that the men said it was the bravest thing they'd known of and looked up to him for it. Then she must know of his wounds and where he was taken care of. "Well, well!" she said. "At your house! So you and Grover and Sister Janie nursed him!"

She remembered their names and, findin'

out that Janie was nineteen, wanted to know how the head of the fambly managed such a big girl.

Together in the shadow you tell things. about her secret. She was head o' Cloud fambly, too, and, without tellin' her

father, had to manage him all the time.
"Why, he'd run wild if I didn't!" she said; and somehow I told bout us Flynns. and how Janie had given up the dance-hall without hardly any managin' at all.

She was still for a while and then said

she was so glad the danger lamp was out at our home.

"And I hope it never will be lit again." she went on. "And here is something l

\$1,600,000 of Approved First Mortgage with Trustee, together with \$850,000 Capital, Surplus and Stockholders individual liability as your security. 23 years in business. Under supervision. Write for "The Salky Dollar." Georgia State Sevings Association, 175 York St., Savannah, Ga. brought you, which a call boy ought to have so he'll never miss a crew. And you must remember me all the time it's tickin'. Now good night—and tell Charley Barrens I didn't miss him a bit."

She said good night again and went into the car, and I could hear the watch tickin' in the dark. By day it was gold, but in the night-time it was just like a friend talkin' secrets ever after.

Mr. Barrens and Grover thought it was splendid; but Janie didn't say much. She was more interested in Miss Cloud, though, and asked how she looked. I could only tell that her clo's rustled like silk and that she had gray eyes by lantern light; so Janie was dis pointed.

Janie wasn't very gay that day; but next mornin', after I came home, she went about singin' all the time, and I said: "Janie, you're not walkin'—you're dan-

And she stared down at her toes while crossin' the room; but she couldn't keep 'emfromwaltzin' a little bit and, with a laugh just like a birdcall, she gave me a tap with

her knuckle and said:
"Oh, you must always stop and look
and listen!"

Well, I didn't mean to do that, but no-body could help noticin' how happy she was those days, and her eyes had a soft, bright light which made you wonder. Gro-ver and I was happy too, as menfolks always are when the women sing round home. I guess us Flynns had nothin' to worry 'bout

now.

Miss Cloud come back and I met her most every night. Some big railroad men and lawyers were in town, and her father was busy with 'em. Sometimes he would run down the line; but the car was always in our yards at night and Mr. Barrens ate dinner with 'em; then he and the lady would look over books together or come out to stroll on the platform.

O' course he thought more o' her than anybody; but he didn't overlook bus'ness, and he kept his hawkeye on every man of us. It seemed funny that such a slim,

us. It seemed funny that such a slim, stylish young man should keep down so many reckless men with an iron hand.

Nobody can sing and laugh all the time, and so Janie quit after a while. She asked the news every mornin' and listened very interested.

'Does he care for that woman?" she asked once.

"Why, sure!" I answered; "more'n he does for anybody. He'd ought to."
When I got up in the afternoon Janie was sittin' by the kitchen table just as I'd left her, with the breakfast dishes round.

"You look as if you hadn't moved," I said, s'prised.

"Are you sure he does? What makes you say so? I don't b'lieve it!" she said, pickin' up our talk as though I'd been gone only a minute 'stead o' six hours.

"Mr. Barrens? He told me so. Why shouldn't he?" I asked.

"Nothin'!" she answered.

She began gatherin' up the dishes; then she laughed and sang, too, but in a low voice that sounded full o' fierce words. And 'stead o' dancin', she walked with a reckless 'stead o' dancin', she walked with a reckless

swagger.
It's better to let womenfolks alone when they're out o' sorts, so I didn't ask any-thing, 'cept when it had begun stormin'. The afternoon was dark and that was the first rain o' fall.

Pretty soon Grover come in and I played backgammon with him.

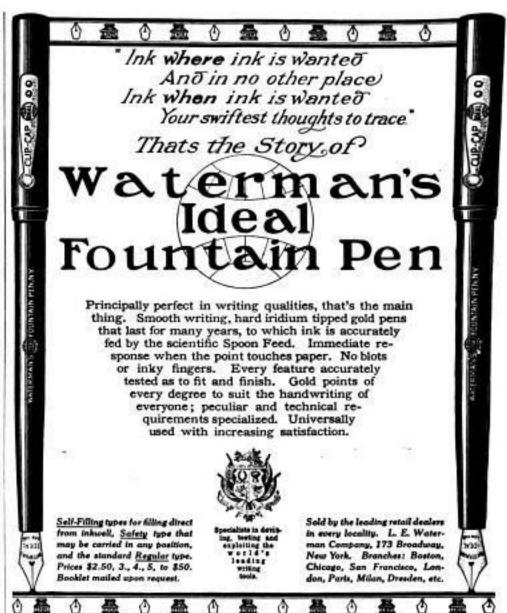

That night I'd called the crew for the White Owl, the overland passenger, when I felt the present'ment. Generally you wait till you're at least a freight conductor afore you have one, or nobody will pay any 'tention to it; but this one was different and comin' on strong about one o'clock I.

and, comin' on strong, about one o'clock I went up on the street through the rain. Some o' the lights in the dance-hall had been put out, but the music was still goin' in a cracked, drunken sort o' way for the all-nighters.

I went up the stairs and looked inside; nobody paid any 'tention, the ticket taker bein' up the hall drinkin' out of a bottle with the orchestra.

I saw Janie sittin' 'cross the hall by herself; she had on her hat, which was pulled down a little over her forehead, and her raincast lay crumpled up on the floor. She looked like a person tossed out of a wreckonly her lips were drawn thin in a kind o' sneer, and her eyes glittered.

If it hadn't been for the present'ment I'd have turned cold and sick all over to see her so desp'rit and forlorn. I went over and

For good dressers and careful spenders

Where Is Your Saturday Evening Post

MONG the young men who as boys sold The Saturday Evening Post hundreds either have since been, or still are, students at some college or university. We have a personal interest in our boys who sell The Post. What some of them have done are inspiring stories. We wish to take a census of them and to make a survey of their attainments.

If you know one or more such young men, you are earnestly requested to send us the name of each one, the name of his college or university, his present address, and, if possible, the name of the town in which he formerly sold The Saturday Evening Post.

For more than fifteen years we have done what we could to encourage boys to obtain college or university training. We want to find out just how successful we have been. Where is YOUR boy? Has he attended college? If you will send us this information, you will do him and us a service.

asked if she was ready to go home now, and

one o' the men said:
"Let her alone; she'll get over her grouch

after a while and dance."

Robbins wasn't there, so I knew Janie'd come by herself. She paid no 'tention to the

come by herself. She paid no tention to the man and, after lookin' me through with her frownin' black eyes, said:

"Why, yes, Cole, if it worries you I'll go home." She put on her coat and we went out, and as I talked about the storm she took my arm. "I just went to hear the music," she said; "I wouldn't dance with such people."

In the storm and dark eyer'thing was all

the storm and dark ever thing was all

right between us, and she thanked me at the door for managin' her so well.

Business got slacker and slacker that night and 'bout daylight there wasn't a train in sight; so the dispatcher said I might go home. Janie was lyin' down on a couch in her party draws but hearing me come in her party dress; but, hearin' me come in, she followed to the kitchen, where I took

off my raincoat and hung my cap to dry out.

"Better go on to bed and take a nap afore breakfast," she said; but she seemed to like me round for comp'ny and we sat talkin' in the kitchen so as not to wake Grover.

I remember the rain beatin' on the roof

and the early mornin' light comin' gray and chilly through the curtains as we sat the kitchen table from each other. The stove was cold, with ashes scattered over the hearth. So the daylight crept in between us and my spirits turned cold too. "I don't care if he does like that woman!"

said Janie.

Her arms were stretched straight in front of her on the table, though her head was held up in that proud way she used to have; and I noticed how her throat and

breast swelled with deep, fast breathin'.

"O' course you don't; why should we care?" I answered, wonderin' at her.

"Why should we?" she said after me.
Shestruck the table with her fist. "No, you don't; but I do-it can't be helped All of a sudden Janie remembered what she was saying, and her face and throat, even her arms, blushed and burned. "Oh! Oh!" she said to herself; "I am hurt! I am done for. Who can stand this! Where is the old devil, so I can go to him, and be happy and forget!"

I believe all I could say was, "Don't, sis!" and that she hardly knew Mr. Barrens. "You can forget him easy if you want to—right here!" I told her.

I saw the blush go down, and such a look come to her face! Nobody can understand such things—it's like starin' the priest in the face when he is prayin'. Yet I had to look. "Don't, sis!" I said; but her face grew whiter and whiter, with a deep black wrinkle between the eyes. All of a sudden Janie remembered what she

between the eyes

Once, a long time ago, I thought the blindin' white spot in the center o' the storm was where God stamped when He was angry. I remembered this now—her face was that kind o' terrible white. Then Janie laughed to mock me.

"I hardly know him!" she said. "Yes, I know him! I didn't want to love him, I wanted to hate him; but he wouldn't let me! He said he—cared for me most of all. Comin' every evenin' and tellin' me so, I believed him. He kissed me—I ain't 'shamed! What is it to you?"

'shamed! What is it to you?"

I thought Janie was mad then; but she told the truth. Every evenin' after I'd gone and Grover was asleep Mr. Charley Barrens had come. Not one evenin' had he missed from the day we'd all had supper together till Miss Cloud came to town.

"When she goes he'll come again," said Janie, "and I'll be glad!" I wondered why if she wanted to forget him.

"Why don't you speak?" she asked; but I couldn't and only shook my head. She

why don't you speak? she asked; but I couldn't and only shook my head. She was anxious and pretty soon reached over to pat me. "Don't mind," she said.

I got up and made me some coffee, and

Janie never moved, watchin' me close as a cat. When the fire burned bright I made toast and ate some with the coffee.

Grover, hearin' us, came out laughin' and rubbin' his eyes; but we couldn't play or laugh just then, and he backed up into a corner one step at a time. I must have showed it plain, for after a while he pointed

his finger.
"Cole's 'fraid again!" he said. "Why,
he's gettin' whiter and skinnier ever' day!" Janie turned such a frown on him that he went out whimperin'.

Then she sat watchin' me again till I put

on my raincoat.
"You go on to bed!" she said in a hoarse voice, and I wanted to answer her, but couldn't. "Go to bed, Cole, please!" As I went toward the door she started up,

overturnin' the chair.
"Wait!" she commanded, and runnin' into Pa's room she came back with the red lantern. "You know how to manage me," she said. "I've told you how, and it's worked more'n once. Now don't you dry the high hand with my affair!" She studied my face: there wasn't any excitestudied my face; there wasn't any excitement now, that was worn away and she was cool and fierce. Still studyin' my face she lit the lantern. "You put such store by this danger fire," she went on, more and more quiet; "now I'll hold it up to you—it's lit against you. Yourself, Cole Flynn, is bein' signaled to ston where you are is bein' signaled to stop where you are. Understand!"
